

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

Russia Threatens  
China

Gladly taking advantage of the Boxer rebellion of three years ago as a pretext, Russia occupied the Chinese province of Manchuria, ostensibly to protect the workmen on her great railway, but after the close of hostilities signed a treaty agreeing to restore the province under certain conditions. Last week the Russian representative at Peking informed the Chinese Government that no further steps in the Russian evacuation of Manchuria would be taken until China had signed an agreement forthwith presented. This agreement is nothing more or less than a "hold-up." It demands (1) that there shall be no new treaty ports and no new foreign consulates in Manchuria—a special thrust at the United States Government, which, in the new Chino-American treaty just presented to the Imperial Government, asks for the establishment of treaty ports at the Manchurian towns of Mukden and Takushan; (2) that the customs revenues of Niuchang, the Manchurian treaty port, be paid into the Russo-Chinese Bank, and not into the Chinese Customs Bank; (3) that no portion of Manchuria be alienated to another Power than Russia; (4) that none but Russians be employed in a military or civil administrative capacity in Manchuria; (5) that the present status (Russian) of the administration of Manchuria remain unchanged—a clause apparently included in the preceding; (6) that Russia have the right to own the telegraph wires wherever there are Chinese telegraph wires in Manchuria, using the same poles; (7) that Russia control the Niuchang sanitary regulations. In view of the uncommonly drastic nature of these demands—those with regard to Niuchang of course violating treaties between China and the various Powers—it is not surprising that Japan, the nearest of the Powers,

has ordered three war-ships to Niuchang, and that the Japanese press insists on immediate and vigorous action, not unreasonably confident of the support of the United States as well as of the British Government. While the Chinese Government is reported to be greatly disturbed, it is apparently powerless in the matter. Though Prince Ching, Chinese Foreign Minister, has refused the Russian terms, his refusal probably pleases Russia almost as well as his acceptance would have done, since either alternative means the relinquishment of Chinese sovereignty in Manchuria. As those acute observers, Messrs. Gerrare and Shoemaker, have shown in their just-published books on Manchuria, Russian occupancy of the great province is now practically complete. Even if Russia fulfils the exact terms of the treaty by which she agreed to relinquish Manchuria, the removal of her soldiers and officials from one part of the country only concentrates them in another part—that is, along the line of her great railway, bisecting the province and connecting the trans-Siberian road with Port Arthur. By the terms of the treaty, Russia has a right to protect this railway, and she chooses to believe that its protection demands the presence in Manchuria of about two hundred thousand men, mostly soldiers.

●

The Dreyfus Letter

Last week a letter was published in the French papers, written by ex-Captain Alfred Dreyfus, under date of April 21, to General André, Minister of War. The communication is likely to have historical importance in the history of the Dreyfus drama. M. Dreyfus pleads that the court martial which sentenced him at Rennes was improperly influenced, (1) by the annotated document ascribed to the German Emperor, and (2) by the false

testimony of certain witnesses, and, reinforced by new facts, begs that an inquiry be instituted as to the further fraudulent practices only now discovered. The letter has caused agitation in France, not only by reason of its appeal for a reopening of the case, but also because of the dramatic recapitulation of the "Five Years of My Life." "Picture to yourself," implores Dreyfus, "the horrors of a soldier whose whole life was devoted to duty, to work, to loyalty, and to profound devotion to his country; and who in an instant is stripped of his good name and despoiled of the honor of himself and his children. For five years this soldier is subjected to horrible sufferings . . . amid the tortures of a murderous climate. . . . He is absolutely innocent of all crime, and struggles in vain to penetrate the mystery. . . . At last he is brought back to France, the guilty one is discovered, and the soldier hears himself proclaimed innocent by some of those who before reviled him as a traitor. . . . But, alas! if I returned to find the devotion of friends who have battled for truth, it was to find also that deadly hatreds had been unloosed. . . . My second condemnation was but an aggravated reaffirmation of what occurred in 1894." These words are none too rhetorical. When Esterhazy was recognized as the author of the treason, the same men who had cheated justice in 1894 sought to cheat it again five years later, and by practically the same maneuvers; that they succeeded in their aim constitutes, as *The Outlook* said at the time, the infamy of army judicature in France. Fortunately, in the inquiry now ordered there is hope for Dreyfus and hope for the dignity of French institutions.

#### The Little War in Somaliland

Since last autumn, when the startling check to British arms in Somaliland, East Africa, occurred, there has been little news from that region. During the winter and spring reconnaissances of dismounted troops have been ordered, the advance being a march in hollow-square formation. Orders were given that the square formation should be maintained during the halts. From recent news, it would appear that the hollow formation has not been of suffi-

cient military power to overawe the natives. At all events, they overwhelmed a hollow square last week, annihilating nearly two hundred men and a large number of officers. The pleasant feelings aroused in England by the unexpectedly favorable terms of British taxation for the ensuing year were chilled by the receipt of this intelligence, which recalled the early days of the Boer War. General Manning, commanding the British forces in Somaliland, has, it is evident, a more difficult task than has been supposed. With a large force he immediately started for Gumburru, the scene of the casualty, forty miles from his own station at Galadi, and on Saturday an engagement was reported by which Colonel Cobbe was relieved; 2,000 of the enemy, it is said, were killed by the British forces. While there is no more doubt about the ultimate result in Somaliland than there was in South Africa, it would not be surprising if the hardy native chiefs under the so-called "Mad Mullah" were to give the British troops as long a resistance as did the whites in the south. The possession of Somaliland has, of course, a strategic value, in the development of Anglo-African trade, in the building of the great Cape-to-Cairo railway, and because it commands, with the colony of Aden on the Arabian shore, the entrance to the Red Sea.

#### Unrest in Morocco

Last week's news from Morocco was certainly startling enough. It culminated in the announcement that Muley Mohammed, the Sultan's brother, had been proclaimed Emperor at Fez. Though this despatch is as yet unconfirmed, the news was not unexpected, since the Moroccan pretender, who is really only the leader of a rebellion, announced some time ago that he did not wish the throne for himself; he only wished the downfall of the present Sultan, on account of the latter's pro-foreign tendencies. Ever since Abdul Aziz began his reign, nine years ago, he has evinced a remarkable partiality for everything European—a tendency ascribed to the fact that his mother was a Circassian. As the pro-foreign tendencies of the Chinese Emperor are said to have been a principal cause of the Boxer Rebellion, so the pro-foreign tendencies of the Moroccan

Emperor became the chief cause of the recent insurrection in that country. The Emperor persisted in purchasing all kinds of goods from abroad, in introducing European methods of administration, and even in appearing in European dress. When the rebellion became really serious, he dismissed the Europeans in his entourage, but, as soon as he thought that he had crushed the insurrection, immediately resumed his bicycling, polo games, and foreign costumes, meanwhile recalling his European friends. Hence there was a second outbreak. This is more serious than the first, because it affects a larger region of country, extending even to the seacoast towns, the inhabitants of which are now so terrorized that in some cases they have asked for ships to be sent to take them away, on account of the large forces of mountaineers who are robbing them. Even such important places as Melilla and Tetuan have yielded to the demands of tribesmen, while Europeans traveling on the principal Moroccan highway—that between Tangier and Tetuan—have been robbed of animals and baggage. Mequinez, the headquarters of an American mission, and a town thirty-six miles from Fez, the capital, has been attacked and pillaged; it is believed that no Americans have resided in the place during recent weeks. At the capital itself discontent is increasing, owing to a great rise in prices, caused partly by the rebellion and partly by the drought. The superstitious think the drought due to the presence of the Christians at court, especially as rain has fallen at Marakesh, where there are no Christians. While these events are happening, the French Government looks calmly on, not ill pleased at a disintegration which makes a hoped-for reintegration more possible.

**Turkish "Reforms"** As a rule, the unspeakable Turk deserves little sympathy; but last week all the world had to acknowledge that he was in a sorry plight. To begin with, the foreign ambassadors at Constantinople had audiences with the Sultan in which, while acknowledging the Porte's good intentions, they urged the imperative necessity of immediately checking the Albanian disorders. These disorders have taken on a more

serious aspect since two of the new reform judges were shot by Albanians at Skutari. The other judges appointed under the reform scheme of the Powers now act in fear of their lives. The Albanians are also detaining the Sultan's reform commissioners as hostages, threatening that, if the native who shot the Russian Consul at Mitrovitsa, in North Albania, is executed for his crime, an awful revenge will fall on the Sultan and on the Christians who forced the death sentence. However, three trials by a Turkish court martial were required before this verdict was secured. In contrast with these facts, the Government's official statement of progress forms interesting reading. It asserts that the Courts of Appeal have been successfully reconstituted, half of the judges being Mohammedans and half Christians; but it declares that the Orthodox Bishops are dissuading Christians from accepting positions in the gendarmerie, alleging that they would be forced to become Muslims. The pay of the gendarmerie has therefore been increased by one-quarter, and the Government has assured the Christians in writing that their religion is in no danger. In Macedonia the institution of these reforms and the publication of these assurances do not seem to have made much impression. The Bulgaro-Macedonian brigand bands continue their programme of pillage, outrage, and murder, hoping thus to compel the Powers' intervention. At Opela, for instance, a sanguinary fight occurred last week, at which the revolutionists resorted to the use of dynamite, hurling bombs among the Turks, seventy of whom were killed or wounded. The next day, at Radovitz, a band of about five hundred insurgents, partly in Bulgarian uniform, was defeated by Turkish regulars. While Russia and Austria continue their apparently impassive attitude as regards measures other than diplomatic, a British battle-ship has sailed from Malta to Volos, on the Greek coast, close to the Albanian frontier. It is to be hoped that the British and Austrian Governments, recognizing their special responsibility for present conditions in the disturbed provinces, will now act in harmony with the Russian Government, instead of opposing any sensible plan of the last named, as they did twenty-five years ago. Wherever Slav Christians are in the great

majority, as in Macedonia, they come more naturally within a Slav than a Teutonic sphere of influence. At all events, they must be redeemed from the terrible Turk.

**England's Peace Budget** The English Chancellor, Mr. Ritchie, in presenting last week the first peace budget in four years, began with the remark that whereas his predecessors had been compelled to increase tax burdens, it was his privilege to reduce them, but he did not add—as a less optimistic mood would have required—that it was not his privilege to reduce them as much as his predecessors had increased them. The South African war, together with the short campaign in China, he reported, had cost nearly eleven hundred million dollars, of which less than a third had been paid out of current revenues, and less than a fifth could be recovered from the Transvaal and China. A full half of this vast sum, therefore, or \$550,000,000, was added to the permanent debt of the country. The interest upon this new debt, however, forms the smaller part of the increase in the nation's expenditures. The increased army estimates Mr. Ritchie regarded with great concern, and hoped soon to effect reductions in this field, but the increase in the naval estimates he regarded as inevitable and unalterable unless Great Britain's neighbors called a halt in their armaments. If this were done, however, he added, "Great Britain is fully ready to follow suit." The Chancellor stated that there were hopeful indications of a movement for lessened armaments, but, unfortunately, Italy is the only Continental country where this movement is strong outside of the ranks of the Socialists. The net result of the increased expenditures is that the peace budget this year calls for appropriations aggregating \$719,000,000, as against \$515,000,000 six years ago. Heavy as the war taxes had become, it was only possible for the Chancellor to propose a reduction of \$50,000,000 a year because of the return of peace. Forty millions of this sum the Ministry would grant to the income-tax payers, reducing their tax from six per cent. to four and a half, and the remainder would be granted to the whole consumers by repealing the new taxed grain. Sir William Har-

court, the last Liberal Chancellor, spoke for his party in condemning the Ministry for relieving the well-to-do classes more than the wage-earners. In Mr. Gladstone's time it became the custom to divide reductions in taxation, so that indirect taxes burdening the poor should be as much reduced as direct taxes burdening the property-owners. By the new budget the latter class get four times as much relief as the former. But the Liberal protest against this feature of the budget did not compare in warmth with the rejoicing over the repeal of the tax on grain, which a year ago seemed to threaten a return to the old system of taxing the bread of the wage-earners to "protect" the rents of the landlords. The abandonment of this grain tax also indicates flagging faith in the possibility of an imperial customs union, by which Great Britain and her colonies might grant each other preferential duties against the rest of the world.

**The Merger Decree Relaxed** To the surprise of the stock market, Judge Sanborn, of the United States Circuit Court—one of the four judges who had united in the decree against the Northern Securities Company—last week modified the injunction so as to permit the Company to pay to its shareholders the regular May dividend. At the hearing before Judge Sanborn the representative of the Attorney-General opposed the modification, taking the position that it involved permitting the company to continue to violate the law. Judge Sanborn, however, held that the major portions of the injunction forbade the Northern Securities Company from controlling the operation of the two competing railroad systems it had purchased in order to unite, and from voting their stock, and maintained that it was a matter of minor importance whether the company paid the dividends earned by these roads pending the decision upon its appeal to the higher courts. These dividends, he pointed out, would in the end go to the same parties, whether paid by the Northern Securities Company or by the railroad companies merged into it, and it would be a relief to the stockholders to get their dividends now. The Supreme Court, he argued,

had provided a rule by which judges granting injunctions might suspend them pending appeal, if the suspension would not affect injuriously the party securing the injunction. In this case the United States had secured the injunction, and he believed its interests were not affected injuriously by the modification granted. So far as financial interests go this is doubtless the case, but there is a public injury if the public in the slightest degree loses its confidence that its laws are enforced with the same rigor against the strongest corporations and the weakest individuals.

#### Disastrous Effect of Rate Changes

Week before last the people of the middle Northwest were astounded to learn that practically all the flour-mills in Minnesota and the Dakotas engaged in making flour for more than a local trade had closed. The great mills of Minneapolis, with a daily capacity of 75,000 barrels, and an average daily production of approximately 50,000, consuming over a million bushels of wheat a week, stopped their machinery, or continued to run only long enough to meet contracts. The mill-owners announced that they had shut up their mills because the discrimination against flour and in favor of wheat by the transportation companies had reached such a point that they were losing money. The immediate effect of the closing of the mills was to put the price of flour up from ten to twenty cents a barrel, and to throw out of work 2,500 men in Minneapolis and 2,000 at other milling towns. The millers announced that their mills would not turn a wheel until the transportation companies granted them fair rates. The rate on flour is nearly three times the rate upon wheat. The difference is so great that the Minneapolis mills, with all the economies of water-power and immense capacity, are not able successfully to sell flour in competition with the smaller Eastern mills in supplying the Eastern or export trade, or with the mills of Europe, though the latter use American wheat. The transportation companies assert that wheat can be transported much more cheaply than flour. The millers admit that it can be moved somewhat more cheaply, but insist that the present difference has passed the bounds of rea-

son. They also insist that the real interests of the railroads, which control the lake lines, is in making it possible for more and more wheat to be ground into flour in the Northwest, as the industry contributes directly and indirectly much more revenue to the railways than the mere hauling of raw wheat. The Minneapolis flour-mills, by far the largest in the world, were built up to their present eminence on a flour rate of 7.5 cents to Chicago per hundred pounds, and 18 cents to New York; to-day the rates are 10 and 25.5 cents, respectively. Fortunately, the manufacturers injured by this advance were able to make their protests heard both in railroad and legislative circles, and last week they received assurances of redress, which led them to reopen their mills.

#### The New Stock Exchange in New York City

Last week the new building of the New York City Stock Exchange was formally opened, and the opening marks another period in its history. It was formed in 1792, and its first meetings were held under the historic buttonwood-tree in front of the old Tontine Coffee-House in Wall Street. The Exchange has well lived up to the very first article of its constitution: "To maintain high standards of commercial honor among our members, and to promote and inculcate just and equitable principles of trade and business." The importance of the Exchange was well illustrated by Mayor Low in his speech at the dedicatory exercises. After referring to the projected expenditure of many millions of dollars by the Pennsylvania and New York Central Railways in construction work in New York City, the Mayor asked: "How could these things be done for our city if such institutions as this did not exist to make a market for the securities of these companies, and to enable the companies to secure from the banks the necessary facilities to obtain funds? This is a home illustration, but it is equally significant for the whole country. Before the end of this century it will be equally significant for the whole world." The Mayor was equally apt in referring to the new structure itself: "I think it no accident that, in building your new home, you have made

it beautiful. To me it signifies the idealism that characterizes the conduct of great business affairs. It is said that trade is sordid; but I think it is true that the man who is to succeed in it on a great scale must be gifted with the imagination of the poet." The building is indeed beautiful, as any building is likely to be which has for its architect Mr. George B. Post, and for the sculptor of its ornamentation Mr. J. Q. A. Ward. The new Exchange is in the form of a Grecian temple, constructed of Georgia marble, the severity and harmony of outline in grateful contrast with certain Philistine, complicated, and over-elaborated sky-scrapers in the vicinity. The demolition of the old Stock Exchange was begun just two years ago, and occupied a long time, because, first, the walls had been laid in cement and had to be blasted; secondly, the site was now surrounded by new and immensely tall buildings; and, thirdly, while the walls were being reduced, the safe-deposit vaults, which were in the center of the old building, about twelve feet below the street level, presented a delicate problem. Inasmuch as the floor of the cellar of the new building was to be thirty feet below the floor of the old vault, the slightest settling by a fraction of an inch in the mass of masonry and iron would have caused the doors to bind, and would have prevented access to the many safe-deposit boxes containing the securities of bankers and brokers who must have them for daily use. To show the excellence of modern methods, we may add that not once did such a state of things occur.

#### An Act in Favor of Disease

One of the Acts passed by the New York Legislature, just adjourned, is so obstructive to the public health of New York City and of the State that we sincerely hope the Governor will withhold his approval. The history of the act is this. Dr. Ernst Lederle, Health Commissioner of the City of New York, planned an outdoor charitable hospital, or camp, for consumptives, to be located in the pretty village of Central Valley, in Orange County, this State. The plan—although to some extent experimental—conformed with the very successful plan which the Health Board and the Board of Charities have accom-

plished in this city in fighting the scourge of tuberculosis. It has been very definitely proved by practical experience that tubercular patients and invalids, when living under hygienic conditions and control, are not a danger to the community in which they live. This is indicated by the community at Saranac Lake in the Adirondack Mountains, in which is situated the widely known sanitarium established by Dr. E. L. Trudeau. But some of the wealthy property-owners in the neighborhood of Central Valley, with what seems to us to be a very unreasonable if not an inhumane fear, brought such pressure to bear upon the State Legislature that Assemblyman Bedell introduced an act prohibiting any individual, association, corporation, or municipality from establishing a "hospital, camp, or other establishment" for the treatment of consumptives "unless the Board of Supervisors of the county and the Town Board of the town shall each adopt a resolution authorizing the establishment thereof and describing the limits of the locality in which the same may be established." No doubt all hospitals should be established and conducted under proper regulation. As a matter of fact, all hospitals, either in cities or in the country, are now subject to the regulation of the local and the State Boards of Health. The Bedell act, however, makes it exceedingly difficult if not impossible for tuberculosis hospitals, either private or public, to be built in the State of New York. For it is very unlikely that such an unwieldy body as would be composed of the county Board of Supervisors and the town Boards could agree on anything, whether it be a school, a hospital, or a village band-stand. It appears to those who are most interested in fighting the dreaded disease of tuberculosis that the act was framed for the very purpose of preventing the establishment by New York City of hospitals for consumptives in the country. Tuberculosis is one of the most terrible of diseases in its ravages. About sixteen thousand individuals die annually in the State of New York from it, and yet it is difficult to get the public to support the work of those faithful men and women who are doing what they can to cure the disease and alleviate the suffering arising from it. That it can be cured, prevented, and controlled is clearly proved by med-

ical statistics. In the city of New York, under modern methods of treatment, the deaths from tuberculosis have been very greatly reduced in number. One such modern method of treatment is the maintenance of patients in outdoor camps or hospitals. It seems to us unfortunate that intelligent men with influence and money should use their power to combat those who are fighting tuberculosis, in not only a humane and public-spirited way, but with scientific, hygienic, and successful methods.

**National  
Municipal League  
Convention**

The annual meetings of the National Municipal League serve to mark the progress of this country toward higher standards of municipal conduct and efficiency. The Detroit meeting (April 22 to 24) was no exception to the rule. The Secretary's annual report and the special reports from New York, Chicago, St. Louis, Minneapolis, and other cities, both large and small, were all hopeful in a marked degree. Perhaps the most striking paper was that of James L. Blair on the "St. Louis Disclosures," in which he completely and satisfactorily dispelled the recently prevalent idea that, notwithstanding all the splendid and significant work of Attorney Folk in convicting the rascals, the same old crowd was still in control. Of the six Councilmen elected at the recent election, five were men of the very highest business and social rank; the sixth, though not ranking so high, was yet much above the average partisan nomination. Likewise the twenty-eight nominations on both sides for the House of Assembly were above the average performances in the past. Mr. Blair also refuted the current impression of a misunderstanding between Mayor Wells and Mr. Folk, and that all the candidates indorsed by the latter were defeated. He showed how Mayor Wells has personally raised \$15,000 to enable Mr. Folk to pursue his prosecutions, and that the latter did not indorse any candidate, announcing that he would take no active part in any campaign because he thought it improper to do so in view of the peculiar nature of his office. The subject of instruction in municipal government in educational institutions was treated of in several brilliant papers, and a committee, with Superin-

tendent William H. Maxwell, of New York, as Chairman, was authorized to take up the work of extending the League's activities along these lines to the secondary and elementary schools. The need for such instruction was most clearly set forth. The idea of a closer federation of the National bodies interested in the various phases of the municipal problem was considered by J. Horace McFarland and representatives of the other bodies interested, and the idea of a civic alliance to promote this idea was heartily indorsed. The League's practical work in the direction of uniform municipal accounting was given deserved prominence. Although the committee has been but two years at work, its schedules have already been adopted in the Ohio cities and Boston, Baltimore, Providence, Detroit, not to mention a number of smaller communities like West Newton and Brookline, Mass. Charles J. Bonaparte was elected President in place of James C. Carter, who was made Honorary President, and Horace E. Deming, of New York, was made Chairman of the Executive Committee.

**The Boston  
"New Voters' Festival"**

A "New Voters' Festival" was held in Boston on Sunday, April 19, "Patriots' Day," the anniversary of the battle of Lexington. The service—for it was religious as well as patriotic in character—was held in Faneuil Hall, unconventionally and artistically decorated for the occasion. The "Boston Equal Suffrage Association for Good Government" had invited a large number of young men, those who had just reached, or were about to reach, voting age, to assemble and hear addresses on the duty of the citizen. The addresses were made by the Mayor, the Lieutenant-Governor, a member of Congress, two clergymen, and a Jewish rabbi. It is worth incidentally mentioning that the subject most frequently reverted to in these addresses was the value of immigrants as citizens, and that two of the speakers were foreign-born. On the programmes distributed there were printed suggestions as to proper "study of the affairs of the city, State, and country." Information was given concerning clubs and societies that would direct the aim of young citizens to

unselfish and patriotic service of the community and the Nation ; concerning prizes offered by the Equal Suffrage Association for essays on the city's government ; and, finally, concerning the names and Public Library numbers of useful books for new voters to read. The celebration, it is expected, will hereafter be annual. The fact that this meeting was devised and carried out by women who are organized to promote the cause of woman suffrage afforded an example of that spirit, too rare among reformers, which is willing to use other than favorite instruments for attaining the supreme end of all civic reform—the righteousness of the State. This meeting may suggest to other municipalities the adoption of some custom by which new voters can be welcomed and advised.

#### The Southern Educational Conference

The sixth session of the Southern Educational Conference, held in Richmond on Wednesday, Thursday, Friday, and at the University of Virginia on Saturday of last week, brought together a large number of men distinguished in educational and literary work, North and South ; and the exercises, held in the Richmond Opera-House, were attended by crowded and responsive audiences. Never before in the history of this great movement has so much popular interest been manifested, and it is doubtful if any previous meetings have been more stimulating. Mr. Robert C. Ogden's opening address struck the keynote of fraternal co-operation and broad educational advance. Governor Montague's welcome was more than cordial ; it was a forceful statement of the enlightened policy which has won for him, as for Governor Aycock, the significant title of "Educational Governor." The reports from the field by such educational leaders as Dr. Frissell, of Hampton Institute, Dr. Alderman, of Tulane University, Dr. McIver, of the State Normal College at Greensboro, N. C., President Dabney, of the University of Tennessee, registered the rapidity of the forward movement and gave a vivid impression of obstacles overcome and a tide of public opinion rapidly rising in all parts of the South. The programmes were devoted chiefly to practical subjects, such

as local taxation for educational purposes, consolidation of schools in rural districts, transportation of pupils, technical education, model schools ; and the addresses were strikingly progressive, hopeful, enthusiastic ; it was significant that reactionary notes, whenever struck, were heard in silence. Mr. St. Clair McKelway spoke frankly and fervently of the common work and feeling of the North and South, and at the closing session Dr. Lyman Abbott interpreted the Conference as one of the most impressive evidences of the reunited Nation. The hospitality of Richmond was without bounds ; and nothing was left undone of graceful and cordial courtesy and thoughtfulness.

#### Mr. Carnegie's Gift to Tuskegee

During this Conference a letter was made public, written by Mr. Andrew Carnegie to Mr. William H. Baldwin, Jr., one of the members of the Endowment Fund Committee of Tuskegee Institute, and a trustee of the Institute. In this letter Mr. Carnegie gives the sum of \$600,000 to the Institute, with absolutely no restriction except the one requirement that suitable provision be made for Principal Booker Washington and his family. It is known that Mr. Washington has unreservedly given his life to his work and has never had time to think of the ordinary and quite proper efforts of professional men to accumulate provision for the future. Mr. Carnegie well says : "I am satisfied that the serious race problem of the South is to be solved wisely only through Mr. Washington's policy of education—which he seems to have been specially born, a slave among slaves, to establish and in his own day greatly to advance." It was pointed out at the recent Madison Square Garden meeting in New York City that one great need of Tuskegee was that Mr. Washington should be able to give more of his attention directly to the management of the Institute, and that the only possibility of this lay in completing the proposed endowment fund. Already about \$400,000 have been raised for that purpose, and Mr. Carnegie's generous gift will complete the first million dollars ; another million will be required to put the endowment on a thoroughly satisfactory basis. Although

the 1,400 students pay their own board, usually in labor, and buy their own books, the expenses are necessarily very heavy, and the opportunities are practically boundless. It was particularly pleasing that the announcement of Mr. Carnegie's gift should have been made during the sessions of the Southern Educational Conference, in which men of both sections of the country were earnestly trying to systematize and perfect plans for the increase of educational facilities for both races throughout the South.

**The New President  
of the City College,  
New York**

Professor John Huston Finley, of Princeton, who was chosen last week to be President of the College of the City of New York, has had an unusual career as an educator. After graduation from Knox College, while a student in Johns Hopkins University, he began to contribute by his writings to the discussion of sociological topics. He then became Secretary of the State Charities Aid Association of New York. When he was only twenty-nine he became President of Knox College, Illinois. From there almost directly he went to Princeton University, where he has since occupied the chair of politics. While at Princeton he adopted unconventional and effective methods for acquainting his students with the political methods of different countries, by organizing them into legislative bodies. Dr. Finley has also done considerable literary and editorial work. He will be expected to achieve lasting changes for good in the institution of which he is now the President-elect. The College of the City of New York is a free college—a part of the public-school system. It is one of the three or four colleges in the United States that are under city control. The oldest of these is the picturesque College of Charleston, S. C., which dates from the eighteenth century. The College of the City of New York is, on the other hand, we believe, actually the youngest, having been founded as a high school in 1847 and having been made a college as late as 1866. But its value to the city has been very great; it has done much to democratize higher education, and, like the system of which it is a part, has aimed to make the instruction which it

has furnished practical rather than merely academic. Next fall the corner-stone of the first new building on its new site, on the heights uptown, will be laid, and at the same time the new President will be installed.

**The Work of the  
Methodist Episcopal  
Church**

Two measures of far-reaching importance are now before the Methodist Episcopal Church for consideration. The first has to do with the unification of the publishing interests, and involves a number of radical changes. At the present time the publishing department of the Methodist Episcopal Church is conducted by the Methodist Book Concern and the Western Methodist Book Concern—the former located at New York and the latter at Cincinnati—and there are depots in various cities. The Book Committee at its recent session in this city drew up a paper, which is to be presented to the next General Conference, in which it recommends that there be one publishing house, called the Methodist Book Concern, and that all the publishing interests of the Church be conducted by that establishment. The plan is to consolidate the manufacturing plants now existing at New York, Cincinnati, and Chicago, and locate the new plant in a place contiguous to some large distributing point. The impression is that this new location will be in a small town in the region of Chicago. The conduct of the publishing interests is to be under the direction of a Publishing Agent elected by the General Conference, instead of four Publishing Agents as at present. The plan also calls for sub-agents at New York, Cincinnati, and Chicago; and there are various other details which give the entire measure an exceedingly radical aspect. It is claimed that in these days of the consolidation of business interests the Methodist Episcopal Church should fall in line and develop its resources to its greater financial benefit. The advocates of unification claim that over one hundred thousand dollars a year will be saved by their plan, and that in a short time the annual dividends appropriated to the superannuated ministers of the Church, which are a part of the earnings of the Book Concern, will be greatly increased.

The second proposition comes from a Commission, appointed in accordance with the action of the last General Conference, which has had under consideration for the last two years a plan for the consolidation of the benevolent societies of the Church. At present there are six such organizations—the Missionary Society, the Board of Education, the Board of Church Extension, the Freedmen's Aid and Southern Education Society, the Sunday-School Union, and the Tract Society. The headquarters of four of these organizations are in New York; the Church Extension office is located at Philadelphia; and the Freedmen's Aid and Southern Education Society has its headquarters at Cincinnati. The plan proposed divides and combines these societies into three new organizations: a Board of Foreign Missions, with headquarters at New York; a Board of Home Missions and Church Extension, with headquarters at Philadelphia; and a Board of Education, with headquarters at Cincinnati; this latter board to be composed of the present Board of Education, the Sunday-School Union, the Tract Society, and the Freedmen's Aid and Southern Education Society. This plan is quite as radical as the proposition for the unification of the publishing interests of the Church, and together they are sure to produce a considerable amount of debate. It is impossible to forecast the action of the General Conference, but it is quite likely that both of these measures will be adopted, with modifications.

**A Union Service in Holy Week** The opportunity which Holy Week affords for union services of churches of different denominations was exemplified in the borough of Kittanning, Pa., this spring. The rector of the Episcopal church there, the Rev. F. C. Hartshorne, who directed such a service, writes us that it "was rendered possible by the cordial co-operation of the ministers of the various churches, and, owing to their influence, the chorus was composed of singers belonging to many different churches." The service was held in an Opera-House. It had been widely advertised. The place was crowded with a heterogeneous audience, including many children. The narrative of the week was

read in the words of the New Testament until the event of the crucifixion was reached; then Stainer's "Crucifixion" was sung; then the narrative was resumed through the events of Easter Day. The whole was illustrated with stereopticon pictures. Upon the audience, which was composed only in part of usual churchgoers, this made a strong impression. The people were quiet and reverential throughout the entire service. Mr. Hartshorne estimates that from one-half to one-third of the population of the town, excepting the aged, the sick, the incapacitated, and infants, were present; and he comments: "It proves that, whether church attendance falls off or not, the power of Christ to draw is as great as ever; and the problem is to find ways in which to lift him up. . . . It was noticeable at the time, and from comments heard afterwards, that the more refined and artistic the picture, the greater the impression it made." He mentions the religious atmosphere that prevailed in spite of the unconventional character of the service and the place in which it was held, and adds that it certainly "was something to have brought the facts of the Passion, Crucifixion, and Resurrection to the attention of twelve hundred people." If there is any time above another when denominational differences ought to disappear, it should be in the celebration of these events, and it is for that reason that this service seems to us worthy, not only of notice, but also, in its spirit at least, of imitation.

**Tennessee Almost Saloon-Free** In the Southern States the anti-saloon movement continues to make steady advances, and to-day very much the larger part of the territory south of Mason and Dixon's line is free from saloons in which liquor can be bought to be drunk on the premises. A fortnight ago we published an account of the recent advances in North Carolina. This week a correspondent in Tennessee sends us an account of the advances that have been made there. Anti-saloon legislation in Tennessee began, he says, in 1873, when Major Fairbanks, then associated with the University of the South at

Sewanee, secured the election of a legislator pledged to propose a law forbidding the sale of liquor within four miles of the University. The bill for that year was defeated, but it was reintroduced two years later and passed. In 1877 the law was broadened so as to forbid any sale in the rural districts within four miles of any incorporated institution of learning. A little later the act was still further broadened so as to forbid sales within four miles of any school. This act practically forbade the sale of liquor outside of incorporated or chartered towns. So popular, says our correspondent, was the prohibition that "some towns having charters surrendered them and did without town government in order to come within the provision of the law." It was the existence of this law that kept the State from adopting the prohibitory amendment submitted in 1884. The people believed that they had in the four-mile law practically all the prohibition that could then be enforced. Two years ago, however, agitation against the liquor traffic was renewed with great vigor, and a bill was passed in the Legislature extending the four-mile law to all towns of less than two thousand people which should hereafter become incorporated. Soon after the passage of this act "nearly all the towns in the State, in this class surrendered their old charters and became incorporated anew in order to come within the provision of the law." Last year the Anti-Saloon League, which had secured this broadening of the law, entered upon a new agitation and secured the extension of the four-mile law to all towns of less than five thousand people which should hereafter become incorporated. This act, says our correspondent, was passed early in the recent session, and the "greater number of towns affected began at once to take steps toward getting rid of their old charters." At the present time there are only eight cities in the State in which liquor may be sold to be drunk on the premises. Tennessee thus has achieved the enviable position of suppressing the saloons, wherever their suppression is made practicable, by the honest sentiment of the people, without enacting a State prohibitory law to be nullified by perjured officials or genuine public opinion in the larger cities.

## Public Ownership Conflicts

The exciting scenes of last week in the Legislatures of New York and Illinois all turned upon the public ownership of city franchises. In New York the advocates of the city's rights in this field met with a succession of defeats—but they were in the main defeats by narrow majorities for bills which could not have commanded a handful of supporters six years ago. The most important measure, perhaps, was the bill introduced by Mr. Robert Grier Monroe, the Fusion Commissioner of Public Lighting in New York City, authorizing the city government to construct its own electric plant for the lighting of city streets. Mr. Monroe's report in favor of this proposal, showing the absence of competition among the private lighting companies and the extortionate charges paid by New York City—especially when compared with cities having their own street lighting plants—is one of the most convincing arguments for public ownership that has yet been submitted. Commissioner Monroe's report, and the indorsement of it by the Merchants' Association of New York City, give the cause of municipal lighting a prestige it has not before enjoyed in the Nation's financial center. The other important bill defeated was that authorizing the city of New York to construct rapid transit subways independent of those already under way, and lease them to operating companies for not more than twenty years. This measure, known as the Elsberg bill, was drafted by the Citizens' Union, and indicated the advanced attitude of that great organization in favor of the immediate public ownership of municipal monopolies and more rigid public control of the operating companies. The one defeat for public ownership which left the public poorer was the passage of a bill reviving charters of a great suburban trolley company which had lapsed because of non-usage. The possession of these charters had for years enabled the company to keep competitors from constructing lines on the streets covered, although the company itself did not render the service delegated to it. The final lapsing of the charters should have restored to the municipalities concerned

the right to re-lease them to any company on the best terms obtainable. The act of the Legislature in restoring them to the old company, without price or conditions, was a flagrant betrayal of public rights. Fortunately, even here the opposition that the bill aroused bespeaks the great public awakening that has taken place in this matter. The metropolitan press condemns the "grab" bill, and Governor Odell may yet veto it.

In Illinois the conflict upon the same subject has been even more violent, and the evidence of the great public awakening still more striking. After the municipal election, as well as before, the Republican and Democratic candidates for Mayor have stood shoulder to shoulder in their vigorous demand for legislation authorizing the city of Chicago to own and operate its trolley lines. Behind them, too, has stood the reformed City Council. Practically the whole city has stood back of the Mueller bill, freeing the hands of the city to deal with its street railway problem as it saw fit. The bill had passed the Senate, yet the powerful private interests opposing it were able to dominate the House committee to which the bill was referred and report a substitute entirely unsatisfactory to the people of Chicago. It soon became evident that while a majority of the Legislature was willing to carry out the policy of the overwhelming majority of the people, the machinery of the House was in the hands of those who wished to force the city of Chicago to make a new contract with the old traction companies—many of whose franchises are about to expire—before the city was in a position to turn to other bidders or undertake the service itself. The Speaker of the House showed himself ready to take practically any action demanded by the opponents of the city's emancipation, first dexterously failing to recognize members rising to put motions in behalf of the city, and finally openly refusing to allow roll-calls demanded by a majority of the House. This high-handed action the Speaker lamely defended by claiming to be governed by vague reports that bribery was being used to advance the measure desired by the public—a report which seems now to have originated with a newspaper man, who is openly and widely alleged to be servilely devoted to traction com-

pany interests. When the Speaker thus brazenly refused to discharge the duties of his office, members rushed toward the chair, a wild *mêlée* ensued, the Speaker fled, another representative was seated in his stead, and the Mueller bill was passed by the reorganized majority. The day following the House declared its want of confidence in its Speaker. The Speaker is to be given an opportunity to defend his course before an investigating committee appointed, and it is likely that no extreme charge can be proven against him, but the course already taken by the determined majority is significant of the public resolution to obtain the rights demanded for the city of Chicago.

These rights ought to be the city's for the asking. The Mueller bill in Illinois, like the Monroe and Elsberg bills in New York, simply asks for public corporations the rights everywhere enjoyed by private corporations. None of these measures proposes to force the cities of Chicago or New York to operate their own lighting or transit systems. The measures simply authorize the cities to do this if they see fit. One of the most telling arguments used in favor of the Monroe bill in New York is the fact that a great many private corporations, by reason of their right to put an electric lighting plant in their own buildings, have saved thousands of dollars—sometimes by the cheapness with which they can make their own light, and sometimes by the low rates granted them by the electric lighting companies to keep them from making the experiment. Municipal corporations should be armed with the same weapon of self-defense. In every field of governmental action it is being found that the right of the government to furnish its own supplies is the surest guarantee against extortion from contractors. In the last issue of the "Atlantic Monthly" Mr. George C. Sikes points out that the Senate amendment to the Naval Bill two years ago, authorizing the Department to construct its own armor-plate works if it could not secure reasonable terms from private companies, resulted in the receipt of bids twenty per cent. less than Congress had been on the point of granting before the public ownership amendment was carried. In the municipal field the same advantage has been experienced again and again. The first

street railroad in America to grant three-cent fares was in Toronto, Canada, and there the then unprecedented offer was made to the public only because the city itself had taken over the roads and favorable terms were necessary to prevent municipal operation. Similarly, in the electric lighting field the great reduction in street lighting charges secured by the public operation of lighting plants is not more striking than the reduction in the bids made by private companies since municipal competition entered the field. If cities are to secure good service from private companies, they must be made free to serve themselves if private companies refuse reasonable terms. Better than either private operation or public operation in many communities is the right of the public to choose between them.

## A Voice from the Past

No one who is familiar with the history of this country will question that Henry Ward Beecher was a friend of the African race. He was one of the first to enter the lists in behalf of that race. Before he had graduated from college he spoke for the negro. Before he had graduated from the theological seminary he bore arms for the negro in Cincinnati against the mob. He plead for him, bearing witness against American slavery, in Indianapolis, where there was no prejudice against slavery and much prejudice against abolitionism. The first Sunday that he preached in Brooklyn he reaffirmed his loyalty to liberty. When the compromise measures were proposed in Congress, he outlined the principles which the Republican party afterwards adopted as its platform, and upon which it elected Abraham Lincoln. In all these years he faced obloquy, reviling, threatening. There is more than mere historical interest in reading what this man said in 1865, six months after the assassination of Abraham Lincoln, and two months before the notable speech of Thaddeus Stevens in the House of Representatives in behalf of the reconstruction measures afterward adopted, based upon universal suffrage. This is what Mr. Beecher said:

All the laws in the world cannot bolster a man up so as to place him any higher than his

own moral worth and natural forces put him. You may pass laws declaring that black men are men, and that they are our equals in social position; but unless you can make them thoughtful, industrious, self-respecting, and intelligent; unless, in short, you can make them what you say they have a right to be, those laws will be in vain. . . . I am satisfied that while we ought to claim for the colored man the right to the elective franchise, you will never be able to secure it and maintain it for him, except by making him so intelligent that men cannot deny it to him.

Prophetic words. The Nation disregarded the wise counsels of such counselors—and he was but one of many. Congress gave political power to the African first, and trusted that he would acquire political wisdom afterwards. It was a grievous error, and grievously has the Nation suffered for it. And the negro has been the worst sufferer. To give a race the ballot before it has been taught its meaning is to give a child a gun before he has been taught how to shoot. It is worse than that. Man is emerging from the brute. He is as yet, at the best, imperfectly developed. To give him political power before the brutal appetites and passions have been brought under the control of the higher reason is to enthrone the brute in him and in so far to enthrone the brute in the community. No man is prepared to control others until he is prepared to control himself. That ought to be axiomatic; but the doctrine of universal suffrage denies it. Brood the egg and the bird will appear. Wait till he is fledged and the bird will fly. America tried the experiment of throwing the egg out of the nest as soon as the bird's head appeared though a crack in the shell; and the consequences were disastrous.

We do not defend the recent suffrage laws in the South. Suffrage should depend on character, not on the color of a skin or the accident of birth. Ignorant, incompetent, and corrupt suffrage is no better for being white. The States which have shut off ignorant and corrupt suffrage which is black will suffer from permitting ignorant and corrupt suffrage which is white. But neither the State, the Nation, nor the negro was benefited by an unconditional suffrage; and neither would be benefited by a return to it. The inequity is in allowing incompetent white voters, not in disallowing incompetent

negro voters. And it is well to remember two facts: First, that in all the Southern States the negro can acquire the right to vote by qualifying himself. We do not think that in any State the qualification is put so high as to be prohibitive to the aspiring and the energetic. Second, that probably fewer negroes are excluded from voting by the law than before were excluded by lawless methods. Practically, in most of the Southern States, the negro is as well represented since the recent legislation as before; perhaps better represented. A hundred votes that are respected and counted are of greater value than a thousand votes that are neither respected nor counted. A hundred votes that represent the intelligence and will of the voter are of more value to the race than a thousand votes that are purchased at two dollars apiece. In fact, the first votes are of value to the race, the latter are injurious to the race.

What, then, Mr. Beecher said in 1865 *The Outlook* repeats in 1903: it is the key to the whole situation; in it lies the secret of the true enfranchisement of the negro; it discloses the only possible method of securing to the negro the political privileges and prerogatives which are coveted for him, which—of that we are not so sure—perhaps he covets for himself. “You will never be able to secure the elective franchise for the negro and maintain it for him, except by making him so intelligent that men cannot deny it to him.” This was true then; it is true now; it is always true. The question of suffrage can wait; it is secondary. The question of education cannot wait; it is primary. Suffrage depends on education. Even if it did not, education is far more important than suffrage. If the negro is educated, he will prosper, even if he cannot vote; if he can vote, he will not prosper unless he is educated. Manhood suffrage may be important; but the manhood is more important than the suffrage, and the manhood must precede the suffrage. Nine millions of negroes, soon to become fifteen millions—who can estimate the wealth they will add to the country if they are chaste, temperate, honest, intelligent, industrious? Who can estimate the burden they will be to the country if they are licentious, intemperate, idle, dishonest, ignorant? “All the laws in the world

cannot bolster a man up so as to place him any higher than his own moral worth and natural forces put him.” Our problem is not to bolster up the negro with laws, State or Federal, but to inspire him with moral worth and develop in him natural force. “Unless you can make them thoughtful, industrious, self-respecting, and intelligent; unless, in short, you can make them what you say they have a right to be, those laws will be in vain.” Our problem is to make them thoughtful, industrious, self-respecting, intelligent. Then those laws will not be in vain.

## To Parents and Teachers

Eighteen years have elapsed since the beginning of a movement in public-school work in this country which has been carried on with a quietness surpassed only by its importance and value. In 1885 Mr. J. H. Thiry, who in early manhood had left his home in Belgium for America, an immigrant who came to give, as well as to receive what the New World offered, was appointed School Commissioner for Long Island City, in the State of New York. At this time press and public were aroused over the prevalence of cigarette-smoking among boys and gum-chewing among girls—habits which were spreading to an alarming extent throughout the school population of the country. To Mr. Thiry, remedy for these enticing and injurious indulgences seemed to lie not in restrictive measures. If the children have some other use to make of their money, he argued, they will not spend their pennies for gum and tobacco and such self-gratifications. When a young man, he had taught for a few years in a normal school in Belgium, and remembered the system of savings in the schools of his former home and in other Continental cities. He wrote to the Ministers of Instruction of various European countries for the methods and statistics of this branch of their work. With these before him he devised a plan adapted for use in this country. Co-operation of savings bank, principal and teachers was gained, and in March, 1885, in one of his schools in Long Island City the plan was put in operation.

It would at first seem complicated to

take a penny here and a nickel there from four or five hundred children, and keep the accounts in order, but practically there are no difficulties. On Monday morning at roll-call each child, as his name is called, brings his week's savings to his teacher. Beside his name on the roll-book the amount is written. A hasty addition is made, the money is put into an envelope, sealed, and sent to the principal. The principal takes the envelopes which come to him from all the classes, makes a note of the teacher's name and the amount written on the outside of the envelopes, and gives them to the janitor to be taken to the bank. Mr. Thiry has sometimes met a janitor on his way to the bank with envelopes amounting to seventy-five dollars—and this from a school in a city which would not be considered the most prosperous in the United States. It is not to be wondered that American children have the reputation of handling more money than the children of any other country.

At the bank the money is carefully counted. On the first Monday morning in each month the teacher sends the roll-book containing the name of each child and his weekly deposit to the bank. These are recorded, and a small bank-book is issued to each child when his deposit has reached the sum of one dollar. A few long-established banks have objected to undertake the extra bookkeeping involved, but all those which have accepted the school savings have found more than compensation in their increased number of depositors, for in many families the parents followed the child, and his bank-book was the means of his father and mother having one also.

In some schools details slightly differ, but the system as first adopted has proved both adequate and admirable. In over fifteen hundred schools throughout the country it is now working, and every week brings to Mr. Thiry requests from other schools for information and blanks concerning his system. Sometimes he is invited to visit a school to explain and inaugurate the plan. He always tells the children that it is not the money he is after; that is a small thing. The object is to foster the habit of saving, of providing for the future, of teaching them that a coin given or earned is not to be spent

for the gratification of the moment, but represents a power to be rightly used; that the self-denial and self-control which saving indicates are the basis of all manhood, all citizenship, all right living.

Money can be drawn out by the child alone, but by him only with the written indorsement of parent, teacher, and principal. The whole object would be defeated if a quarter or a dollar were constantly withdrawn, or could be taken back as easily as when one shakes a toy savings bank upside down; for the aim is to promote regularity. While in some period of family distress the child's savings have often proven a blessing, his teacher can guard him against unjust demands from home. For if father or mother too frequently visit the saloon, and the child is told, "Johnny, you have twelve dollars in the bank; you can let me have two of them," the teacher, knowing the probable disposition, can decide which parent must sign the indorsement.

Once a year Mr. Thiry writes to each school where the plan is followed asking for the year's statistics, that he may prepare an annual report. Certainly the beanstalk that reached the sky after a night's growth of a tiny bean, and the farthings for the horseshoe nails that netted a fortune, are not more marvelous than these cold figures, which show at once how much money the children have, and how much they might have wasted. In Long Island City, during these eighteen years, one hundred and fifty-one thousand dollars has been deposited, and to its three thousand school depositors is now due thirty-five thousand dollars. In Los Angeles, California, the plan has been in operation since 1900; from its fifty-three schools thirty-eight thousand dollars has been collected. Owosso, a town in Michigan, began to save two years ago; the children of its four schools have now in the bank one thousand nine hundred and seventy-seven dollars. These places are taken at random from the returns the principals send, generally with some word of appreciation of the benefit they have found coming to their communities and their pupils from this effort to put in practice the old-time, homely virtue of thrift.

The Outlook commends these facts to the consideration of its readers, and espe-

cially of teachers, school authorities, and parents throughout the country.

## Power and Resistance

In a recent volume of "Sermons" bearing the imprint of Messrs. E. P. Dutton & Co., New York, by one of the most thoughtful men who has spoken from a New York pulpit for many years—the Rev. Dr. Jacob S. Shipman—a phase of the Christian life is presented which many people are in the habit of overlooking or ignoring. Many earnest men and women are persuaded that if they were living in the Middle Ages it would be easy for them to be saints, and that they are not saints because of the distractions of modern life. They imagine that if they were taken out of the turmoil, and released from the claims of a hundred so-called secular duties and the pressure of an immense amount of so-called secular work, they could develop their spiritual natures without delay or hindrance. There are hosts of people who still associate the religious life exclusively with the atmosphere of the Church, and who look upon all out-of-church life as essentially antagonistic to the development of the spirit and inimical to its interests. This is, of course, a survival of a very partial view of religion, but it is still quite general, and many persons are misled by it because they have never analyzed the real sources of religious power, nor have they ever clearly and adequately defined for themselves the real scope of the religious life. A life spent in devotion, with sacred images around them, with chants, hymns, and the subdued light of great church windows, and the associations of worship, seems to such people all that would be necessary to create the religious atmosphere and develop the religious character.

Dr. Shipman very clearly points out that in locomotion two things are necessary—power and friction. The locomotive cannot move if there is a glare of ice upon the track; it cannot take hold of the rails. The bird ascends, not only because it has the faculty of flying, but also because it meets with the resistance of the air. In the development of the religious life there must be the presence of these two elements—power and resistance. Without resistance the power re-

mains undeveloped; there is no gain of strength, no toughening of the muscle, no conquest of temper, no assertion of principle; in a word, no character. In the Church, in all its forms of worship, the soul finds its motive power, gathers its strength, prepares itself for its growth; but it is in the world in which it meets resistance that it uses this power, increases it, and turns it into moral strength. "We worship God that we may get strength from him to do our work in life religiously. But that work is not here in the church; it is at home, amid the nameless worries of those noisy children, in the shop, the office, the field. Wherever your daily occupation is, wherever your daily trials are, there is your religious work. If religion consisted in praying and singing and feeling good, then, I grant you, the time devoted to the everyday duties and drudgeries of life would be so much time lost. But, as religion consists, in fact, not simply in acts or emotions, but in character—in being loving and pure and patient and honest and truthful—I can conceive of nothing more favorable to the best religious culture than a life filled to overflowing with the very commonest of duties and cares."

There is a profound truth in this statement which many good people overlook. The resistance of the world, and in many cases its antagonism, are quite as essential to the growth of the spirit as acts of worship. Without that resistance no man or woman is ever thoroughly tested, and without testing there is no final development of character. We are slow to learn and quick to forget that the division between the so-called religious and the so-called secular is of human and not of divine making. Not until we recognize that all things were made by God for the highest uses; that the body is in its way as sacred as the mind, and the mind as sacred as what we call the soul; that the home is as religious as the church; that to public life is due the same conscientiousness that is brought to worship; that men are saved, not by their creeds, but by their characters, and that no man can really love God, whom he cannot see, unless he loves his neighbor, whom he can see, do we enter into the fullness of the religious life, or grasp the conception that Christ lived and died to interpret to man.

RALPH WALDO EMERSON

The centenary of Emerson's birth will be observed on May 25

# CONCORD AND EMERSON

*By Hamilton Wright Mabie*

*With pictures by Elizabeth Wentworth Roberts*

EMERSON'S FAVORITE CORNER

EMERSON was born in what has become one of the busiest sections of Boston; but when the future poet and thinker opened his eyes in this world, on the 25th day of May, 1803, it was in a Congregational parsonage "in the silence of retirement, yet in the center of the territory of the metropolis," where, to continue the words of his father, "we may worship the Lord our God." That was the lifelong occupation of Ralph Waldo Emerson, and it is interesting to note that from the beginning it was singularly free from conventions and forms of every kind. Nature is, to most men, a middle term between God and man; to Emerson it was a common ground over which the Universal Spirit always brooded, and where the open-hearted might happen upon inspiring hours. He felt the sublimity of the Psalms of David, and the noble swell of the *Te Deum*, the ancient hymn which the centuries have sung in antiphonal worship, never left him cold; but his highest thoughts came to him in the broad silence of summer afternoons in the fields, or when the stars kept up the ancient splendor of the wintry

heavens. "Boys," Dr. Holmes reports him as saying to two youths who were walking with him as they entered the wood, "here we recognize the presence of the Universal Spirit. The breeze says to us in its own language, How d'ye do? How d'ye do? and we have already taken our hats off and are answering it with our own How d'ye do? How d'ye do? And all the waving branches of the trees, and all the flowers, and the field of corn yonder, and the singing brook, and the insect, and the bird—every living thing and things we call inanimate feel the same divine universal impulse while they join with us, and we with them, in the greeting which is the salutation of the Universal Spirit." In the life of the author of "Wood-notes," as in that of the author of the great ode on "Intimations of Immortality," Nature was a background so intimately and reverently lived with that the work of both poets was not only colored but penetrated by it.

Favorable conditions conspired in Emerson's ancestry, birth, and childhood to make him peculiarly sensitive to the influence of star and field and wood, by familiarizing him with the simplest habits of life and centering his interest in the things of the mind. He was the child of a long line of highly educated and poorly paid ministers; men who had the tastes and resources of scholars, but whose ways of living

THE PINES OF WALDEN

were as frugal as the ways of the poorest farmers to whom they preached. "We are poor and cold, and have little meal, and little wood, and little meat," wrote his father at the close of his Harvard pastorate and on the eve of the removal to Boston, "but, thank God, courage enough."

The moral fiber of the stock was as vigorous as its life had been self-denying and abstemious; but it must not be imagined that the long line of ministers behind Emerson were pallid ascetics. When his father was on the edge of death, he wrote to a relative: "You will think me better, because of the levity with which this page is blurred. Threads of this levity have been interwoven with the entire web of my life." This touch of gayety could hardly be called levity; it was, rather, the overflow of a very deep spring in the hearts of a race of men and women who kept their indebtedness to external conditions at the lowest in order that they might possess and use freely the amplest intellectual and spiritual means. Again and again, in the simple but noble annals of this family, whose name was on the college roll in every generation, one comes upon the fruit of this kind of frugality of appetite in the fine use of common things, and, above all, in an intimate sense of access to Nature

and the right to draw freely on her resources of beauty and power.

This ancestral heritage of simple fare and good books first comes to light in the little community with which the greatest of the long line of scholars and teachers is so intimately associated that to think of "Nature" and "Wood-notes" is to see Concord lying in quiet beauty in a tranquil New England landscape. There were Emersons in the pulpit in Ipswich and Mendon, but it is upon Peter Bulkeley, grandfather at the seventh remove of Ralph Waldo, that attention rests as typical ancestor. He was descended, one of the oldest of the colonial chronicles tells us, from an honorable family of Bedfordshire; educated at St. John's College, Cambridge, of the rich tone of whose second quadrangle Ruskin spoke with glowing enthusiasm; was given a goodly benefice, but found himself later unable to conform to the services of the English Church; came to New England in 1635, and after a brief stay in Cambridge "carried a good Number of Planters with him, up further into the Woods, where they gathered the *Twelfth Church*, then formed in the Colony, and call'd the Town by the Name of Concord."

This pioneer scholar is described as a well-read person, an exalted Christian, who had the reverence not only of his own people but of all sorts of people throughout the land, and especially of his fellow-ministers, "who would still address him as a "Father, a Prophet, a Counsellor on all occasions." He had, we are told, "a competently good stroke at Latin Poetry," and he gave no small part of his library to Harvard College. William Emerson, who came five generations later, was as notable a leader in Concord as his great-great-grandfather had been. He preached the gospel of resistance to tyrants and practiced it as well; for he left the pulpit in Concord to join the army at Ticonderoga. When the miniature but immensely significant fight in which

"... the embattled farmers stood,  
And fired the shot heard round the world," took place at the bridge, he stood on the steps of the Old Manse, which he had built ten years before, and

EMERSON'S DESK

EMERSON'S HOME FROM THE ORCHARD

was kept out of the fray only by the vigorous intervention of his friends.

In 1834, when Ralph Waldo Emerson was at the end of his period of apprenticeship, had withdrawn from the pulpit and made his first memorable trip to Europe, he went back to the Old Manse in Concord as to his ancestral home; henceforth he was to know no other. His grandfather, Dr. Ripley, sustained in the famous old house the best traditions of his race; "he was a natural gentleman," wrote Emerson in a charming character study; "no dandy, but courtly, hospitable, manly, and public-spirited; his nature social, his house open to all men. His brow was serene and open to his visitor, for he loved men, and he had no studies, no occupations, which company could interrupt."

In September of the following year Emerson took his young wife to live in the house which was to be his home to the end, and which has become, by reason of its association with him and his friends, one of the places which both illustrate and interpret American life at its best. The village of Concord was then the quietest of rural communities; no trains connected

it with Boston; no literary pilgrims visited it; no city folk had discovered it. It was rich in historical associations; it had long been the home of a small group of families of social and intellectual distinction; the memories of its heroic age were still fresh in the minds and hearts of elderly people; but it did not stand out as yet on the map of the modern world. It was what Dr. Holmes would have called a Brahman town; in quality and dignity of character and habit it held a place by itself; and when, later, three or four men of genius made it famous, it seemed as if they had revealed Concord to the world rather than imparted to it a sudden prestige by reason of their residence there.

The country which was to be the background of Emerson's life and work was in such consonance with his temper and habits that, as in the case of Wordsworth and the English lake country, it is not fanciful to trace a real rather than an accidental relation and resemblance between the men and the landscapes they loved. In a very true sense, all history and all countries were behind Emerson's thought and work; he seemed to have the two hemispheres in his brain, one

lobe, being Oriental and the other Occidental. In certain moods he was of the East as distinctly as in the applications and urgency of his thought he was of the West. He was akin with Saadi in the breadth of his view and the catholicity of his experience; and he was brother to Hafiz, not in physical delight in fragrance and melody, but in instinctive ease in softening the hard line of the fact by evoking its mystical significance. He was enamored of Plato, and spoke of him with more warmth of advocacy than was in his tones in urging the claims of any other man of representative genius. He valued the Roman power of organization; he felt the immense sense of reality in Dante's symbolism of the experience of the soul in the three worlds; he had read nearly all the fifty-five volumes of Goethe that he owned in the German, although he was never a methodical reader, and he was in deep sympathy with Goethe's great contemporaries; and he was at home in the wide range of English literature. He moved lightly through the storehouse of the past, with sound knowledge of what it contained and with a sure instinct of finding what was of value to him. He borrowed generously, as he had a right, from the capital of the race, and in every case he repaid the loan at a high rate of interest.

Cosmopolitan as Emerson was in his interests, his surroundings, his tastes, he was nevertheless a true New Englander of the Concord quality. No one roamed further, but no one was a more devout home-keeper. He was eager to get the spiritual product, the deposit in the spirit, of the strain and storm of life; but he hugged his own hearth and was content to hear faint echoes of the tumult of life in the distance. A cosmopolitan in the range of his intelligence, he was a provincial in his habits and personal associations; and this was the prime characteristic of Concord. To a European it must have been a place of extraordinary contrasts; it was the home of the loftiest idealism and of the simplest manner of life. The little group of men and women of culture, among whom Emerson took his place by personal and hereditary right, shared this habit of rural or rustic simplicity with the farmer folk who surrounded them. In the old-fashioned farm-houses,

which stood and still stand along the roads or hidden among trees in sheltered nooks, there was a mingled air of thrift and generosity. They were built on ample lines, and their frugality was tempered by hospitality. The living was of the plainest; the mug of hard cider and the pot of beans were in every house; but there were also reverence, sobriety, respect for learning, the peace of God, and a love of liberty that had elements of passion in it.

"These poor farmers, who came up that day to defend their native soil," said Emerson in a memorable historical address, "acted from the simplest instincts; they did not know it was a deed of fame they were doing. These men did not babble of glory; they never dreamed their children would contend which had done the most. They supposed they had a right to their corn and their cattle—without paying tribute to any but their own Governors. And as they had no fear of man, they yet did have a fear of God." And he recalls the simple statement of one of these "embattled farmers" "that he went to the services of the day with the same seriousness and acknowledgment of God which he carried to the church." The spirit of the best in New England is revealed in these few words. They feared God, but they feared nothing else; they held to the highest truths in the simplest speech; and the best of them carried the world in their minds and stayed quietly at home. They had penetrated to the foundations; and although there was in Concord, as elsewhere in New England, an aristocracy of birth and intellect, men and women were honored on a basis of character.

This independence went so far that it sometimes became whimsical, as in Thoreau, and sometimes issued in such an excess of nonconformity that a man found it impossible to get on with his neighbors, and took refuge in isolation. The peculiarity of the New England hermit has not been his desire to get near to God, but his anxiety to get away from man. In later years, when Concord had become a Mecca, a whimsical self-consciousness was sometimes evident in the more individualistic members of the community. Alcott said that Thoreau thought he lived in the center of the universe and would annex the rest of the planet to

Concord; while Thoreau's view of his own relation to the place is reflected in his confession: "Almost I believe the Concord would not rise and overflow its banks again were I not here." This note of superiority did not escape the keen-witted neighbors of Thoreau. "Henry talks about Nature," said Madame Hoar, "just as if she'd been born and brought up in Concord."

Emerson was the highest type of this

the marvelous felicity of his diction. would not have disclaimed the comment of being called the "Yankee P" so entirely content was he to be a resident of Concord as well as a citizen of the world. In nothing was his soundness of nature, his health of mind, more evident than in the delicacy with which he protected himself from the intimacy of those who were eager to gain some personal possession of his thought, and the g

WALDEN LEDGE BY MOONLIGHT

mingled frugality of the life of the body and generosity of the life of the mind; of this harmonization of the highest and broadest interests with the simplest domesticity. He took pleasure in dissociating the resources and distinction of the intellectual life from the conventions and forms of an elaborate social life; and he seemed to affect in dress and manner a slight rusticity as heightening the effect of his thought, as the slight hesitation of his speech in public address brought out

persistency with which he held unbalanced people at a distance and kept himself clear of all rash attempts to bring in the millennium prematurely.

Hawthorne has given us a characteristic report of the strange folk to be met in Concord in the days of the "newness": "It was necessary to go but a little way beyond my threshold before meeting with stranger moral shapes of men than might have been encountered elsewhere in a circuit of a thousand miles. These hob-

EARLY MORNING AT THE OLD MANSE

goblins of flesh and blood were attracted thither by the wide-spreading influence of a great original thinker, who had his earthly abode at the opposite extremity of our village. His mind acted upon other minds of a certain constitution with wonderful magnetism, and drew many men upon long pilgrimages to speak with him face to face. Young visionaries, to whom just so much insight had been imparted as to make life all a labyrinth around them, came to seek the clue that should guide them out of their self-involved bewilderment. Gray-headed theorists whose systems, at first air, had finally imprisoned them in an iron framework, traveled painfully to his door, not to ask deliverance,

took refuge in Concord, "stretched beneath the pines," Emerson wrote the poem which expresses the deepest instinct of his nature and the tranquillity and detachment he was to find in the quiet village :

GOOD-BYE, proud world ! I'm going home :

I am going to my own hearthstone,  
Bosomed in yon green hills alone,—  
A secret nook in a pleasant land,  
Whose groves the frolic fairies planned ;  
Where arches green, the livelong day,  
Echo the blackbird's roundelay,  
And vulgar feet have never trod  
A spot that is sacred to thought and God.

O, when I am safe in my sylvan home,  
I tread on the pride of Greece and Rome ;  
And when I am stretched beneath the pines,  
Where the evening star so holy shines,

THE CONCORD RIVER (MUSKETAQUID)

but to invite the free spirit into their own thralldom."

No one will ever know the annoyances, perplexities, and dangers of Emerson's position ; what every one does know is that he never fell a victim to the countless illusions, delusions, and unbalanced dreams in which reproachful and perhaps impertinent followers, who misread his leading, endeavored to involve him. The foremost idealist of the New World, he rendered incalculable service to the cause he had at heart by holding it clean and clear above the touch of fanaticism, impracticable experiment, and the bitterness of the egoistical reformer. If he had committed the fortunes of Idealism to a disastrous venture, the loss to the youth of America would have been irreparable.

In April, 1824, two years before he

I laugh at the love and the pride of man,  
At the sophist schools and the learned clan ;  
For what are they all, in their high conceit,  
When man in the bush with God may meet?

Emerson was in no sense a hermit ; an inveterate traveler of the mind, he was, for his time, an experienced traveler among his kind. His trips to Europe were memorable by reason of his quick and decisive insight, of which the "English Traits" is a permanent record ; and by reason of what he brought back in broader sympathies and clearer discernment of the great race qualities. He was for many years a familiar and honored figure on the lyceum platform in distant sections of the country, and he came to have a wide knowledge of the United States of the middle decades of the nineteenth century. He had a keen appetite

THE GREAT MEADOWS

for good talk, and he was often seen in Cambridge and Boston in social gatherings, great and small. But his genius was essentially meditative; he brooded over his subjects until they cleared themselves in his mind; he kept himself in an attitude of invitation, and his thoughts came to him; above all, his work was the fruit of the ripening of his own nature, and he needed alike the quiet of the fallow and of the growing field. The solitude in which a man finds himself and the silence in which his thoughts come to him he found in Concord.

Tranquillity and peace were its possessions by reason of its isolation and of the conformation of its landscape. Monadnock and Wachusett stood on the horizon for those who went to look at them; but Concord lay content along a river of slumberous mood, with a group of pellucid lakes or ponds within easy reach, with broad meadows and low hills and stretches of whispering pines at hand. It was a shire-town, and it had business relations with lumbermen and farmers who came to it for supplies. It was on the route of four stage lines, and under the roofs of as many taverns old-fashioned toddy was mixed for home consumption and as an expression of hospitality to guests and travelers. Thoreau noted in the quiet village all the signs of the ordinary uses and habits of men: "I observed that the vitals of the village were the grocery, the bar-room, the post-office, and the bank; and, as a necessary part of the machinery, they kept a bell, a big gun, and a fire-engine at convenient places, and the houses were so arranged as to make the most of mankind, in lanes and fronting one another, so that every traveler had to run the gauntlet, and every man, woman, and child might get a lick at him."

It must be remembered, however, that two houses within call made a crowded community for Thoreau, and that the appearance of a strange or inquisitive person on the highway sent him incontinently into the woods. Concord, in the thirties and forties, was an entirely normal village, with the usual conveniences for conducting life; but the life of the time was exceedingly deliberate in movement, and the passage of several stages a day did not make a fever in the blood of the villagers. Emerson found there seclusion

without isolation, and solitude and silence tempered with the most congenial companionship.

The Old Manse, in which he lived for the first year, is a dignified old house, in a locality of heroic tradition, in a place of singularly reposeful beauty, in so quiet an air that one can easily overhear the whisperings of the pines. Under its roof generations of gentlefolk have lived frugally and in loyal devotion to the highest interests of the spirit; from colonial days books of classic quality have been within reach in the halls and rooms; in a small room on the second floor at the back of the house Hawthorne wrote a part of the "Mosses from an Old Manse" and Emerson wrote "Nature." When the latter appeared anonymously, the question, "Who is the author of 'Nature'?" brought out the reply, "God and Ralph Waldo Emerson."

If tranquillity is the distinctive note of Concord, a tinge of something dim and shadowy seems to touch the Old Manse and impart to it, not gloom nor sadness, but something of the twilight effect of the pine groves. When one recalls its traditions of plain living and high thinking, one is reminded of Dove Cottage; but the little stone cottage embosomed in foliage where Wordsworth spent the most productive decade of his life is now a shrine set apart to memory, while the Old Manse is still a home from which in these later years has come pictorial genius of a high order; and the impulses which have made Concord a place apart have not spent their force.

In this rural community, snugly at home in a landscape full of repose, Emerson found the best conditions for his growth and work, and through his long life lived on most intimate terms with his nearest and most companionable neighbor, Nature. "Hail to the quiet fields of my fathers," he wrote when he had settled himself in the Old Manse. "Not wholly unattended by supernatural friendship and favor let me come hither. Bless my purposes as they are simple and virtuous. . . . Henceforth I design not to utter any speech, poem, or book that is not entirely and peculiarly my work. I will say, at public lectures and the like, those things which I have meditated for their own sake and not for the first time with a view to that occasion." In these words is to be found

THE ELMS OF THE CONCORD RIVER

the secret of his relation to Concord and of his beautiful and fruitful life; he came to Nature as to the word of God, and he gave the world only the ripe fruit of his quiet, meditative, consecrated life. The twin activities of his spirit found their field and their inspiration under the open sky. He played with Nature and she worked with him. With him, as with Wordsworth, his working-room was outdoors; his writing-room was the place where he made a record of his hours and studies under the open sky. No season barred the woods to his eager feet; he was abroad in winter as in summer, and he loved lonely walks at night, finding companionship with the stars full of inspiration.

The pine woods brought him some of his happiest moods and many of his most felicitous thoughts and phrases. In all weathers he went abroad alert and expectant, waiting serenely and confidently on the ancient oracles; and, holding himself in this trustful, receptive attitude, the pines became for him

"Pipes through which the breath of God  
doth blow  
A momentary music."

Thoreau, keen observer though he was, took into the woods a personality which affected his vision and made him the most

conspicuous object in the landscape; Emerson left himself at home and brought to Nature the most receptive and impersonal of moods. He saw fewer things than Thoreau, but he saw more deeply. "But if I go into the forest," he wrote, "I find all new and undescribed; nothing has been told me. The screaming of wild geese was never heard; the thin note of the titmouse and his bold ignoring of the bystander; the fall of the flies that patter on the leaves like rain; the angry hiss of some bird that crepitated at me yesterday; the formation of turpentine, and, indeed, every vegetation and animation, any and all, are alike undescribed. Every man that goes into the woods seems to be the first man that ever went into a wood. His sensations and his world are new. You really think that nothing can be said about morning and evening, and the fact is, morning and evening have not yet begun to be described. When I see them I am not reminded of these Homeric or Miltonic or Shakespearean or Chaucerian pictures, but I feel a pain of an alien world, or I am cheered with the moist, warm, glittering, budding, and melodious hour that takes down the narrow walls of my soul and extends its pulsation and life to the very horizon. That is Morning; to cease for a bright hour to be the prisoner

of this sickly body and to become as large as the World."

Compare this account of the attitude which Emerson took toward Nature with the fragrant, dewy, glowing account of a day under the pure sky which Corot left among his records, and the secret of spiritual and artistic vitality and freshness is plain. The men of genius, who recreate life in art to assuage the thirst and renew the heart of the world, are immortal not only in their works but in themselves; for they are the children of God, playing in a world in which their fellows toil.

There was a garden on the south side of the Emerson house, and apple-trees brought the most ancient fragrance and domestic associations to the place; but Emerson was more at home in the broad landscape which inclosed his own acres. What the old road over the hill to Grasmere and Loughrigg Terrace were to Wordsworth in the long years at Rydal Mount, the Great Fields and Meadows, the shores and groves of white pine about Walden Pond, Peters Woods, and the level stretches through which the Musketaquid, most quiet of rivers, flows, were to Emerson during the most fruitful period of his life. He found endless delight in the ownership of a tract of land from which he could look down on Walden Pond and away to the farther hills:

"My garden is a forest ledge  
Which older forests bound;  
The banks slope down to the blue lake-edge,  
Then plunge to depths profound.  
Self-sown my stately garden grows;  
The wind, and wind-blown seed,  
Cold April rain and colder snows,  
My hedges plant and feed."

Emerson was not a successful farmer,

though he had the respect of the practical farmers about him, and was known as "a first-rate neighbor and one who always kept his fences up;" his business was not with the acres, but with the landscape. No one ever took ampler or nobler harvests of the spirit off the land than Emerson. He had a keen eye for the small facts of natural life, but he cared chiefly for the vital processes, the flooding life, the revelation of truth, the correspondence of soul between man and Nature; he was, in a word, the poet in the woods and fields. With serene faith and loyal fellowship he kept friends with Nature from youth to age, and the joy of his intimacy suffered no shadow of estrangement as the years went by. A walk in the woods, he declared, was "one of the secrets for dodging old age;" and in an address "To the Woods" he wrote: "Whoso goeth in your paths readeth the same cheerful lesson, whether he be a young child or a hundred years old. . . . Give me a tune like your winds or brooks or birds, for the songs of men grow old, when they are uprooted; but yours, though a man have heard them for seventy years, are never the same, but always new, like Time itself, or like love."

To the very end this devout lover of Nature lived in daily intercourse with her, and it was during a walk in a cold April rain that he contracted the illness which proved fatal after a few days of sitting in his chair by the fire calmly waiting for death. In the quiet place where he lies, near Hawthorne and Thoreau, the pines seem to be always whispering among themselves; but, alas! there is no longer one who understands them.

PETERS WOODS

## AT EMERSON'S GRAVE. BY CHARLOTTE BREWSTER JORDAN.

What afterthoughts the rough-hewn, uncarved stone  
Which marks the resting-place of Concord's Sage  
Suggest to our time-serving, restless age!  
How strong is its simplicity! Unknown  
To its complexity of line! Alone,—

Amid the commonplace who ever gauge  
Life's guerdon by its fickle gauds and wage,  
Unheeding of the world's grave undertone,—

It stands, fit type of him whose soul's behest  
Transcended mere convention's petty bound.  
The boulder's rugged outline power implies;  
The rose tints, gleaming through the quartz, suggest  
That inward light which energized and crowned  
A gracious spirit, kindly, keen, and wise.

A NEW PORTRAIT OF JOHN S. SARGENT

## Sargent the Portrait Painter

By John C. Van Dyke

Professor of the History of Art in Rutgers College

**M**R. Sargent, the painter, is not a person whose career may be safely summarized at the present time. The chances are that at forty-seven his style is established, and that he will not change radically hereafter, but in that assumption lies danger. No one can foresee what new manifestation may be flung off by his active talent, nor how contradictory it may be to his earlier work. Thus far he seems to have developed in one direction—a direction not difficult to point out—but who shall say that he will always continue as now? It were wiser, perhaps, to follow him in what he has done than to waste words in predicting what he may do hereafter. And wiser,

too, not to worry ourselves about whether he will "rank with Titian and Velasquez." We are not the best judges of that. Posterity will give him his place, and no doubt it will be a conspicuous one; but we may be reasonably sure it will not be the place we assign him.

The events in Mr. Sargent's life, as we read them or hear them told, seem not in any way striking or fateful. He was born in Florence in 1856. His parents were Americans residing in Italy, and legally Mr. Sargent is an American, too; but the legal tie is about all that binds him to us. We like to claim him now that he is the most celebrated portrait-painter living, but in reality he is Ameri-

can only in name. He was not reared nor educated here, he has not lived here, he has not fought in our quarrels, nor failed in our failures, nor succeeded in our successes. The greater part of his life has been lived abroad, amid other scenes and other peoples. As a boy he traveled about Europe with his parents, speaking German as his first acquired language, and gaining the bulk of his schooling in Italy and Germany. At seventeen he was an art student in Florence, and a little later he went to Paris and entered the *atelier* of Carolus-Duran—at that time perhaps the most dashing technician of the French school. It was not until 1876, when Mr. Sargent was twenty years old, that he made his first visit to the United States. He did not stay for any length of time, and what were his impressions of the land and people we do not know. Several times since then he has been here for short periods, but one or another of the large European capitals has always been his residence. Since 1884 his permanent abiding-place has been London, though he lived for some time in Paris, and has traveled in Morocco, Spain, Egypt, and elsewhere.

It would seem, then, that, however much pride we may take in Mr. Sargent's achievements, we can hardly be proud because he is peculiarly our own. He is not American in the sense of knowing the land and the people, sympathizing with our aims and aspirations, and reflecting our life and civilization. Just as little has his birth in Italy made him Italian or his residence in France and England made him French or English. No country can appropriate him, no people can claim him, for in reality he is a citizen of the world at large—the manner of man we sometimes call a cosmopolite. If there is one place above another that he can be traced to and said to emanate from, it is Paris; and Paris is no longer merely the first city of France. It, too, has become cosmopolitan—the center of modern life and the gathering-place of the world's knowledge, intelligence, and fashion. Mr. Sargent reflects its taste and its skill, but not anything else that is peculiarly French—not anything that smacks of the French soil. The accomplishments of Paris are his, but without the sentiment or the feeling that is French.

It is questionable if a man who is equally at home in London, Paris, Florence, and New York will or can have a very strong sentiment for any one of those places. He can hardly spend a winter in New York and become vitally interested in democracy, and the next winter go to London and fall deeply in love with aristocracy. Nor can he live for a few months in Spain or Germany and penetrate to the quick the life and character of the people. The cosmopolite who moves hither and yon about the globe hardly ever takes to heart the affairs and interests of those with whom he is temporarily sojourning. On the contrary, it is rather his attitude of mind that nothing is to be taken too seriously. To ruffle one's composure with an emotion or to worry one's self about a sentiment is the very thing he seeks to avoid. He accepts facts as facts, concerns himself with the appearance of things, is a great stickler for the refinements, and a great student of manners, methods, and styles. He quickly absorbs whatsoever is intelligent or artistic or learned, his perceptions are very acute, his knowledge and skill are polished to the last degree; but the strong feeling that, after all, lies at the bottom of great endeavor finds no utterance in his work, and the national beliefs that are really the insistent and the persistent things in both literature and art are not the mainspring of his action.

So much may be said in a general way about the man we are considering. And so much without a thought of either praise or blame. Mr. Sargent's life has been the result of peculiar circumstances—fortunate circumstances, some may think, or perhaps unfortunate, as others may hold. At least they have brought forth an accomplished painter whose art no one can fail to admire. That his work may be admired understandingly it is quite necessary to comprehend the personality of the artist—to understand his education, his associations, his social environment. For if the man himself is cosmopolitan, his art is not less so. It is the perfection of world-style, the very last word in method, learned to a startling degree, accurate, scientific, almost faultless; but it belongs to no country, reflects no people, discloses no sentiment, and causes no emotion. It is calmly intellectual and begets enthusiasm

only for its absolute truthfulness to appearance and the brilliancy of its achievement.

To achieve and to accomplish—that is, to draw and to paint—seem to have been Mr. Sargent's ambition from the start. He early became proficient with the brush. Leighton remarked his skill as a boy, and before he left Florence he was accounted a student of uncommon ability. He had grown up in the home of Leonardo and

thus: "We were astonished at the cleverness shown in the water-color and pencil work, and his *début* was considered a most promising one. He made rapid progress from the day he entered the school, and gradually rose to perfection in academic study." He soon surpassed his master, learned all that was to be taught in Paris, and then passed on to newer fields. If one may judge from appearances, craftsmanship—the best way of

Andrea del Sarto, and had studied the works of the old Italians from many points of view. Everywhere among the Renaissance painters he had met with the skilled technician, and doubtless his early aspirations were to excel as a craftsman. Certainly it was with no little knowledge of drawing that he presented himself at the Paris *atelier* of Carolus-Duran in 1874, aged eighteen. Mr. Beckwith, who opened the door for him and presented him to the master, speaks of his sketches

doing things—continued to be his quest wherever he journeyed. It is easy to imagine that in Madrid he would admire such a painter as Velasquez, in Antwerp Rubens, in Holland Frans Hals, in London Sir Thomas Lawrence. No doubt a man of his sensitiveness sees and sympathizes with the sentiment of painters like the early Italians, Rembrandt, Gainsborough, and possibly Millet; but he thinks and works in quite a different way from them. His attention is drawn by the

SARGENT'S PORTRAIT OF ADA REHAN

picturesque appearance, and his handling has more in common with Lawrence than Rembrandt, more affinity with the robust, matter-of-fact Velasquez than the nervous, hesitating Gainsborough. But while he may have admired one more than another, he gained what he could from all. And at last, like the eclectic Raphael, having absorbed from many sources, he finally established a style of his own.

In choosing portraiture for the field of his operations Mr. Sargent was perhaps wise as well as fortunate. For it requires something of the keen, cool observer, the man who can record the fact without romance, to make a good portrait-painter; and Mr. Sargent has proved himself an observer above all. His successes in other fields are perhaps only manifestations of the same peculiar talent. The lovely "Carnation Lily, Lily Rose" is little more than the portraits of two young girls lighting Japanese lanterns in a flower garden, told with great beauty of color and light. "Carmencita" is a portrait in costume. "El Jaleo" is a portrait of a Spanish interior with a dancing figure, and his Venetian scenes are not different. All of them are treated in the portrait spirit—that is, from the point of view of an observer and a recorder, rather than a lover or a rhapsodist. Mr. Sargent does not rhapsodize—at least not in his works. The decoration in the Boston Public Library is no exception. It evidently cost the painter much time and thought, but the symbolism of it bewilders, and its excellence lies less in meaning or appropriateness than in masterful execution. It does not enthrall or sway or charm; it astonishes by the brilliancy of its coloring and the supreme excellence of its workmanship. It is something that one marvels over but cannot fall in love with. And the sanest part of it is perhaps the panel of the prophets, which is essentially portraiture again—that is, something painted from the model.

To say that Mr. Sargent has produced only portraits is not by any means to depreciate either the painter or his subject. On the contrary, it may be affirmed that painting knows no higher range than portraiture, and to-day the masterpieces of the world will be found in that department. And to say that he produces a portraiture somewhat wanting in intimate

sympathy, devoid of race bias, a calmly intellectual product that has little sentiment back of it, is not to underrate its value as pure art. Seldom, indeed, do we find the intensely sympathetic and the technically skillful combined in painting. There is usually a strong leaning toward one or the other extreme. But the loss of either quality has its compensation in the superior excellence of the quality which is gained.

Mr. Sargent's portraits are good illustrations of this. They may not be all that could be wished for in soul, but they are not lacking in life. You will not be able to look into the eyes and seem to know the inner consciousness of the sitter, as in a portrait by Rembrandt; but you will feel the bodily presence, the physical fact, as you do in a portrait by Frans Hals. There is the Marquand portrait at the Metropolitan Museum, to which reference may be made. How well he has emphasized the facts of the spare figure, the thin, nervous hand, the refined if somewhat weary face! How very effective the placing of the figure in the chair, the turn of the head, and again that thin hand against which the head rests. Every physical feature is just as it should be. Look at the bone structure of the forehead, the setting of the eyes, the protrusion of the lower lip, the modeling of the mouth and chin. Could anything be more positive?

All his portraits of men are of this character. They stand well, weigh well, have bulk and body—in short, they live and breathe. The "Speaker Reed" and the "Mr. Chamberlain" are likenesses of men in the flesh, done apparently without a thought of their being statesmen. There is nothing of the official about them, but everything of the actual. Just so with the celebrated portrait of Mr. Wertheimer, or the portraits of Mr. Booth, Mr. Richard M. Hunt, or Mr. Widener. It is the look of the man that is given in each case rather than the professional air.

His portraits of women are not different. He seeks the personal presence, sees keenly every physical peculiarity, and gives as truthfully as is consistent with pigments the facts as he sees them. There is no romance of mood, no idealizing or prettifying of the likeness. All phases of fashionable life have come to his studio,

COURTESY OF THE NEW YORK METROPOLITAN MUSEUM OF ART

SARGENT'S PORTRAIT OF HENRY G. MARQUAND

and he has painted a host of celebrities—some of them more worthy of his brush than others. Many times he has painted the grand lady in flashing jewels and gorgeous robes, and been accused of vulgarity in the doing of it. But the accusation will not lie. Frequently the vulgarity has been in the sitter and has been shown by the painter; but that is a portrait fact which it is just his business to show, not suppress. Many times the lady, the robes, and the jewels have been given without a suspicion of vulgarity. That wondrous creation which appeared in the

Salon some years ago—the tall lady in the magenta gown—was something bordering upon the bizarre; it was flashing glittering, noisy; but not unrefined in any sense. The portrait of Miss Terry as Lady Macbeth is “stagy,” as perhaps it should be, for again the “staginess” was before the painter; but surely it is not wanting in taste. And for refinement, distinction, sensitiveness, what could be better than the beautiful portrait of Lady Agnew, shown some years ago among the “Portraits of Fair Women” in London? Whatever may be the qualities or the

### THE DOGMA OF REDEMPTION

Sargent's new decoration for the Boston Public Library.

defects of the sitter, Mr. Sargent may be trusted to record the facts before him exactly as they are. For his knowledge is almost absolute and his execution almost faultless.

In the production of the portrait clear and accurate observation is half the battle. If a painter sees and knows his subject thoroughly, he will have little trouble in telling what he sees and knows to other people; and to repeat of Mr. Sargent that he sees rightly and records rightly is to state the case in a sentence. Nothing in the physical presence escapes him. The slight inclination of a head, the shyness of a glance, the mobility of a mouth, the uneasiness of a hand, the nervous strain of a gesture, are all turned to account. Every tone of color in itself and in its relations to the other tones, every light in relation to its shadow and to the other lights, every melting contour in contrast with every accented contour, and every texture in relation to every

other texture—all are caught within the angle of the painter's focus.

And how certain is his technical expression! Here comes in the value of his cosmopolitan education. His hand obeys his mind without flinching, without doubting, without hesitation. There is not the slightest uncertainty about the drawing in the Marquand portrait. The group of portraits, sometimes called the "Hall of the Four Children," was painted twenty years ago; it is an early work, and yet the exact values of the tones, the relations of the lights to the darks, the atmospheric effect over all, are precisely and irreproachably right. And as for color, there is the portrait of Mrs. Playfair to illustrate the truth of brilliancy, and the "Lady Agnew" again to illustrate the truth of sobriety, even if we had not the lovely coloring of the "Carnation Lily, Lily Rose" or that jewel-like setting of varied hues upon the ceiling of the Boston Library. All of his technical skill,

all of his taste, all of the sentiment and emotional feeling that may be in his personality, seem to be shown in his beautiful child-portrait, "Beatrice." It was painted a dozen years ago, and since then the painter has done more talked-about but certainly not more effective work. The naïve look, the childish character, are given with convincing drawing and exquisite coloring. It shows the painter at his very best, and it must always be accounted one of his pronounced successes.

Possibly the feature of Mr. Sargent's work that excites the greatest admiration in his fellow-artists is his facile handling of the brush. The final result of it gives one the impression of work done easily—in fact, rather improvised than premeditated. But the impression is somewhat misleading. Every stroke is calmly calculated, every touch is coolly designed. If the effect looks labored, the palette-knife cleans the canvas and the work is done over again. There is no excitement or feverish haste, however swiftly the brush may seem to travel. The nimble hand obeys a well-trained mind, and if the work is easily and accurately done, it is not through any burst of inspiration or preternatural facility of the moment, but through long and careful training. In this respect our painter reminds us

of that supreme master of the craft—Rubens.

Mr. Sargent's whole style is more Parisian than anything else, and is based upon that of his master, Carolus-Duran. Of course he has greatly improved upon his preceptor. Whatsoever he has found to be good in the art of the times he has studied, but not everything that came to hand has been accepted. He has never been led away by new movements, nor has he sympathized with mere fads. He has taken the best from without and added it to the best from within, producing a sane and individual style of his own. No cosmopolitan painter of the present day has a more individual expression than he. And one cannot think of a living painter who expresses himself so well. We have deprecated the ranking of Mr. Sargent with such old masters as Titian and Velasquez, and yet a comparison with present-day painters is very tempting. It is almost impossible to think of him otherwise than as the leading portrait-painter of the time. We need not claim that place for him, because it has already been given him by Europeans who bear us no great love, and some of whom still think of Mr. Sargent as "a typical American." We wish he were such an American; we wish our title to him as an American painter were a little less questionable.

## Dawn

By Alice Ward Bailey

Darkness, on which no ray hath risen,  
Fetter and guard and prison,  
In vain I bar to thee my soul;  
I give thee dole, I give thee dole!

Thy trailing robes I cannot reach,  
Deaf are thy ears, thou hast no speech;  
Thou art not what thou seem'st to be;  
O formless Dread, depart from me!

Hark! far away I hear a ringing note  
Answered from many a throbbing throat.  
The East is dappled like a fawn—  
It is the dawn, it is the dawn!

The day breaks and the shadows flee:  
Sing, sing your Benedicite!  
Let all the earth the shout prolong,  
Thank God for Light, thank God for Song!

## Edgar E. Clark

No better selection could have possibly been made by President Roosevelt in filling the office of Assistant Secretary of the new Department of Commerce, of which Secretary Cortelyou is the head, than that of Mr. E. E. Clark; particularly is this the case from the point of view of the best element among the supporters of organized labor. Mr. Clark rose from the lowest place in the employ of a railway to that of a responsible official; while his influence among his fellow-workmen is shown by the fact that he was six times made head of the Order of Railroad Conductors. When President Roosevelt named Mr. Clark as a member of the Anthracite Coal Commission, he was regarded as filling the description of sociologist, that being one of the characterizations of the man to be selected made by the railway operators in their agreement to submit to arbitration. At that time the President himself defined a sociologist as "a man who has thought and studied deeply on sociological questions and has practically applied his knowledge." It was because Mr. Clark answered this definition that he was selected for the Coal Commission, and in that capacity, as is agreed by all his fellow-commissioners, Mr. Clark showed remarkable ability.

# THE NEW AMERICAN NAVY'

THE GUN ON THE NASHVILLE THAT FIRED THE FIRST SHOT OF THE WAR WITH SPAIN

BY

JOHN D.  
LONG

SECRETARY OF  
THE NAVY FROM  
1897 TO 1902

## THE BLOCKADE OF CUBA AND ITS EFFECT

**B**Y the terms of the joint resolution voted by Congress on April 19, 1898, and approved by the President on the following day, the Government of the United States recognized the independence of Cuba and pledged itself to remove Spanish control. Of itself, this resolution made that island the military objective of the American land and naval forces. All other offensive operations, though necessarily conducive to final victory, were simply incidental to its attainment. Mars had girded on his armor and was raising his sword to strike. In despatches to the President and the State Department, Minister Woodford, in Madrid, had asserted that a public sentiment was there crystallizing which would sustain the Spanish Government in its effort to preserve peace even though the price were the surrender of an island which had been an appurtenance of the Crown for four hundred years. So rapid was the march of events, however, that this sentiment failed to attain the strength necessary

to enable Maria Christina, the brave and anxious mother of Alphonso XIII., to sever from the kingdom of her son the "Pearl of the Antilles." Approval by the President of the joint resolution of Congress was immediately followed by a request from the Spanish Minister in Washington for his passports. To Minister Woodford an instruction was sent directing him to demand formally that the Government of Spain at once relinquish its authority and government in Cuba and withdraw its land and naval forces therefrom. Before the Minister could communicate this instruction to the Spanish Minister for Foreign Affairs, he was notified that diplomatic relations had been broken off. His further stay in Madrid rendered useless, he withdrew.

Diplomacy had failed. To the sailor and to the soldier the United States now intrusted the task of expelling Spain from Cuba. In the councils of the Navy Department there were some who asserted that this purpose could be most promptly and economically achieved by destruction of the commerce of Spain and by threatening ports of the Peninsula which lay upon the seashore and which were known to be as notoriously lacking in defense as

number—had been constructed specially to supplement the shore fortifications in repelling attack by an enemy. It was suggested that one be stationed at Boston, another at New York, a third at the mouth of the Delaware, and a fourth at Hampton Roads. But clamor for protection arose at points for which we had no monitors. Besides, a single vessel of this type, not of modern construction and armament, would be of little avail in a battle with five armored cruisers, swift and thus able to choose the scene and position in conflict, and provided with an armament composed of the latest models of heavy guns. To reduce this superiority, it was urged that the monitors be mobilized at a central point on the Atlantic coast. The insuperable objection to this plan was that the slowness of the craft would prevent them from reaching a distant port attacked by the enemy in time to catch him if he were disposed to avoid a fight. Were he willing to risk the chances of conflict, their unsteadiness as gun platforms in a seaway would increase their disadvantage.

Thus, though the monitors were built especially for coast defense, they were manifestly unsuited for this purpose, and the Department, driven to the employment of every weapon, whatever its value, was compelled to order them to Key West for participation in offensive operations for which they were equally unsuited. This decision necessitated, however, the division of the battle fleet, the full strength of which would be needed in case Spain made the natural tactical move and mobilized her entire fighting force. Circumstances consequently forced separation of the real effectives of the United States navy—its battle-ships and armored cruisers; but as far as possible the Department sought to overcome them and to place each squadron within supporting distance of the other. The "Flying Squadron," the name of which denotes the purpose of its organization, was assembled at Hampton Roads, one thousand miles from Key West, but nearer to that point and to Porto Rico than to New York, and yet within easy striking distance of this great commercial center, upon which particularly it was apprehended that an attack might be made. Organization of the Northern Patrol Squadron, at first

composed of the San Francisco, flagship of the Commander-in-Chief; Prairie, Dixie, Yankee, and Yosemite, relieved to some extent the pressure upon the Navy Department to hold the Flying Squadron at Hampton Roads, and partially allayed the unwarranted terror felt by the inhabitants of the coast towns.

Instead of frittering away our naval strength by assignment of vessels before every port of the Atlantic and Gulf coasts, the Department, by the use of makeshifts, succeeded in concentrating it into two squadrons. That at Key West, when war began, had an armored backbone made up of the battle-ships *Indiana* and *Iowa*, armored cruiser *New York*, and monitors *Puritan*, *Miantonomoh*, *Amphitrite*, and *Terror*. The lighter framework was made up of the cruisers *Cincinnati*, *Detroit*, *Marblehead*, and *Montgomery*, the gunboats *Castine*, *Dolphin*, *Helena*, *Machias*, *Wilmington*, *Nashville*, *Newport*, *Vesuvius*, *Fern*, and *Mayflower*, the transport steamer *Resolute*, revenue cutters *McLane* and *Morrill*, lighthouse tender *Mangrove*, tugs and converted yachts *Accomac*, *Leyden*, *Uncas*, *Wompatuck*, *Eagle*, *Hawk*, and *Hornet*, and torpedo-boats *Cushing*, *Dupont*, *Ericsson*, *Foote*, *Rodgers*, and *Winslow*. Other vessels were rapidly added. The Flying Squadron comprised the battle-ship *Massachusetts*, second-class battle-ship *Texas*, armored cruiser *Brooklyn*, protected cruisers *Columbia*, *Minneapolis*, and *New Orleans*, armored ram *Katahdin*, and converted yacht *Scorpion*. Hastening with all speed around Cape Horn were the battle-ship *Oregon* and gunboat *Marietta*, the former needed to reinforce the armorclads of the North Atlantic fleet and make them undoubtedly the superior of the Spanish ships believed to be ready for sea.

In the officers and men who formed the complements of the vessels which represented the naval arm of the United States, the country possessed efficient and courageous servants who could be depended upon to do more than their duty and to do it well. Commanding the division at Key West was Captain William Thomas Sampson, promoted upon the outbreak of war to the rank of acting Rear-Admiral and given supreme command of the entire naval force in North Atlantic waters. Before the destruction of the *Maine*, none of the

In supreme command of the American Naval Force in Atlantic waters during the war with Spain.

officers on the active list of the navy was prominently known to the country, though many had gained distinction in their profession and some had displayed gallantry and ability during the war of the Rebellion. Sampson was pre-eminent among this number. His courage had been proven by performance in the Civil War. An officer of the ill-fated *Patapsco*, sunk by a submarine mine at Charleston, S. C., he calmly stood on the roof of the turret while the vessel was going to the bottom, and when his men had safely left the ship he stepped into the water. He

demonstrated his progressiveness by striving constantly to improve the service. His executive ability, especially in ordnance, made him a rare administrator, and was responsible for his retention on shore duty a longer period than usual. When I entered the Navy Department, Sampson was Chief of the Bureau of Ordnance. He was offered a transfer to the Bureau of Navigation, but, believing that he would be more useful at sea and that his health would be benefited by the change, he declined it and assumed command of the battle-ship *Iowa* in the summer of 1897.

THE MASSACHUSETTS, OF THE BLOCKADING FLEET

COPYRIGHT BY E. MULLEN

The North Atlantic squadron was then under Rear-Admiral Montgomery Sicard, who had earnestly and energetically striven to make his command an efficient instrument of war. Illness of this Commander-in-Chief caused the Secretary of the Navy, in March of 1898, to appoint a Board of Medical Survey to make an examination of his physical condition. To his own regret, no less than to that of the authorities in Washington, he was condemned, and the Department was advised that his health demanded his detachment from the squadron.

On the eve of war the Department was confronted by the necessity of choosing a fitting successor to this capable and conscientious officer. The moment required a man of splendid judgment, quick decision, possessing intimate knowledge of the characteristics of the vessels he would have to use and the officers and men manning them, and enjoying the esteem and confidence of his subordinates. The consensus of naval opinion was that Sampson had these qualifications. He had graduated number one in his class at the Naval Academy, and this without the prestige of blood, of wealth, or of position. He had maintained this superiority throughout his naval career. He had been a dominant voice in important boards which had considered the development of the *matriel* and personnel of the New Navy. He was the senior captain of the North Atlantic squadron, and in command of it during Sicard's incapacity. He enjoyed the full confidence not only of the officers and men of his own ship, but of the officers and men of the entire navy.

There was no political demand for Sampson. He had no friends in Congress to speak for him, nor did he directly or indirectly indicate to the Department that he desired to succeed Rear-Admiral Sicard. For his selection the Department is alone responsible; and it was made advisable by the interests of the country, to which the eye of the Department was single. The President gave his cordial approval to the choice, and Sampson, though there were worthy and efficient officers his seniors, was to give ample evidence that the assignment was justifiable.

Commodore Winfield Scott Schley was in Washington serving as Chairman of the Lighthouse Board when the Maine

was destroyed. He at once made application for assignment to sea duty, and upon the organization of the Flying Squadron I selected him as its commander-in-chief. Among his naval associates Schley was not credited with as high a measure of professional ability and judgment as Sampson and some other officers. Nevertheless, his career was filled with stirring incidents which had their scenes in the War of the Rebellion, in the frozen North, where he voluntarily went in search of Greely and his daring companions, and in other parts of the world where American interests demanded protection. He had been Chief of the Bureau of Equipment, had commanded a vessel of the New Navy, and appeared to be an officer of skill, judgment, and resource. That there might be no doubt of his position at sea, I personally informed him that, while his command would, for a time at least, be independent, it was a part of the North Atlantic Fleet, and when his squadron and that at Key West were merged he would be subordinate to Acting Rear-Admiral Sampson. To this condition he cheerfully agreed, and expressed his cordial readiness for co-operation and service.

To assure efficient operations on the part of the numerous vessels engaged in the blockade of Cuba, the Department determined, a few days after the outbreak of war, to order two officers of the rank of Commodore to report to Rear-Admiral Sampson. Commodore George C. Remy, who was senior to Sampson in actual rank, accepted, without the slightest objection, orders to command the naval base at Key West. In a letter to Sampson in regard to Commodore Remy's duty, it was explained that he would see that the ships of the squadron were coaled, provisioned, and supplied with ammunition speedily, and that any repairs on them were pressed with all the despatch possible with the facilities on the ships themselves and the station on shore. "One of his most important duties," to quote the letter, "will be to complete each vessel that you send him or that comes into his station as quickly as possible and return to you." Commodore John C. Watson, the junior Commodore ordered to report to Sampson, was appointed for employment in the squadron operating on the coast of Cuba

or in the general neighborhood. The object of sending him was to provide Rear-Admiral Sampson with assistance in the military duties devolving upon him in connection with the squadron of operations. Commodore John A. Howell, the commander of the Northern Patrol Squadron, had been brought home from the European Station, of which he had served as commander-in-chief.

The captains of the ships would be largely the brains directing maneuvers in action; and upon their behavior and judgment would depend whether their commands fought well or ill. Anticipating war, the Department had been most careful in its selections of commanding officers. Of the armorclads, all but two were commanded by officers assigned during my administration, and the exceptions were Captain Henry C. Taylor, commanding the battle-ship *Indiana*, and Captain Francis A. Cook, commanding the armored cruiser *Brooklyn*, who had been assigned by my predecessor. Captain Taylor had gone to sea from the Naval War College, where at its head he had solved problems such as were likely to arise during the war. Captain Cook assumed command of the *Brooklyn* on December 1, 1896. Both thoroughly understood their ships, and could be depended upon to handle them with skill. The promotion of Captain Sampson left the *Iowa* without a commander, and the vacancy was filled by the assignment of Captain Robley D. Evans, at the time serving on the Lighthouse Board. Captain Evans's career showed intrepidity and resource, and the Department believed he could be relied on. The armored cruiser

*New York* was under Captain French E. Chadwick. Captain Chadwick had been Chief of the Bureau of Equipment, which had charge of all matters connected with the equipment of ships and coaling, and the knowledge he possessed, especially in relation to such matters, made him valuable to the Commander-in-Chief, whose flag floated on the *New York*. Captain John W. Philip was the commander of the *Texas*. He was known to be a brave, God-fearing man. The Massachusetts had as her captain Francis J. Higginson,

an earnest officer. The scout *St. Paul* was given to Captain Charles D. Sigsbee, who had commanded the ill-fated *Maine*; and Lieutenant-Commander Richard Wainwright, executive of that sunken ship, was ordered to the auxiliary yacht *Gloucester* when she was commissioned. Captain Bowman H. McCalla was on the *Marblehead*. The Department had no difficulty in obtaining willing hands, for most of the officers of the service on shore volunteered for sea duty, and those of sufficient rank were placed in command of vessels available.

Like our own force,

the section of Spain's armored fleet in the Atlantic Ocean was divided into two squadrons, one of which, homogeneous and mobile, was at the Cape Verde Islands, and the other, unready, although the work upon it was pushing to completion, was distributed among the ports of Spain. The squadron at the Cape Verde Islands had been assembled by the withdrawal from the West Indies of the armored cruisers *Vizcaya* and *Almirante Oquendo*, which had been sent across the ocean to display the flag of Spain and to show the United States that

PHOTOGRAPH BY BACHRACH

REAR-ADMIRAL WINFIELD SCOTT SCHLEY

Commander of the Flying Squadron during the war with Spain.

their Government possessed means of defense, and to inspire courage and faith among the loyal in the islands of Cuba and Porto Rico. War's approach caused the despatch of the Vizcaya and Oquendo to St. Vincent, where they found the armored cruisers Infanta Maria Teresa and Cristobal Colon, the torpedo-boat destroyers Furor, Terror, and Pluton, and three torpedo-boats and two colliers. This first move by Spain was sagacious, and it was anticipated that she would follow it up by adding the Carlos V. and Pelayo, the former an armored cruiser and the latter a battle-ship, to the force. Such action would have required concentration of all American armored ships in the Atlantic, for the Oregon could not have arrived at Key West by the time the Spanish fleet reached American waters, and singly each division would have been inferior to the enemy.

The exact value of the Spanish fleet was to us unknown. It was true that the Department had received many reports, some apparently authoritative and circumstantial, indicating that the ships were indifferently equipped and inefficiently manned, and these reports were worthy of some credence in view of the corruption notoriously existing in Spanish administration, and the studious neglect which the Madrid Government had observed toward its navy. After a visit to Cadiz in 1793, Nelson wrote: "The Dons may know how to build beautiful ships, but they do not know how to procure men. At Cadiz they have in commission four battle-ships of first rank, very beautiful ships, but miserably manned." Until the contrary was established, the Department was bound to estimate the Spanish ships as highly trained and

efficient, to credit their officers and men with patriotism and strategical and tactical ability, and to put forth every effort to bring about their prompt destruction. Five of the Spanish vessels were armored cruisers, all of modern construction and armament and possessing swifter heels on paper than any of our armorclads with the exception of the Brooklyn and New York; and one was a battle-ship, which, if properly fought, could give a good account of itself in a duel with the Indiana. Spain had also a type of vessel which we had not, and which, its possibilities unknown, was greatly feared by experts and laymen. I refer to torpedo-boat destroyers. To the Department and to the world, Spain possessed a fleet composed of vessels of tactical and strategical value, and properly handled it would have a chance of obtaining control of the sea. We know now how misleading was our information.

Writing in the month of April, shortly before the war, Cervera said:

My fears are realized. The conflict is coming fast upon us; and the Colon has not received her big guns; the Carlos V. has not been delivered, and her 10-cm artillery is not yet mounted; the Pelayo is not ready for want of finishing her redoubt, and, I believe, her secondary battery; the Victoria has no artillery, and of the Numancia we had better not speak.

In another letter he said:

You talk about plans, and, in spite of all my efforts to have some laid out, as it was wise and prudent, my desires have been disappointed. How can it be said that I have been supplied with everything I asked for? The Colon has not yet her big guns, and I asked for the bad ones if there were no others. The 14-cm ammunition, with the exception of about 300 shots, is bad. The defective guns of the Vizcaya and Oquendo have not been changed. The cartridge-cases of the Colon cannot be re-

during the Blockade of Cuba.

charged. We have not a single Bustamente torpedo. There is no plan or concert, which I so much desired and called for so often. The repairs of the servomotors of the Infanta Maria Teresa and the Vizcaya were only made after they had left Spain. . . . The Vizcaya can no longer steam, and she is only a boil in the body of the fleet.

Spain's withdrawal of her Minister and the enforced departure of Minister Woodford from Madrid were, in themselves, defiant declinations to comply with the President's demands. Assured of the safety of Mr. Woodford and the Consular officers of the United States in Spain, who had started on April 21 for neutral territory, the President on the following day issued this proclamation of blockade:

#### PROCLAMATION

Blockade of Cuban ports. By the President of the United States, a proclamation. Whereas, by a joint resolution passed by the Congress and approved April 20, 1898, and communicated to the Government of Spain, it was demanded that said Government at once relinquish its authority and government in the island of Cuba, and withdraw its land and naval forces from Cuba and Cuban waters, and the President of the United States was directed and empowered to use the entire land and naval forces of the United States, and to call into the actual service of the United States the militia of the several States, to such extent as might be necessary to carry said resolution into effect; and

Whereas, in carrying into effect said resolution, the President of the United States deems it necessary to set on foot and maintain a blockade of the north coast of Cuba, including ports on said coast between Cardenas and Bahia Honda and the port of Cienfuegos on the south coast of Cuba aforesaid, in pursuance of the laws of the United States and the laws of nations applicable to such cases. An efficient force will be posted so as to prevent the entrance and exit of vessels from the ports aforesaid. Any neutral vessel approaching any of said ports or attempting to leave the same without notice or knowledge of the establishment of such blockade, will be duly warned by the commander of the blockading forces, who will indorse on her register the facts and the date of such warning, where such indorsement was made, and if the same vessel

REAR-ADMIRAL JOHN A. HOWELL.  
Commander of the Northern Patrol Squadron during  
the Blockade of Cuba.

shall again attempt to enter any blockaded port, she will be captured and sent to the nearest convenient port for such proceedings against her and her cargo, as prizes, as may be deemed advisable. Neutral vessels lying at any of said ports at the time of establishment of said blockade will be allowed thirty days to issue therefrom.

In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed. [SEAL.]

Done at the city of Washington, this twenty-second day of April, A.D. 1898, and of the Independence of the United States the One Hundred and Twenty-second.

WILLIAM MCKINLEY.

By the President,  
John Sherman,  
Secretary of State.

With the limited force at Rear-Admiral Sampson's disposal, a blockade of the entire island was impossible; furthermore, the President had no intention of establishing merely a "paper" blockade, with its accompanying international embarrassments and entanglements. "A blockade to be binding and effective," to quote the instruction given to Rear-Admiral Sampson, "must be maintained by a force sufficient to render ingress to or egress from the port dangerous," and this principle of international law was observed strictly and legally.

In selecting the ports to be blockaded the Department had considered those which, closed, would shut the enemy off from food supplies and munitions of war. Cuba imports large quantities of foodstuffs, and the insurrection compelled the Spanish troops to obtain most of the components of their rations from adjacent lands. From Havana a railroad stretched to the east, connecting the capital with Cardenas and Matanzas, and to the west, where it provided communication with Bahia Honda. A branch connected the capital with Cienfuegos—an excellent harbor, which, it was anticipated, might be the objective of the Spanish squadron. In this section of the island most of the Spanish army was concentrated. Here

its rule was effectually maintained, and here would occur military operations when the War Department determined the time propitious to invade the island.

By the measure of blockade three important results were anticipated: First, exhaustion of the Spanish army in Cuba without injury to ourselves; second, destruction of Spanish commerce—the main artery of which connected the Peninsula and its West Indian possession—and, third, the imposition upon Spain of the duty of sending relief to her colonies, and the consequent strain of conducting war more than three thousand miles from an effective home base. "They [the Americans]," wrote a Spanish captain of artillery who served in Cuba, "realized that, owing to our lack of naval power, the island of Cuba, separated from Spain by a long distance and without direct means for supporting its army and people as a result of the agricultural conditions, could be easily cut off, and reduced by starvation, without much effort or bloodshed." Great as was the promise of this measure, it did not appeal to those who could not understand the Department's refusal to permit an immediate assault upon Havana. Rear-Admiral Sampson himself advocated such a movement, pointing out that the batteries—the western batteries particularly—were well placed for an attack from the westward and close in shore, where they would be exposed to a flank fire, or to the fire of our big ships at short range, where the secondary batteries would have full effect. Rear-Admiral Sampson reported that he had discussed the plan with Captains Evans, Taylor, and Chadwick, and that they united with him in the belief that the direct attack was sufficiently promising of the capture of the city to warrant a trial. It is quite possible that had Rear-Admiral Sampson been allowed to make the assault, the results he expected would have been achieved. But the Department could not lose sight of the fact that, dashing though the project, it involved a grave element of risk for the vessels participating in it, and that even if Havana were captured, the Spanish squadron at Cape Verde was still intact and capable of inflicting heavy damage upon our coast, especially if there were any reduction in the fighting strength of our fleet. Writing to the

Admiral under date of April 6, the Secretary of the Navy said:

The Department does not wish the vessels of your squadron to be exposed to the fire of the batteries at Havana, Santiago de Cuba, or other strongly fortified ports in Cuba, unless the more formidable Spanish vessels should take refuge within those harbors. Even in this case, the Department would suggest that a rigid blockade and employment of our torpedo-boats might accomplish the desired object, viz., the destruction of the enemy's vessels, without subjecting unnecessarily our own men-of-war to the fire of the land batteries.

There are two reasons for this:

First, there may be no United States troops to occupy any captured stronghold, or to protect from riot and arson, until after the dry season begins, about the first of October.

Second, the lack of docking facilities makes it particularly desirable that our vessels should not be crippled before the capture or destruction of Spain's most formidable vessels.

Spain would have welcomed an attack upon Havana. "It would likewise have been of good effect," observed the Spanish artilleryman I have already quoted, "if we had compelled the enemy to engage in a battle against Havana. A victory there would have cost them much time and blood." Moreover, Germany and France had made no secret of their wish that Spain should prove victorious, and Germany particularly, unofficially, it is true, indicated among her people her contempt for the American navy, and was not unconscious that she might develop into an important factor in determining how the war should end.

Preservation of our armored ships was, therefore, imperative. It would have been the height of recklessness to have risked the destruction of one or more of our few battle-ships while the Spanish fleet was afloat intact. Contributory to this decision was the unwillingness of the Department to stray from its purpose to devote itself to one thing at a time. Adequate fortification of the Atlantic coast would release the Flying Squadron and enable its location at Cienfuegos on the south of Cuba, the one place above all others where it should have been stationed. The blockade of the north coast was strengthened by the armored ships under Rear-Admiral Sampson; that of the south coast was maintained by small vessels, ridiculously inadequate in strength, and, at first, in numbers, which could have been brushed aside without the slightest difficulty by

the Spanish cruisers. The Department was deeply concerned about the maintenance of the blockade of Cienfuegos. Had it been raised, Spain would have gained an advantage which would have been hailed with satisfaction in Europe and might have produced international complications. To re-establish it, formal proclamation and maintenance before the port of a sufficient number of ships to enforce it would have been necessary. But in the interim merchant ships flying neutral flags departing from or entering Cienfuegos could not have been seized under the provisions of the original proclamation. In consequence of the insufficient force at the disposal of the Commander-in-Chief, a trade was developed by neutrals with Batabano and other ports in the vicinity of Cienfuegos not specifically closed, and thus the purpose of the blockade in the early days of the war partially failed of effect. International law recognized the legality of this trade unless declared contraband by the United States, and the President and his advisers were not disposed to take this action, because it would have increased the unfriendliness of nations none too well disposed toward us. Once Cervera's fleet was safely locked in the harbor of Santiago, and with additional converted war-ships available, it was possible to prevent this trade by extension of the blockade on the south coast of Cuba from Cape Francis to Cape Cruz. After the destruction of Cervera's fleet, an expedition was ordered to the Isle of Pines to occupy it as a base for small vessels operating against Cienfuegos, Batabano, and other southern coast ports; but the peace protocol suspended hostilities and the occupation was not effected. Not so much for the purpose of starving out the Spanish army in Porto Rico as to watch the port and prevent the departure of the Spanish torpedo-boat destroyer which had sought refuge there, a blockade of San Juan was declared.

What was the gain of the blockade of Cuba? This question may be best answered by quoting from an article written by Commander Jacobsen, commanding the foreign cruiser Geier, whose constant inspection of the blockade was most irritating to the Department:

A walk through the streets of Havana (May 17) revealed the usual every-day life. Of

course the traffic was not as great as in time of peace. . . . Beggars were lying about in front of the church doors and in the main streets, among them women with half-starved little children, but not in very large numbers. Many a coin was dropped into their outstretched hands by the passers-by; but there was nothing to indicate that the blockade had entailed serious results for the poorer population. . . . The general opinion was that there were sufficient provisions in the city to sustain the blockade for some length of time; but what was to become of the poorer class of the population in that event was a problem. . . .

Since our last visit to Havana, about a month ago (June 22), there was hardly any change noticeable in the aspect of the town and the conditions prevailing there. The harbor was empty and deserted. . . . Provisions were expensive, but the prices were held down by the Government, so as to prevent excesses on the part of the dealers. The poor were being taken care of as far as possible by the distribution of food in free kitchens and by entertainments for their benefit. . . . The rate of sickness and death was said to be hardly higher than usual. . . .

We . . . again returned to Havana on August 1. . . . Few changes were noticeable in the city itself. There was not as yet an actual famine, but the poorer classes were evidently much worse off than they had been on our former visit, for the number of beggars in the streets had increased. Crowds of poor people would come alongside the ships in boats to try to get something to eat. . . . "If the Americans would only attack Havana," the people would say, "they would soon find out what the garrison of the capital is made of. They would get their heads broken quick enough. But Uncle Sam is only beating about the bush. He is not going to swallow the hot morsel and burn his tongue and stomach." No wonder that the Spanish troops, condemned to inactivity, poorly fed, cut off from the whole world, and without any prospect of relief, were anxious for the end to come. . . .

. . . . But I have information from reliable sources that on August 12 the military administration of Havana had provisions on hand for three months longer, outside of what the blockade-runners had brought into the country and what was hidden away in the houses of the city. One can therefore understand the indignation of Captain-General Blanco when he heard that the peace protocol had been signed. But of what use would have been a further resistance on the part of the Spanish garrison? The United States Government only needed to make the blockade more rigid. That would necessarily have sealed the fate of Havana sooner or later. A fortress in the ocean, cut off from its mother country, can be rescued only with the assistance of the navy. The enemy who has control of the sea need only wait patiently until the ripe fruit drops into his lap.

None regretted more than the President and the people of the United States the

condemnation of the poor of Cuba to starvation equally with the Spanish army. But war inflicts its wounds upon all classes. How different became the condition in Havana when the peace protocol was signed! I again quote from Captain Jacobsen :

... I returned to Havana for the fourth time on September 3. How different everything looked! The clouds of smoke of the blockading ships were no longer seen on the horizon. That circle of brave vessels, greedy for prey, ready every moment to pounce upon anything that came within their reach, had vanished. . . . The harbor entrance was animated. In the harbor itself German, English, and Norwegian steamers were busily engaged in loading and unloading. Alongside the custom-houses there were a number of American and Mexican sailing vessels that had brought food and wine. All the storerooms were filled with provisions of every kind. The city had awakened to new life, business houses were once more open, merchants were again at work, the streets were full of people. . . .

By her severance of diplomatic relations with the United States Spain had, by international usage, precipitated a state of war; and the United States gave recognition to the same condition by declaring a blockade of her colonies. To define more clearly the status of the United States, and, to quote Mr. McKinley, "to the end that all its rights and the main-

tenance of all its duties in the conduct of public war may be assured," Congress declared, in accordance with the recommendation of the President, that a state of war existed, and had existed since April 21. This declaration at once imposed the obligations of neutrality upon nations not party to the conflict. The Spanish squadron lay in the Portuguese harbor of St. Vincent, Cape Verde Islands. It had been rumored that Portugal would throw in her fortune with Spain, and this report was important, because the attitude of the Lisbon Government would determine the length of time Cervera would remain at St. Vincent. That the King had no intention of injecting himself into the Hispano-American quarrel was shown at 5 P.M. April 28, when he signed the Imperial proclamation of neutrality. That proclamation permitted the stay of belligerent vessels in Portuguese ports for a "short time"—an indefinite period, somewhat puzzling to the men who were attempting to work out the grand problems of war. Cervera relieved our anxiety on this point, but gave us fresh cause for concern. On April 29 he left the Cape Verde Islands, and for almost two weeks the Navy Department floundered in a sea of ignorance as to his whereabouts.

# - The Land of Stand-Still

By James Barnes

Special Correspondent of The Outlook in Venezuela

**I**T is only the stirring events of the last few months that have forced Venezuela to the world's attention, only the immediate and positive evidence of the deep interest, financially and diplomatically speaking, of three great Powers, that filled the public press. Perhaps there was, frankly speaking, no special reason otherwise why curiosity should have arisen. For two or three centuries Venezuela had remained discovered and unchanged, and, saving the boundary-line dispute, now almost forgotten, and the omnipresent revolutions, she had individually done nothing. The occasional mention of her existence had been owing to the strength or activity of the recurrent local irruptions. The country had come to be regarded as merely a place on the map, whose location was more or less uncertain, but whose name had the vague familiarity of a distant and infrequently visited volcanic island. In fact, Venezuela, like many of the South American countries, is yet, in one aspect, nothing more nor less than an intermittent republic. Yet, in another, she has some of the potent forces of the slumbering volcano, and the flames that could arise there might redden the sky. Twice the warning has been given. Only those who see no deeper than the surface consider the trouble settled.

But it is not to the latent, nor to the present active, force that I would speak just now. Rather I would like to tell, in a few short words, of how Venezuela appears from the standpoint of visitor or traveler.

Remove the foreign and intruding elements of steam and electricity and we are in the past—a past whose promised glory has crumbled and decayed through neglect and age—we walk in the Land of Stand-Still.

It is a very beautiful and flowering land, where the thermometer varies but a score of degrees from year's end to year's end. Yet it is more than a superstition that the native feels when he says, "Wait till you have been here longer, and you

will live as we do." Perhaps the visitor who yet feels the vim of the North in his veins, whose ambitions are awakened by the possibilities to the left and right—visible, tangible, and insistent—denies the possibility and condemns the excuse.

But will the alien ambition fade with the custom of the siesta, disappear under the balm of the upland day breezes and the long sleep of the cool, still nights? Will the spirit soften in the damp of the summer season and the warm, monotonous clearness of the unchanging winter? Will the soul sink hopeless in the few scattered pest-places where, resigned, the people accept without inquiry the conditions they have assisted nature to impose? That is a matter for conjecture—I do not believe it. The argument of proof is on the native's side, perhaps, for he stands immobile in a land that began with an onswEEP of action and energy. He inherits but the desire for ease and apparently a delight in the amusement of bloodshedding, in one form or another, when aroused from his lethargy. The original Spaniard was ambitious; he gave full-swinging impetus to the mental pendulum that has now come to gyrate slowly in the circle of a dying or a slumbering national force. He was a hard taskmaster, but a harder worker.

Here are things that mean wealth and assure commerce; here is the capacity for self-support in the way of agriculture and industries; here are gold-mines that twenty years ago were giving an average yield of nearly four millions of dollars, while later new fields have been discovered, new sections prospected, and a war almost took place for their possession. But when the Boundary Commission had finished its work, and England had accepted the decision, Venezuela found the wealth within her boundary; and there are copper-mines there too, and even tin and silver, the extent of which has not been well determined. Bituminous coal of a good quality is abundant in many districts, good petroleum is refined in the State of

A VIEW OF CARACAS

Los Andes, and asphalt enough to supply the world in the districts of Bermudez and Maracaibo.

When Columbus, on his third voyage, in 1498, sighted the long main coast, he little knew of the country that lay behind the frowning ramparts of the mountains; he had no idea of the stretching wastes of wealth that lie back of the Orinoco's mouth; and we know little more of parts of the land to-day. On the old Spanish maps there is a vague country put down as "Castilla del Oro." It is claimed by some people now that modern civilization has touched its edge. That may be so. Even the traveler sees but the unawakened on all sides of him; the slumbering fallow ground, waiting but for irrigation and the plowshare, the same unpenetrated forests into which Drake and Pizzaro looked, are there with their treasures. Coffee, actually now the wealth and the medium of exchange, is not indigenous; but, once imported, it flourished to its present undeveloped capacity. But in fifty-five years, from 1830 to 1885, the export had increased per annum by less than 75,000 ds. For ten years at a time it would

remain stationary, owing to the revolutions, and then when peace came it would bound to soaring figures.

It is difficult, perhaps, in writing an article, with the ever-present temptation to refer to figures and statistics, to avoid them. But this is not my intention—it is but to make the reader stand with me on one of the mountain-sides and look over the grand spread of sweeping hills and narrow valleys; to have him wait at the corner of the street while the heavy carriage of a Cabinet Minister joggles and twists over the uneven, ill-paved streets of the capital; to see the idle, good-natured population basking in the sun; to glance at the señoritas who murmur their salutations from the iron-barred windows; to get a glimpse of what may be amusing, or of what may interest—but to feel, permeating all, the sense of pathos, the idea of hopelessness, that is now the keynote of the Land of Stand-Still.

Climbing over the great hills that tower above the port of La Guayra, clinging to the sides of the valleys, and following the easiest grades, once ran a Spanish road; twenty feet wide it was, paved with care-

FROM THE SOUTH

fully selected stones, in runnels and patterns that would best deflect the summer downpour and preserve the highway. Countless millions of hoofs and sandaled human feet wore the stones smooth; slaves who had built the road were the ancestors of the people who are yet as beasts of burden. The conquerors brought with them the tough Spanish jack that was the sire of the burro and the strong-backed little mule of the country. Line after line, plodding up the hill and down the valley, they still follow the same route. But the wide Spanish road is gone! It went long before the railroad came; only in short spaces of a few yards or so does it exist, and the crumbling pavements litter and obstruct the path, like the rocks at the bottom of a dry mountain torrent bed. For scores and scores of years after the Spaniard left, the Government did not attempt to repair that once noble highway. It was permitted to go to ruin.

There is one spot, on the Caracas side of the slope, where it remains intact; and a person standing there can look down the hill and imagine things as they were two hundred years ago. The buildings

in the city and the valley below are of the same unchanged architecture and design. Many stood in the same place where they now stand, and the same cracked old bells clanged and jangled their calls to mass. This man coming on, bare-legged, clad in his ragged old garments, is the same whose sandals wore the cobbles smooth. The arriero, or line of donkeys he is driving, are carrying the same saddles, tied to their sore little backs in the same old way. Behind them one could almost imagine one of the old Spanish cavaliers riding up the slope. It is but the slightest stretch of imagination—against that background of distant sloping roofs and square church towers—to see him there, to catch the glint of the sunlight on his steel corselet. How easily his hand rests upon the hilt of the dagger at his belt! Mark the gay caparisons of his saddle and the heavy decorations of the leather head-stall! But no; it is only his descendant, brown-skinned and darker of eye; but he rides the same saddle, his stirrups may be of metal like the foot of a man in armor. The caparisons are there, head-stall and all; the spurs he wears over

his naked heels have been handed down from generations before him; his dagger is really hanging from his embroidered belt.

You pass a little hillside plantation, and over it, to your surprise, there is flying the red and gold flag of old Spain—it is not imagination, it is fact; fully a third of these little hillside farms on the coast line belong to people who yet claim to be under the Spanish protection. It is better for them to be able to prove that they are not citizens sometimes. But in the garden a peon is working; his plow is the root of a tree, shod with iron along its pointed end; the oxen are attached across their horns with thongs of rawhide. Let the same man leave his hillside labor and work for a foreign overseer at one of the European haciendas. It would only be by watching and constant threats that any one could get him to use a wide-cutting, double-handed American plow. He prefers to do as his forefathers have done; he will insist on doing it, with the stubbornness of semi-civilized conservatism.

But press on. The last steep descent, and you look down upon the expanse of the red-tiled city. It stretches and fades almost into a purple tint, as the color comes against the vivid green of the cane-fields that line the river on the farther side. Evidently, ages ago, the Caracas valley must have been the bottom of some great lake. The alluvial soil stretches up to the old high-water mark on the sides of the hills and is so deep that it reaches for many feet below the surface. The plazas are marked by their squares of green tree-tops, and the gardens in the patios are marked by palms and vines. Away off toward Paraiso there lift the feathery tops of a line of royal palms. From the distance the defects of Caracas are unobserved. It might be ancient Spain, it might be one of the towns of the lost Atlantis. But from off on the right there comes a whiff of steam, and the train that climbs the steep grades of the marvelous English road from La Guayra pushes back the years. It is the Present, after all, and, almost with a sigh at the disillusioning, you descend.

Such a street as you enter upon when once past the spot where stood the old city gates you could not have imagined.

It is like the bottom of a cañon, marked and deeply seared by the erosion of rushing water. No vehicle that ever moved on wheels could travel a dozen yards on it. But wheels are not necessary for the people who live in the houses that line this end of the town. The burro or the mule can reach them with his loaded panniers, and that is all-sufficient.

You go by an old church on the left; you circle about an ancient plaza whose flagstones are cracked and shattered by the earthquake, and through the streets, passing the succession of one-storied houses, you get deeper and deeper into the city. Mangy dogs are scratching themselves at every corner. The gutters are littered with freshly scattered and sun-dried piles of refuse. The smells vary with every turn; numbers of idle men, clad in linen or a cheap kind of khaki, increase in number. Little naked babies squat about the doorsteps; beggars, many with sore legs and husky voices, ask politely but piteously for alms. You notice, even in the faces of the young, an expression of something akin to resignation. You imagine at first that it may be resignation to the ever-present odor. But it is more than that. There is among the lower classes no glow of laughing contentment such as we see among those of other countries. It is the resignation of the poorly fed, the half-nourished—it is the hardship of no hope.

Through the iron-barred windows brown-skinned women look at you. A priest in his long black gown passes by a group of young men at one of the corners. No one lifts his hat; they do not even make room for him, so he steps out into the street. An Indian soldier boy, scarcely fifteen years of age, with the national colors tied about his straw hat, slouches by, with a suspicion of swagger, along the shady side. Behind him comes an artillery sergeant; he wears garish red trousers and a red embroidered cap. His broad black toes peep out over the soles of his alpargatas, or native sandals. You know he is a sergeant, for his chevrons dangle upside down from a safety-pin on his sleeve. He may have been a private yesterday, and his color is no bar to his becoming a general.

As you come nearer the heart of the town the houses increase in width and

LA GUAYRA HARBOR

IN THE PRESIDENT'S HOUSE

THE MARKET-PLACE

A COUNTRY ROAD

THE PLAZA BOLIVAR

THE PORT OF CALL

SCENES FROM "THE LAND OF STAND-STILL"

height, but they are all one story. In some cases beautiful black eyes look out through the ornamented gratings. Fair faces, accentuated in whiteness by a layer of powder, prove a pride in an unbroken Castilian ancestry. At one place a suitor mounted on his sleek saddle-mule has ridden up on the sidewalk and is carrying on a flirtation through the grating. He pulls his mustachios fiercely and glares at you from under the brim of his sombrero. He murmurs something, and the señorita laughs.

You come to a long, iron-trestled bridge across a deep, walled gorge. The loose bolts rattle as a heavy carriage approaches. The driver of the fine pair of horses is dressed in an old-fashioned, double-breasted coat, trimmed with gilt braid a full inch wide. A cockade ornaments his high glazed hat; he wears false boot-legs pulled over his white canvas trousers, but the shoes that protrude beneath are patched and worn, and innocent of blacking. He has driven carefully, this coachman, for there is a hole in the planking of the bridge through which the forelegs of both his horses might easily disappear. But there is not a driver in all Caracas that does not know that hole! It has come to be accepted as a fixture, with its dangerous possibilities, much as the dirt has come to be a fixture, with its threatening of disease.

In the carriage lolls a Cabinet Minister; maybe he is not the one in charge of the highways, and maybe it is seldom that he drives across the bridge, so what cares he for the menace to public life or limb! The Minister is dressed in a long frock coat; the ribbon of a decoration is in the lapel; the silk hat he wears shows the influence of France; and his air, as he leans back with both hands upon his gold-headed cane, shows the influence of prosperity.

But now we are down in the city and have come to the corner of its heart of hearts, the Plaza Bolivar. The Casa Amarilla, the old government house, is on the corner; a policeman, in his faded black uniform, with his shiny Remington carbine used as a prop for his knee, leans against the wall. He belongs to an organization that earns every penny that it gets, for he stands on the street all day and sits in his usual corner at night, wrapped

in his heavy red-lined cloak. But every time the bell in the cathedral opposite clanks the quarter he is obliged to blow his whistle in challenge or in answer to his nearest comrade. It is stated on good authority that he has learned to blow his whistle in his sleep. The police of Caracas have nothing to do with politics. Presidential parties may come or go, but they keep order just the same. Commanding them for some years has been a man whose head has not fallen into the political basket. Every one speaks well of him. But we digress.

Fronting the Plaza on the north are the post-office, a few cafés, and a big garish two-storied hotel, devoid for the last two months of guests; the sign on one of the cafés has recently been changed from "Allemania" to "America." On the south side of the square is the Bishop's palace, and on the east the cathedral and a few small shops. The old cathedral, chipped, scarred, and ugly, has withstood the shock of earthquake more than once. Its square tower has trembled but never fallen; it has witnessed many changes, and may witness many more.

The plaza in front lies below the street level like an Italian sunken garden; fine shade-trees line its tessellated walks. It is dominated by a prancing equestrian statue of Bolivar Liberador. There is a smaller replica of it, I believe, hidden away behind the bushes in some unfrequented spot in Central Park. The skeleton of an ancient wreath still hangs on its front, and the rust and weather have streaked the bronze body of the horse in great gashes of gray-green rust.

But what would Caracas be without the Plaza! Here beats the center of its social life; here gather the politician and his friends, to chat and mayhap to plot under the shadows of the trees. Here on Thursday and Sunday evening the big band, by no means a bad one, plays till almost midnight. Just now German and English airs are barred; grand opera is the favorite—and Spanish airs—but the people do not rise nor doff their hats at the notes of the national anthem; to do so is a matter of mere taste.

Seated about on the folding camp-chairs that can be rented for the evening for a locha (two and one-half cents) are all the beauty and fashion on the concert nights.

DRAWN BY WALTER HALE

THE TOWER OF THE UNIVERSITY, CARACAS

The señoritas, with the mammas, papas, or dueñas, sit there in their best gowns. They withstand bravely the bold staring of the well-dressed men who parade before them to and fro, singly or in companies.

All the notabilities are present, the foreign Ministers and their families, the generals and minor officers, and everywhere groups of immature young swells, flourishing their walking-sticks. I say immature for want of a better word, for they mature early, in the ways of the world, in Venezuela. Lads who in our country would be at home or at their studies, or talking about football or athletic games, discuss the latest whims of their mistresses, or their losses at the recent cock-fight. Yes, indeed, here beats the city's heart, and here on the wonderful cool evenings, in the glow of the lamps and under the influence of the music, Caracas, after her own fashion, grows almost gay.

The public buildings occupy a huge square by themselves. The camera can give no hint of their appearance; even the pencil fails. It may require description to do it—the pale circus blue and faded pink of wall and cornice, the chipped and shattered stucco, the protruding elbows of the underlying brick that show at the corners and edges, and the frayed, worn patches. It all has the appearance of opera scenery after three years' service on the road. On the edge of one of the entablatures of the Federal Palace a seed has caught in the accumulated dirt and dust, and grown into a healthy tree. The lack of glazing in the windows gives the buildings the sacked appearance of a recent partial conflagration.

Let us go inside the big reception-room where the splendor-seeking dictators of the past held their ceremonious gatherings—it is the ruined play-room of the Presidents. On one side of the wall hangs a noble painting by a German artist—Bolívar and his chiefs meeting in a hut on the Orinoco; all down the wall are portraits, some fairly painted, others archaic in color and design, mirth-compelling in their stiffness and lack of symmetry. Overhead is a well-composed fresco of the battle of Corobobo, and, odd to relate, it shows the English legion and the American volunteers helping the Ven-

ezuelans drive the Spaniards into flight. The farther end of the room was where Guzman Blanco and Crespo once sat in uniformed splendor; but the ceiling has fallen here, and has been recently swept into a corner of the sunken, uneven floor. Bits of cloud and horses' legs, generals' epaulets, and Victory's wreaths lie there in huddled confusion. There was more money spent in sudden decoration than in methods of perpetuating its surroundings and supports.

Venezuela has produced two great artists—Michelena, whose work is known in Paris, and whose splendid paintings help to adorn the cathedrals and the walls of the neglected national gallery; the other, whose name has unfortunately slipped the writer's memory, has a wonderful painting of the Inferno in the old church on the top of the hill. Both men died young and have left no successors.

Directly south, across a much-cracked concrete courtyard, are the buildings of the University; if anything, they are in worse condition than the Federal Palace. They are so scaled, cracked, and battered, so chipped and scribbled up by chalk and lead-pencil, that their pseudo-Gothic intention looks almost unhealthy in its forlornness. Once there stood in the court an equestrian statue of the creator of all this tawdry magnificence, as big as Bolívar; from his horse Guzman Blanco doffed his cocked hat to admiring posterity. But the Venezuelans do the act of erasure thoroughly—they left no trace of the pedestal when they tore him down. Upon every other statue that he erected they obliterated his inscriptions; but, as I have said in a previous article, his presence and methods live to-day.

Let us hasten our steps; there is an imposing-looking plaster-trimmed theater yet to see, and several more half-bare ancient churches, the cheaply built bull ring, and at last the architectural and engineering feats about the hill that fronts the railway station. Here are a few paradoxes for you! A crumbling triumphant archway under which no one passes, a tunneled roadway through which no one drives, and a long iron bridge which no one crosses, connecting two hummocks surmounted each by a little chapel in which no mass is said. The limbs of the surmounting statuary of the arch have

fallen to the ground, and we can see that the plaster was laid on cores of wood. It was probably charged for at the rate of marble, however, and the difference fell into gaping pockets.

The palace of Miraflores, an ugly square building surmounted by the three-colored flag of yellow, blue, and red, is on the hill to the northwest. It belongs to the Crespo family, and is rented by President Castro from the estate. He is supposed to pay \$12,000 per year for its occupancy, but a member of the family told me that for some time the matter of payment has slipped his memory. Some of the rooms are beautiful, and the decorations are worthy of any palace in Europe. It is here that some of the best of Michelena's work is to be found. The decorations of one room cost in the neighborhood of one hundred thousand dollars. When I looked at its splendor, I could not help thinking of the yawning hole in the bridge! There is another room that is built entirely of steel, and painted with the garishness of a lady's fan; it is called the earthquake room, and well it may be a comfort to the present occupant, for at the last earthquake he broke his leg by jumping from the window of the Casa Amarilla, his former official residence.

There are the barracks; the one to the north with its single gun presented to the Venezuelan Government by the Empress Eugénie, and with all its loopholes frowning at the city, like all the other "defenses." There is another near the center of the town, where the small brown soldier boys stand guard at the door, armed to the teeth. At night both places are given a wide berth, and the unknowing stranger who might not understand the peremptory "*Halte, qui vive!*" is in no little danger. Much afraid of these places are the peaceable inhabitants, and much right have they to be so, for the soldier that supports the reigning government is a privileged person. It does not do to complain of him. The keeper of a café frequented by the troops once spoke to the colonel of an Andino regiment and said that his soldiers borrowed his knives and forks and did not return them. "Do you mean that the soldiers of my government are thieves?" replied the colonel. The restaurant-keeper replied that it might look that way to the casual observer, or words to that effect;

whereupon the colonel shot him dead, and that was an end of the matter.

Leading out of the city to the south and crossing the shallow river is the far-famed "iron bridge." It joins at its farther end with a broad road about a mile in length. Beautiful gardens and well-kept little villas, mostly the pleasure homes of politicians, are on either side. Here on holidays meet the upper classes, the old conservatives, the wealthy tradesman, and the successful politician. The pampered favorite of the latter drives here, too, lolling back in her victoria. The people bow to one another or give the cut direct, as their acquaintanceship dictates or their position in the social scale may give them privilege or not. At the eastern end used to be the gay quarter, the dance-houses and the fandangos. A little park is at the western end, where there is also, strange to say, a baseball field. A hopeful sign for the future is that a small percentage of the youths and boys have taken up outdoor sports, this within the last four years. This mile or more of good road is all that is worthy of the name of "driveway" in a country bigger than the State of Texas! The people are very proud of it.

There is the beautiful convent school for girls out in the same direction, and farther out are scattered the picturesque haciendas of the sugar-planters. Now add to all that I have described the busy market, with all its thronged stalls, its teeming life and movement, its own individual odors and sounds, the miles of stretching, close-hemmed-in streets, some traversed by little narrow-gauge street railways, and we have a quick glimpse at the capital of the Land of Stand-Still. Two miles out, and you are in the great and glorious country.

The mountains tower up between the city and the sea. They have helped to hem it in from progress, perhaps, for, geographically speaking, the country is turned the wrong way, and were the fertile slopes stretched seaward, and were not the rich tablelands and valleys for so many years so hard of access—until the railway solved the problem—the country might not have been so long at slumber.

The city can be cleaned, the roads can be improved, occupation found for the idle, if they but have peace from the evil

PHOTOGRAPH BY M. MIRABEL

PRESIDENT CASTRO ALIGHTING AT THE RAILWAY STATION TO BID GOOD-BY TO  
MINISTER BOWEN

to which they blame everything—the Revolution. But will the country then rise, of itself, for advancement and progress? Will the bloody quarrels of the political parties be forever ended—will the look of resignation disappear? Let us be hopeful. It is hard to believe that everlasting dry-rot can exist in the midst of such possibilities. The fault may lie in the race, and it may be predestination that has reduced the capacity of the people; but the awakening must come, and come, from all appearances just now, from the outside. From what direction,

whether from across the sea from Germany, whether pushing southward through the Caribbean, who can tell?—it is not for me to predict the source of the awakening, but some day come it will. The present Land of Stand-Still will be the future Land of Movement.

There are natural forces in the people that will respond, respond most eagerly. Naturally the common people are honest; you can trust the most ignorant peon with your most precious belongings. The native servants up in the country, and even in the town, never steal. Doors are

never locked nor windows closed. Highway robbery is unknown. The arrieros, with every donkey laden with gold from the mines, travel along the lonely trails without a guard in time of peace, and even sometimes in time of war. The revolutionary forces and the Government armies live on the country, as live they must, and depletion and disaster follow in their path. But you can leave your money-belt with the keeper of any way-side posada, and sleep in peace. You can send it by a barefooted messenger and feel safe. Yet the proprietor carries a revolver and the messenger a knife, and shootings and stabbings are more than common, but not for robbery.

Kindly, courteous, and hospitable are the owners of the outlying haciendas. Everything they have is at the disposal of the transient guest. Here and in the cities are to be found cultured, educated, and delightful people. You meet members of the great universal class that is the same the world over—who differ only in racial temperament, coloring of hair and eyes and skin, and whose inheritance of national customs is secondary to their knowledge of the world-wide, unwritten rules. Their sons may be graduates of Oxford or Cambridge, of Yale or Harvard; their daughters would ornament any society with their beauty and their charm of manner; but they are not the ruling class; for the most part they have scarcely had a voice in the government at any time. They are but an atom in the composite make-up of the nation. There are American and European wives and Venezuelan husbands. If a foreigner marries a Venezuelan woman, of course his immediate family take after the father, yet there are born Venezuelans in this same class, whose progenitor was so far back that they have lost all trace of him but the name—Campbell or Smith it may

be, and their ancestor's tongue may be unknown to them. It is not everybody who meets them. Their existence is not obtrusive; and, alas! many who are not in trade of some sort are now so poor that there is hardly anything left them but their pride. Their beautiful country places are sold or mortgaged beyond hope of payment, their big city houses are rented or empty. The wide-open patios, with their flowers and palms, mock in their exuberance the empty larder. The family plate and jewels are long since sold; even the heirlooms of lace, the mantillas and the ivory fans, high combs and loved trinkets, have gone for almost nothing.

But the señoritas sit in the windows and chatter through the bars—poor little half-imprisoned birds—and then go back through the big, high-ceilinged rooms to their peasants' dinner. Sometimes there is hardly charcoal enough to warm the old Spanish oven, and the meal is cooked over fagots gathered in the woods.

The science of living, so far as creature comforts are concerned, is still in its infancy—the pleasures of the table little known. Cookery is a forced employment, hardly a calling, never an art. Garlic and spice, spice and garlic, flavored bread and meat—the luxuries of nature, the fruits and native cereal, products of the untouched forest and half-tilled ground, kept alive the common people who only ate to live.

They are hardy, the pueblo, but leprosy and other diseases are among them; fever is frequent. But see what science and advanced sanitation have done for Cuba. Cannot the impetus that will be given to the laws of government and its proper administration be extended to the laws of living? Even the intense conservatism of the masses may yield to patient teaching. The awakening may be general.

## Wish and Will

By Priscilla Leonard

Scatter thy wishes, and their arrows fall  
Broken and spent, beneath Fate's frowning wall;  
Forge from their fragments one sharp spear of will,—  
The barriers frown, but thou shalt pierce them still!

### Judge Peter S. Grosscup

Judge Peter S. Grosscup was born in Ashland, Ohio, in 1852. In 1892 he was made United States District Judge in a northern district of Illinois, and in 1899 he was promoted to the Circuit Court. He has given a remarkable number of decisions bearing upon almost distinctively public questions. The first which attracted National attention was a dissenting opinion upon the application to close the Chicago Exposition on Sundays, an opinion afterwards sustained by the higher Court, and the next was that in which he joined with Judge Woods in issuing the famous injunction against Eugene V. Debs and the other officers of the American Railway Union. The most important recent decision was that in which he granted a permanent injunction against a combination of the beef-packers to keep their agents from competing with one another. Judge Grosscup's recent address before the University of Michigan urging closer public supervision of corporate transactions, in order to make corporate investments secure to members of the middle classes, has deservedly attracted wide attention.

**A**N unimproved site on Fifty-third Street, between Eleventh and Twelfth Avenues, in New York City, reserved for a future park, overlooking the river, and used for many years as a dumping-ground and storage-place for trucks, etc.; one green spot where there was any vegetation, and that producing plantain leaves; no shade, no water, the approaching streets filled with restless, begrimed children with nowhere to go, nothing to do—this was the home of the first Children's School-Farm in New York City.

The most level spot overlooking the Hudson, 114 feet by 84 feet, was selected, the ground plowed, prepared, and laid out in small plots, numbered, and inclosed by a three-foot-high fence.

The soil being very poor, the plow having turned up rags, wire, lime, and stones, and the season late, quick-growing vegetables were selected. Water was put in at three places. A tent accommodating about two hundred people, blackboards for instruction, seats for comfort, a circular flower-bed in the center of the farm, and all was ready for the first planting-day. Twenty-five children at a time, with tags the numbers on which corresponded with those on the sticks, staking out their claim, three feet by six feet (upon which the nearest and most friendly neighbor had no right to intrude), were lined up and given directions, then marched into the farm, forming two sides of a hollow square around a small plot, where the gardener went through the whole process of making the furrows, describing the seeds put in, covering them, etc. The children then marched to the number corresponding to their tag, and went through the same process, making the

furrows with the sharp end of the stick, and covering and patting down with the spatula containing the number; then right about face and out the gate they went, faces glowing with excitement, which was not lessened when a few days later the earth began to crack open and little heads peeped out. At the same time seeds of like variety were planted in sawdust, that the process of those under ground might be watched. Here curiosity, that strongest of human traits, was satisfied wholesomely. Seven varieties of vegetables were planted in each plot, corn in the center, on either side of this string and butter beans, peas, radishes, turnips, lettuce, and a border of buckwheat around the whole farm.

The child's co-operation in preparing the ground was found to be a necessary initiative step, as its hands were not accustomed to handle anything so small and tender as a seed.

After the workmen left for the day, it was suggested to the boys and girls that they clear the ground of some of the stones in order to facilitate the next day's work. Would we sit by while they did it? Yes, indeed; and away they went with a loud shout; but throwing the stones into regular piles was by far too monotonous, and, spying an old horse a block off, they stood three deep aiming at him. The air was black with stones. All words of caution were useless. There was nothing to do but wait until they injured themselves. Before long *they* decided that it would be necessary to have either a hospital on the grounds or calmly put the stones in piles. An old horse and dump-cart were secured, and eight loads of stones removed in two hours, and the ground made ready for the second plowing in the morning. A

happy, tired group, seated on the ground about our chair, together sang the good-night song, and then wended their way by moonlight across the rough lot back to the hot, close street, eager for the morrow and the farm. And so eyes, hands, feet, heart, and mind were unconsciously trained, while seemingly the hours were filled only with endless pleasure. The timid girl in her teens, so inclined to remain indoors, grew more self-reliant, the bold more modest, the rough boy more gentle. Little faces, lately so hard and prematurely old, began to assume the look of real childhood, and the farm became truly their own.

A public flag-raising seemed the least tribute that could be paid to the Park Department of Manhattan for making this vitally important educational object-lesson possible. On August 5 this took place. To the casual observer it seemed but a public function, but it proved one of the most important features of the farm, and its raising and lowering were eagerly watched for. But on the morning after the ceremony a cloud seemed to rest on the faces of many who lived down the nearest street, and inquiry as to what dire calamity had happened elicited the answer, "We cannot see the flag

from our doorstep or window." In a few days the flag-pole was moved so as to be seen two blocks away.

The question has been asked, What method was used to control an unruly mob of children of various ages of non-public school attendance? After watching them for the first day or two, it was discovered that they were like thistledown before the breeze, or, more properly, like a flock of sheep. A sudden noise promising excitement, and away they all flew, one, two, three blocks, and, it proving to be a false alarm or the promise not fulfilled to the extent of their hopes, back

they all came to see what these intruders were doing on their domain. On account of their noise, sometimes accidental, but as often intentional, it was impossible to be heard. We decided to seat ourselves on some stones in the center of the floorless tent and be listlessly silent. Five, ten minutes passed, while the audience of several hundred children looked on expectantly; but not even an expression of interest being visible on the faces of those thus seated, the crowd melted away and

did not return, and it was then possible quietly to make plans for future work. Futile efforts were made to have the children listen to orders. The next day the happy thought of standing in their midst, with a stone held high, was tried. Curiosity was aroused at this unusual proceeding from such a source, and for just a breath silence reigned, but that second was taken advantage of to say, "Let us see who can hear this stone drop." Every one was silent. As the stone struck the ground, before the shout of "I did" came, the opportunity was seized to say a few, very few, words of instruction. This plan was carried out the second day, and the attention was held longer.

The choice was given as to who would be

farmers or policemen. Only fifteen chose to be the latter, who were quite different from our metropolitan police force, which is largely made up from the farms.

After the first few days a whistle was used—one sound meaning attention; two, farm police; three, vacate farm, tent, and perhaps lots. On the third day there was no response to the second signal. The police had all deserted and become farmers. There were two reasons for this—love of the work, and fear of being stoned if they should assert their authority. A club was formed, the dignity of which had a marked effect, from the day the

ONE OF THE FARMERS

DE WITT CLINTON PARK BEFORE CULTIVATION

DE WITT CLINTON PARK AFTER CULTIVATION

CHILDREN'S SCHOOL-FARM AT DE WITT CLINTON PARK

real work began, and they were allowed to help. There was no more trouble.

One of the secrets of the success of this scheme was the attitude toward the children of the men who prepared the ground; they recognized the desire of the children to help. They would bring extra shovels and rakes for them. The head and foreman gardeners of the Park Department were Swedes, and had had the benefit of gardens connected with the schools in childhood in their own country, so their hearts went into the work as well as their hands and heads, for they understood the children and how they would love it.

The farm grew to perfection from the suggestions of these men, the parents, and police; one of the latter saying, "These children will never obey until the tent is made more beautiful than anything they have ever seen." Following this suggestion, a floor was laid, and a box of blooming plants was placed around the whole tent, twenty-five feet by thirty-five feet. The effect was magical.

Once a week in the tent a round tub was filled with water, on whose bosom floated a mass of water-lilies in all their rich, cool, native beauty. Their subtle influence seemed to reach all. Making a beautiful park or making a beautiful garden with the "Don't touch" sign is like eating luscious fruit before hungry children; they want some too. So at stated times a basketful of cut flowers was distributed in the tent, so satisfying the wholesome longing aroused by the boxes of plants, which were to be respected.

The boys would work like beavers, sometimes until the rain fairly forced them to beat a retreat to the shelter of the tent. As soon as the storm abated a little, out they went again.

George T. Powell, Director of Briarcliff Agricultural College, says he will never forget the day of his first nature-study talk in that tent, when he witnessed this scene and the eagerness with which the children fairly fell over each other in order to see his charts and hear his wonderful story of the strawberry plant and the worm that was its enemy.

These small farmers were drawn from the densely populated West Side, no distinction being made as to age or sex, those first applying being taken. Boys

in their teens, employed as hall-boys, would work two consecutive Sundays in order to come for a few hours to the farm during the week. Others would come before their day began, help put up the flag or rake a path. Mothers would send notes saying, "Please drive my boy out of the farm. He must go to the factory. We need his earnings."

Could these delicate growing boys and girls have had a few feet of ground, they could have raised and sold enough vegetables to keep their own family, earning more than double the money they could earn in the factory, and have grown strong and courageous, instead of weak and discouraged with the long hours, shut away from God's sunshine. They would have seen the satisfactory results of their own labor, whereas in the factory their efforts are only a small part of a great whole, the completion of which they never see. The money is turned into the family and is lost to view. The child owns nothing, has no better clothes or food for his long hours, and by the time he is sixteen he does not care whether he lives or dies; and so our tramps are formed.

Mr. Powell said: "If I could have the training of the city children on these vacant lots for a period of two months, I could send out several thousand of the boys, ranging from fifteen to eighteen years of age, upon farms throughout New York and other States."

The few weeks' work on the ground, planting seeds, caring for the growing plants, the responsibility and pride of individual plots, the having an object of personal interest to them, which gave to each something to do, has done much for these children. Their activity, once destructive, has been given a turn for construction and care. They have learned something of the fact that work can also be a pleasure, and they can now be guided into doing things useful where once they could hardly be controlled. The evolution from rudeness, nervous excitement, and "scatteration" to concentration, was daily perceptible.

They also made a great stride in "private care of public property." This, which was not believed of these children, has been proved. That this has been done in this district is good evidence that it can be done anywhere in Greater New

York, and especially as it was accomplished when handicapped by lack of tools, very little money, only one teacher, and a late beginning. As in all experiments, an immense amount of detail work was done and many perplexing problems were faced. The experimental stage has passed. With the means at the disposition of the Board of Education, and with the co-operation of the Department of Parks, which showed such great willingness with this School-Farm, the successful operation of others should be merely routine work.

It was a long time before proper implements were furnished, but clam-shells just fitted little hands and made an excellent substitute for hoes. City farming on poor soil, where the ground looked very much like concrete, is quite a different matter from the same work done in the country. Our wise foreman gardener from the Park, ever ready to give us advice and aid, said, "Water, water, water," instead of hoeing.

In a neighborhood where before only vandalism reigned, this miniature farm, lying in one of New York's most congested districts, awakened an almost forgotten feeling in the hearts of the people of the neighborhood, at the same time satisfying the active restlessness of the children. To the high-school girl Hiawatha and the waving corn became a reality. The crippled child, striving to get strong enough to be brought to this wonderful fairy-land that its little companions told so much about, drew deep breaths of satisfaction. The overtaxed, weary business man, the millionaire, the laborer, the teacher, minister, longshoreman, the mother from her pressing manifold duties in a home all too small, or a home too large with no childish voices, impelled by curiosity or courtesy, came for fifteen minutes, but forgot to leave until the lengthening shadows gave warning of the approach of night.

The attraction? Children in their natural environment, in close touch with

nature and allowed an opportunity to develop their own individuality, guided by simply a word. "Was that honest?" "Was that manly?" "Johnny, stand right still. Look at your feet." And when the tender lettuce-leaf was found bruised beyond restoration, if possible a fresh root was transplanted to that spot, but those wayward feet never strayed from the path again.

The twentieth-century child must go back to nature if it is to hold its own, for the strenuous life of its mother and father, in high life or low, has not bequeathed to it quiet nerves and strong physique.

The harvest was a rich one. The brownies certainly must have had a hand in it, for these vegetables, the seeds of which were planted on July 27, seemed to know what was expected of them, and did not fail their loving caretakers in a single detail. Fancy a bevy of happy, wondering children, who had never beheld corn before, eagerly tripping from plot to plot, counting those wonderful tassels, until sixty-five had been found. Then the ear, the silk, quarts of fresh beans, wheelbarrows full of radishes, heads of lettuce, taken home for the family meal! From every doorway or window the smiling, expectant faces of adults proved that the contagion of interest had spread, and news of *our* farm was watched for. At five o'clock, three blasts on the whistle and every little farmer went out of the gate and stood eagerly waiting to see who would be chosen to rake the paths. Those were selected who had behaved the best, one for each long path. Like soldiers they marched, rake over the shoulder, to the head of the garden. As the whistle was sounded each fell to work most dexterously, raking toward the center path where stood others with wheelbarrows ready to gather up the piles, and in a few minutes—for "many hands make light work"—our Farm was a beautiful picture with its symmetrical paths and plots left in order for the night.

## The Man Without a Party

Samuel M. Jones, who has just been elected Mayor of Toledo, Ohio, for the fourth successive term, and has been thrice re-elected as an Independent against the candidates of both of the great parties, was born in Wales in 1846, and brought to this country by his parents when three years old. He was compelled by the poverty of his family to become a wage-earner when a mere child. When eighteen years old he entered the oil fields in a newly opened Pennsylvania district; and later became the inventor and manufacturer of an improved oil-well appliance. His manufacturing business has been conducted in Toledo, Ohio. He took no part in political life until 1897, when his popularity as an employer led to his nomination for Mayor on the Republican ticket. As an employer he won the name of "Golden Rule" Jones by his insistence that no other rule was needed in the management of employees, and the same rule has been his watchword in the administration of public affairs. His interpretation of this rule has often alienated the support of good people, but no one has ever questioned his sincerity or kindness of spirit. Nearly all his political views have grown out of his belief that all people are essentially equal and entitled to equal consideration. This is at the bottom of his advocacy of the public ownership of monopolies, which has marked his administrations from the beginning. It is also at the bottom of his hatred of the rule of political machines—a hatred which has led him to denounce all party organization and conduct his last campaigns as "the man without a party."

"ONLY EXPERIENCE IN BALANCE . . . WILL BRING YOU SAFELY ACROSS A STRETCH OF WHITECAPS"

# THE FOREST

## Chapter VII.—On Open-Water Canoe Traveling

"It is there that I am going, with an extra hand to bail her—  
Just one single long-shore loafer that I know.  
He can take his chance of drowning while I sail and sail and sail her;  
For the Red Gods call me out and I must go."

THE following morning the wind had died, but had been succeeded by a heavy pall of fog. After we had felt our way beyond the mouth of the river we were forced to paddle northwest by north, in blind reliance on our compass. Sounds there were none. Involuntarily we lowered our own voices. The occasional click of a paddle against the gunwale seemed to desecrate a foreordained stillness.

Occasionally to the right hand or the left we made out faint shadow-pictures of wooded islands that endured but a moment and then deliberately faded into whiteness. They formed on the view exactly as an image develops on a photographic plate. Sometimes a faint *lisp-lisp-lisp* of tiny waves against a shore nearer than it seemed cautioned us anew not to break the silence. Otherwise we were alone, intruders, suffered in the presence of a brooding nature only as long as we refrained from disturbances.

Then at noon the vapors began to eddy, to open momentarily in revelation of vivid green glimpses, to stream down the rising wind. Pale sunlight dashed fitfully across us like a shower. Somewhere in the invisibility a duck quacked. Deuce awoke, looked about him, and *yow-yow-yowed* in doggish relief. Animals understand thoroughly these subtleties of nature.

In half an hour the sun was strong, the air clear and sparkling, and a freshening

wind was certifying our prognostications of a lively afternoon.

A light canoe will stand almost anything in the way of a sea, although you may find it impossible sometimes to force it in the direction you wish to go. A loaded canoe will weather a great deal more than you might think. However, only experience in balance and in the nature of waves will bring you safely across a stretch of whitecaps.

With the sea dead ahead you must not go too fast; otherwise you will dip water over the bow. You must trim the craft absolutely on an even keel. Otherwise the comb of the wave, too light to lift you, will slop in over one gunwale or the other. You must be perpetually watching your chance to gain a foot or so between the heavier seas.

With the sea over one bow you must paddle on the leeward side. When the canoe mounts a wave, you must allow the crest to throw the bow off a trifle, but the moment it starts down the other slope you must twist your paddle sharply to regain the direction of your course. The careening tendency of this twist you must counteract by a corresponding twist of your body in the other direction. Then the hollow will allow you two or three strokes wherewith to assure a little progress. The double twist at the very crest of the wave must be very delicately performed, or you will ship water the whole length of your craft.

With the sea abeam you must simply paddle straight ahead. The adjustment is to be accomplished entirely by the poise of the body. You must prevent the capsize of your canoe when clinging to the

<sup>1</sup> Copyright, 1903, by the Outlook Company.

angle of a wave by leaning to one side. The crucial moment, of course, is that during which the peak of the wave slips under you. In case of a breaking comber, thrust the flat of your paddle deep in the water to prevent an upset, and lean well to leeward, thus presenting the side and half the bottom of the canoe to the shock of water. Your recovery must be instant, however. If you lean a second too long, over you go. This sounds more difficult than it is. After a time you do it instinctively, as a skater balances.

With the sea over the quarter you have merely to take care that the waves do not slew you around sidewise, and that the canoe does not dip water on one side or the other under the stress of your twists with the paddle. Dead astern is perhaps the most difficult of all, for the reason that you must watch both gunwales at once, and must preserve an absolutely even keel in spite of the fact that it generally requires your utmost strength to steer.

In really heavy weather one man only can do any work. The other must be content to remain passenger, and he must be trained to absolute immobility. No matter how dangerous a careen the canoe may take, no matter how much good cold water may pour in over his legs, he must resist his tendency to shift his weight. The entire issue depends on the delicacy of the steersman's adjustments, so he must be given every chance.

The main difficulty rests in the fact that such canoeing is a good deal like airship travel—there is not much opportunity to learn by experience. In a four-hour run across an open bay you will encounter somewhat over a thousand waves, no two of which are exactly alike, and any one of which can fill you up only too easily if it is not correctly met. Your experience is called on to solve instantly and practically a thousand problems. No breathing-space in which to recover is permitted you between them. At the end of the four hours you awaken to the fact that your eyes are strained from intense concentration, and that you taste copper.

Probably nothing, however, can wake you up to the last fiber of your physical, intellectual, and nervous being like some such thing as this. You are filled with an exhilaration. Every muscle, strung tight, answers immediately and accurately

to the slightest hint. You quiver all over with restrained energy. Your mind thrusts behind you the problem of the last wave as soon as solved, and leaps with insistent eagerness to the next. You attain that super-ordinary condition when your faculties react instinctively, like a machine. It is a species of intoxication. After a time you personify each wave; you grapple with it as with a personal adversary; you exult as, beaten and broken, it hisses away to leeward. "Go it, you son of a gun!" you shout. "Ah, you would, would you! think you can, do you?" and in the roar and rush of wind and water you crouch like a boxer on the defense, parrying the blows, but ready at the slightest opening to gain a stroke of the paddle.

In such circumstances you have not the leisure to consider distance. You are too busily engaged in slaughtering waves to consider your rate of progress. The fact that slowly you are pulling up on your objective point does not occur to you until you are within a few hundred yards of it. Then, unless you are careful, you are undone.

Probably the most difficult thing of all to learn is that the waves to be encountered in the last hundred yards of an open sweep are exactly as dangerous as those you dodged so fearfully four miles from shore. You are so nearly in that you unconsciously relax your efforts. Calmly, almost contemptuously, a big roller rips along your gunwale. You are wrecked—fortunately within easy swimming distance. But that doesn't save your duffel. Remember this: be just as careful with the very last wave as you were with the others. Get inside before you draw that deep breath of relief.

Strangely enough, in out-of-door sports, where it would seem that convention would rest practically at the zero point, the bugbear of good form, although mashed and disguised, rises up to confuse the directed practicality. The average man is wedded to his theory. He has seen a thing done in a certain way, and he not only always does it that way himself, but he is positively unhappy at seeing any one else employing a different method. From the swing at golf to the manner of lighting a match in the wind, this truism applies. I remember once hearing a long argument with an Eastern man on the question of

"AT NOON THE VAPORS BEGAN TO EDDY"

the English riding-seat in the Western country.

"Your method is all very well," said the Westerner, "for where it came from. In England they ride to hunt, so they need a light saddle and very short stirrups set well forward. That helps them in jumping. But it is most awkward. Out here you want your stirrups very long and directly under you, so your legs hang loose, and you depend on your balance and the grip of your thighs—not your knees. It is less tiring, and more sense, and infinitely more graceful, for it more nearly approximates the bareback seat. Instead of depending on stirrups, you are part of the horse. You follow his every movement. And as for your rising trot, I'd like to see you accomplish it safely on our mountain trails where the trot is the only gait practicable, unless you take forever to get anywhere." To all of which the Easterner found no rebuttal except the, to him, entirely efficient plea that his own method was good form.

Now, of course, it is very pleasant to do things always accurately, according to the rules of the game, and if you are out merely for sport, perhaps it is as well to stick to them. But utility is another matter. Personally, I do not care at all to kill trout unless by the fly; but when we need meat and they do not need flies, I never hesitate to offer them any kind of a doodle-bug they may fancy. I have even, at a pinch, clubbed them to death in a shallow, landlocked pool. Times will come in your open-water canoe experience when you will pull into your shelter half-full of water, when you will be glad of the fortuity of a chance cross-wave to help you out, when sheer blind luck, or main strength and awkwardness, will be the only reasons you can honestly give for an arrival, and a battered and disheveled arrival at that. Do not, therefore, repine, or bewail your awkwardness, or indulge in undue self-accusations of "tenderfoot." Method is nothing; the arrival is the important thing. You are traveling, and if you can make time by nearly swamping yourself, or by dragging yourself or by dragging your craft across a point, or by taking any other base advantage of the game's formality, by all means do so. Deuce used to solve the problem of the little pool of cold water in which

he sometimes was forced to lie by drinking it. When a thing is to be done in the woods, do not consider how you have done it, or how you have seen it done, or how you think it ought to be done, but how it *can* be accomplished. Absolute fluidity of expedient, perfect adaptability, is worth a dozen volumes of theoretical knowledge. "If you can't talk," goes the Western expression, "raise a yell; if you can't yell, make signs; if you can't make signs, wave a bush."

And do not be too ready to take advice as to what you can or cannot accomplish, even from the woods people. Of course the woods Indians or the voyageurs know all about canoes, and you would do well to listen to them. But the mere fact that your interlocutor lives in the forest, while you normally inhabit the towns, does not necessarily give him authority. A community used to horses looks with horror on the instability of all water-craft less solid than canal-boats. Canoemen stand in awe of the bronco. The fishermen of the Georgian Bay, accustomed to venture out with their open sailboats in weather that forces the big lake schooners to shelter, know absolutely nothing about canoes. Dick and I made an eight-mile run from the Fox Island to Killarney in a trifling sea, to be cheered during our stay at the latter place by doleful predictions of an early drowning. And this from a seafaring community. It knew all about boats; it knew nothing about canoes; and yet the unthinking might have been influenced by the advice of these men simply because they had been brought up on the water. The point is obvious. Do not attempt a thing unless you are sure of yourself; but do not relinquish it merely because some one else is not sure of you.

The best way to learn is with a bathing-suit. Keep near shore, and try everything. Don't attempt the real thing until your handling in a heavy sea has become as instinctive as snap-shooting or the steps of dancing. Remain on the hither side of caution when you start out. Act at first as though every wavelet would surely swamp you. Extend the scope of your operations very gradually, until you know just what you can do. *Never* get careless. *Never* take any *real* chances. That's all.

## Chapter VIII.—The Stranded Strangers

AS we progressed, the country grew more and more solemnly aloof. In the south land is a certain appearance of nobility, lent by the deciduous trees, the warm sun, the intimate nooks in which grow the commoner homely weeds and flowers, the abundance of bees and musical insects, the childhood familiarity of the well-known birds, even the pleasantly constant aspects of the skies. But the North wraps itself in a mantle of awe. Great hills rest not so much in the stillness of sleep as in the calm of a mighty comprehension. The pines, rank after rank, file after file, are always trooping somewhere, up the slope, to pause at the crest before descending on the other side into the unknown. Bodies of water exactly of the size, shape, and general appearance we are accustomed to see dotted with pleasure craft and bordered with wharves, summer cottages, pavilions, and hotels, accentuate by that very fact a solitude that harbors only a pair of weirdly laughing loons. Like the hills, these lakes are lying in a deep, still repose, but a repose that somehow suggests the comprehending calm of those behind the veil. The whole country seems to rest in a suspense of waiting. A shot breaks the stillness for an instant, but its very memory is shadowy a moment after the echoes die. Inevitably the traveler feels thrust in upon himself by a neutrality more deadly than open hostility would be. Hostility at least supposes recognition of his existence, a rousing of forces to oppose him. This ignores. One can no longer wonder at the taciturnity of the men who dwell here; nor does one fail to grasp the eminent suitability to the country of its Indian name—the Silent Places.

Even the birds, joyful, lively, commonplace little people that they are, draw some of this aloofness to themselves. The North is full of the lonelier singers. A dozen species of warblers lisp music-box phrases, two or three sparrows whistle a cheerful repertoire, the nuthatches and chickadees toot away in blissful *bourgeoisie*. And yet, somehow, that very circumstance thrusts the imaginative voyager outside the companionship of their

friendliness. In the face of the great gods they move with accustomed familiarity. Somehow they possess in their little experience that which explains the mystery, so that they no longer stand in its awe. Their every-day lives are spent under the shadow of the temple whither you dare not bend your footsteps. The intimacy of occult things isolates also these wise little birds.

The North speaks, however, only in the voices of three—the two thrushes, and the white-throated sparrow. You must hear these each at his proper time.

The hermit thrush you will rarely see. But late some afternoon, when the sun is lifting along the trunks of the hardwood forest, if you are very lucky and very quiet, you will hear him far in the depths of the blackest swamps. Musically expressed, his song is very much like that of the wood thrush—three cadenced liquid notes, a quivering pause, then three more notes of another phrase, and so on. But the fineness of its quality makes of it an entirely different performance. If you symbolize the hermit thrush by the flute, you must call the wood thrush a chime of little tinkling bells. One is a rendition; the other the essence of liquid music. An effect of gold-embroidered richness, of depth going down to the very soul of things, a haunting suggestion of having touched very near to the source of tears, a conviction that the just interpretation of the song would be an equally just interpretation of black woods, deep shadows, cloistered sunlight, brooding hills—these are the subtle and elusive impressions you will receive in the middle of the ancient forest.

The olive-backed thrush you will enjoy after your day's work is quite finished. You will see him through the tobacco haze, perched on a limb against the evening sky. He utters a loud, joyful *chirp*; pauses for the attention he thus solicits, and then deliberately runs up five mellow double notes, ending with a metallic "*ting* chee chee chee" that sounds as though it had been struck on a triangle. Then a silence of exactly nine seconds and repeat. As regularly as clockwork this performance goes on. Time him

"HERE," SAID HE, "YOU ARE A JUDGE OF FICTION; TAKE THIS"

as often as you will, you can never convict him of a second's variation. And he is so optimistic and willing, and his notes are so golden with the yellow of sunshine!

The white-throated sparrow sings nine distinct variations of the same song. He may sing more, but that is all I have counted. He inhabits woods, berry-vines, brulés, and clearings. Ordinarily he is cheerful, and occasionally aggravating. One man I knew, he drove nearly crazy. To that man he was always saying, "*And he never heard the man say drink and the —*." Towards the last my friend used wildly to offer him a thousand dollars if he would, if he only *would*, finish that sentence. But occasionally, in just the proper circumstances, he forgets his stump corners, his vines, his jolly sunlight, and his delightful bugs to become the intimate voice of the wilds. It is night, very still, very dark. The subdued murmur of the forest ebbs and flows with the voices of the furtive folk, an undertone fearful to break the night calm. Suddenly across the dusk of silence flashes a single thread of silver, vibrating, trembling with some unguessed ecstasy of emotion: "*Ah! poor Canada Canada Canada Canada!*" it mourns passionately, and falls silent. That is all.

You will hear at various times other birds peculiarly of the North. Loons alternately calling and uttering their maniac laughter; purple finches or some of the pine sparrows warbling high and clear; the winter wren, whose rapturous ravings never fail to strike the attention of the dullest passer; all these are exclusively Northern voices, and each expresses some phase or mood of the silent places. But none symbolizes as do the three. And when first you hear one of them after an absence, you are satisfied that things are right in the world, for the North Country's spirit is as it was.

Now ensued a spell of calm weather, with a film of haze over the sky. The water lay like quicksilver, heavy and inert. Towards afternoon it became opalescent. The very substance of the liquid itself seemed impregnated with dyes ranging in shade from wine color to the most delicate lilac. Through a smoke veil the sun hung, a ball of red, while beneath every island, every rock, every tree, every wild

fowl floating idly in a medium apparently too delicate for its support, lurked the beautiful crimson shadows of the North.

Hour after hour, day after day, we slipped on. Point after point, island after island, presented itself silently to our inspection and dropped quietly astern. The beat of paddles fitted monotonously into the almost portentous stillness. It seemed that we might be able to go on thus forever, lapped in the dream of some forgotten magic that had stricken breathless the life of the world. And then, suddenly, three weeks on our journey, we came to a town.

It was not the typical fur town of the Far North, but it lay at the threshold. A single street, worn smooth by the feet of men and dogs, but innocent of hoofs, fronted the channel. A board walk, elevated against the snows, bordered a row of whitewashed log and frame houses, each with its garden of brilliant flowers. A dozen wharves of various sizes, over whose edges peeped the double masts of Mackinaw boats, spoke of a fishing community. Between the roofs one caught glimpses of a low sparse woods and some thousand-foot hills beyond. We subsequently added the charm of isolation in learning that the nearest telegraph line was fifteen miles distant, while the railroad passed some fifty miles away.

Dick immediately went wild. It was his first glimpse of the mixed peoples. A dozen loungers, handsome, careless, graceful with the inimitable elegance of the half-breed's leisure, chatted, rolled cigarettes, and surveyed with heavy-eyed indolence such of the town as could be viewed from the shade in which they lay. Three girls, in whose dark cheeks glowed a rich French comeliness, were comparing purchases near the store. A group of rivermen, spike-booted, short-trousered, reckless of air, with their little round hats over one ear, sat chair-tilted outside the "hotel." Across the dividing fences of two of the blazoned gardens a pair of old crones gossiped under their breaths. Some Indians smoked silently at the edge of one of the docks. In the distance of the street's end a French priest added the quaintness of his cassock to the exotic atmosphere of the scene. At once a pack of the fierce sledge-dogs left their foraging for the offal of the fisheries, to bound

challenging in the direction of poor Deuce. That high-bred animal fruitlessly attempted to combine dignity with a discretionary lurking between our legs. We made demonstrations with sticks, and sought out the hotel, for it was about time to eat.

We had supper at a table with three Forest Rangers, two lumber-jacks, and a cat-like handsome "breed" whose business did not appear. Then we lit up and strolled about to see what we could see.

On the text of a pair of brass knuckles hanging behind the hotel bar I embroidered many experiences with the lumber-jack. I told of a Wisconsin town where an enforced wait of five hours enabled me to establish the proportion of fourteen saloons out of a total of twenty frame buildings. I descanted craftily on the character of the woodsman out of the woods and in the right frame of mind for devilry. I related how Jack Boyd, irritated beyond endurance at the annoyances of a stranger, finally with the flat of his hand boxed the man's head so mightily that he whirled around twice and sat down. "Now," said Jack, softly, "be more careful, my friend, or next time I'll *hit* you." Or of a little Irishman who shouted to his friends about to pull a big man from pounding the life quite out of him, "Let him alone! let him alone! I may be on top myself in a few minutes!" And of Dave Walker, who fought to a standstill with his bare fists alone five men who had sworn to kill him. And again of that doughty knight of the peavie, who, when attacked by an ax, waved aside interference with the truly dauntless cry, "Leave him be, boys; there's an ax between us!"

I tried to sketch, too, the drive, wherein a dozen times in an hour these men face death with a smile or a curse—the raging, untamed river, the fierce rush of the logs, the cool little human beings poisoning with a certain contemptuous preciosity on the edge of destruction as they herd their brutish multitudes to the booms. There was Jimmy, the river boss, who could not swim a stroke, and who was incontinently swept over a dam and into the boiling back-set of the eddy below. Three times, gasping, strangling, drowning, he was carried in the wide swirl of the circle, sometimes under, some-

times on top. Then his knee touched a sand-bar, and he dragged himself painfully ashore. He coughed up a quantity of water, and gave vent to his feelings over a miraculous escape. "Blast it all!" he wailed, "I lost my peavie!"

"On the Paint River drive one spring," said I, "a jam formed that extended up river some three miles. The men were working at the breast of it, some underneath, some on top. After a time the jam apparently broke, pulled down stream a hundred feet or so, and plugged again. Then it was seen that only a small section had moved, leaving the main body still jammed, so that between the two sections lay a narrow stretch of open water. Into this open water one of the men had fallen. Before he could recover, the second or tail section of the jam started to pull. Apparently nothing could prevent him from being crushed. A man called Sam—I don't know his last name—ran down the tail of the first section, across the loose logs bobbing in the open water, seized the victim of the accident by the collar, desperately scaled the face of the moving jam, and reached the top just as the two sections ground together with the brutish noise of wrecking timbers. It was a magnificent rescue. Any but these men of iron would have adjourned for thanks and congratulations. Still retaining his hold on the other man's collar, Sam twisted him about and delivered a vigorous kick. '*There, damn you!*' said he. That was all. They fell to work at once to keep the jam moving."

I instanced, too, some of the feats of river-work these men could perform. Of how Jack Boyd has been known to float twenty miles without shifting his feet, on a log so small that he carried it to the water on his shoulder; of how a dozen rivermen, one after the other, would often go through the chute of a dam standing upright on single logs; of O'Donnell, who could turn a somersault on a floating pine log; of the birling matches, wherein two men on a single log try to throw each other into the river by treading, squirrel fashion, in faster and faster rotation; of how a riverman and spiked boots and a saw-log can do more work than an ordinary man with a rowboat.

I do not suppose Dick believed all this—although it was strictly and literally

true—but his imagination was impressed. He gazed with respect on the group at the far end of the street, where fifteen or twenty lumber-jacks were interested in some amusement concealed from us.

"What do you suppose they are doing?" murmured Dick, awestricken.

"Wrestling, or boxing, or gambling, or jumping," said I.

We approached. Gravely, silently, intensely interested, the cock-hatted, spike-shod, dangerous men were playing—croquet!

The sight was too much for our nerves. We went away.

The permanent inhabitants of the place we discovered to be friendly to a degree. The Indian strain was evident in various dilution through all. Dick's enthusiasm grew steadily until his artistic instincts became aggressive, and he flatly announced his intention of staying at least four days for the purpose of making sketches. We talked the matter over. Finally it was agreed. Deuce and I were to make a wide circle to the north and west as far as the Hudson Bay post of Cloche, while Dick filled his note-book. That night we slept in beds for the first time.

That is to say, we slept until about three o'clock. Then we became vaguely conscious, through a haze of drowse—as one becomes conscious in the pause of a sleeping-car—of voices outside our doors. Some one said something about its being hardly much use to go to bed. Another hoped the sheets were not damp. A succession of lights twinkled across the walls of our room and were vaguely explained by the coughing of a steamboat. We sank into oblivion until the calling-bell brought us to our feet.

I happened to finish my toilet a little before Dick, and so descended to the sunlight until he might be ready. Roosting on a gray old boulder ten feet outside the door were two figures that made me want to rub my eyes.

The older was a square, ruddy-faced man of sixty, with neatly trimmed, snow-white whiskers. He had on a soft Alpine hat of pearl gray, a modishly cut gray homespun suit, a tie in which glimmered an opal pin, wore tan gloves, and had slung over one shoulder by a narrow black strap a pair of field-glasses.

The younger was a tall and angular young fellow, of an eager and sophomore youth. His hair was very light and very smoothly brushed, his eyes blue and rather near-sighted, his complexion pink, with an obviously recent and superficial sunburn, and his clothes, from the white Panama to the broad-soled low shoes, of the latest cut and material. Instinctively I sought his fraternity pin. He looked as though he might say "Rah! rah!" something or other. A camera completed his outfit.

Tourists! How in the world did they get here? And then I remembered the twinkle of the lights and the coughing of the steamboat. But what in time could they be doing here? Picturesque as the place was, it held nothing to appeal to the Baedeker spirit. I surveyed the pair with some interest.

"I suppose there is pretty good fishing around here," ventured the elder.

He evidently took me for an inhabitant. Remembering my faded blue shirt and my floppy old hat and the red handkerchief about my neck and the moccasins on my feet, I did not blame him.

"I suppose there are bass among the islands," I replied.

We fell into conversation. I learned that he and his son were from New York. He learned, by a final direct question which was most significant of his not belonging to the country, who I was. By chance he knew my name. He opened his heart.

"We came down on the City of Flint," said he. "My son and I are on a vacation. We have been as far as the Yellowstone, and thought we would like to see some of this country. I was assured that on this date I could make connection with the North Star for the south. I told the purser of the Flint not to wake us up unless the North Star was here at the docks. He bundled us off here at three in the morning. The North Star was not here; it is an outrage!"

He uttered various threats.

"I thought the North Star was running away south around the Perry Sound region," I suggested.

"Yes, but she was to begin to-day, June 16, to make this connection." He produced a railroad folder. "It's in this," he continued.

"Did you go by that thing?" I marveled.

"Why, of course," said he.

"I forgot you were an American," said I. "You're in Canada now."

He looked his bewilderment, so I hunted up Dick. I detailed the situation. "He doesn't know the race," I concluded. "Soon he will be trying to get information out of the agent. Let's be on hand."

We were on hand. The tourist, his face very red, his whiskers very white and bristly, marched importantly to the agent's office. The latter comprised also the post-office, the fish depot, and a general store. The agent was for the moment dickered *in re* two pounds of sugar. This transaction took five minutes to the pound. Mr. Tourist waited. Then he opened up. The agent heard him placidly, as one who listens to a curious tale.

"What I want to know is, where's that boat?" ended the tourist.

"Couldn't say," replied the agent.

"Aren't you the agent of this company?"

"Sure," replied the agent.

"Then why don't you know something about its business and plans and intentions?"

"Couldn't say," replied the agent.

"Do you think it would do any good to wait for the North Star? Do you suppose they can be coming? Do you suppose they've altered the schedule?"

"Couldn't say," replied the agent.

"When is the next boat through here?"

I listened for the answer in trepidation, for I saw that another "Couldn't say" would cause the red-faced tourist to blow up. To my relief, the agent merely inquired,

"North or south?"

"South, of course. I just came from the north. What in the name of everlasting blazes should I want to go north again for?"

"Couldn't say," replied the agent.

"The next boat south gets in next week, Tuesday or Wednesday."

"Next week!" shrieked the tourist.

"When's the next boat north?" interposed the son.

"To-morrow morning."

"What time?"

"Couldn't say; you'd have to watch for her."

"That's our boat, dad," said the young man.

"But we've just *come* from there!" snorted his father; "it's three hundred miles back. It'll put us behind two days. I've got to be in New York Friday. I've got an engagement." He turned suddenly to the agent. "Here, I've got to send a telegram."

The agent blinked placidly. "You'll not send it from here. This ain't a telegraph station."

"Where's the nearest station?"

"Fifteen mile."

Without further parley the old man turned and walked, stiff and military, from the place. Near the end of the board walk he met the usual doddering but amiable oldest inhabitant.

"Fine day," chirped the patriarch in well-meant friendliness. "They jest brought in a bear cub over to Antoine's. If you'd like to take a look at him, I'll show you where it is."

The tourist stopped short and glared fiercely.

"Sir," said he, "confound your bear."

Then he strode on, leaving grandpa staring after him.

In the course of the morning we became quite well acquainted, and he resigned. The son appeared to take somewhat the humorous view all through the affair, which must have irritated the old gentleman. They discussed it rather thoroughly, and finally decided to retrace their steps for a fresh start over a better-known route. This settled, the senior seemed to feel relieved of a weight. He even saw and relished certain funny phases of the incident, though he never ceased to foretell different kinds of trouble for the company, varying in range from mere complaints to the most tremendous of damage suits.

He was much interested, finally, in our methods of travel, and then, in logical sequence, with what he could see about him. He watched curiously my loading of the canoe, for I had a three-mile stretch of open water, and the wind was abroad. Deuce's empirical boat-wisdom aroused his admiration. He and his son were both at the shore to see me off.

Deuce settled himself in the bottom. I lifted the stern from the shore and gently set it afloat. In a moment I was ready to start.

"Wait a minute! Wait a minute!" suddenly cried the father.

I swirled my paddle back. The old gentleman was hastily fumbling in his pockets. After an instant he descended to the water's edge.

"Here," said he, "you are a judge of fiction; take this."

It was his steamboat and railway folder.

[TO BE CONTINUED]

## The Sin of Sister Veronica

By the Baroness Von Hutten

Author of "Our Lady of the Beeches," etc.

SISTER VERONICA pushed the beans down into the moist earth, each one in a hole by itself. It was tiring work, but she loved it, for she loved the damp spring air with its faint sweet smells. It seemed to her that the millions of flowers down in the darkness each moved the old earth a little in its efforts towards the light, and that the earth gave out this sweet smell as old rose-leaves do when they are disturbed in a drawer. For Sister Veronica was imaginative in spite of her great nose.

From time to time the Sister paused, and, straightening up her aching back, looked around her. It was very lovely in the old cloistered garden. Between the slender pillars, under the loggia, shone fragments of the famous frescoes by Ghirlandajo; higher up the graceful bell-tower accented the blueness of the sky, and in the middle of the garden was the well with its heavily carved stone curb.

Beyond the well lay the flower garden, but the flowers had to do the best they could by themselves, for the sisters never helped them. (The Abbess had a small garden of her own in which grew camellias, but the Sister Veronica hated camellias.)

However, the flowers got on very well by themselves. Later, there would be a tangle of honeysuckle in one corner and lilies-of-the-valley in another. And, if all went well, the rose on the wall would be covered with little yellow blossoms to charm the bees and Sister Veronica. Then there were the violets which never failed the little nun who loved them so.

Sister Veronica was tired to-day, for she had been very ill in the winter and was not yet strong. She had fasted too much and prayed too much on the stone floor of the chapel at all sorts of impossible and pious hours, and had inflammation of the lungs as a result. For three weeks she had lain in her narrow bed (almost as nar-

row as that dreamless one awaiting each of us), and ached and burned and coughed, and cried because she could not go to the Midnight Mass the night before Christmas.

Sister Maria Monica, the Sister with the crossed eyes, had taken care of her, and now she was better, though weak, and the doctor, who was antiquated enough to bleed her, had at least told her to be in the sun and air as much as possible. She loved the open air, but was half afraid that enjoying it so much was a sin.

This morning she felt much better. The little spikes of pale green grass poking up through the mold, the vivid blue of the sky, the smell of the eternal new life beginning all around—everything was beautiful, and made her very happy. God had meant her to be a simple-minded, nature-loving peasant, but she had carefully taught herself to be an introspective, self-torturing, nervous, Amateur Saint.

A bird began to twitter near by. Sister Veronica straightened up, sat down on her heels, and looked around. There he sat on the brink of the well—a common little brown thing with an inquisitive tail. He couldn't sing, for he had no voice, but he chattered away to Sister Veronica, and asked her if she remembered her old home by the sea, when she was a girl?

"Do you remember your father with his red cap and his brown bare feet? How he used to sing as he drew his boat up with a s-w-i-s-h through the wet sand? And your mother? Do you remember how she used to let you help her wash the clothes in the brook, on the stones? And how you rubbed a hole in your father's best shirt?"

Sister Veronica smiled, and then crossed herself hastily. "Dio, how worldly I am this morning!" she thought, catching up her stick and boring another bean-hole, coughing as she worked.

When all the beans were planted, Sister

Veronica rose and crept down the path, past the well, into the flower garden. She would rest a little before going to chapel. She sat down on the moss-grown stone bench near where the lilies-of-the-valley would soon come, and took up her rosary.

"Ave Maria, . . ." she began, when suddenly her eyes fell on a little purple flower that was standing all alone in the path, without even a leaf to protect it. The rosary dropped. Just such a flower Giuseppe had given her the day he sailed. She had never seen one in all those years. It was just another such day, too: she was walking on the beach with her brother's baby in her arms, when he came. She remembered how the wave-wrinkled sand, with its wreaths of tiny sticks and stones, had sparkled in the sun; she remembered the great flat-bottomed boats turned upside down, the smell of tar, the fishing-nets spread over poles to dry.

"Marianina," Giuseppe said, with something strange in his voice, "when I come back, will you marry me?"

And she buried her face in the moist, fuzzy neck of little Carmelo and did not answer.

"Mi vuoi bene?" he insisted, gently. "You wish me well?"

"Si."

"Then say yes, Madonna mia." He stooped and kissed the baby's fat cheek. "Oh, Marianina, if we should have such a one some day ourselves! Nina—you will marry me when I come back?"

"Si," she said again, looking up at him. Then he kissed her and blessed her.

"God bless you, dear," and she said the same to him. "Dio ti benedica, caro," and he went.

He never came back, because the boat went down off Caprera, with all hands.

Ding, ding, ding. It was the Angelus. Sister Veronica slid from the bench to her knees, tears in her eyes.

"Angelus Domini nuntiavit Mariæ."

And when the bell ceased ringing she continued to pray. She was praying for forgiveness, for had not her thoughts been sinful?

That night Sister Veronica dreamed a dream. She was sitting by an open window about which blew long tendrils of scarlet-runners. Below her was the sea, and she was watching a fishing-boat with

rust-colored sails as it bounded along towards her. And she knew that in the boat was Giuseppe and he was coming home to—them. For on her breast lay a sleeping baby; a brown, round, dimpled thing, with silky rings of hair and a red mouth. It was so warm and soft, and she loved it so much.

Just as the boat reached land the baby awoke and smiled at Marianina (for she was Marianina in the dream), and, with a rush of mother love, which warmed her all over, she stooped to kiss it. But before her lips touched the half-opened mouth—Sister Veronica awoke.

"God forgive me," she cried, feeling for her rosary; "what a wicked woman I am!" She rose hastily, and, lighting her lantern, she crept down the long corridor to the chapel.

Sister Veronica knelt down before the high altar in an agony of repentance, sobbing and praying at once. Could God ever forgive her? She who had been a nun for nearly forty years to dream that she had a husband and baby!

She knelt there until daylight was beginning to sift in through the windows, while the statues and pictures about her looked on with unmoved eyes, some of them even simpering foolishly.

That day Sister Veronica did severe penance, eating hardly anything and avoiding the garden as though the devil were awaiting her there in person. And she went to sleep at night with her hard, bony rosary under her cheek, an Ave on her lips.

But she dreamed again of the baby. It was laughing and crowing and dancing so she could hardly hold it. She awoke with her arms folded tight across her breast, and cried when she found them empty. "Bimbo, Bimbo," she murmured. Then, with a little conscience-stricken shriek, she rose and went again to the chapel. The next night it was the same thing, and the next. Probably her intense remorse, the fasting, and the vigils were the cause; but, whatever it was, poor Sister Veronica dreamed every night of the baby that had never been, and she loved it better all the time.

She was in despair. Haggard and wild-eyed she went about, going from her cell to the chapel and then back to her cell,

where she did Heaven knows what to subdue her unruly heart. And the worst of it was that she loved her dreams. In the midst of her prayers the feeling—not the thought, for her mind was bent resolutely on her prayer—but the feeling would come to her, "To-night I shall see it again and hold it in my arms."

Verily the devil must have been rubbing his hands together for joy.

And then one day the Archbishop came and said Mass with much splendor in the chapel. It was a beautiful service, with a great deal of gold embroidery and incense, for the Church, though humble in doctrine, is very magnificent in practice.

Poor Sister Veronica, as she knelt, thought of a plan whose audacity half frightened her, but to which she made up her mind, for she must have help, she thought, or she would die. Consciences are like men. When they have had too much artificial stimulation, they sometimes become unruly. So Sister Veronica went to the Abbess, who was the Archbishop's sister, and the Abbess arranged for her a private audience with his Excellency.

Sister knelt and kissed the Archiepiscopal hand, which was finely shaped and beautifully kept. But when his Excellency wished to bless her, she shrank back.

"No, no," she cried, "I am too wicked. I am a sinful woman, Eccellenza."

The shadow of a smile crossed his Excellency's face. He had seen this sort of thing before. So many bad people live their lives through thinking themselves good, that perhaps things are only balanced when some few good people imagine themselves bad.

He waited in silence for a minute, and then asked her what it was that troubled her. And she told him all about it, beginning with the bird on the well-curb.

"I tried, oh, I tried not to think, Eccellenza," she said; "but the sun, and the spring smells, and the sky, and then, Eccellenza, the flower. Just such a flower, and I hadn't seen one for forty years. I'm a miserable creature, not fit to be in this holy house."

"My daughter," said his Excellency, kindly (she was about ten years older than he himself), "you were ill in the winter?"

"Si, Eccellenza."

He paused and looked at her keenly. "I must not tell you that it would be no

sin to sit and dream deliberately of things that can never be—that is a sin for those even whom God has not called to a nunnery. But in the spring—ah!" His Excellency sighed. "And you are not well yet, I see. Give me your wrist."

Sister Veronica held out her knobby, big-veined hand, and the prelate put his finger on the pulse. "Ah," he said again. Sister Veronica folded her hands in her sleeves and waited.

"You are still weak, my daughter. It is well to fast, and to mortify the body, but—not too much. And as to the dreams, no one, not even the Holy Father himself, can control his dreams. So, you cough, too?" he broke off.

"Si, Eccellenza, I always cough a little."

"H'm. You must only do your best not to think of these troubling things, and let the dreams take care of themselves. It is no sin for a woman to love children, my daughter, and you are none the less a woman for being a nun."

After a short pause he added: "Now go. I will speak to the Abbess about you, and for the present I dispense you—no vigils, and meat once a day."

Sister Veronica stared, an honest peasant stare. She had come for spiritual advice, and she was given meat. Then suddenly she said, in a timid tone of protest:

"But, Eccellenza, I like meat."

The Archbishop bit his lip. "Tanto meglio," he said; "so much the better. When you are well again, you can stop eating it."

"And you think I will be forgiven? That the good God will pardon me?"

"The good God can pardon a great deal, my daughter, or there would be no world." Then, seeing the puzzled expression on her good old face, he added: "I, as your spiritual adviser, give you absolution for your——" He paused; that shadowy something that would have been a smile had he not been a prelate crossed his face again. Then he added: "For your dreams." Sister Veronica tumbled down on her poor old prayer-worn knees and kissed his ring again. Then he raised his hand and blessed, and as the little black figure disappeared he wiped a tear from his Excellent eye. "And there is so much real sin in the world," he said aloud.

Sister Veronica, after a short visit to the

chapel, went out to the garden and sat down on the stone bench. There was a group of little pale-green points at her feet. The lilies-of-the-valley were coming.

"Meat every day," said Sister Veronica. "Thank God."

But she was not thanking God for the meat.

# A PREACHER'S STORY OF HIS WORK<sup>1</sup>

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

## V.

IT is quite remarkable to my own mind that I have never seen my way to modifying, to any great extent, the plans I formed for the work of a great city parish while in Toronto, quite by myself. It was simply the result of an intensely earnest desire and effort to minister to all sorts and conditions of people as I found them in a city of a hundred thousand people.

I had one great advantage in coming to St. George's—an advantage generally regarded as a disadvantage: I found positively an empty church. There had been an interim of two years without a rector. When Dr. Williams, my predecessor, resigned, he resigned because he felt that it was quite impossible to build the church up; indeed, even to hold it together. When I came, so far as I could make out, there were about twenty families of the old congregation left in the whole church, and there was a considerable floating debt. We did not advertise St. George's; we put no advertisements of any kind in the papers. I began to preach to a very small congregation; and, as I said, I think it was a great advantage to begin in this way instead of having a lot of people around I should have had to fight—people who would be sure to be opposed to the things I wanted to say and do. A certain number of people who were here when I came soon left; they did not like my way. As an usher said, years afterwards, "Those that stayed stood for work, and could stand anything." We did not open the galleries at all for six months after I came. There was none of that—I think often harmful—rush of strangers and curiosity-seekers at the beginning; we grew, com-

paratively speaking, slowly. I preached very badly the first six months, too; I don't know why; I did not feel as if I had any grip of things for quite a long time. But I think a slow growth is a great advantage. A great many men are broadly advertised before they come; people hear that a great preacher is coming; they crowd and rush at first, but soon melt away. So, for the first year or two, our growth was slow, as our accounts show.

I started out in the beginning to try to reach the people in the neighborhood; I knew they had never been reached before; they never could have been reached with the old pew church system. Great changes had taken place in this part of New York City. Houses that had always been occupied by one family were constantly being given up, and into these houses came four and five and sometimes more families. As long as the houses were occupied by one family, those families naturally sought a pew, and they were likely to seek a pew in the nearest church; when they moved uptown, smaller families with smaller means, people who had been neglected, took their places. That is a point I should like to dwell on; and I have taken every opportunity to present it to the clergy in my own and in other denominations. Since I came to New York, below Twentieth Street, forty churches have moved uptown, and over 300,000 people have moved into that section of the city from which the forty churches have gone. That is the great mistake the Protestant churches have made: they are all alike—Presbyterians, Episcopalians, Baptists, Methodists—their whole idea of church relation is based on the family that can live in a twenty-foot house. As soon as that social unit moves away from them,

<sup>1</sup> Copyright, 1903, by the Outlook Company. All rights reserved.

they are lost. The Church ought to be able to fit herself to new conditions. She is like a fisherman accustomed to earn his bread at catching herrings; presently the run of herrings goes away from that section of the sea; in their place come a tremendous run of smelts. If the fisherman could change his net, he would be a richer man than before, because smelts are better fish; but he starves because he cannot change the size of the meshes. That is putting it very simply; that is about the idiotic policy that the Protestant Church has followed. Follow the churches from the Battery up. They can minister fairly well to the family; they know, by tradition received from their fathers, how to do that; but when that element departs, they get frightened and run after it. That is precisely the situation; but the churches do not recognize it.<sup>1</sup>

"How do you get on?" they often ask.

By altering the machinery to the needs of the people.

It is wonderfully simple; and yet it did not seem to occur to anybody before. If the Church cannot fit itself to so moderate a change—a change wrought in the evolution of a great city—is that not a most tremendous criticism on the lack of life, development, and adaptability in the Church?

That was the problem with which I was confronted. Here was a church which, in the sixties, had been immensely successful. After 1865 it began slowly to fall off. I found a big church; empty, expensive to run, very costly to heat, most inadapted to my work in many ways, surrounded by a denser population than in its palmier days, and yet incapable of reaching that population, except through the Sunday-school; and the gulf between the congregation and the Sunday-school was a great one. How to cross the gulf between the Sunday-school and St. George's broad aisle-line of pews was a question to be solved; and it was solved; otherwise my work would have been impossible.

I took the stand, first of all (and I am more firmly convinced of this to-day than ever before), that in order to reach the

people of a great city the church must be absolutely free and open. You cannot successfully preach one kind of Gospel in the pulpit if you do not practice it in the pews. I don't care how liberal you may be, or how hospitable; the Church of God is not the place to exercise mere hospitality. Every man seeking his Father has a *right* there. The thing is to open your heart and hand to every man because he is a child of God and has a right to hear of his Father; the Church was built for that purpose; it is futile for her to repeat the Gospel of freedom and practice something else. If people ask the cause of my success, so far as I know, that was one of the main things—I recognized that point; and the Church in her attitude towards the mass of people is wrong to-day—wrong, wrong, wrong. People say I'm a crank on the free church. Well, perhaps I am; but then I propose to live and die a crank. They say, "You get a lot of bums in a free church." All right; "bums"—or, I might say, religious rounders—want religion, and when one of them is converted and feels that the Church needs him, and needs what he can do, he becomes a grand working man. There is no other way to reach the middle-class people and working people than by the free church; and they make the best workers; they are not unsettled by the social engagements of an inefficient life, as are the rich; they will stand by you, work for you and with you; give you three evenings in the week and stick to it. There should be at least one place beside the grave that men have in common—the Church of God.

I think it is wrong to charge admission to any church. The Roman Catholic Church can occasionally do that because, traditionally, for so many years she has been right in her application of the free church to the people. She has established a tradition by long years of self-denying effort, persuading the people that she is working for the people, and that enables her to charge admission now. The priests go to the poor as quickly as to the rich; and now, when she puts a tax of twenty-five cents for admission, people pay it. On the other hand, her doors are always open. I can go to the Cathedral at any time on any day, and find a place to kneel. I went one day into St. Patrick's

<sup>1</sup> In this condemnation of the movement of Protestant churches north in New York, I do not wish to be understood as denying the reasonableness of, nay, the needfulness of, the departure of some churches. There are localities on the East Side, once Protestant, now entirely Jewish or Italian. The Roman Catholic Church alone can at present care for the Italians.

and found there four of the clergymen who had come to my anniversary. A Protestant church cannot charge admission, because it does not fit with Protestant traditions. But I would a great deal rather make a man pay twenty-five cents to get in a church than say, "I own a piece of real estate in the floor of such and such a church, and therefore I can go in."

In St. George's Church some of the pews were owned in fee simple, by as good a title as that of real estate or a house. This idea of proprietorship in the church is all wrong. The pews were nearly all surrendered after I came, but one or two we could not buy; they are still owned; but we don't pay any attention to them; we fill the church right up, and do not keep any places; we never turn people away when there is a seat. Some owners objected at first, but they gradually dropped out; the spirit of the church was too much for them.

One of the first means I adopted in trying to reach the people of the immediate neighborhood was to start a mission on Avenue A. I hired a room at five dollars a night behind a saloon on Avenue A; and there I went, with one layman. We had printed a circular saying that a Sunday-school would be opened for boys at three o'clock on Sunday afternoon. We had boys alone at first. I went to the room with one layman, and found perhaps seventy-five or eighty boys, ranging in age from ten to sixteen. This was all the result of a placard; I had done no personal work at all. I walked in, and one of the first things I saw was that the boys had ranged themselves like a wedge, and before I could say a word I was knocked flat on the floor—full length—and for a while we had a pretty rough time, until we had cleaned out about twenty of the worst of them. We did the best we could with the boys that remained. When we got ready to go, my friend went out a little ahead of me, and when I got out, I found him astride the gutter, with two boys between his legs, defending himself from two more. I never called a policeman; though at first things of that kind happened. I remember one man in particular—a big, strong fellow. He came in and sat down in the Sunday-school (by this time I had some of the very best

teachers I could find working there, and I always put the best workers I had there), and began to talk in a way that a man should not talk to a lady. He was a little drunk. I saw the lady's face flush; I walked over, and told him to get out. He would not move. I said:

"We are here to help you people; we are paid nothing for it; now, you are enough of a man to respect a lady; why do you sit here and make it impossible for her to teach these boys?"

He swore at me and would not get out.

"You don't want me to call a policeman, do you? Go out quietly."

He jumped to his feet, and I saw I was in for a row. He was as big a man as I am. I did not call a policeman, but I hit him harder than I ever hit a man in my life, and knocked him down. Then I stood over him and said:

"Have you had enough?"

He said, "Yes."

"All right," I answered; "now get out." And he went.

About three weeks after that, we got into a scrimmage outside the Sunday-school room with some toughs, and, to my horror, I saw, elbowing his way through the crowd, this same burly fellow, and I began to feel that, between him and the others, I would be killed, when, to my astonishment, he walked up to the ringleader and said:

"The Doctor an' me can clean out this saloon; you get out."

But all that sort of thing soon passed away. We carried on meetings every night for six or seven years in Avenue A. The work we did there would be characterized as entirely Gospel preaching. We had men from the McAuley Mission constantly taking charge of the services. Every single night for six or seven years we had Gospel preaching there. We had experience meetings, we had evening prayer-meetings—sometimes lasting all night. I allowed all my associates the widest liberty, even when my own convictions did not permit me to approve entirely of their methods. Dr. Wilson was with me then; he was chief among my associates; he had come to me from Canada. He had been a stiff churchman. While in Canada he had been stimulated and helped, and his own life had been greatly quickened, by the Salvation Army; he believed in those methods and practiced them, and I did

not feel like doing anything to hinder him, although I became thoroughly convinced that such work did not pay, that time and energy were wasted. I should not like to say that no good came from those meetings, but I do say that little good came from them. Far more good, in my judgment, would have resulted from one well-conducted Bible class led by a capable, godly man or woman among boys and girls than came out of six nights a week preaching of the Gospel in that way in Avenue A. That is, so far as I can judge. Never was a more persistent, painstaking effort made to apply what is called old-fashioned Gospel preaching to the community than we made for six years on distinctly Salvation Army lines; and I satisfied myself that the testimonies and all the rest were mostly trumped up. The effect was bad. It was absolutely necessary to start the children's work. The only lasting good that came from the work was that we gathered the young people together; the older people who came to the Gospel meetings spread to other Gospel meetings, and are probably giving the same testimonies to-day. Here and there good is done by such methods; here and there a man is reformed; but men can be reformed in the church if she is only big enough and wide enough, and will push open her doors. I do not want to appear as condemning this style of work; I merely say that I found other work more profitable. I preached on the streets, often; my laymen—solid, capable, first-rate men—preached on the streets again and again; we worked for six years, and there was nothing to show for it worth speaking of.

The times had changed since I had done my work in Norwich, England. The conditions were different. I am sure the methods I employed there would not succeed to-day. I could not do that sort of thing now; I could no more do it than I could put a butterfly back into the chrysalis. That method would not succeed anywhere to-day; the men I stood alongside of years ago, if they are preaching that way now, are preaching to diminished audiences—there is no question about that. Another illustration of the fisherman who would not change his net to the fish. They had a message that appealed to a decade, but

that decade has changed; it lies behind us; people want the Gospel, but not in that way. That is my profound conviction; and I believe that I have had probably a larger experience in that line than any other clergyman in our Church. I do not think I could gain the ear of the people here to-day using the means I employed in Norwich years ago—I do not know anybody who does; I do know I can get the ear of people by using the means I do use. I have often stopped and listened to a street preacher; and while I honor their devotion and take off my hat to their Christian character, I have never heard one with a message likely to meet the needs of all sorts of men as they pass on the street. It seems to me they have mistaken the spirit of the time. Some people think I am reacting too far; I cannot help it; I am working on the lines that seem to me right.

For several years we had very delightful work in the Mission among the young. The ladies' work among the mothers of the neighborhood was excellent; and when we found we had sufficient hold there, and our new building was ready, I gave up Avenue A and drifted the people up here. When I first came, there was no building, only a little old-fashioned chapel seating about four hundred children, where Sunday-school had been carried on. We did not have much difficulty in getting the people to change and come up here; although at first it was a little hard to get the adults—the very poor men and women. But I have already said that the chief result of our work on the East Side here in New York was that we got hold of the young. I emphasize that, because my experience leads me to feel strongly that the way to reach a neighborhood is to reach the children. I do not think a man's ministry in a district begins to tell until the end of ten years; that is, until the children he has taken hold of as little fellows begin to reach young manhood and womanhood. So, if I were asked how to reach a neighborhood, I should say, "Get hold of the young—the children." I was talking the other day with some gentlemen about the extraordinarily unique opportunity afforded by the development of the city on the north; and some one asked, "How would you manage it?" I said, "I would take

six stables, or rent space above stables, pick out half a dozen godly, able, capable young men, give them \$1,500 a year, and tell them to start Sunday-schools in those stables." I would pick out places where the population was coming in; I would go where real estate people thought property was likely to advance; and in ten years I believe that half of those Sun-

[TO BE CONTINUED]

day-schools would have developed into big churches. I know I could do it myself; I know I could pick out men to do it. That is my idea of how churches ought to be started in a great city. Of course New York offers a unique opportunity; an opportunity which our Church (I will not criticise other Churches) is not taking—or taking very imperfectly.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Bee and Other Essays (The).** By Oliver Goldsmith. (Temple Classics.) The Macmillan Company, New York. 4×6 in. 281 pages.

**Belle-Nivernaise (La).** By Alphonse Daudet. By Frank W. Freeborn. Ginn & Co., Boston. 4½×6¾ in. 68 pages. 25c. (Postage, 5c.)

**Bishop (The).** By Cyrus Townsend Brady. Illustrated. Harper & Bros., New York. 5×7¼ in. 301 pages. \$1.50.

Stories partly fictitious, partly from real life. They tell strange experiences in the professional life of a Bishop in the Far West, who in some ways resembles the late Bishop Whipple, especially in that he gets close to the life of rough men and is beloved by them. The tales are decidedly uneven in force and probability, but taken together they make a lively, vivacious, and entertaining volume.

**Botticelli.** By A. Streeter. (The Great Masters in Painting and Sculpture.) The Macmillan Co., New York. 5×8 in. 167 pages. \$1.75.

Reserved for later notice.

**Charlotte Mary Yonge: Her Life and Letters.** By Christabel Coleridge. Illustrated. The Macmillan Co., New York. 5½×9 in. 391 pages.

An adequate and generally readable account of the life of the author of "The Heir of Redclyffe," of the really better if not more famous books, "The Dove in the Eagle's Nest" and "The Daisy Chain," and of a long list of stories and other writings which were a distinct influence for character and truth upon the generation for which they were written. An uncompleted autobiography has many quaint glimpses of English life in the early years of Miss Yonge's long and useful life. There are also many letters, which have the rare quality of being natural as well as gently humorous and observant. Altogether this is a pleasant record of a sweet and gracious personality.

**Child's Religious Life (The): A Study of the Child's Religious Nature and the Best Methods for its Training and Development.** By Rev. William George Koons. A.M. B.D. Eaton & Mains, New York. 5×7½ in. 270 pages. \$1.

This is a book neither of mere theory on the one hand nor of mere precepts on the other. It is rather a statement of principles in rela-

tion to the practical effort of training the religious side of children's nature. There is no argument to prove the existence of the religious nature; no attempt to explain or analyze it. The existence of instinctive and acquired spiritual traits is assumed; just as in a medical work the existence of the body is assumed. In one sense, therefore, this is not a book of psychology. It, however, uses the results of psychology in determining what is really efficient religious education and what is not. Here, for instance, are some of the subjects considered: the child not a miniature adult; how to destroy the religious instinct; child sympathy for others; the motor side of religious training. Subjects like these are grouped under three main divisions: the child's religious nature; its formation; and methods of training. Men like William James, G. Stanley Hall, and G. A. Coe are frequently quoted. Every church ought to have a library of books designed for the use of teachers in the Sunday-school. This book might well find a place in any collection of that sort, as well as in the home.

**Colomba.** By Prosper Mérimée. Edited by Albert Schinz, Ph.D. Ginn & Co., Boston. 4½×6¾ in. 50c. (Postage, 5c.)

**Contrasts.** By Florence Henniker. John Lane, New York. 5×8 in. 292 pages.

Short stories of English life; some are vivid and appealing to the sympathies; others are feeble and machine-made.

**Correspondence of the Colonial Governors of Rhode Island, 1733-1775.** Edited by Gertrude Selwyn Kimball. In 2 vols. Vol. II. Houghton, Mifflin & Co., Boston. 6×9 in. 498 pages. \$5, net.

**Dawn of the New Era (The).** By Abbie Daniels Mason. The James H. West Co., Boston. 4¾×7 in. 140 pages. 75c.

**Diary and Letters of Wilhelm Müller.** Edited by Philip Schuyler Allen and James Taft Hatheld. The University of Chicago Press, Chicago. 5¾×8 in. 201 pages.

This charming book contains excerpts from the diary and letters of Max Müller's father. Three years ago the great Indian philologist discovered among his mother's papers the diary and letters; but he himself passed

away before the fragments could be published. They afford a glimpse into the life of a notable German poet and into the German society (particularly the literary society) of the early part of this century—a time of great significance for the future of the Fatherland.

**Elementary Studies in Insect Life.** By Samuel J. Hunter, A.M. Illustrated. Crane & Co., Topeka. 5x8 in. 344 pages. \$1.25.

**Elizabeth's Children.** John Lane, New York. 5x7½ in. 364 pages. \$1.50.

One is prejudiced against this book at the outset by the very peculiar announcement on the cover. If this involved statement is not intended to lead the reader to suppose that the author of the book is the author of "Elizabeth's Visits" (now known to be Elinor Gwyn), or at least to suppose that this may or might be the authorship, one does not know what it does mean. A reading of the book does not dispel this prejudice. It is forcedly facetious and abounds in trying baby dialect and slang.

**Faithful Unto Death: A Word of Admonition to the Confirmed Youth of the Evangelical Church.** By the Rev. J. H. Horstmann. The Eden Publishing House, St. Louis, Mo. 4x6 in. 112 pages.

**First Makers of England: Julius Cæsar, King Alfred the Great.** By Lady Magnus. (Dutton's Home and School Library.) E. P. Dutton & Co., New York. 4½x7 in. 136 pages. 60c., net.

**Gentleman from Everywhere (The).** By James Henry Foss. Illustrated. Published by the Author, 22 Claremont Park, Boston. 5½x8 in. 318 pages.

**Handbook of Climatology.** By Julius Hann. Translated by Robert De Courcy Ward. Part 1. The Macmillan Co., New York. 5½x9 in. 43½ pages. \$3, net.

**Helps to the Holy Communion.** From the Writings of Phillips Brooks. Compiled by Caroline A. Derby. E. P. Dutton & Co., New York. 3x4½ in. 106 pages. 50c., net.

A very helpful little book, in which the office of the Communion in the Prayer-Book is supplemented by meditations taken from the writings of Phillips Brooks.

**Hermann and Dorothea.** By Johann Wolfgang Goethe. Edited by Arthur H. Palmer. D. Appleton & Co., New York. 4½x7 in. 202 pages. 50c.

**Heroes of the Norselands: Their Stories Retold by Katharine F. Boulton.** Illustrations. (The Temple Classics.) The Macmillan Company, New York. 4x6 in. 211 pages.

**House on the Hudson (The).** By Frances Powell. Charles Scribner's Sons, New York. 5x7½ in. 416 pages.

Somewhat overwrought and long drawn out.

**Introduction to the History of Western Europe (An).** By James Harvey Robinson. Illustrated. Ginn & Co., Boston. 5x7½ in. 714 pages.

A cursory examination of this book shows that in arrangement and division of subjects, as well as in typographical appearance and illustration, the volume is attractive and admirably adapted for reference use. A closer examination shows also that it is written in a readable style, and that Professor Robinson has been unusually successful in combining the merit of concise historical statement with that of an easy, readable style. In its essence the book is rather a history of the development of European culture, as the author hints

in his preface, than a point-to-point history of political and military events. For this reason, and because the book deals with the personal and anecdotal side of history, it is calculated to entertain in a dignified way as well as to instruct.

**Keys of the Kingdom and Other Sermons (The).** By R. J. Campbell, M.A. The Fleming H. Revell Co., New York. 5x7½ in. 121 pages.

**Kindergarten Building Gifts (The).** By Elizabeth Harrison and Belle Woodsen. Illustrated. The Sigma Publishing Co., St. Louis. 5x8 in. 226 pages.

**Light in Dark Places: A Spiritual Imagination.** By Newman Smyth. Thomas Y. Crowell & Co., New York. 5x7 in. 26 pages. 30c. (Postage, 5c.)

**Literary Landmarks of Oxford.** By Laurence Hutton. Illustrated. Charles Scribner's Sons, New York. 5x8 in. 274 pages. \$1.20, net.

Reserved for later notice.

**Living for the Best.** By James G. K. McClure. The Fleming H. Revell Co., New York. 4½x7½ in. 175 pages. 60c., net.

**Loves Labour's Lost.** By William Shakespeare. Edited by Charlotte Porter and Helen A. Clarke. (First Folio Edition.) Thomas Y. Crowell & Co., New York. 4x6½ in. 265 pages. 50c., net.

The second volume in the First Folio Edition of Shakespeare commented upon at length in these columns some time ago. The characteristic feature of this edition, as readers of The Outlook will remember, is its use of the text of the First Folio. This volume, dealing with one of the most difficult of the Shakespearean plays, supplies the reader with all possible information relating to the play, its text, its sources, and its relation to its time. This information is conveyed in a preface and introduction, a glossary, variorum readings, and a series of very full notes.

**Manual for Christian Instruction (A).** By Wilson R. Buxton. The Pilgrim Press, Boston. 4½x7 in. 98 pages.

**Memorial Collection of Sermons.** By Edwards A. Park, D.D., LL.D. Compiled by his Daughter. The Pilgrim Press, Boston. 6x9½ in. 321 pages. \$1.50, net.

Those who were personally acquainted with Dr. Park and those who are interested in the historical development of New England theology will find this volume especially valuable, for it contains sermons that are characteristic of Dr. Park and representative of his thought. Some of the most suggestive matter in the book is to be found in the appendix, consisting of notes on four of the sermons.

**Modern Secret Societies.** By Charles A. Blanchard, D.D. The National Christian Association, Chicago. 4x6 in. 310 pages. 75c.

**Pathway to Reality (The): Being the Gifford Lectures Delivered in the University of St. Andrews in the Session 1902-1903.** By Rt. Hon. Richard Burdon Haldane, M.P., LL.D., K.C. E. P. Dutton & Co., New York. 5¼x9 in. 316 pages. \$3. net.

Dr. Haldane had no easy task in following such lecturers as Professors Royce and James. Their work, and that of their colleague, Professor Münsterberg, has suggested to him that the next great advance in speculative thought may be made on this side of the Atlantic. His great masters are Aristotle and Hegel, the former of whom was first truly interpreted by the latter. For himself he essays to interpret Hegel's fundamental principles and clear them of misconceptions. In the first place he considers at length the nature of Reality; subsequently to this comes an extended criticism of the Categories, or fundamental forms of thought employed by the sciences. The general character of the discussions is expository and critical, and, accordingly, cannot well be summarized here. The Aristotelo-Hegelian doctrine, that the real is the individual, defended and illustrated so elaborately in Professor Royce's work, "The World and the Individual," receives strong emphasis; likewise the doctrine that it is not in causes but in purposed ends that the explanation of phenomena is to be sought, and reality found in its varying degrees. In other words, the Cosmos, as a manifestation of mind and a revelation of purpose, can only teleologically be explained.

**Phillips Brooks: As His Friends Knew Him.** From "The Congregationalist." Illustrated. The Pilgrim Press, Boston. 10x8 in. 91 pages. 75c.

**Plato's Republic.** By Lewis Campbell, M.A., LL.D. (Dutton's Home and School Library.) E. P. Dutton & Co., New York. 4½x7 in. 184 pages. 60c., net.

**Prose Works of William Makepeace Thackeray. Yellowplush Papers.** Edited by Walter Jerrold. Illustrated by C. E. Brock. The Macmillan Co., New York. 5x7 in. 456 pages. \$1.

**Quaint Family of Three (The).** By Duncan McRa. The Tribune Company Print, Charlestown, W. Va. 5x7¼ in. 71 pages. 35c.

**Ronald Carnaquay: A Commercial Clergyman.** By Bradley Gilman. The Macmillan Co., New York. 5x8 in. 374 pages. \$1.50.

The interest of this story comes, not from its plot or its literary quality—although it is of at least average merit in both respects—but from the novelty of its subject. This is what may be called the inside history of a church. The "commercial clergyman" is a popular and eloquent preacher who takes hold of a strug-

gling church, builds it up materially, caters to every one's tastes, seeks to please every one, and in the end makes out of a struggling but spiritually-minded congregation an ambitious, extravagant, ostentatious people. The book is full of sharp hits on typical church characters, such as the woman who tries to run everything, the trustee who makes an advertisement for his business out of his church work, the faithful drudge who is clerk of every committee and stays up nights writing up reports, the critics and carpers on doctrinal points, and so on and so on. Probably almost every one who reads the book will constantly be inclined to fit the different characters on actual persons. As a contrast to the "commercial clergyman"—but, it must be admitted, less interesting—is the faithful, industrious, spiritual minister who in the end finds his reward, not in any flattery and praise, but in actual accomplishment.

**Siege of York (The): A Story of the Days of Thomas Lord Fairfax.** By Beatrice Marshall. Illustrated. E. P. Dutton & Co., New York. 5x7¼ in. 318 pages. \$1.50.

A historical romance dating back to the struggle between Cavaliers and Roundheads, given in autobiographical form, the narrator being the heroine, a Royalist maiden whose lover is a Roundhead. "The great Lord Fairfax," Charles I., Prince Rupert, and other famous personages figure in the story; the illustrations as well as the word pictures of York in the seventeenth century and of society as it was then are of interest.

**Some Useful Animals and What They Do for Us.** By John Monteith, M.A., and Caroline Monteith. Illustrated. The American Book Co., New York. 5x7¼ in. 232 pages. 50c.

**Studies in the Apostolic Church: A Year's Course of Thirty-five Lessons, Providing a Daily Scheme for Personal Study. Adapted also to Class-Work.** By Charles Herbert Morgan, Thomas Eddy Taylor, S. Earl Taylor. Jennings & Pye, Cincinnati.

This manual is very well planned for its purpose—a thorough study of the progress of Christianity during the first century, as exhibited consecutively in the Acts of the Apostles and their writings. It is rather more thorough for the practical Christian purpose in view than for a scholarly purpose. Its bibliography of useful reference-books has some significant omissions; and variations from traditional opinions, even when most strongly supported, *e. g.*, as to the authorship of the Pastoral Epistles, are not even mentioned. This does not seem really wise, and is the more regrettable, so good is the book in other respects.

**Until Seventy Times Seven.** Thomas Whitaker, New York. 5x7¼ in. 180 pages. \$1.

**Verses.** By Bertha Gerneaux Woods. The Neale Publishing Co., Washington, D. C. 5x8 in. 120 pages.

**Whence Cometh Help: An Aid to Home and Individual Devotions.** Prepared by John Wright Buckham. The Pilgrim Press, Boston. 4¼x7½ in. 65 pages.

**Written in Florence: The Last Verses of Hugh McCulloch.** J. M. Dent & Co., London. 5½x7½ in. 107 pages.

Composers and their Art**

**By DANIEL GREGORY MASON**

*Second Edition. \$1.50 net (postage 11 cents)*

**From the London Spectator**

"What chiefly strikes the reader in these studies is the prevailing sanity of the writer. His estimates . . . are undisfigured by gush or preciosity. We are, perhaps, too near any of these [composers] to expect finality in any of his judgments, but we have nowhere encountered in contemporary criticism a more terse or lucid summary of their dominant characteristics, or a more easily intelligible attempt to relate them to the general evolution of the art."

**From the New York Times Saturday Review**

"It is a pleasure to meet with a discussion of musical subjects so clear, so sane, so thoughtful, and so independent. . . . We have no hesitation in saying that his book, charming in literary style, rich and suggestive in expression as it is acute in judgment and ample in knowledge, ought to be ranked among the best of recent contributions to the higher forms of musical criticism."

The Alabama Case:  
The Case Stated

The decision of the United States Supreme Court in the Alabama case indicates, if it does not definitely and finally decide, that the remedy for any injustice to the negro race involved in the amended Constitutions of the Southern States must be sought by political action, not by appeals to the courts. The fifteenth amendment to the Constitution of the United States provides that "the right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude." The amended Constitution of Alabama allows any one of the following persons to register prior to 1903: (1) Soldiers and their lawful descendants, including those who served on either side in the Civil War. (2) "All persons who are of good character and who understand the duties and obligations of citizenship under a republican form of government." After 1903 those only can register who can read and write any article of the Constitution of the United States, and have been for the twelve months preceding the registry engaged in a lawful business—an exception being made in both cases for those who are physically disabled; or who are owners of and resident upon forty acres of land in the State, or owners of real or personal estate assessed for taxation at three hundred dollars. Only registered persons can vote or take part in any method of party action. A colored man named J. W. Giles brought an action in the United States Circuit Court against the Registrars of Montgomery County to compel them to register him as a voter, basing his suit upon the ground that the provisions of the amended Constitution of Alabama were repugnant to the Constitution of the United States, "in their intent and purpose and in their

language and meaning, as well as by their operation and administration, and, in effect as well as in fact, deprived him and his race of the equal protection of the law and of their right to vote, for no other reason than their race and color and previous condition of servitude." To show that this amended Constitution was unjust in its operation, the plaintiff's counsel presented a tabulated census report "which indicates the suppression of negro majorities in more than twenty counties." He claimed that "the negro majorities in the State of Alabama had been overcome by fraud and intimidation for twenty years, and that the provisions of the new Constitution were to take the place of fraudulent methods and intimidation in the government of that Commonwealth." The Registrars demurred; by their demurrer claiming that, even if all the facts were as stated by the complainant, that complainant had no cause of action. The Court, therefore, in deciding, as it has done, that the plaintiff had no cause of action, has decided that, even if it be admitted both that the intention of the amended Constitution was to deprive the negro of the suffrage, and that this intent has been carried out by the administration of the provisions designed for that purpose, the Supreme Court cannot interfere.

The decision of the Supreme Court was rendered by Mr. Justice Holmes. Passing by other subordinate questions, he states two objections to the claim of the plaintiff, each of which the Court regards as fatal to it. The first is that the plaintiff asks the Court to direct that the Registrars register him under a law which he declares to be unconstitutional in fact and fraudulent in intent. If it is unconstitutional and

fraudulent, the Court cannot be asked to enforce it. "How can we make the Court a party to the unlawful scheme by accepting it and adding another voter to its fraudulent lists? If a white man came here on the same general allegations, admitting his sympathy with the plan, but alleging some special prejudice that had kept him off the list, we hardly should think it necessary to meet him with a reasoned answer." The other objection is that the plaintiff asks the Court to undertake a task beyond its powers to perform because beyond its jurisdiction to attempt. Whatever the wrong committed, it is political in its nature and the remedy must be political, not judicial. "The bill imports that the great mass of the white population intends to keep the blacks from voting. To meet such an intent something more than ordering the plaintiff's name to be inscribed on the lists of 1902 will be needed. If the conspiracy and the intent exist, a name on a piece of paper will not defeat them. Unless we are prepared to supervise the voting in that State by officers of the Court, it seems to us that all the plaintiff could get from equity would be an empty form. Apart from damages to the individual, relief from a great political wrong, if done, as alleged, by the people of a State and the State itself, must be given by them or by the legislative and political department of the Government of the United States." From this decision Justices Brewer and Brown dissent, holding that "it is competent for the courts to give relief in such a case as this." Mr. Justice Harlan agrees with Justices Brewer and Brown in this opinion, but agrees with the majority that the appeal must be dismissed, on technical grounds not affecting the general political question.

⊗

**The Alabama Case:  
Possible Remedies**

Assuming that the negroes are unjustly deprived of the suffrage under the amended Constitutions of Alabama and other States, have they any relief? Several methods of relief appear to us possible: (1) It does not follow from this decision that all appeal to the courts is denied them. It is quite possible that if a negro were refused registration by a violation of the law or by a palpably fraudulent administration under

that law, he might apply to the courts for a writ requiring the Registrars to put his name upon the list. Injustice perpetrated by Registrars in administering the law might be corrected, although injustice by the State in enacting the law could not be. (2) The negro refused registration in violation of the spirit and letter of the law might appeal to the State courts, and so to the conscience and sense of fairness in the people of the State. Such an appeal would be heard by all the people, not only of the State, but of the Nation, and would help to enlighten and concentrate a public opinion which might correct any injustice in administration under the law. (3) Congress is the final judge of elections. In any case in which any great number of legal voters are denied the right of suffrage it is quite possible that Congress might, on investigation, refuse to seat the candidate who owed his election to fraudulent registration, and require a new election, or seat his competitor. (4) Congress might pass a law making violence, fraud, or corruption in Federal elections a Federal offense, to be prosecuted by the United States District Attorney and before the United States Courts. (5) Finally, Congress may reduce the representation in Congress in the proportion in which the State has reduced the suffrage. All these remedies are possible. But, in our judgment, none of them should be resorted to, except possibly the second, until locally the appeal has been made to the Southern friends of law and order, of constitutional action and of fair dealing, in order to compel honest and unprejudiced administration of the laws as they now exist. We do not believe that such an appeal would be made in vain. And if it succeeded, the chief grievance of the negro—his exclusion, even when intelligent and competent, from the polls—would be remedied, even though the State still suffered, and he with the rest of the State, from the continued infusion of ignorant and incompetent white voters.

⊗

**New York's  
Franchise Tax  
Sustained**

To a striking degree the important events of last week were court decisions. Only less important than the decision of the United States Supreme Court in the negro suffrage case was the decision of the Court of Appeals in New

York State sustaining the municipal franchise tax law passed in 1899, under which \$18,000,000 of back taxes are already due, and upwards of two hundred million dollars' worth of property hitherto untaxed is fixed upon the assessment rolls for the future. This tax law, it will be recalled, was pronounced unconstitutional in January by a majority of the Appellate Division of the Supreme Court. This decision is now reversed, and the highest court in the State pronounces the statute valid at all points. The street railway and gas corporations announce that they will carry the case to the Federal courts, but the grounds upon which their appeal is based are too shadowy to inspire any real hope in the appellants. The real point upon which the corporations rested their case was the claim that the Legislature, by amending the tax law at their suggestion, so as to have the taxes assessed by State instead of local officials, had violated the home-rule provisions of the New York Constitution. Judge Parker, it will be recalled, speaking for a majority of the lower court, sustained this contention. Judge Vann, however, speaking for the entire Court of Appeals, denies its validity, declaring that while the Legislature cannot transfer from local to State officials powers exclusively lodged in the former, the Legislature can increase or diminish these powers, and that the Legislature has complete authority to tax the franchises of corporations chartered by itself. This property the Court declares was never made taxable until the passage of the present law, and therefore the provision that it should be assessed by State officials cannot be deemed to deprive local governments of their constitutional rights. The fact that relatively unimportant tangible property, such as street-cars, tracks, etc., hitherto assessed by local authorities, is placed under the jurisdiction of State officials, does not vitally affect the situation, as the value of this tangible property is chiefly incident to the possession of the franchise, and it is plainly desirable that both forms of property should be assessed together. The Court further argues that many of the franchises assessed are not distinctively municipal, but extend or may extend through several localities, and therefore are most properly assessed by a State Board. The claim of the com-

panies that their payments for their municipal franchises exempted them from further taxation by the State (the claim on which the appeal is taken to the Federal courts) the Court makes short work with. No municipal government, it points out, has the power to make a contract exempting property from State taxation. Indeed, the State may even tax its own bonds, unless it expressly stipulates not to tax them. The language used by the Court in discussing this point makes it clear that none of the payments made in the past by the companies for their franchises, whether in lump sums or annual rentals, are to be regarded as tax payments. They are merely payments for the special privileges granted the companies by the municipalities. The entire value of the property of the companies is subject to taxation at the same rate as other property not enjoying special municipal privileges. In other words, apparently, the street railways and gas companies can claim no deductions from the taxes now imposed upon the long-exempt value of their franchises.

#### The Educational System of New York

The reorganization of the educational machinery of the State has gone over, with many other things, until another session. In the meantime the Lieutenant-Governor is to appoint a Commission consisting of five members of the Senate with the Speaker, and of seven members of the Assembly, who are to make a special study of the situation during the recess, and to recommend proper legislation at the next session of the Legislature. Of course everything will depend on the personnel of the men who are appointed upon this important Commission. The matter may very well be postponed for the sake of fuller investigation and more careful study of the entire situation. A few months' delay is of small consequence. What is important is that the general principle upon which the public education of the State is to be conducted should be settled, an end put to the present dual system, and unity, harmony, and efficiency secured. Several bills have been introduced involving important changes in the Board of Regents; such as the surrender of the life tenure of the Regents, elimination of the

Superintendent of Public Instruction as a member ex officio of the Board of Regents, and the reduction of the number of Regents to eleven. These bills have not been opposed by the Regents, who seem not to oppose any change in the constitution of the Board which will insure freedom from political domination. The Outlook has before repeated its conviction that questions of detail, such as are involved in these amended Stevens bills, may be left to be settled in the future; what ought to be secured as soon as possible is the end of the present dual system and the reorganization of the educational administration throughout the State in such a way as to make one responsible head, to avoid friction, and to secure unity of action in all departments.

**Expansion at St. Louis** A staff correspondent gives the readers of this week's Outlook a description of the dedication of the World's Fair buildings at St. Louis on Thursday of last week. The principal speakers were President Roosevelt and ex-President Cleveland, and the theme of both speakers was the immense addition to the territory of the country by the Louisiana Purchase and the character of the early expansion. President Roosevelt reminded his hearers that the present States of Illinois and Indiana were added to the territory by force of arms in the middle of the Revolutionary War, and as a sequel to the exploration of George Rogers Clark, and the western boundaries were still further extended by the treaties of Jay and Pinckney; but the first real expansion of the country was the acquisition of the vast territory beyond the Mississippi stretching to the Pacific. When this expansion was made, the people of the United States undertook a task for which there was but little precedent. The two principal types of expansion had been illustrated in the history of Rome and of Greece; the first "expanded her rule over the entire civilized world by processes which kept the nation strong and united, but gave no room whatever for local liberty and self-government;" the second organized colonies in many places, but these colonies became independent of the mother State, securing local self-govern-

ment and local independence by the complete sacrifice of national unity. American expansion has preserved from the beginning local liberty and National unity. The greater part of the territory acquired by the Louisiana Purchase has not only been developed, but has been organized into States. American expansion has been expansion in the spirit of peace and of construction. Mr. Cleveland emphasized the great importance of the Louisiana Purchase as a National accomplishment next in moment to the Declaration of Independence and the adoption of the Constitution. He recalled President Jefferson's attitude towards the Purchase, his doubt as regards the constitutional right to extend our limits by the acquisition of such a vast territory, and at the same time his perception of its need and of the peril which would follow if the opportunity were put aside. In conclusion, the ex-President interpreted the history which was consummated in the purchase of the Louisiana Territory as indicating the leading of Divine Providence in the building of a great Nation. Both speeches involved recognition of the fact that expansion has been inevitable and normal; but that it has been and must be expansion along constructive lines, carrying with it local liberty and National sovereignty. The fact that the most eminent leaders of the two great political parties agree so nearly in their interpretation of expansion, its necessity, on the one hand, and the method and spirit in which it should be carried out, on the other, indicates that the policy of expansion will not be and cannot be an important political issue in the near future.

#### **The Coal Combination Inquiry**

Much testimony of exceptional interest has been taken by the Inter-State Commerce Commission during the past fortnight at its hearing upon the complaint of Mr. W. R. Hearst against the anthracite coal carrying roads. Some of the testimony has had a sensational interest, as when the attorney for the Reading Company, Judge Campbell, compared the people of New York City to "a pack of whipped dogs." Edmund Burke once said that he did not know how to frame an

indictment against a whole people, but Judge Campbell felt no such limitations:

"Where do the complaints come from?" he shouted. "From the independent companies? No! From the owners of the palaces about Central Park, the crowded tenements, and the business buildings in the lower part of the city? Yes." . . . "We will show this Commission that for more than a quarter of a century the people of New York have wrung the bowels out of the coal regions of Pennsylvania, practically getting their coal for nothing, and whine like a pack of whipped dogs when a decent remunerative price is asked by the miners."

This bit of declamation had the useful but unintended effect of calling public attention to some really important testimony which followed. The attorney for Mr. Hearst asked for the contracts made by the railroads with the Temple Iron Company. The Temple Iron Company, he said, ran a small furnace worth less than \$150,000. The railroads had guaranteed its stock and bonds to the extent of \$5,000,000, paying this preposterous price in order to buy out the firm of Simpson & Watkins, who threatened to build an independent coal road. The contracts desired, continued the attorney, would demonstrate the truth of his charge. Under the advice of their counsel the railroad officials declined to produce the contracts, though instructed to do so by the Commission. In 1898, it is interesting to recall, a member of the firm of Simpson & Watkins urged upon a representative of The Outlook the feasibility of the proposed competing coal road, calling attention to the fact that the Delaware and Lackawanna reported a profit of nearly two hundred per cent. upon the hauling of coal—(receipts, \$10,048,000; expenditures, \$3,700,000). When President Baer, of the Reading, came before the Commission, he was questioned closely regarding the Temple Iron Company purchase, and practically admitted that its object was to keep Simpson & Watkins from carrying out their railroad plans. In his subsequent statements President Baer declared that even with present charges he was unable to pay his stockholders four per cent. dividends, and stated very truly that he had had nothing to do with any scheme to overcapitalize his road. When, however, President Truesdale, of the Lackawanna, spoke of paying seven per cent. dividends with precisely the same rates,

it was clear that the Reading's apparent poverty was simply inability to pay dividends on an inflated capitalization. The Inter-State Commerce Commission's report makes the situation clear. The total capitalization of the Lackawanna (stocks and bonds) is a little less than \$100,000 a mile. The Reading, on the contrary, has a bonded indebtedness of \$185,000 a mile, upon which it must meet the interest before paying anything to its stockholders. Its total capitalization is \$240,000 a mile. President Baer stated frankly that he proposed to advance the price of coal at tidewater to \$5 a ton—or nearly one dollar above the average price for the last two decades. The wages of miners by the last two strikes have been advanced about twenty cents a ton.

**General Miles's Report** The report of General Miles concerning his observations in the Philippines has been made public. It is dated February 19, 1903, and covers all features of his trip through the islands. A considerable proportion of the report is given to an account of cruelties alleged to have been perpetrated by our soldiers in the Philippines. Some of these accounts are based upon evidence of witnesses examined by General Miles, or personal examination of those who had been subjected to ill-treatment. Others of them are based on hearsay testimony of a very doubtful character. In one case reports of atrocities were made to him, and he asked for a written statement to be forwarded of them, but the statement was never received. Concerning this failure he says, "Whether any influence was brought to bear to prevent their statement, either by persuasion or coercion, I am not prepared to say at the present time." He says that he found among certain officers an impression prevailing that the water-cure and other similar cruelties were justifiable, and he implies that in at least one case it is questionable whether they could have been perpetrated without the personal knowledge of the commanding General. But he also declares that "such atrocities have been condemned by such commanders as Generals Lawton, Wade, Sumner, Lee, Baldwin, and others," and adds that, in order to correct any misapprehension, he addressed to the

Division Commander a letter of instructions condemning any such acts of cruelty, and declaring that "the excuse that the unusual conditions justify the measures herein condemned is without foundation." He approves the discontinuance of the canteen, and recommends the discontinuance of the use of church property, monasteries, and the like as barracks for the troops. General Miles's report is accompanied by a letter from Judge-Advocate-General Davis, to whom it seems to have been referred by the Secretary of War, in which the Judge-Advocate affirms that the incidents referred to by General Miles have been made the subject of special investigations either by court martial or by special inspectors, resulting in a number of court martial trials. He adds that "whether the necessity for any further administrative action, in addition to that already taken, will be disclosed as a result of such investigation, can only be determined when inspection reports are received at the Department."

⊙

**General Miles's Report:  
Our Estimate**

Unfortunately, it is an open secret that General Miles has political aspirations for the Presidency, that his attitude toward the present Administration, as toward the one which preceded it, has been hostile, and that he has failed for some reason to secure the confidence either of his superiors or his subordinates in the army. The tone of this report, so far as we can judge from the extracts published, does not indicate a judicial spirit, but rather the spirit of a prosecuting attorney. On the other hand, it must also be said that the extract from Judge-Advocate Davis's report indicates somewhat the attitude of a defendant's attorney. The New York "Evening Post" publishes a list of officers who, it declares, have either not been brought to trial or have escaped the "proper punishment for their acts;" but in estimating this statement it must be remembered that the "Evening Post's" judgment of what is "proper punishment" might differ from that of an entirely just tribunal. Per contra, the "Army and Navy Register" says that out of 6,000 officers not more than twelve are involved in the charges of atrocities—a smaller number than we had supposed. We take this

occasion, however, to repeat what we have heretofore frequently said. There is no doubt that acts of cruelty and oppression, some of them truly characterized as atrocities, have been perpetrated by members of the United States army in the Philippines. It is certain that none of the officers high in command have been guilty of participation in these outrages. There is no General Weyler in the American army. But it is not so certain that they have all been eager to bring the guilty parties to exposure and punishment. The desire to shield the reputation of the army is natural; but it is always a mistake to attempt to shield an organization by concealing the crimes of individuals who belong to it. It appears to us, however, that General Miles's report should have made account of the splendid philanthropic work which many army officers have been engaged in—the building of roads, the feeding of the impoverished and the famine-stricken, the establishment of schools, and the active participation in the work of teaching. The only reference to such work which we find is General Miles's intimation that the reconcentrados were defrauded by being required to buy the rice furnished them at a profit; he is apparently ignorant of the fact that the profits thus obtained from Filipinos who were able to pay for their rice were transferred to the insular treasury, and applied by the civil government to the relief of the widespread distress occasioned by the prevalence of cholera and famine in the provinces of southeastern and southern Luzon. On the whole, we do not think that this report adds much to the knowledge already possessed by the public; but, by recalling public attention to the matter, it may reawaken and revivify public sentiment against such atrocities and against any condonation of them.

⊙

**Russian Diplomacy  
Regarding China**

The report of the eight demands made week before last by the Russian Chargé d'Affaires at Peking upon China was accepted as true by the foreign representatives and correspondents at Peking, and was well enough authenticated to be regarded as correct by the Foreign Offices at Washington, London, and Tokyo. Immediately upon the publication of these

demands, Mr. Hay, American Secretary of State, addressed to the Chinese Government a remonstrance against that Government's acquiescence in the demands. Coincidentally, Mr. Hay asked the Russian Government to inform him of its purposes regarding Manchuria, and especially to define those reported demands made upon China (1) that no more Manchurian treaty ports or towns should be opened, and (2) no more foreign consuls recognized. The Chinese note was telegraphed to Mr. Conger, American Minister at Peking, and that to Russia to Mr. McCormick, American Ambassador at St. Petersburg. China's reply to the first was a refusal to accede to the demands of Russia. Replying to the second (a note of inquiry diplomatically so called, really a protest), the Russian Foreign Office made the gratifying announcement that of the eight demands said to have been made by its Chargé d'Affaires at Peking, four were false, one was unimportant, two others involved no change in previous arrangements, and the last related to a sanitary commission to keep out contagious diseases. If, as some think, the Peking representative put forth these demands to test the sentiment of the nations interested, he was certainly successful in eliciting instant and emphatic disapproval from the American press, and from the American Government an inquiry more pressing than from any other source. Russian officials have not only made general professions of innocence, but have separated America from the other Powers, as indicated by the assurance that not only does the Russian Government not intend to exclude other countries from advantages now enjoyed in Manchuria, or to confer exclusive privileges upon Russians, but that nothing will be done to close doors now open, and that American commerce is the very thing which Russia most desires to attract. We believe that the people of this country will be glad to take this disclaimer as sincere, without stopping to ask whether there has not been a complete change in the Russian demands rather than an error in the original statement from Peking. Secretary Hay's protest has served to call forth a permanent and apparently positive and direct statement of Russia's position in regard to the treaty rights

which for half a century this country has enjoyed with China.

**The German Parliament** Last week the German Reichstag was prorogued by the Emperor. Its five years' term has been a notable one. As to home legislation, the general tendencies running through the sessions have been towards enlargement of the power of the Empire at the expense of the federated States. It is true that there has been extension of social reform legislation in behalf of the workingman—the sick insurance law as an example—but there has been a subjection of the tariff policy affecting all Germans, and in particular the manufacturing element, to the purely agrarian demand of the minority, reinforced by the Roman Catholic party for an appropriate return favor. This demand culminated in the objectionable tariff law passed last December, which gives to Germany the highest duties ever known, particularly on agricultural products. When it comes to ultra-protectionism, however, the United States is hardly in a position to complain of excessive tariffs elsewhere, no matter how they may strike—as this particular measure does—at our own export trade. Another piece of legislation which may trouble us is the meat law passed in 1900 and recently put in operation; it was designed by the Government for sanitary purposes only; but the agrarians in the Reichstag treated it as a weapon for use against foreign and principally against American competition. Thus to Americans the Reichstag's term has been especially interesting, comprising more frequent discussions of Americo-German relations than hitherto. While careful note is taken in this country of the attacks in the Reichstag upon our commercial policy, we may disregard the many jealous and ill-natured complaints concerning the great preponderance of imports from the United States into Germany over Germany's exports to America. It will be interesting, nevertheless, to observe whether the preponderance now attained continues at the present proportion. The late Reichstag will probably be most noteworthy in German history on account of the passing of the Navy Bill, three years ago, doubling Germany's ocean strength

and corresponding to the determination of Germany's energetic monarch to give to his empire a new and weighty influence in settling important questions of world politics.

**Salonika in a  
State of Siege**

A state of siege has been proclaimed at Salonika, the principal port of Turkey on the Aegean Sea, in consequence of the destruction last week of the Ottoman Bank by the Macedonian revolutionists, concurrently with fifty dynamite bomb explosions in the post-office, railway station, cafés, and elsewhere. The revolutionists had mined the principal districts of the town, intending to blow them up simultaneously, but circumstances forced them to act before all their preparations were completed. Several hundred persons were killed and injured in the conflict, as well as in disturbances in the vicinity, where in several places the revolutionists tried to destroy the railroad. As in the case of other disturbances in Macedonia, it is believed that this seemingly anarchistic affair at Salonika was intended to provoke severe reprisals by the Turks, and thereby cause European intervention. The revolutionists remembered that the Armenian attack upon the Ottoman Bank in Constantinople, nearly seven years ago, was immediately followed by the massacre of thousands of Armenians in the streets of Constantinople and similar slaughter in the provinces, but they might also have remembered that this did not result in European intervention, any more than did the awful events which had already taken place in Armenia itself. However, the rioting of last week has caused at least marked notice, in the despatch by Austria of three war-ships, and by Italy of no less than eight, to Salonika. The Turkish Government promptly arrested a thousand persons and doubled the military strength of the place. Dr. Barton, Secretary of the American Board (Congregational), informs The Outlook of the receipt of a cablegram from Salonika stating that, despite the grave disturbances, the missionaries there fear no personal danger. The town is one of the stations of the European Turkey mission of the American Board of Missions; in the four stations of the mission there are twenty-eight persons. The trouble throughout Macedonia and Albania

apparently continues in increasing degree. Along the Struma River, for instance, a fight lasted for four days last week, resulting in severe loss on both sides. The Sultan's commission for bringing about the pacification of the Albanians has resulted only in the continued detention of the commissioners as hostages. It is now believed by many that, despite European apathy and despite possible sincerity on the part of the Turks in a reform of their methods, any change in the spirit of their administration really comes too late. No matter how deeply we may abhor the methods of the revolutionists, the many years of Turkish pillage, outrage, and murder, together with the conflict of race tendencies and religions, have at last instigated a rebellion which may ultimately enlist European sympathy and be carried to a final issue.

**The French  
Monastic Orders**

Last week a few disturbances in France attended the enforcement of the law, passed nearly two years ago, which compels all associations, whether religious or secular, to be authorized (or, as we might say, incorporated) by the State in order to exercise the special duties and functions for which they were formed. These disturbances attendant upon the expulsion of certain recalcitrant monastic orders have apparently been due, first, to the pathetic spectacle of many aged monks, who, having spent their whole lives in preaching, education, or charity, are now too old to begin life anew in a foreign country, and, secondly, to appeals made by a number of prelates. For instance, in a recent pastoral letter the Bishop of Tours advised the superiors of the monastic orders in his diocese, in terms almost insulting to the Government, to ally themselves in an energetic resistance. The Bishop of Bayeux, according to a correspondent of the New York "Evening Post," has published a letter to the dissolved orders in his parishes, saying: "It is our Lord Jesus Christ, his name, his doctrine, and his authority, which they combat in you. There are, doubtless, among those who proscribe you, some who would deny that they are waging war upon a religious idea, but the great majority of them make no secret that that is their object." Referring to the Govern-

ment's interdiction to individual members of the recalcitrant preaching orders to continue as such to exercise their calling as pulpit orators, the correspondent quotes the words of the Bishop of Orleans to a Capuchin friar who was preaching in Orleans Cathedral: "It is possible that you will never again enter this pulpit, with or without the frock of your order, but, should that be the case, it would depend rather upon you than upon me. As for this diocese, no one but the Bishop has the right to forbid any one whatever to preach within its walls." Finally, the text of a letter from the Archbishop of Paris has now reached this country, also protesting against the Government's interdiction, and declaring that this question concerns the bishops alone, and not the Government. The sympathy of many Protestants will be with these prelates in making their protest against an apparently tyrannical exercise of authority. The expulsion of the male preaching, teaching, and commercial monastic orders from France seems one thing, the Government's prohibition to them to exercise their individual functions as members of expelled orders seems another; logically, however, there is hardly any escape from the Stratford-like policy of "Thorough," once the Government had decided upon the drastic course inaugurated in 1901.

Dr. G. D. Boardman,  
Bishops Hurst and Foster

The Rev. George Dana Boardman, whose death occurred in Atlantic City, N. J., last week, was well known both as preacher and author. Born in Burma in August, 1828, the son of a missionary, engaged in his early manhood in law, medicine, and mercantile pursuits, he soon followed the impulse given to him by his early training, and entered the ministry. From 1864 to 1894 he was pastor of the First Baptist Church in Philadelphia, since which date most of his time had been given to travel and authorship. A loyal member of the Baptist Church, he belonged to that increasing school whose faith is too catholic to be confined within denominational lines, and whose influence therefore extends far beyond them. His works on religious rather than theological topics, or perhaps we should say on theological topics treated

always religiously, have had a wide circulation and always a beneficent influence. Two Bishops of the Methodist Episcopal Church have died within a week: John Fletcher Hurst was one of the most scholarly thinkers and writers in his denomination, had been largely influential in establishing the American University at Washington, and was the author of many books on both religious and secular topics—among which perhaps his "Indika" was the best known; Randolph S. Foster became an itinerant at the age of eighteen, was President of the Northwestern University for three years, and later, after filling the professorship of systematic theology at Drew Seminary for some time, became President of the Seminary.

**Progress Toward Church Union** The movement for a union of the United Brethren, the Methodist Protestant, and the Congregational denominations has entered a hopeful stage, although there are yet grave difficulties to be overcome. Committees of the three bodies have agreed upon a basis of union, which was adopted without a dissenting vote. Their conference at Pittsburg occupied two days, April 22 and 23, besides much of one night. Dr. Gladden, Congregationalist, was nominated as Chairman of the meeting by the committees of the United Brethren and Methodist Protestants. A thoroughly fraternal and earnest spirit characterized all the proceedings, and the result was celebrated by singing the doxology twice. A committee of five from each of the three bodies has been appointed to constitute a committee of the whole, to work out an agreement upon the matters of detail involved in the plan of "the ultimate and complete organic union" now hoped for. This committee is to meet in Washington, May 27. The general agreement already reached is embodied in two articles, viz.:

First—The formulated statements of doctrine as held by each of these denominations at present, although phrased differently yet being essentially the same, are to be affirmed.

Second—The union for the present is to be expressed in the organization of a General Council, to be composed of representatives elected from the respective denominations composing the union, on some ratio of membership. This Council is to have its powers and duties defined, but all legislative and judicial matters shall be referred to the

general bodies of the respective denominations. These denominations shall retain their present name and their autonomy in respect to all local affairs, but they shall add to their official title the following: "In affiliation with the General Council of the United Churches."

The harmony realized after the protracted discussions at Pittsburg is auspicious, but it is likely to be at least two years yet before all the interests involved in ultimate organic union are fully adjusted; not only business and property interests, but, still more, the vital principle of Congregationalism, the independence of each local church. The body to be constituted of these three will have upwards of a million members, about half of them in the Congregational churches, and the remainder not very unequally divided between the Methodist Protestants and the United Brethren. The former of these two separated from the Methodist Episcopal Church in 1828, because of the refusal of lay representation in the Conferences (long since granted). The latter separated from the German Reformed Church about 1789, because of the opposition to their evangelistic interest in revivals of religion. The joint committee who have now to agree upon questions of detail is constituted as follows, with Dr. W. H. Ward as Chairman:

Methodist Protestants—Dr. T. H. Lewis, Dr. D. S. Stephens, Dr. M. L. Jennings, Dr. F. T. Tagg, Dr. George Shaffer.

United Brethren—Bishop J. S. Mills, Dr. W. R. Funk, Dr. W. M. Weekly, Dr. W. M. Bell, J. W. Ruth, Esq.

Congregationalists—Dr. A. H. Bradford, Dr. Washington Gladden, Dr. A. E. Dunning, Dr. S. M. Newman, Dr. W. H. Ward.

**More than Federation** The opinion was unanimously expressed at the Pittsburg Conference that something more than federation must come of it. For this end it is regarded as desirable that the National meeting of each of the constituent denominations shall be held at the same time and place as the General Council of the three, the Council taking occasional recesses that the constituent bodies may transact necessary business. It is hoped that this temporary arrangement will be superseded by one Council inclusive of all. State and district organizations likewise it is hoped will ultimately coalesce, though they are to be separately maintained for the present. As soon

as the Committee of Fifteen has done its work, the Pittsburg Conference is to reassemble to act upon its report. Besides the three denominations that united in the agreement reached there, a fourth was represented by its committee—the Christian Connection, a body numbering some fifteen hundred churches. During recent years conferences with a view to union have been held between these and the Congregational churches. Rejecting all creeds, and holding to the Bible as the sole authoritative statement of Christian belief, the first article of the Pittsburg agreement, by its reaffirmation of doctrinal formularies, prevented them from coming into the union. The main hindrance to a perfect agreement of the three bodies was found in differences of polity, Congregationalists being disinclined to the centralizing of authority preferred by the others. The United Brethren and Methodist Protestants, being closely agreed on this point, met by themselves after the Conference, and agreed on everything but a common name. Between these two union seems now to be virtually accomplished.

**The Temple of Peace** Mr. Carnegie has made no more characteristic or important gift than the gift of fifteen hundred thousand dollars for a building in which to house a permanent Court of Arbitration at The Hague, and to provide an ample library of international law, as an expression of the profound conviction of one of the foremost capitalists of the world in the settlement of international questions by arbitration instead of by arms. Mr. Carnegie's act is of high importance. There were many who disbelieved in the practicability of the Hague Tribunal; there were those who declared that no real cases would ever be presented to it; but it has already been evoked in a complicated international difficulty; and every year its possibilities of service will become more real in the thought of the world. To nobly house it, as Mr. Carnegie proposes to do, in what he calls a Temple of Peace, will give it a new aspect of permanency; and the building will be a visible evidence and symbol of the immense significance of the principle of arbitration and the practical importance of the Tribunal in

the beautiful Dutch city. Mr. Carnegie has said in conversation that, in his judgment, no more important event has happened in a century than the establishment of this Tribunal. It may be possible that, looking back a hundred years from now, it will be seen that its establishment was the most important single event of modern times. That the possibility of peaceful settlement will be presented every time an international difficulty arises is now certain; and, in the nature of things, with every reference of a great question the authority of the Tribunal will be heightened and the habit of applying to it confirmed.

Professor Smith  
on Jeremiah

The lectures on "The Prophet Jeremiah," given last week by Professor George Adam Smith, of Glasgow, attracted crowded audiences to Union Seminary Chapel, and were marked with characteristic freshness of thought. Jeremiah can no more be called "the weeping prophet," for the Lamentations are known not to be his. The crisis that Jeremiah felt predestined to meet was the collapse of the religious reformation introduced by the law book known as Deuteronomy, in the seventh century B.C., perhaps the fairest plan of national religion ever devised. During the long reactionary reign of Manasseh Israel had apostatized from this and was ruined. As the prophet of wrath and doom came Jeremiah. He saw that the only form of religion capable of realization was personal piety, and so he became the first great preacher of individuality. He wrought the transformation from the Deuteronomic conception of the nation as the religious unit to that of the individual as such. But of God Jeremiah reveals comparatively little. He lacked the anointed vision of Isaiah. To him God was the taskmaster whose commands compel. But while his love for his people deepened as their doom drew near, he struggled into consciousness of the Eternal Goodness, and of his individual relation to it in the new covenant of which he prophesied. Though Jeremiah's life seemed a failure, his people later recognized it as a vicarious sacrifice for their sin. He is the earliest prophet in the Old Testament of vicarious sacrifice, as well as of individuality in religion. The fifty-third chapter of Isaiah reflects Jeremiah's

experience and that of the righteous in that evil time. Nothing in the Old Testament leads more deeply into fellowship with the sufferings of Christ than the experiences of Jeremiah. The general fact enforced by these lectures was the importance of Jeremiah's writings to an understanding of the growth of religious ideas in Hebrew history.

Paul Du Chaillu The death in St. Petersburg last week of Paul Du Chaillu removes an explorer of indomitable energy and a writer of many vivid and spirited books; to young people particularly he endeared himself, not only by his stories written directly for them, but also because he infused into all his narratives of travel a dramatic element which made them immensely readable. It was partly because he used an imaginative style of writing and delighted in painting word-pictures that his earlier books were discredited by many people; yet it is now admitted that what he told about gorillas, pygmies, and cannibals has been essentially confirmed by later travelers and explorers. As his name shows, he was of French parentage, and it seems to be in doubt whether he was born in New Orleans or in Paris; his boyhood was spent in a French colony near the Gaboon River in West Africa. It was in 1855 that he undertook his first great African exploring expedition; he passed over eight thousand miles in the equatorial regions, discovered scores of new species of plants and animals, and brought back the first specimens of gorillas seen in Europe. Other journeys into unexplored territory followed, and later on he made extended explorations in Norway, Lapland, and Finland. Among Mr. Du Chaillu's best-known books (he published some fifteen or twenty in all) were "Explorations and Adventures in Equatorial Africa," "A Journey to Ashango Land," "Wild Life Under the Equator," "The Land of the Midnight Sun," and "The Viking Age."

Save the Big Trees The giant sequoias of California form a natural wonder and beautiful scenic feature absolutely unique. How far the rumor that their existence is in danger may be true is not quite apparent, but it seems certain that the Calaveras Grove at least is threat-

ened with extinction. It must be remembered that there are at least five hundred trees in California which are really entitled to be called giant trees, and that these are found in many rather widely separated groups. The Mariposa Grove, near the Yosemite Valley, is owned and cared for by the State of California, while the United States holds as National parks two tracts of land on which big trees stand. The Calaveras group, the first to be discovered, contains about a hundred very fine giant trees, and has been well maintained and preserved. It is private property, and, of late years at least, has not yielded a reasonable profit on the price paid by the present owner, \$100,000. There is, therefore, great danger that the trees may be cut down and sold—it is said that a single sequoia might yield 50,000 feet of lumber. It seems evident that California should have purchased the Calaveras Grove at the very moderate price named above, but the State authorities have hoped that the United States would buy the tract as a National Park; Congress, however, has seemed averse to this, and has refused an appropriation for the purpose. It is now suggested that a public subscription should be made, or that an individual benefactor should present the famous grove to the Nation. In one way or another the destruction threatened should be averted.

## The Educational Revival

Years ago Captain Sayles, acting on the suggestion of the Rev. Dr. Edward Abbott, and following the example of Mr. Smiley at Lake Mohonk, invited a number of guests to his hotel at Capron Springs, West Virginia, to consider the question of Southern education. For a number of years Mr. Robert C. Ogden, of New York City, has been accustomed to invite a party of Northern friends to accompany him to Hampton Institute, in Virginia, of which he is a trustee, to participate in its Commencement exercises. From these two sources has grown the Southern Educational Conference, which met in Richmond, Virginia, week before last, of which we gave a brief paragraph account last week.

Three sessions were held daily; the Music Hall was always full and often crowded, all standing-room being taken;

Northern speakers were heard, and always with cordiality, but the sentiments of the Conference were voiced chiefly by Southern men, and, as was proper, all the offices were filled by Southern men, except that Mr. Ogden was enthusiastically re-elected President. The houses of the best families in Richmond were thrown open to the guests, and the problem how to attend all the sessions and also respond to the hospitable invitations of the hosts was a wholly insoluble one. The spirit of the Conference was akin to that of a religious revival in the spiritual earnestness which dominated it. Problems which two years ago were discussed with serious apprehension were treated as theoretically solved, and the reports from the field indicated that they were in the way of practical solution.

It is apparently no longer questioned in the South that the State provision for the education of the colored race is to be equal to that for the white; the proposition to appropriate only the taxes received from the colored citizens to the education of the colored children is not now seriously entertained and is not likely to be renewed. The question whether the people will tax themselves for popular education is being answered in a manner which, if not universally satisfactory, is universally progressive and hopeful. And the problem of the rural school is being solved by a concentration of district schools and a transportation of pupils. One of the most significant addresses was that giving an account of a rural school, equipped with not only the necessary room for a graded school, but with an assembly hall for popular use, provided with twelve acres of land furnishing means for possible horticultural and floricultural education, and accompanied by provision for bringing together to the school all children within a radius of ten miles.

In brief, the Conference, which is Southern in its territory but National in its spirit, indicates a great educational revival. A full report of the proceedings of the Conference is to be published hereafter, and information concerning this report can be obtained by addressing Charles W. Dabney, Southern Education Board, Knoxville, Tennessee. Here we attempt, not

such a report, but an interpretation of the movement of which the Conference is an expression. It carries with it hope for much more than a mere academic development. It means a revival of industry, of liberty, of home life, of the religious spirit.

I. Much of the current discussion concerning industrial education is based upon the old and false assumption that industrial education and higher education represent different if not antagonistic conceptions; that the highest education is that which issues in the three learned professions; that mechanical and agricultural education prepares for an inferior calling and indicates an inferior capability. The Southern Educational Conference indicates a healthful repudiation of this narrow and narrowing conception. The end of education is life; the object of life is service; and that is the best education which fits the pupil for the best service that he can render. The first service that he can render to society is to support himself and so not become a burden on the charity of others. The second service is to aid in contributing to the life of others. That all industry is honorable, and all idleness is a disgrace, is the first postulate of the new educational movement; that no industry is drudgery if it is intelligently performed, and no industry is ennobling if it is performed unintelligently, is its second postulate. It is a far higher and better thing to make a table intelligently than to preach a sermon, write an editorial, or teach a school mechanically. The old education was for the few, the new education is for all; the old education prepared for three learned professions, the new education prepares for intelligent activity in every department of life; the old education was literary and professional, the new education is industrial and universal. Thus the revival of education means a revival of industry; a humanizing and so an ennobling of all vocations; a transformation of all by the illuminating power of a quickened intelligence; the abolition of drudgery by mixing the labor of the hand with the labor of the brain; an ultimate revolution in industry so that "the man with the hoe" shall no longer be a synonym for stunted intelligence, dwarfed affections, and deadened

ambitions. Education means life; and universal education—universal not merely in the persons admitted to it, but in the vital topics with which it deals—means universal life—a vitalizing of the farm and the factory, the full recognition of the truth that all toil can be intelligent and therefore all toil can be itself educative.

II. The revival of education involves the revival of political liberty, because in universal education it lays the only enduring foundation for universal freedom. The Outlook here reaffirms what its editor-in-chief said on the platform at Richmond as reported by the New York "Evening Post:"

Dr. Lyman Abbott went out of his way to reiterate his assertion that "manhood suffrage means manhood first and suffrage second," and that "no man has a right to govern his neighbor who has not the intelligence and the conscience to govern himself." As with similar utterances of Northern men, these views are accepted by the ignorant and prejudiced as justifying any amount of oppression of the negro. "We cannot afford," said the President of a Southern college, "to permit Dr. Abbott to speak as he does; it encourages those who would forever disfranchise the negro, and makes the tasks of those of us who would uplift the negro infinitely harder."

How radical is the revolution which has taken place in the South in half a century! In 1853 no man was permitted to teach that any negro, however educated and competent, had a right to vote; now no man will be permitted to teach that any negro, however ignorant and incompetent, has not the right to vote! We confess to a considerable degree of curiosity to know who this unnamed President of a Southern college is. We doubt his ability to enforce the prohibition. At all events, we shall take the risk.

Suffrage is not a right, it is a prerogative; it is not a privilege, it is a duty. He who cannot govern himself has no right to govern others; and he who lacks either the intelligence to understand the truth or the will to follow it lacks the power to govern himself, and therefore has not the right to help govern his neighbor. Suffrage ought to be conditional; but the condition of suffrage ought to be, not class, caste, or race, but character. Suffrage ought to be, not race suffrage, but manhood suffrage; and manhood suffrage means manhood first and suffrage afterwards. The educated leaders among the

colored people do not object to this principle; they do not object to the disfranchisement of the ignorant and incompetent negro. They object, and they have a right to object, to laws which pretend to do one thing and do another, which require the voters to understand the Constitution, but are so administered as to demand of the negro a knowledge of constitutional law such as few white men possess, which profess to exclude ignorance and admit it freely if it is white.

But universal education will eventually bring with it universal suffrage; and no suffrage will long remain universal unless it is based on universal education. Knowledge is power; and the ballot without knowledge is not power. The attempt to give political power without first giving political intelligence always fails. Out of the direst evils some good springs. The South learned in the reconstruction period that universal suffrage does not bring with it universal liberty; the North is more slowly learning the same lesson. Some criticism may be brought against the recent laws in the South restricting the suffrage; very serious criticism against their unfair administration in some localities. But the purpose to limit the suffrage to men who by a technical test can prove their intelligence, or by a moderate property qualification give some evidence of possessing the fundamental virtues of temperance, industry, and thrift, is wholly praiseworthy, provided it is so administered as to be in fact as well as in letter a manhood, not a race, test. This educational revival involves a good hope of a sound political revival because it is an endeavor to give to all, black and white alike, that intelligence and that virtue which always ought to be the prerequisite for governing others, as they are the necessary conditions for self-government.

III. This educational revival is also a revival of the home. It is by no mere accident, it is by a necessary law, that the agitation for the abolition of child labor accompanies the agitation for child education. The right of the child to be protected from the greed of employers or the carelessness and indifference of parents is indistinguishable from his right to an adequate education. The child cannot at the same time be in the factory making money for the idle or ill-paid father and in the

school being made an intelligent and virtuous citizen. The educational movement means that we are beginning to see more clearly that cheap goods are costly when we sacrifice men and women in order to make them; that a law to protect children is more important than a tariff to protect manufactures; that the wealth of a State depends upon its homes far more than upon its factories; and that if we have forbidden the sale of slaves to the cotton-fields only to allow the sale of children to the cotton-mills, we have small cause to congratulate ourselves on our progress. The Southern Educational Conference indicates an appreciation of the home as the beginning and the end, the foundation and the capstone, of American civilization.

IV. Thus this educational revival is a revival of religion. If ignorance is the mother of superstition, intelligence is the handmaid of religion. Education and religion seek the same end. The school-house and the church are partners in a common enterprise. It is the commonplace of the normal school and the teachers' institute to say that the end of education and so the object of the school is the development of character. And what is the end of religion? What the object of the Church?

And he gave some, apostles; and some, prophets; and some, evangelists; and some, pastors and teachers; . . . till we all come unto a perfect manhood, unto the measure of the stature of the fullness of Christ.

No one could have attended the recent meetings of the Southern Educational Conference without perceiving that this character-building was the common chord from which every theme started and to which every theme at last returned. Whether the topic was common-school education or university education, the rural school or the city school, agriculture, mechanic arts, or literature, as there was on the one hand no call for catechisms or creeds, no suggestion even of denominational divisions, so there was on the other hand constantly manifest as a part of the subconscious thought of the Conference, reappearing every now and then in explicit statement, the idea that the end of education always is and always must be the making of men and women. Our Protestant churches have separated earnest and devout souls by purely conventional distinctions and

definitions, for which practical Americans care but little. Debates and discussions in ecclesiastical assemblies concerning terms of union do little more than accentuate the fact that the causes for discussion are wholly inadequate to justify the divisions which exist. Meanwhile the children of all denominations, and of none at all, are growing up in the common school together and are learning that honesty, justice, truth, hope, benevolence, and faith are the peculiar inheritance of no one denomination; and it will not be strange if the school-house should prove to be the center which the church is not, and bring us, despite our varying creeds, together, on the common basis of a manhood endowed with intelligence and integrity, philanthropy and devotion, which are always essentially one, however different their forms of expression.

We do not, indeed, think that the school-house will ever take the place of the church, as we are quite sure that intellectual and industrial education can never take the place of that inspiration whose fountain is God, whose interpretation is worship. But education will purify and cleanse the religious life; will direct religious emotion into channels of practical service, and eliminate the mere useless emotionalism; will measure philosophies by their practical results, and so emancipate from the tyranny of traditionalism and conventionalism; will accustom men and women to see truths in their right proportions, and not quarrel about terminologies and formularies while they are united in love for their Father and their brethren. In brief, the revival of education as a method of character-building may be expected to recall the Christian world to the truth that the end of religion is also character-building, and thus be also a revival of a religious spirit as free from a hysterical emotionalism on the one hand as it is from a dogmatic and dry intellectualism on the other.

We may well hope that the present Southern educational enthusiasm may spread to the Northern States, where education is in danger of becoming somewhat perfunctory, may inspire it with new and deeper life, and may end by creating throughout the Nation an educational revival, the modern analogue of the evangelistic revivals of a past epoch, and carry-

ing with it the promise and potency of a revival of industry, freedom, domestic life, and a purified religious spirit.

## The City and the Citizen

The two hundred and fiftieth anniversary of the founding of the city of New York finds the metropolis in the hands of capable men who are studying its manifold and difficult problems with intelligence, administering its affairs with skill, and representing it to the world with dignity. Much has been done towards the rehabilitation of the city in the eyes of the world and the confidence of the country; but much still remains to be done. This work cannot be accomplished by Mayor Low and his associates unless they are supported by an intelligent and wisely directed public opinion; nor can it be carried to a successful end unless that opinion confirms in successive elections the policy of the present administration, whatever changes of personnel may take place. New York was not redeemed from the evils of corrupt and incompetent government by bold leadership, though it has not lacked such leadership; it was redeemed by the combined action of its citizens; it can be kept in its place as the foremost of American cities only by the combined action of its citizens.

Cities are not mere aggregations of individuals; they have a character of their own. Every city of any note has its own personality; and those cities which have become most significant in the affairs of men have been those whose personality has been most marked and distinct. The rank of a city depends largely upon the distinctness of its type; upon the distinctness with which it impresses upon the minds of men certain things for which it stands. There have been great commercial cities which have been largely without marked characteristics, and which, accordingly, do not count with the imagination; they do not make an appeal to the sentiment of the race. Jerusalem, Athens, Florence, Venice, Edinburgh, have all been relatively small cities; but they have been conspicuous in the higher life of humanity because they have stood for something which was distinct, individual, characteristic—some work of

the mind or of the spirit, as well as some work of the hands.

A really great city is one of the greatest of human achievements. A good deal of nonsense has been written and spoken concerning the city and the country; and the proverb, "God made the country, but man made the city," is one of the most misleading of aphorisms. It is true God made the country, and every wise man loves the country because God made it; but God did not make the country as men find it to-day. The most beautiful country in the world is that which men have co-operated with God in bringing to the highest perfection. It seems to be a law of the divine development of the world that the finest things shall be secured only by the co-operation of the human and the divine. God made the quarries of Carrara, but man made the great statue of Moses and of the Venus of Milo. God gives material; it is the function of man to make high and beautiful uses of material; and among the most beautiful things are many which represent the co-operation of human intelligence and genius with divine purpose.

Men are made to live together. Cities represent living together in its highest estate. Man was not made to remain a lonely and undeveloped individuality; he was not made to live in isolation; he was made to live in contact with other men, for it is only by contact with other men that he gets his freest and broadest development, and it is only developed man who perfectly fulfills the purposes of God. A city, rightly governed, represents the highest form of human organization. It is when men get together in cities that they produce the arts. Shakespeare was born in Stratford, but he went up to London for his material. Balzac and Thackeray found the richest dramatic possibilities in Paris and London.

Something characteristic is imparted by every city to its citizens; so that men who live in Boston, in New York, in Philadelphia, in Richmond, in Charleston, in New Orleans, bear the traces of their locality, and are recognized as distinct types. From the very beginning, New York has been cosmopolitan; it has been the gate of the New World. It is idle to talk of its not being American; for it is, of all cities, the most democratic in the broad

sense. It has welcomed more races and more men and women to the continent than any other city. Its hospitality has been without limit; eighteen languages were spoken within its limits before the Revolution. Its earliest writer, and the first in point of time to contribute to American literature, disclosed the qualities of a metropolitan city—urbanity, tolerance, ease, humor, sense of form, charm of style.

The higher life of a city is the expression of all its activities—commercial, educational, artistic, social, and religious; and a man's quality and rank as a citizen depend on the fullness with which he enters into the manifold life of his city. There are hosts of men who lead individual lives of the highest probity, but who have no civic life. A citizen is one who shares the burdens of the city, cherishes its interests, and contributes to the richness of its life. Mr. Hewitt was a great citizen because he was in touch with the life of the city in so many of its activities. The profound respect in which he was held was testimony to the ethical quality at the root of his citizenship.

A man becomes a citizen when he recognizes his responsibility and obligation to the community. As soon as a man begins to live closely with his fellows he owes them, in the first place, the inspiration of high character. No bad man ever was or ever can be a good citizen. Nothing contributes so much to the moral strength of a city as the tradition of a noble life. Citizens who lead such lives personify and reveal to the world the higher life. Mr. Gladstone's splendid integrity, the extraordinary and undenied nobility of his spirit, were of immense importance as interpreting the life of the State; and New York has no better possession to-day than the unimpeachable and unquestioned integrity of Mayor Low.

Being righteous does not of itself make a good citizen; it is the beginning of citizenship; but a man must go on to conceive of the business of the government of the city as part of his own business. A prime trouble with New York has been that it has been full of men who were residents but not citizens; who had individual homes, but no community home; who have been willing to take everything from the city and give nothing in return. No man really makes a home, however

beautiful and ample his house may be, unless he gives himself to it; and no man is a citizen unless he gives himself to the city. He must identify his interests with its interests, study its problems; and, above all, he must vote at its elections.

The chief concern in every city is to develop what may be called the higher civic life. The higher life in all departments is always the life of ideas and ideals. It is the source of a man's higher efficiency, of his more enduring influence. Every city has ideals, whether it defines them or not. Whatever they may be in the direction of religion, of art, of science, or social life, two must always be sharply defined and resolutely followed if the city is not only to build up its citizens commercially but to enrich them spiritually and intellectually:

First, there must be the ideal of efficient government, and that means always honest government. No corrupt government was ever yet efficient, however active it may have been in certain superficial ways. No corrupt government can be efficient, because honesty is the basis of all efficiency. And no government which lacks intelligence can be efficient. Honesty and intelligence are the roots of capable, high-class administration and work of every kind; the highest efficiency always involves moral cleanness, broad intelligence, and far-seeing prevision.

Second, every city ought to think of itself as a fundamental educational influence. It ought not only to care for the physical well-being of its citizens by giving them clean streets, pure air, good drainage, wholesome water, the best food supplies, but to train them to love the best things in the best forms. The higher civic life means the expression of the entire life of a community. It involves civic order and civic beauty as well. It means well-kept streets, and it means also noble school-houses. It means capable government, and it means also museums, libraries, art galleries, restful parks, fine streets, and good architecture. Thucydides said of the group of buildings on the Acropolis that the sight of them was a daily delight. Athens, by its very constitution, was for many decades a great educational influence. It was a university because of its quality as a city before it became the recognized center of the

education of the classical world. Every city ought to educate its children unconsciously; it ought to teach them integrity, intelligence, and efficiency by the quality and character of its government. It ought to teach them neatness and cleanliness by the condition of its streets; it ought to educate the eye by the beauty of its parks and by its public buildings. It ought to give them noble school-houses, so that they shall identify education with the highest processes of the soul. It ought so to accustom them to good architecture that they shall know integrity and beauty of structure by the eye, as well-taught children know good music by the ear. It ought to be said of every city, as a great Italian sculptor said of Florence, in response to the question how the best criticism of a statue could be secured, "Leave it to the judgment of the public square."

A great city cannot be built on a purely commercial foundation. It needs wealth, because wealth means the command of resources, leisure, the ability to do things on a large scale; but wealth never yet made a great city. A city becomes great by virtue of its character, the breadth of its policy, the dignity of its life, the variety of its interests, the splendor of its appearance. In such a city alone the higher civic life is realized; fed by innumerable streams of private virtue, sustained by innumerable acts of private devotion, made beautiful by numberless private sacrifices and beneficences.

## Unnoticed and Uncounted

It is constantly assumed in many quarters, and the statement is often made, that the churches are only half filled, that Christianity is on the decline, and that religion has ceased to be one of the great interests of the human race; and all the while, in all parts of Christendom and in lands outside its borders, there are millions of people leading devoutly religious lives, sacrificing themselves without hesitation and without repining, bearing heavy burdens without complaint, and doing the hard, rough, obscure work of the world with patient, unconscious courage. These faithful servants of the Lord constitute far the greater proportion of the

numan race. Some of them do not go to church; many of them are found in the churches, which are by no means as empty as they are represented. They are devout believers in Christianity, and the chief motive of their lives is profoundly and genuinely religious. They live as in the sight of the Infinite, and in the life immortal; but they never report themselves; they are never interviewed. Their lives are essentially undramatic. Those lives are apparently commonplace, and are never included in those enumerations

of the good and the evil which are from time to time taken by the daily press. It is one of the great distinctions between vice and virtue that it is easy to secure statistics of the first, and impossible to get any report of the second. The discords are always noticeable; the harmonies attract no attention. The devout, the religious, the faithful, and the pure, upon whose integrity society securely rests and who are the salt of the earth, do not appear in the census reports; but they make life safe and sweet as of old.

## St. Louis on Parade

From a Staff Correspondent

THE level New Jersey fields twisted and swirled past the car windows; the valley of the Delaware, with its browns of early buds and pale greens of early leaves, allowed us a glimpse of its beauty; the dingy, sordid mining region of Pennsylvania gave way to long, home-like stretches of the rolling, watered farming land of western New York; then night closed in. When day returned, the almost unbroken farmlands of Indiana were streaming by, and then the soil of southern Illinois. We were nearing St. Louis. Every hour of the journey made it more apparent that the Atlantic seaboard is but a fringe to the great inland country of which St. Louis is, at present at any rate, the focus. Others were on their way there to take part, either as sightseers or as actors, in the centennial celebration of the first acquirement of territory by the United States.

On April 30, 1803, a treaty between France and the United States was signed, transferring, for \$15,000,000, the territory between the Mississippi River on the east and the Rio Grande on the west, and extending to the north and west over a then unknown area, to the sovereignty of the American Republic. On April 30 of this year was to occur the dedication, to which we were traveling, of the buildings of the World's Fair to be held in 1904 in celebration of this event. It was natural, therefore, to have the impression while on the journey to St. Louis that this dedication was to be dis-

comprised in the territory of the Louisiana Purchase. And when the train drew into the big station at St. Louis, that impression was deepened by the sight of the people—farmers from Missouri and southern Illinois, negroes, prosperous Middle West Yankees, and city folk who moved without the nervous hurry of the East, but with the alertness of the West.

The inadequacy of that first impression was, however, very soon shown. Once in the streets or in the hotel, the crowd was National. One got careless very soon about jostling against "celebrities." In the course of two days Mr. Bryan, Mr. John Mitchell, ex-President Cleveland, Senator Hanna, General Miles, Cardinal Gibbons, Governors of several States, and others of equally National prominence became familiar figures. Yet it soon became apparent that this occasion was more than National. Foreign ambassadors, with insignia, in uniforms, and one or two in Oriental costume; young men in frock coats and tall hats, who seemed conscious of representing not only political powers, but also social influences and dynastic traditions; ladies who looked as if they were used to being at once gracious and insistent on their rights of going proudly in to dinner in due order of precedence; men with very black beards that looked Spanish, and men with very blond beards that looked Teutonic, and men with curled mustaches that looked moderately fierce—all these made St. Louis seem like Washington transplanted, a temporary National capital, an international city.

There were three days of celebration, and in with the celebration were crowded a Good Roads Convention, a Civic Federation meeting, a university alumni gathering, a military tournament, besides fireworks, dinners, and receptions. The first day was distinctively the day of dedication; the second was given over to the diplomatic representatives of all the nations, who came *en masse* to the celebration; and the third was devoted especially to the States, with a civic parade in which the city of St. Louis took a naturally conspicuous and highly creditable share. Of the three days, the first was markedly the one which aroused the most interest and enthusiasm. The fact that President Roosevelt and ex-President Cleveland visited together at the house of Mr. D. R. Francis, the President of the Exposition, and that they spoke at the same dedication exercises, was enough to give the day distinction.

The celebration began with a parade of troops. All military parades are alike—long lines of infantry, some in khaki, some in blue; cavalry, scabbards clanking, horses' hoofs clattering; artillery with guns, caissons, mountain guns on mule-back; bands, hospital wagons; sun-browned regulars, doing their duty in a procession as in a battle; fair-skinned militia, intelligent, vigorous, a bit more military, though not more warlike, than soldiers by trade; straight, alert army officers, with the bearing of keen experts proud of their calling; militia officers, rather self-conscious and trying not to seem vain of their heavy gold lace; Governors in tall hats on horseback, with their elaborately bedecked staffs; more bands, more infantry, more gold lace, more of everything; bugles sounding, fifes playing, drums rattling; crowds pushing and swaying; grand stands full of cheering, laughing, and on this day shivering people; "fakirs" selling badges; farmers in with their wives and daughters; mule teams drawn up along the side streets; little colored boys darting and sidling and squirming through the crowds. This for three miles or so. The procession was reviewed by the President of the United States in a reviewing stand erected in the grounds of the Exposition; it marched through a triumphal way, then passed on one side a huge extended scaffolding and framework, some

day to be one of the immense buildings of the Fair; and on the other side a long, wide, ditch-like excavation, some day to be a waterway covered with boats and banked with trees.

Up in a stand opposite the reviewing stand, and directly facing the President, who stood there straight, and browned from his vacation in the Yellowstone Park, were a number of reporters and a few men who had found there a convenient vantage-point from which to view the passing soldiery and watch at close hand the actions of generals, senators, governors, a cardinal, a president, and five detectives opposite. Along came the soldiers.

"Who are all of those fellows? Say, are they all from New York?" asked a middle-aged, vigorous, clean-shaven man from Illinois, who had slidden into the reporters' stand unobserved. "There must be a train-load of them."

"Yes, several train-loads."

"You don't say! Well, that's the best showing yet! Who's that?"

"Governor Yates, of Illinois."

"Whoop! Hey! That's my Governor. So it is; it's Yates! Hey! Wasn't that a fine salute he gave the President? Hey! hey! Hi there! Olney! Olney! Hello, boys! That's my town, Olney, Illinois! Who's that?"

"Governor Heard, of Louisiana."

"Hi! That was fine the way they stopped, wasn't it?" said he, as a band halted and, turning, played a few bars of an Irish air that the President evidently enjoyed especially.

Whenever the National colors were brought past, the President, of course, saluted them, but in a manner so far from the perfunctory that his example was contagious, and the newspaper men were soon doffing their hats whenever the flag went by. One could not help attributing the contagion of the example partly to the personality of the President, partly and perhaps chiefly to the fact that the example was set by one who was commander-in-chief of the army not by virtue of military rank, but by virtue of civil office.

Hardly had the last soldier passed the stand when the broad roadway became black with people. The crowd made its way to the Liberal Arts Building, externally still in process of erection, where the dedication exercises were to be held.

It is hard to imagine a building that can contain fifty thousand people. It is not easy to keep in mind the image of the interior of such an immense building, even after one has seen it. Into that gigantic inclosed space, where the wind was rushing about quite as familiarly as out-of-doors, pushed these struggling throngs. The noise of stamping feet and of shouting was as continuous as the roar of a city. From an elevated point within thirty feet of the speakers' platform the voice of Cardinal Gibbons, as he offered the invocation, could scarcely be heard. The confusion was not drowned even by the massive, simple harmonies of Beethoven's Creation Hymn, sung by a chorus of thousands of voices. President Francis and ex-Senator Carter failed in turn to make themselves heard beyond a few feet. At last, when Mr. Roosevelt was introduced, and greeted tumultuously, he rose to speak, then, with the exclamation, "I wish I could get up higher," he climbed impulsively to the top of the improvised table, and, raising his hand, caused a hush among some hundreds nearest him.

"Give me all the chance you can; I need it," were his first words.

His address was a characteristic eulogy of those strong qualities that made the men of 1803 dare try the first experiment of expansion; but not a word could have reached the vast multitude that was swaying and struggling and shouting up to within twenty yards of where he stood. The applause of those who could hear would roll out in all directions until it was lost in the noise that came rumbling back. At such times Mr. Roosevelt would bring about some degree of quiet near at hand by a gesture or a smile, and, with some pleasantry addressed to those with him on the platform, relieve from possible embarrassment those in authority. Mr. Cleveland, when he rose to speak, was hailed with cheers; but as soon as he began to speak the din became greater than ever. Except for a few score, the people had to wait until they read the papers next day to learn that his subject was the peaceful character of the expansion they were celebrating.

This confusion was only one of a number of instances which indicated that the arrangements for the celebration were most inadequate. One Governor with his staff was allowed to arrive without receiving any attention, or even necessary information. Hotel prices were exorbitant. One large audience was kept waiting for two hours after the time set by official bulletin. These experiences and others equally serious were, however, in no respect fatal to the celebration; they will probably prove valuable as lessons for the conduct of the Exposition itself. On the other hand, the efficiency of the management on the whole, the bigness of the undertaking, and the real largeness of the conceptions that were realized in these three days make the errors and even the blunders seem comparatively insignificant. The errors, after all, were errors consequent upon trying to do things; they were the shortcomings of buoyant ambition.

Here, it seems, lies the real significance of these three days. A spirited Nation has been giving expression to its sense of power. The people of St. Louis were most truly evident in catching this spirit, in their enthusiastic welcome for guests of distinction, in their hopeful and energetic expressions of faith in their Exposition, in their justifiable pride in their city, in their warm-hearted hospitality, and in their enjoyment of this celebration itself. All Americans who spent those three days in St. Louis must have become conscious anew of the youthful vigor of this Republic, and the representatives of the nations must have found in this far inland city some new evidences of the nervous might of this people who govern themselves. Certainly no better outward sign of this power of self-government could have been given than the hush which came over fifty thousand struggling, unpoliced people when, at the end of the dedication exercises, Bishop Hendrix offered prayer and Bishop Potter pronounced a benediction. Then was shown where lay the controlling power of a democracy—in the will within. The brilliant display had ceased, but the real force which it had symbolized was then first exhibited with the greatest impressiveness.

# A PREACHER'S STORY OF HIS WORK<sup>1</sup>

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

## VI.

A LARGE part of our success is due to the young men, my junior clergy. When I came to St. George's, I said to my vestrymen: "I want you to let me have three to five assistant clergy here," and I got them. There was a remonstrance all over the parish at first against my sending the young clergy to visit. Some said, "We do not want these young pastorettes coming around visiting us," so I had to tell them, "Then you would better go to some other church. It is quite impossible for me to visit you all. When you are sick or when you need me, I will come. But meanwhile I look to you people to aid me in training and keeping my junior clergy. Receive my clergy and give them opportunities to know you." When I took these young men as associates, I made a bargain which I have lived up to and which they on their part have lived up to. I said: "You will preach in St. George's Church; I will criticise your sermons; you will visit the cultured people as well as the poorest; you will see the whole life of the parish, fairly and squarely, and after two or three years you ought to know more than you do now." I met with opposition at first, but I have stuck to the rule.

At first we had a system that included senior and junior clergy, but I found that necessarily seniority was accounted by length of time and not by competency, and I found that the senior, being only human, arrogated to himself certain rights which were not helpful to him or to his junior brothers. Then I got the inspiration that each of my clergy should be the senior assistant for one week in a month; during that week he is officer of the week, so to speak, as a cadet at West Point is selected to be officer of the day; he must see the people, take the funerals, preach, and make emergency calls. This plan has worked delightfully; it gives each man

as many rights as the others; and in addition gives more leisure to the others to read. Then I have what I consider another good plan: I make my associates select in turn the new associates. For instance, after a man has worked here two or three years, he knows pretty well what I want, and I tell him to pick out some one to take his place when he gets ready to leave. At first theological seminary students were very timid about coming here, and asked all sorts of questions as to what was expected of them; now they ask no questions; they ask to be let in. Some, at the end of a year or six months, are ready to go somewhere else; others I have to drive away. I like the idea of sending them away two at a time, if I have two men who make a good team, as I did recently to Christ Church, Cincinnati. One man fitted the other exactly, and they turned the whole place upside down. Three months ago I sent two more to Dayton, Ohio; I always try to fit the men to the conditions I find.

Another thing: I urge my associates to be as elastic as possible with the service. We are allowed large elasticity in our Episcopal Church, and it is a grievous mistake to make the service too long. No suffering mortal wants to listen to a sermon after listening to the three whole services of the Episcopal Church. Furthermore, these services were not intended to be given together; they were rolled together in former times by men who held several parishes and were obliged by law to visit and read all the three services in each parish church each Sunday, and they combined the services to get them all in without too frequent visits. The Episcopal Church discounts her splendid liturgy; it is used often as unwisely as a great instrument could be used.

One great influence in my success I lay to the fact of trying to make the young clergy feel at home in this rectory. I issued an invitation seventeen years ago

<sup>1</sup>Copyright, 1903, by the Outlook Company. All rights reserved.

to the Senior Class of the General Theological Seminary to take supper with me before they graduated. I had three men. I issued the same invitation last year; I had forty-one out of a class of forty-three; and this year I had a request from the Junior Class that I should let them spend an evening with me at the beginning of their seminary life as well as at its close. I only mention this to show that if you hold out your hand and keep on holding out your hand (for I have invited the General Seminary students every year) to the young clergy they will respond.

My idea is to let my associates enter fully into the life of the parish; to visit the rich, and not simply the poor; to let them see me whenever they wish, and make them feel that we are working together. Every Monday morning my clergy spend a couple of hours with me, often more, and during the week they are in and out of the study all the time. I expect good work, and I get it. Give a man a chance, and if there is anything in him it will show. I do not have any trouble in keeping them.

How do we get our money for this work? Well, here at St. George's we have received in these twenty years over four thousand five hundred accessions to the church from the Sunday-school alone, and though I suppose there is hardly a child in the Sunday-school who can afford to put ten cents in the plate, yet I get thousands every year from the young people of the church. It is easier to train twigs than trunks.

The great thing is to adapt your machinery to your environment. If you have a brownstone environment—people who can afford to live in a twenty-five-foot house—it is a very simple thing to adapt church services and methods to them. Give them a good sermon and good music and visit them, and the thing is done. But that has not been my problem. My problem has been how to get at the people who do not want to come forward and join the church at all, or who, if they do want to join, cannot pay a hundred dollars or upward for a pew. And I have found that one can raise a good deal of money in a free church if one has a system.<sup>1</sup> All these people are willing to pay something; they ought not to go to worship without

paying; offering money is part of worship; and I do not want people to get the idea that they can come to church and not give anything. A great many people feel they cannot afford to pay so much a year for a pew; and yet, on the other hand, poor people—even people with ten dollars a week income—people who must cut their cloth most carefully in order to have any coat at all—these people are all willing to pay something. Not long ago I had a message from a large number of people on the East Side who could not take an envelope of twenty-five cents per week, but they wanted to take envelopes; and as a result of that movement we have had a thousand dollars a year added to St. George's in five and ten-cent envelopes—all from poor people, unskilled wage-earners. One man comes to me year after year and brings me sixteen dollars as regularly as the seasons come; he has no envelope, but he brings his sixteen dollars.

Just after my anniversary a poor woman—a servant—came to me and said: "I am a lonely woman; St. George's has been a great help to me. I have no family; I know how important it is to keep the church here, and I know the church wants more endowment. I have saved fifty dollars; will you take it for the endowment?" That is God's money. I could give you instance after instance like that. If a man says that the poor and the middle-class people are not willing to pay, he does not know what he is talking about. The people who use our building are all middle class or poor; but all who use it pay something for what they get. Last year we raised \$7,600 from the young people's societies alone in that building; that is fine, you know. And then there are some people who say, "If you feel that way, why do you always call for an endowment?" Well, for this reason: the difference between what these people can pay and what the thing costs must be met by somebody, hence the endowment. People who say, "Do not give the people of New York any institutions except what they can pay for," do not know what they are talking about. The poor people cannot pay for these things altogether; they need them, they are willing to pay what they can; but somebody must pay the difference. When St. George's separated from Trinity Parish, it had thirty-six lots,

<sup>1</sup> We have raised over \$2,300,000 in St. George's during my pastorate.

and in 1883 all these lots but two had been sold; there was not a penny of endowment, and there was a floating debt. We have now over \$300,000 endowment, but that is not enough. We want half a million at the very least.

I have found in my experience that you can raise money by the envelope system, but it must be organized. We raised last year \$9,000 for foreign and domestic missions. Everybody in the congregation gets an envelope before the collection for foreign missions comes up; and when the time comes for domestic missions, everybody gets an envelope in the same way. Our bill for stationery and stamps is terrible, and I have a big staff of secretaries; but much of the work is done voluntarily. My treasurer, for instance, gives up time and strength which no money could purchase. And that is the secret of St. George's success; we have service that money could not buy.

The most efficient lay assistants that churches have are doubtless women; that ought not to be; but I think we have to face that fact and seek reasons for it. The reason is that the laity, consciously and unconsciously both, feel the need of the restatement of the Christian doctrine, and very few churchmen, comparatively, are setting themselves to do that. If I could sum up in a line what I think has been the reason why I have such a unique band of lay helpers, it is because the great majority of them were attracted and held by the fact of my constant aim to restate the old truths of the Christian religion in terms which commend themselves to men's conscience and judgment. From my experience I should say that the cultured laity are not giving up religion, but too many of them are ceasing to look for it in the churches. There is great danger that public worship may be left to women, clergymen, and the uneducated. The movement I speak of affects men rather more than women. We must bring the teachings of Christ nearer the level of modern thought; the thinking of our day is more naturally Christian than the thinking of any other age. I am all the time trying to do that—very imperfectly, it may be, but still I am trying. It is my profound belief that if a man has any gift of God to do that, he can get a hearing among people.

I have hundreds of men and women giving up their evenings for St. George's work. I have a hundred and fifty Sunday-school teachers, and last Sunday, a wet, disagreeable day,<sup>1</sup> there were only three absent. Six came from Brooklyn, and nine or ten from above One Hundredth Street. I try to make them feel that we are all working together; twice a year we have supper together, and we discuss in a democratic way the needs of the Sunday-school. The Sunday-school is carried on as far as possible on the basis of the public school. We try to apply the kindergarten system among the younger children, but usually I cannot get that sort of teacher without money. Kindergartners are worn out during the week and cannot teach again on Sunday. I should like to apply the kindergarten system to all children under eight. We do teach with the blackboard, and follow the general system of the public schools. Many churches seem to think any sort of a young man or woman can teach in a Sunday-school, but that is not so. These children are accustomed to first-rate teachers during the week, and they are not going to put up with slovenly teaching on Sunday. Of course I am working all the time for better teachers, and we do get better ones; the standard to-day is immensely better than it was ten years ago. I have some fine young men, but there are more women than men; I have some great women working here as Sunday-school teachers. We make out our own lessons. Our own committee has drawn up our lessons; that is the highest point we have yet reached.

Every single organization we started was an earnest effort to meet the needs of the people. I have been criticised for starting a dancing-class; that was a new thing not many years ago. I did it because I found that the girls were going to bad dances. Then, when we started the dramatic society, some people said I wanted to turn St. George's into a theater. My boys and girls want to go to the theater; they ought to go. The drama has a great influence; that influence will increase, not decrease; it has an immense place in human life; and so we started the dramatic society; they take up good plays, and it is a great success. At first, when we started the dancing-class, there

<sup>1</sup> February 8, 1903.

were always three or four of the clergy and half a dozen ladies present to look after things; the boys would spit in the corners and throw cigarettes on the floor; now there is nothing of the sort; you could not find better behavior in Sherry's, and there are often no clergy or deaconesses present. Ten years ago, if one of these boys met me in the street, he would scarcely notice me; now there is hardly one who does not take off his hat when he meets me, and I have never asked them to do it. Boys like brass bands; they want to join organizations, and so we started the Battalion; we have one hundred and twenty in the Battalion. St. George's sent seventy-one men to the Spanish War; four were killed; our Battalion is a great power for good.

So about the saloon question. People said I advocated the saloon—church saloon. I never said anything of the kind. As a matter of fact, what I did say was that there was nothing more harmful than a light regard for law. A law that cannot be enforced is a curse in the community; and therefore I advocated having the saloon open part of Sunday. Ten years ago, before Mr. Jerome touched this thing, I talked about it in the pulpit and on the platform: "I would to God there were no saloons, but, since they are here, you have no right to pass a law which cannot be enforced. There is nothing so destructive to the well-being of a community as a light regard for law. Your Puritan who insists on passing his own peculiar law is the ally of the bad element in the city, as has been said so often in *The Outlook*. His stupid insistence to pass laws that cannot be enforced is disastrous; there can be nothing worse." That is what I said over and over again.

I have studied the needs of the people and have tried to meet them. I wish rich men would give the people more opportunities for pleasure—innocent pleasure. I do not specially indorse Mr. Carnegie's gifts to libraries. Libraries are good things, but in New York there are things we need more. We need pleasure-houses far more in New York; places of amusement that will not degrade. For instance, I have had a good man come to me and say, "Next week is the anniversary of our wedding, and I want to give a little dinner and dance to my wife and her

friends. Do you know of any hall I can get?" And I cannot tell him where to go. My boys and girls wanted to dance. I wanted a place for them, and I had to bring them right into our parish building; but it is not the proper place. There is not room enough. The church ought to meet the social needs of the people, and the social needs of the people of the tenement district of New York are not the social needs of the people in a Maine village, nor even the social needs of Baltimore or Philadelphia. If a man would minister successfully, he must have his finger on the pulse of the community where he is and know how it beats. That is the whole thing.

Since there is no provision for social life in the tenement-house district except the dark alley and the street, I try to meet this condition by providing social life here under right influences. The gymnasium, the cooking and sewing schools, are all efforts to supplement the home training. The time is coming when the Church will not need to do these things at all. The public schools are going to have cooking taught as it should be; manual training will be introduced; gymnasiums will be opened. But in the meantime, by the use of these things, we get in touch with the people, and the whole neighborhood is affected. I can give a beautiful illustration of this. There is an old Dutch woman on one of the blocks on the East Side who owns her own tenement, and who has lived there a great many years. Talking with her the other day, she spoke of the great changes she has seen, and I said, "Well, what about the people?"

"Ach," she said, "twenty years ago there was all bums and toughs here; now there are four or five gentlemen on every block."

Some years ago a man came to see me—a nice-looking fellow—and said: "Dr. Rainsford, I want to tell you a story. I was a physician, doing well, already earning \$10,000 a year, happily married; my wife loved me and I loved her, and, looking back, I cannot see any reason why we did not continue to be happy; but meddling friends interfered, we drew apart, and, to my great shame, I must confess I began to drink. As I drank more and more, we drew further and further apart; I

began to lose my practice; and, to make a long story short, in a couple of years I had nothing. I was a lonely man on the way to the bottomless pit, going as fast as I could go. One hot day in July I was wandering about this part of the city, and I saw a notice on the outside of this church which I had never seen on any other church: 'Come in, Rest and Pray.' I went in and threw myself on my knees; it was the first time I had prayed for years. I reviewed my life. I knew my wife was a good woman; I knew I still loved her; I believed she loved me; I saw no reason why I should be beaten. I prayed to God to give me strength, and I got it. I sought my wife and regained my professional position and my friends; and I lay it all to your open church that said, 'Come in, Rest and Pray.' Let me introduce you, sir, to my wife."

St. George's is out of the way on Stuyvesant Square, and it is not used as much as if it were on the avenue, but it is used a great deal. I should like to reach the tides that go up and down the avenue on Sunday afternoons. I should like to have a place like Trinity Church, Boston; there is the place to preach to men; I do not

say that Boston does not see the opportunity and use it; but look at our avenue churches with their doors closed all week.

What we want is to have the most beautiful churches in the crowded districts, and the best music. Where life is sordid, you want beauty; where life is crowded, you want the big church; where there is discord, you want the most beautiful music. If I had the power, I would put the most beautiful churches in the Bowery, and give them the right sort of preaching and the right sort of music, and the people would come. Make them feel that you are genuine, and they will stand up for you—like the big fellow I had to knock down before I could get him to leave the Sunday-school; he evidently was impressed that I was doing something genuine, and when the time came, he stood up for me and routed the others. I do the best I can to be perfectly genuine; that is the reason why I never wear the clerical dress; that is why when I fish I say I am fishing; when I hunt I say I am hunting. I try to be absolutely natural and sincere; it helps the message, though often people don't understand.

## The Strenuous Life

By William De Witt Hyde

O Lord, we most of all give thanks  
That this thy world is incomplete;  
That battle calls our marshaled ranks,  
That work awaits our hands and feet;

That Thou hast not yet finished man,  
That we are in the making still;  
As friends who share the Maker's plan,  
As sons who know the Father's will.

Beyond the present sin and shame,  
Wrong's bitter, cruel, scorching blight,  
We see the end at which we aim—  
The blessed kingdom of the Right.

What though its coming long delay!  
With haughty foes it still must cope!  
It gives us that for which to pray,  
A field for toil and faith and hope.

Since what we choose is what we are,  
And what we love we yet shall be,  
The goal may ever shine afar;  
The will to win it makes us free.

Bowdoin College, Brunswick, Maine.

# THE FOREST<sup>1</sup>

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

## Chapter IX.—On Flies

ALL the rest of the day I paddled under the frowning cliffs of the hill ranges. Bold, bare, scarred, seamed with fissures, their precipice rocks gave the impression of ten thousand feet rather than only so many hundreds. Late in the afternoon we landed against a formation of basaltic blocks cut as squarely up and down as a dock, and dropping off into as deep water. The waves *chug-chug-chugged* sullenly against them, and the fringe of a dark pine forest, drawn back from a breadth of natural grass, lowered across the horizon like a thunder-cloud.

Deuce and I made camp with the uneasy feeling of being under inimical inspection. A cold wind ruffled lead-like waters. No comfort was in the prospect, so we retired early. Then it appeared that the coarse grass of the park had bred innumerable black flies, and that we had our work cut out for us.

The question of flies—using that, to a woodsman, eminently connotive word in its wide embracement of mosquitoes, sand-flies, deer-flies, black flies, and midges—is one much mooted in the craft. On no subject are more widely divergent ideas expressed. One writer claims that black flies' bites are but the temporary inconvenience of a pin-prick; another tells of boils lasting a week as the invariable result of their attentions; a third sweeps aside the whole question as unimportant to concentrate his anathemas on the musical mosquito; still a fourth descants on the maddening midge, and is prepared to defend his claims against the world. A like dogmatic partisanship obtains in the question of defenses. Each and every man possessed of a tongue wherewith to speak or a pen wherewith to write, heralds the particular merits of his own fly dope, head-net, or mosquito-proof tent lining. Eager advocates of the advantages of pork fat, kerosene, pine tar, pennyroyal,

oil of cloves, castor oil, "lollacapop," or a half-hundred other concoctions, will assure you, tears in eyes, that his is the only true faith. So many men, so many minds, until the theorist is confused into doing the most uncomfortable thing possible—that is, to learn by experience.

As for the truth, it is at once in all of them and in none of them. The annoyance of after effects from a sting depends entirely on the individual's physical make-up. Some people are so poisoned by mosquito-bites that three or four on the forehead suffice to close entirely the victim's eyes. On others they leave but a small red mark without swelling. Black flies caused festering sores on one man I once accompanied to the woods. In my own case they leave only a tiny blood-spot the size of a pin-head, which bothers me not a bit. Midges nearly drove crazy the same companion of mine, so that finally he jumped into the river, clothes and all, to get rid of them. Again, merely my own experience would lead me to regard them as a tremendous nuisance, but one quite bearable. Indians are less susceptible than whites; nevertheless I have seen them badly swelled behind the ears from the bites of the big hardwood mosquito.

You can make up your mind to one thing—from the first warm weather until August you must expect to cope with insect pests. The black fly will keep you busy until late afternoon; the midges will swarm after you about sunset; and the mosquito will preserve the tradition after you have turned in. As for the deer-fly, and others of his piratical breed, he will bite like a dog at any time.

To me the most annoying species is the mosquito. The black fly is sometimes most industrious—I have seen trout fishermen come into camp with the blood literally streaming from their faces—but his great recommendation is that he holds

<sup>1</sup> Copyright, 1903, by the Outlook Company,

still to be killed. No frantic slaps, no waving of arms, no muffled curses. You merely place your finger calmly and firmly on the spot. You get him every time. In this is great, heart-lifting joy. It may be unholy joy, perhaps even vengeful, but it leaves the spirit ecstatic. The satisfaction of *murdering* the beast that has the nerve to light on you just as you are reeling in, almost counterbalances the pain of a sting. The midge, again—or punkie, or no-see-'um, just as you please—swarms down upon you suddenly and with commendable vigor, so that you feel as though red-hot pepper were being sprinkled on your bare skin; and his invisibility and intangibility are such that you can never tell whether you have killed him or not; but he doesn't last long, and dope routs him totally. Your mosquito, however, is such a deliberate brute. He has in him some of that divine fire which causes a dog to turn around nine times before lying down.

Whether he is selecting or gloating I do not know, but I do maintain that the price of your life's blood is often not too great to pay for the cessation of that hum.

"Eet is not hees bite," said Billy, the half-breed, to me once, "eet is hees sing."

I agree with Billy. One mosquito in a tent can keep you awake for hours.

As to protection, it is varied enough in all consciousness, and always theoretically perfect. A head-net falling well down over your chest, or even tied under your arm-pits, is at once the simplest and most fallacious of these theories. It will keep vast numbers of flies out, to be sure. It will also keep the few adventurous discoverers in, where you can neither kill nor eject. Likewise you are deprived of your pipe; and the common homely comfort of spitting on your bait is totally denied you. The landscape takes on the prismatic colors of refraction, so that, while you can easily make out red, white, and blue Chinese dragons and mythological monsters, you are unable to discover the more welcome succulence, say, of a partridge on a limb. And the end of that head-net is to be picked to holes by the brush, and finally to be snatched from you to sapling height, whence your pains will rescue it only in a useless condition. Probably then you will dance the war-

dance of exasperation on its dismembered remains. Still, there are times—in case of straight-away river paddling, or open walking, or lengthened waiting—when the net is a great comfort. And it is easily included in the pack.

Next in order come the various "dopes," and they are various. From the stickiest, blackest pastes to the silkiest, suavest oils they range, through the grades of essence, salve, and cream. Every man has his own recipe—the infallible. As a general rule, it may be stated that the thicker kinds last longer and are generally more thoroughly effective, but the lighter are pleasanter to wear, though requiring more frequent application. At a pinch, ordinary pork fat is good. The Indians often make temporary use of the broad caribou leaf, crushing it between their palms and rubbing the juices on the skin. I know by experience that this is effective, but very transitory. It is, however, a good thing to use when resting on the trail, for, by the grace of Providence, flies are rarely bothersome as long as you are moving at a fair gait.

This does not always hold good, however, any more than the best fly dope is always effective. I remember most vividly the first day of a return journey from the shores of the Hudson Bay. The weather was rather oppressively close and overcast. We had paddled a few miles up river from the fur trading post, and then had landed in order to lighten the canoe for the ascent against the current. At that point the forest has already begun to dwindle toward the Land of Little Sticks, so that often miles and miles of open muskegs will intervene between groups of the stunted trees. Jim and I found ourselves a little over waist-deep in luxuriant and tangled grasses that impeded and clogged our every footstep. Never shall I forget that country—its sad and lonely isolation, its dull lead sky, its silence, and the closeness of its stifling atmosphere—and never shall I see it otherwise than as in a dense brown haze, a haze composed of swarming millions of mosquitoes. There is not the slightest exaggeration in the statement. At every step new multitudes rushed into our faces to join the old. At times Jim's back was so covered with them that they almost overlaid the color of the cloth. And as near as we could see, every

square foot of the thousands of acres quartered its hordes.

We doped liberally, but without the slightest effect. Probably two million squeamish mosquitoes were driven away by the disgust of our medicaments, but what good did that do us when eight million others were not so particular? At the last we hung bandanas under our hats, cut fans of leaves, and stumbled on through a most miserable day until we could build a smudge at evening.

For smoke is usually a specific. Not always, however—some midges seem to delight in it. The Indians make a tiny blaze of birch bark and pine twigs deep in a nest of grass and caribou leaves. When the flame is well started, they twist the growing vegetation canopy-wise above it. In that manner they gain a few minutes of dense, acrid smoke, which is enough for an Indian. A white man, however, needs something more elaborate.

The chief reason for your initial failure in making an effective smudge will be that you will not get your fire well started before piling on the damp smoke-material. It need not be a conflagration, but it should be bright and glowing, so that the punk birch or maple wood you add will not smother it entirely. After it is completed, you will not have to sit coughing in the thick of fumigation, as do many, but only to leeward and underneath. Your hat used as a fan will eddy the smoke temporarily into desirable nooks and crevices. I have slept without annoyance on the Great Plains, where the mosquitoes seem to go in organized and predatory bands, merely by lying beneath a smudge that passed at least five feet above me. You will find the frying-pan a handy brazier for the accommodation of a movable smoke to be transported to the interior of the tent. And it does not in the least hurt the frying-pan. These be hints, briefly spoken, out of which at times you may have to construct elaborate campaigns.

But you come to grapples in the defense of comfort when night approaches. If you can eat and sleep well, you can stand almost any hardship. The night's rest is as carefully to be fore-assured as the food that sustains you. No precaution is too elaborate to certify unbroken repose.

By dark you will discover the peak of your tent to be liberally speckled with insects of all sorts. Especially is this true of an evening that threatens rain. Your smudge-pan may drive away the mosquitoes, but merely stupefies the other varieties. You are forced to the manipulation of a balsam fan.

In your use of this simple implement you will betray the extent of your experience. Dick used at first to begin at the rear peak and brush as rapidly as possible toward the opening. The flies, thoroughly aroused, eddied about a few frantic moments, like leaves in an autumn wind, finally to settle close to the sod in the crannies between the tent wall and the ground. Then Dick would lie flat on his belly in order to brush with equal vigor at these new lurking-places. The flies repeated the autumn-leaf effect, and returned to the rear peak. This was amusing to me and furnished the flies with healthful, appetizing exercise, but was bad for Dick's soul. After a time he discovered that the only successful method is the gentle one. Then he began at the peak and brushed forward slowly, very, very slowly, so that the limited intellect of his visitors did not become confused. Thus when they arrived at the opening they saw it and used it, instead of searching frantically for corners in which to hide from apparently vengeful destruction. Then he would close his tent-flap securely, and turn in at once. So he was able to sleep until earliest daylight. At that time the mosquitoes again found him out.

Nine out of ten, perhaps ninety-nine out of a hundred, sleep in open tents. For absolute and perfect comfort proceed as follows: Have your tent-maker sew you a tent of cheese-cloth with the same dimensions as your shelter, except that the walls should be loose and voluminous at the bottom. It should have no openings. Suspend this affair inside your tent by means of cords or tapes. Drop it about you. Spread it out. Lay rod-cases, duffel-bags, or rocks along its lower edges to keep it spread. You will sleep beneath it like a child in winter. No driving out of reluctant flies; no enforced early rising; no danger of a single overlooked insect to make the midnight miserable. The cheese-cloth weighs almost nothing, can be looped up out of the way in the day-

time, admits the air readily. Nothing could fill the soul with more ecstatic satisfaction than to lie for a moment before going to sleep listening to a noise outside like an able-bodied sawmill that indicates that the *ping-gosh* are abroad.

It would be unfair to leave the subject without a passing reference to its effect on the imagination. We are all more or less familiar with comic-paper mosquito stories, and some of them are very good. But until actual experience takes you by the hand and leads you into the realm of pure fancy, you will never know of what improvisation the human mind is capable.

The picture rises before my mind of the cabin of a twenty-eight-foot cutter-sloop just before the dawn of a mid-summer day. The sloop was made for business, and the cabin harmonized exactly with the sloop—painted pine, wooden bunks without mattresses, camp blankets, duffel-bags slung up because all the floor-space had been requisitioned for sleeping purposes. We were anchored a hundred feet off land from Pilot Cove, on the uninhabited north shore. The mosquitoes had adventured on the deep. We lay half asleep.

"On the middle rafter," murmured the Football Man, "is one old fellow giving signals."

"A quartette is singing drinking songs on my nose," muttered the Glee Club Man.

"We won't need to cook," I suggested, somnolently. "We can run up and down on deck with our mouths open and get enough for breakfast."

The fourth member opened one eye. "Boys," he breathed, "we won't be able to go on to-morrow unless we give up having any more biscuits."

After a time some one murmured, "Why?"

"We'll have to use all the lard on the mast. They're so mad because they can't get at us that they're biting the mast. It's already swelled up as big as a barrel. We'll never be able to get the mainsail up. Any of you boys got any vaseline? Perhaps a little fly dope—"

But we snored vigorously in unison.

The Indians say that when Kitch' Manitou had created men he was dissatisfied, and so brought women into being. At once love-making began, and then, as

now, the couples sought solitude for their exchange of vows, their sighing to the moon, their clasping of hands. Marriages ensued. The situation remained unchanged. Life was one perpetual honeymoon. I suppose the novelty was fresh and the sexes had not yet realized that they would not part as abruptly as they had been brought together. The villages were deserted, while the woods and bushes were populous with wedded and unwedded lovers. Kitch' Manitou looked on the proceedings with disapproval. All this was most romantic and beautiful, no doubt, but in the meantime *mi-daw-min*, the corn, *mi-nó-men*, the rice, grew rank and uncultivated; while *bis-fw*, the lynx, and *swingwáage*, the wolverine, and *me-én-gan*, the wolf, committed unchecked depredations among the weaker forest creatures. The business of life was being sadly neglected. So Kitch' Manitou took counsel with himself, and created *saw-gi-may*, the mosquito, to whom he gave as dwelling the woods and bushes. That took the romance out of the situation. As my narrator grimly expressed it, "Him come back, go to work." Certainly it should be most effective. Even the thick-skinned moose is not exempt from discomfort. At certain seasons the canoe voyager in the far North will run up on a dozen in the course of a day's travel, standing nose-deep in the river merely to escape the insect pests.

However, this is to be remembered: after the first of August they bother very little; before that time the campaign I have outlined is effective; even in fly season the worst days are infrequent; in the woods you must expect to pay a certain price in discomfort for a very real and very deep pleasure. Wet, heat, cold, hunger, thirst, difficult travel, insects, hard beds, aching muscles—all these at one time or another will be your portion. If you are of the class that cannot have a good time unless everything is right with it, stay out of the woods. One thing at least will always be wrong. When you have gained the faculty of ignoring the one disagreeable thing and concentrating your powers on the compensations, then you will have become a true woodsman, and to your desires the forest will always be calling.

[TO BE CONTINUED]

# Child Labor in Pennsylvania

By Kellogg Durland

**T**HE Pennsylvania Legislature adjourned recently, leaving its principal child labor bill unpassed. Two years must now elapse before the deplorably lax laws can be touched. According to the United States Agent of the Department of Labor, Mr. William Waudby, there were approximately 860,700 children between the ages of ten and fifteen years employed in various "gainful occupations" in 1890 in the United States; in 1900 that number had grown to *one million seven hundred and fifty thousand*. The first steps to stay the tide of this development this winter were taken in Pennsylvania. Investigation among the silk and knitting mills disclosed the extent to which the employment of little children is practiced, and publication of the facts stirred public interest considerably. Other States were stimulated to investigation. Child labor committees were formed, and in a dozen States legislative reforms were urged. Bills have already passed in eight States, and in four others remedial measures are pending. The bills introduced at Harrisburg were supported by the United Mine Workers of America and the anthracite coal operators jointly. Yet they dragged slowly through the mechanism of the Senate and Assembly, and finally, in almost the last hour of business, the bill raising the age-limit of breaker-boys to fourteen, and of mine employees in both anthracite and bituminous fields from fourteen to sixteen, passed; but the other, which sought to abolish the night work of little girls in the mills and factories, was lost. While North and South Carolina, Alabama, Texas, California, Oregon, New Jersey, and New York were actually reforming their laws, Pennsylvania was indifferently delaying all reform. It is fourteen years since any amendment to the factory laws has been made. These years have been characterized by a full meed of industrial prosperity, according to the shortsighted estimate of Pennsylvania's false economic prophets. At the same time the illiteracy of Pennsylvania children ranks the State lowest among the important manufacturing States of the

country, and places her with the backward States of the South. The employment of small boys through long days, the working of little girls through nights of strain and toil, is so grave and so obvious an economic blunder that the wonder is that the employers themselves do not realize it. Yet one large mill manager said openly a few weeks ago: "Much of the prosperity of the State of Pennsylvania is owing to the fact that she has a lower age-limit than any of her neighbors. Tinkering with existing conditions will drive the mills to other States."

The story of the beginnings of the child labor campaign in Pennsylvania is like the opening chapter of a strong book of fiction. It is replete with dramatic incident, harrowing in its realism, heartbreaking in its temporary outcome. At a certain memorable session of the Anthracite Strike Commission a group of little girls were brought to the witness-stand. Every one of them was at work under the statutory age, or had begun to work under that age. It was a morning in November. The Scranton court-room was crowded with eager men and women. As the little children were brought to the stand, every Commissioner rose up and drew toward Judge Gray's chair. The hush that fell over the room left the childish voices audible in every corner. Chairman Gray questioned them, and the little girls replied wonderingly. The crowd puzzled them. They could not understand why so many people were interested in them. They did not realize that they were speaking for seventeen thousand little girls who work in the mills and factories just as they do. Nor did they realize that their lot is leastwise different from what it should be. Years ago children, more especially boys, were sent to work to learn trades. Now they are sent to work to earn money. From tender years both boys and girls are taught to look forward to the time when they may bring their share of money into the home. Thus the system works evil in several ways. The child is dwarfed in body and mind. The parents tend to release themselves from

natural responsibility, and come to lean more and more upon the children. Helen Sisscak, a wan mite of a girl, who spoke no English, told Judge Gray that she cleaned bobbins at three cents an hour. She went to work at half-past six at night and worked till half-past six in the morning. It took her nearly an hour to get from her home to the mill, and the road led across fields that were exposed to the storms that sweep down the valley. I have gone over that very road in a winter afternoon, when the bleak winds and snow were blowing from the hills, and it was a journey I should not care to make often. It was when this child had finished her story that Judge Gray exclaimed, with much feeling, "Here we actually find the flesh and blood of little children coined into money!" And, shortly after, "This matter of night labor by young girls should be thoroughly investigated by those who will not shirk the work, and the result made known in every part of Pennsylvania." This work has been done. Yet the indifferentism of legislators, or the lack of public pressure, has resulted in a continuance of the system, with never a strong hand raised in protest. As soon as the Western Association of Glass Manufacturers saw that a bill had been introduced to abolish night work, a committee was appointed to go to Harrisburg and prevent the enactment of any legislation this session. These manufacturers are reported to have adopted resolutions denouncing and ridiculing that section of the bill which provided that children must learn to read and write English before beginning work. It was the influence of this organization that helped to keep in office, as chief factory inspector, for several years, Mr. James Campbell. Mr. Campbell it was who had been an advocate of the glass manufacturers at all hearings on the glass tariff before the Committee on Ways and Means at Washington. Mr. Campbell it was who, in speaking in Pittsburg last October before the Mothers' Congress, said that Pennsylvania suffers from the excessive education of workingmen's children. This is a theory that some of Mr. Campbell's subordinates have been fond of upholding of late. As recently as March, at a meeting of the Civic Club in Philadelphia, a late factory inspector

urged the same point. But Mr. Campbell has been removed by Governor Pennypacker, and his successor promises a more enlightened policy. These are the kind of men who do not even pretend to enforce existing laws. As Judge Gray further remarked, "Some of the laws in the anthracite region are little better than dead letters." Endless excuses are advanced for this laxity, but there is little validity in any of them.

Going from factory to factory throughout the anthracite counties, I sometimes came upon the sign "Girls Wanted" nailed to the factory doors. Where the demand for silks and laces is good, as apparently it is most of the time in Pennsylvania, cheap child labor is in urgent demand. It is through it that Pennsylvania manufacturers are able to undersell New England manufacturers, for example. The available and eligible children are not so numerous that they can afford to scrutinize the age certificates too closely.

According to the State factory inspector, there are something over seventeen thousand girls between the ages of thirteen and sixteen working in the manufacturing establishments of the State. Of this number approximately four thousand work all night in the textile mills, and early in the investigation it was estimated that probably one-half of these were under the legal age, and fully seventy-five per cent. of those who work at night are under fifteen. The nature of the night work is such that commonly the smallest children are kept for that shift.

The breaker-boys work only by day. Undoubtedly they are able to bear the vicissitudes of their labor more easily than the girls bear theirs, but the number of boys at work below the statutory age was probably between one and two thousand at the beginning of the winter. When the coal comes up out of the mines, it is sent to the towering breakers and run through a series of sifting and sorting troughs, astride of which the boys sit, their little backs bent over the streams of moving coal, as with their bare hands they pick the stone and refuse from the good coal. Their fingers soon become scarred and calloused, and their nails worn or broken to the quick. The breaker atmosphere becomes impenetrable. Fine particles of coal-dust fill the air and are

taken into the lungs with every breath. This is the dark cloud that hovers like a pall above every dry breaker in the anthracite region. The tissues of the boys' lungs gather the black specks until the whole lung is discolored, and I have seen boys who have been away from the breakers and mines for eight and even ten years cough up these particles whenever they were attacked by a slight cold. Experiment has shown that the work of the breaker-boys can be done by machinery. Automatic slate-pickers have been demonstrated to be practicable. Flesh and blood are at present deemed cheaper commodities than iron and steel. And the State permits the boys to do this work at fourteen.

Less kindly is the State toward the girls. They may work at thirteen years. They may work at twelve-hour shifts by day or by night. Their work is often in a warm, moist atmosphere, out of which they pass into the chill dawn of winter mornings. They must stand at their work. They must be unceasingly diligent lest an unnoticed broken strand of silk entangle others and damage the work. They are unprotected from moral dangers shocking almost beyond credence. The State has refused to protect these children because the abolition of child labor at night would necessitate the remodeling of certain industrial plants, and the citizens of the State bow to the wishes of the manufacturers in this matter as quietly as if it were a moot point complicated by subtle technicalities. The moral phase of the matter is completely subjugated to the pecuniary.

"I deplore this business as much as you do," a silk-mill owner said to me one day, "but I am part of a great industrial system, and so long as the system exists I must run my mill as other mills are run." The gentleman had come to me to beg that I keep silent on what I had seen in his mill the previous night. The foreman in charge, with more kindness than business discretion, had allowed me to go through the mill with absolute *carte blanche*. When I saw a small girl whose thin features and lusterless eyes attracted my attention, I asked her age. "Eleven past, sir," she answered.

"How long have you worked in the mill?"

"Two years."

"Do you always work night shift?"

"Yes, sir, all the time."

A little boy was working over a loom a few feet off.

"How old are you, my boy?" I asked.

"Fourteen past, sir."

I should not have thought him more than eleven.

The perpetual click of the rattling looms, the whirl of belts, the crunch and rumble of wheels, made a deafening din. The looms move so regularly that I found my eyes easily tired watching them. It needed only a few moments of fixed gazing to appreciate the story told by one little girl who had had to quit the mill:

"The tangles were always worst when I was tiredest. I had to twist back the reel for a long, long time, until all the tangles were gone. The big girl who had charge of our department often scolded me, and sometimes the man who was night superintendent told me he would discharge me if I couldn't do better. Then my head would ache something awful, and I would have to cry, and some other girl would straighten out the tangle."

Another one employed in a mill near Scranton, who had been transferred to the day shift, said:

"When I first went to work at night, the long standing hurt me very much. My feet burned so that I cried. My knees hurt me worse than my feet, and my back pained all the time. Mother cried when I told her how I suffered, and that made me feel so badly that I did not tell her any more. It does not hurt so much now, but I feel tired all the time. I do not feel near as tired, though, as I did when I worked all night. My eyes hurt me, too, from watching the threads at night. The doctor said they would be ruined if I did not stop the night work. After watching the threads for a long time, I could see threads everywhere. When I looked at other things, there were threads running across them. Sometimes I felt as though the threads were cutting my eyes."

Consumption, bronchial affections, anæmia, are all common ailments among the children of the mills. Their vitality is sapped. They enter the period of womanhood frail and worn out. Yet these are the women expected to bear sons who will carry on great industries, that the

State may prosper. Bad as this aspect is, there is another, a sadder and more terrible feature. The close atmosphere of the factory rooms in the dead of night tends to stupefy the children. To freshen them and drive the natural drowsiness away, they are encouraged to spend their midnight half-hour running in the open air. The mills usually occupy isolated sites. They are often on the edge of a mining village, sometimes by the banks of the Susquehanna, or near the foot of the hills. Open fields and shadowy woods surround them. In the depth of the night shades lurk human vampires and vultures, immoral loafers who prey upon the ignorant, helpless girls. In large factories there are always one or two, at least, whose influence is pernicious—older girls who work havoc among the littler ones. Sometimes men are sent out to guard against these hideous practices, but at night it is easy to be wary and escape notice.

The home life of the juvenile toilers differs as do the homes of the miners. Some are bare and unlovely. Others are comfortable. The home often explains why the child is at work. I visited all kinds of homes. Entering a typical miner's cottage one day, I found the father of a silk-mill girl a stalwart miner. When I took him to task for allowing his child to work, he glared at me and exclaimed:

"It means bread money for the family."

In another home the mother, significantly, silently handed me the provision book. It showed that at the time the child went to work a bill of more than seventy-six dollars had been owing for provisions. The girl's earnings had gone toward reducing this bill. Only twenty dollars remained unpaid when I saw the book. These cases are typical of one class. The fathers are actually unable to support their families adequately, and it is from sheer necessity that they send the children to work. There is another class. Prodigal parents seek to make up for their improvidence through the little wage-earners. And then there are children who are ambitious to dress beyond the means of their parents. They want new hats and boots. They find pleasure in ribbons and furbelows. They tease to go to work,

and when they have worked long enough to rue the step, it is too late for them to repent.

Not one of these reasons is valid. Every father should be able to support his family decently. With the advance in wages which has now been made to the miners, they at least may no longer offer this excuse. The others are unpardonable. The same inadequate standard of life that leads parents to force their children to work, or prompts them to acquiesce in their voluntarily entering the mills, also leads them to falsify the age certificates. They are often of alien tongue. They are ignorant. It is customary to say a child is thirteen in order that she may go to work, and the laxity of the inspectors and the mill-owners encourages parents to swear to false ages. Their outlook on life is so different that to them there is no conception of wrong in this. But that is not the point of immediate concern. The children are in the mills, performing work beyond their strength, and the State should save them. It is but right that that State should protect itself. During the winter Mr. Baer stated that the breaker-boys in the Philadelphia and Reading collieries received eighty-five cents a day. Mr. Baer's wage-sheets showed that they received fifty-eight cents. But that Mr. Baer should have transposed the figures is beside the point. Whether at five cents or eight cents an hour, little boys ought not to be employed in the breakers. Whether at three cents or five cents an hour, little girls ought not to be in the mills. And whether thirteen or fifteen or eighteen, girls ought not to be allowed to work all night under circumstances so hardening, so unwholesome, and so unnatural.

If there is any civic conscience in Pennsylvania, it must be looked for among the women. Various women's organizations have undertaken to stand by the child labor reform agitation though it take years. A committee has been appointed to take steps as individual citizens to see that existing laws, such as they are, are rigidly enforced, and to fight for legislation until the child labor blot is swept from Pennsylvania's escutcheon.

# Studies in Colonial Administration<sup>1</sup>

## III.—British North Borneo

By Alleyne Ireland, F.R.G.S.

Author of "Tropical Colonization," etc.; Colonial Commissioner of the University of Chicago

**A**LTHOUGH our present concern is chiefly with the condition and government of British North Borneo, one or two facts in connection with the history of the country are of sufficient interest to call for a passing word.

In 1858 the famous East India Company ceased to exist; its political and territorial rights passed to the British Crown; its special trading rights had disappeared some years before. It was generally believed that the day of great commercial companies with the territorial powers of States was over. In 1869 Mr. William Forsyth, writing of the Hudson's Bay Company, said: "I have endeavored to give some account of the last of the great proprietary companies. . . . It may continue to exist as a trading company, but as a territorial power it must make up its mind to fold its (buffalo) robes around it and die with dignity."

The British North Borneo Company, therefore, acquires a special interest for students of history from the fact that its charter, granted in 1881, marks the revival of the old discarded policy of commercial companies endowed with territorial authority, and because it is the oldest of that group of companies which includes the Imperial British East Africa Company and the British South Africa Chartered Company.

Another point of historical interest is that the greater portion of the territory of the Company was originally acquired in 1865 from the Sultan of Brunei, together with all sovereign rights, by the American Consul for Brunei, who forthwith formed the American Trading Company of Borneo. This Company, from one cause and another, failed to do any good with its territory, and sold its rights in 1877 to two Hongkong merchants, Mr. (now Sir) Alfred Dent and Baron von Overbeck, an Austrian. This led to the formation of the British North Borneo Company,

which was incorporated under Royal Charter on November 1, 1881.

Finally, it is a curious circumstance that the charter should have been granted on the advice of Mr. Gladstone and his Ministers, confirmed anti-expansionists. This incongruity was noted at the time by Mr. A. J. Balfour, the present Prime Minister of England, who, in the course of the debate in the House of Commons on the granting of the Charter, said: "This debate is, I think, the most singular thing I have ever listened to in this House. There have been a great many able speeches delivered in defense of her Majesty's Government, but these speeches have all come from this side of the House.<sup>2</sup> There have been several Jingo speeches delivered here, but the most remarkable example of them has come from the Treasury bench."<sup>3</sup>

So it is seen that the Company is remarkable in that it acquired its territory from an American citizen, its charter from a Liberal Government, and that the countenance afforded it by England marked the re-establishment of conditions which every one believed to have finally disappeared.

In my last article I gave some account of the British Crown Colony of Hongkong, and it is perhaps fortunate that the present article should deal with the British Protected State of North Borneo (better known as British North Borneo), for no two colonies situated in the same part of the world could possibly present to the student greater contrasts in every matter with which political economy and sociology are concerned.

The former has a very small area and a very large population; in the latter these conditions are reversed. The area of British North Borneo (30,000 square miles) is about equal to that of the State of Maine; the area of Hongkong (thirty square miles) is less than that of the city

<sup>1</sup> Previous articles in this series have been: I., Introductory, November 22, 1902; II., Hongkong, November 29, 1902.

<sup>2</sup> That is, from the Opposition.

<sup>3</sup> That is, from the Liberals.

of Indianapolis; but the former colony has a population of less than four persons to the square mile, the latter a population of more than ten thousand to the square mile. In the thirty square miles of Hongkong there are, excluding naval and military forces, nearly seven thousand white people; in the thirty thousand square miles of British North Borneo there are less than two hundred. Hongkong exists only by virtue of its shipping, and agricultural interests are insignificant; in British North Borneo everything is of the land—tobacco, timber, india-rubber, gutta-percha, cocoanuts—and one steamer a week represents the foreign shipping of the country.

A comparison of the populations discloses yet greater differences. In Hongkong ninety-six per cent. of the people are Chinese—a race used to the life of cities, saturated with a political theory entirely democratic in all essentials, possessing a great literature and a native system of philosophy, a race molded to a social form more completely developed, more minutely defined, and more unalterably fixed than that of any other country in the world. In North Borneo, on the other hand, scarcely fifteen per cent. of the population is Chinese. The mass of the people belong to three native tribes—Bajau, Dusun, and Murut. The Bajaus are a race of sea-gypsies—pirates turned fishermen, under British guidance; the Dusuns are a coast folk living in small villages or kampongs by the shore and along the foothills; the Muruts are a half-savage tribe in the far interior.

These people differ greatly from one another in many important respects, but from the administrative standpoint they have this much in common, that they have no written language, no cities, no wealth, and that the internal relations of each tribe are purely feudal in character.

To close our comparison, it may be pointed out that the brilliant career of Hongkong, granted the maintenance of law and order, has not been due in any great degree to excellence of internal administration, but to the fortunate position of the colony as affording a good harbor at the southern gate of China. British North Borneo is too young to have had a career as yet, since the State is scarcely twenty years old; but it is

abundantly clear that its present condition has nothing to do with extraneous causes, and that the future of the country rests entirely on the single question of wise and skillful administration.

The principal questions which the government of British North Borneo is called on to face rest upon three main factors—two of local origin, the need of immigration and the general nature of the country, which together comprise the problem of development *per se*; and one of an extraneous nature—namely, the declared wishes of the shareholders of the Company, which may or may not coincide with the best interests of the country itself as viewed from the purely administrative standpoint.

After an experience of a number of years in all parts of the tropics, I can safely say that I have never visited a tropical country which combines in a higher degree than British North Borneo every natural element that goes to make up a fine territory. The soil is rich; the climate, though hot, is not unhealthy; the rainfall is regular, and prolonged drought is almost unknown; the country is watered by magnificent rivers; the most valuable tropical products, india-rubber, gutta-percha, cutch, tobacco, timber, cocoanuts, thrive here in a manner unsurpassed in any other part of the world; and Nature, as though anxious to put a visible stamp of excellence upon the land, has endowed it with superb scenery of open plain and rolling hill, has clothed it with magnificent forests, and has set in its midst the mighty mountain Kina Balu, which rises abruptly out of the plain to a height of 14,000 feet, and dominates sea and land for nigh a hundred miles in every direction.

So much for the country. Of the people little need be said. Their number is so small and they are distributed over so great an area that in regard to them there scarcely arises any administrative problem. It is supposed that at one time the country supported a much larger population; but in the years before British authority suppressed piracy, constant warfare so depleted the stock that to-day, as far as the development of the country is concerned, the natives are a negligible quantity.

The story of how the Company has faced its task of finding the capital, the

population, and the administrative skill for the conduct of its enterprise may be preceded by a description of the general form of the government.

The limitations imposed on the Company by its Charter (1881) and by its Deed of Protectorate (1888) are of such a nature as to interfere in the smallest degree with matters of internal administration. They are the following:

1. The Company must remain British in character and domicile; and all the members of the court of directors, as well as the Company's chief representative in Borneo, must be British subjects.

2. The Company is not permitted to transfer any of its rights without the express permission of the British Government.

3. Foreign relations are to be conducted through the British Government or in accordance with its directions.

4. Perfect religious freedom to be allowed to all persons living in the territory.

5. The British Secretary of State for Foreign Affairs has the right to dissent from or object to any part of the proceedings or system of the Company relative to the people of Borneo; and the Company is bound to act upon any suggestion founded on such dissent or objection.

6. No general monopoly of trade may be set up.

7. The appointment of the Governor of British North Borneo is subject to the approval of the British Government.

Within these bounds the rule of the Company is purely autocratic. The Governor is free to introduce such laws as may appear to him suitable for the needs of the country; and in so far as he is given a free hand by the Company he alone is responsible for general success or failure.

Apart from the absolute independence of legislation enjoyed by the Company, there is nothing unusual in the organization of the Government of British North Borneo. The country is divided into districts, and in each there is stationed a district officer who acts as magistrate and tax-collector. The immediate superiors of the district officers are the Residents, of whom there are three, one at Papar, on the west coast, one at Tawao, on the east coast, and one at the port of Kudat in Marudu Bay, in the north of the island. The work of the Residents and district officers is subject to the review of the Judicial Commissioner and the Finance Commissioner, whose offices are in Sandakan on the east coast, and finally to the approval of the Governor.

In traveling about the country I was much impressed by the excellent tact and administrative ability displayed by the Government officers. They spoke the language of the people, showed an interest in their affairs, were at all times accessible to everybody who wished to make a complaint or to ask for advice or assistance, and appeared in every way to command the respect and good will of the natives. In the discharge of their duties the district officers are assisted by the native chiefs, who, on condition of remaining loyal to the Government, retain their titles and are paid fixed allowances. The general effect of my observations was that the people were governed rather by force of personal influence than by the power of legislation, that the judicial relations were based upon wise and tolerant equity more than upon mere precise law, and that a perfectly friendly understanding existed between the Government and the natives.

Unlike the old East India Company, the British North Borneo Company does not conduct any trade on its own account, but confines itself to the administration of the country. The local revenue and expenditure accounts possess, therefore, this interest, that they exhibit the work of the Company in so far as it is a matter of profit or loss to the shareholders.

The paid-up capital of the Company is, roughly, \$3,500,000 (gold), and there has been an issue recently of \$1,000,000 (gold) first mortgage debentures on which five per cent. per annum interest is payable. The proceeds of the issue of the debentures are to be devoted to the completion of the State railway on the west coast and to other reproductive works. The general financial situation of the country is at present this, that, over and above the expense of administration, the revenue must meet a charge of \$100,000 (silver) as interest on the debentures before any dividend can be declared on the paid-up capital. As, up to the present time, the Company has never paid a higher dividend than two per cent., it is clear that, unless all profits are to be swallowed up by the payment of interest on the debentures, the revenue will have to show a substantial increase in the near future.

The latest complete figures for revenue and expenditure are those for 1900. The

total revenue for that year was \$587,226 (silver), equal to about \$2.50 United States currency per head of the total population. Of the total amount, seventy-five per cent. was raised from customs duties (\$209,183 silver) and revenue farms (\$230,345 silver). About sixty per cent. of the customs revenue is raised from duties on imports, and forty per cent. from duties on exports. The imports consist of the usual articles—cloth, cutlery, wines, spirits, tobacco, glassware, lamps, kerosene, and so on; the exports which contribute most to the revenue are tobacco, timber, gutta-percha and india-rubber, edible bird's-nests, and dyestuffs. The revenue farms consist of the monopolies of the right to sell opium and spirits, to keep gambling-houses and pawnbrokers' shops. These monopolies are sold to the highest bidder, who is always a Chinaman.

The question of the opium and gambling licenses is one which has been hotly debated in England from time to time; but out in the Far East public opinion has always been practically unanimous in favor of such monopolies. If three hundred years of contact with China has taught one lesson more thoroughly than another, it is that no legislation, no measures of repression, however severe (and much has been attempted from time to time in this direction), can turn the Chinaman from opium-smoking and gambling. I have no desire to advocate indulgence in these vices; but as a thousand voices are ever ready to condemn a policy which enables a State to draw a revenue from them, it seems advisable, for the better understanding of the matter, to say a few words on the other side.

As far as I am aware, no one has ever tried to make people believe that gambling and opium-selling are licensed in many Far Eastern countries because it is hoped by that means to eradicate those vices; the reason why they are licensed is because the sale of the monopolies produces a good revenue. But although eradication is impossible, a certain degree of control may be effected by granting to some one person or firm the opium and gambling monopoly. The effect of the monopoly, as far as control and regulation are concerned, is this: the holder of the monopoly secures his rights only on payment of a very large sum of money, and

retains them only for so long as he strictly adheres to the Government regulations. It thus comes about that, in British North Borneo for instance, the Government has been able to put an end to two great evils which always exist in the absence of licensing; namely, gambling and opium-smoking by minors, and the use of clothing, tools, and other property for gambling stakes or for the purchase of opium. No person except an adult male is allowed to purchase opium or to visit a gambling-house, and nothing except current coin can be staked or used for the purchase of opium. It may be suggested that if regulation to this extent can be secured under the system of licensing, it could be secured otherwise. But there is this vital difference between the license and the no-license system, that in the former case the opium and gambling farmer will, in the interest of his own monopoly, use every means in his power to prevent opium-smoking and gambling except in his own saloons, and to enforce the Government regulations under which his monopoly is granted; whereas in the latter case all attempts to suppress or regulate must be made through the agency of a paid Chinese police force, an agency which has been proved, after repeated experiment, to be utterly unreliable. Considerations of space prevent further remarks upon this subject at present; but I may add that in Hongkong and in the Straits Settlements, where gambling is not only not allowed but is a matter for severe punishment, the vice is more prevalent and is accompanied with worse results than in almost any other places under European government in the Far East.

The expenditure returns call for little comment. The expenditure falls under two main heads, that on Revenue Account and that on Capital Account. The latter is almost entirely made up of the cost of constructing the West Coast Railway.

The financial position of the country is shown by comparing the revenue with the expenditure on Revenue Account, and such comparison shows that up to 1895 there was an annual deficit; while in that year the treasury possessed a small surplus. This has gradually increased, and it has been possible to declare a dividend of two per cent. on the paid-up capital.

The general policy of the Company

seems to me to have been a mistaken one. It was clear from the first that the pressing needs of the country were the construction of good roads into the richest part of the interior, which could not be reached by river communication, and the establishment of a flow of Chinese immigration from Hongkong, Singapore, and the China coast ports. The necessity of good roads is one common to all countries, and the pressing need for Chinese immigrants arose from the fact that, even if the native population were willing to work, which it certainly is not, it is too small in number to suffice for the requirements of large industries. Neither of these matters has been properly attended to.

In regard to immigration, attempts have been made from time to time to secure a steady supply of Chinese; but these efforts have been of a desultory character, have been conducted in an unsystematic way, and their success has been greatly hampered by the failure of the Company to make British North Borneo attractive to those Chinese who have come there from time to time. I do not mean to imply that in recent years there has been any ill-treatment of the Chinese immigrants; but sufficient care has not yet been taken to provide employment for the immigrants and to encourage various forms of culti-

vation on free grants of land, and the system of taxation has, in some important respects, been unsuited to the conditions of a country whose prosperity rests almost entirely on the maintenance of a constant flow of Chinese immigration.

Bearing in mind the magnificent nature of the territory, it is quite clear that future success or failure rests with the Directors of the Company. The present Governor of British North Borneo, Mr. E. W. Birch, C.M.G., a man who had his training in the Federated Malay States, is perfectly competent to place the country on the high road to success; but the past history of the Company discloses an unfortunate tendency to decide important local questions too much from considerations of small immediate gain and too little from the standpoint of the permanent interests of the country; and hitherto the Governor's views in regard to matters of local administration have been too often disregarded.

In no country with which I am acquainted does the record more clearly teach this lesson, that for the successful development of a wild and unopened country the best policy is to select a first-class administrator, put him in absolute charge, and give him a free hand.

Kudat, Province Alcock, British North Borneo.

## The Knowledge of Faith

By Everett P. Wheeler<sup>1</sup>

"Grant that we, who know Thee now by faith, may, after this life, have the fruition of Thy glorious God-head."

**A** WISE woman once said that a cold-blooded animal sinks to the level of its surroundings, and is chilled and stiffened by the cold; but a hot-blooded creature, in the same atmosphere, produces heat within itself and is warmed. There is much in the struggle of life to chill the soul. The strong spirit is not overcome by this freezing

environment, but is warm even in the Arctic winter. To be so, however, it must have food. The hunger-bitten soul will freeze at last.

The man who is honest with himself recognizes the truth of this. But he often fails to receive the food he needs, because he doubts the reality of the spiritual food which alone can nourish the spirit of man. He fails to realize the significance of the experience of his fellows. He forgets that all our knowledge is based upon belief in the affirmations of human consciousness. When we see a man or a tree, we see an image on the retina of the eye. The observer believes that this image correctly represents the object before him, and therefore believes in the reality of that object. If he touches the

<sup>1</sup>Few, if any, members of the New York bar have exercised a stronger influence for political reform than Mr. Everett P. Wheeler, the writer of this article upon personal religious life. Mr. Wheeler was born in New York City in 1840, graduated at the city college at the age of sixteen, and from the beginning of his professional life has been active in a wide variety of public-spirited movements. His political work has been largely in the advocacy of civil service and tariff reform. For many years he was the Chairman of the New York City Civil Service Commission and the President of the Reform Club.—THE EDITORS.

man or the tree, he believes what his own sense of touch teaches him respecting the object on which his hand is placed. If he hears sweet music, it is the drum of his own ear that vibrates and makes known to him the melody that delights the heart. The deaf man does not hear the music, but he believes the assertion of his friend who has the hearing ear. The blind man does not see the beautiful object before him, but he believes what his friend tells him of it. The astronomer, by the aid of his telescope, studies the moons of Jupiter and the rings of Saturn, and even resolves the distant nebula. We may never have done either, but we accept his observation.

Now, throughout the world there are numberless men and women who have a consciousness of the being and love of God. They know God, not by what they think of him or conjecture about him, but by their own consciousness of his presence, his power, and his goodness. This consciousness is just as distinct and real as their consciousness of the presence and love of father or brother or child. He comforts them in trouble, gives them strength in weakness, inspires them with resolution to plan and courage to achieve the most difficult undertakings—even the conquest of selfishness, which is the hardest of all.

Why is not this affirmation of the consciousness of so many witnesses truly knowledge? Some may not have felt it. Whatever intellectual opinion, or even conviction, they may have about the being of God, if they are not conscious of his presence and love, they do not know him. But why doubt the knowledge of the thousands who do? Why is it not as certain and authentic as the knowledge of the material world that some men attain to by long years of study? The ordinary man cannot verify their processes, but accepts the result. Why not accept the experience of those who know and love God?

1. A man may reply that these do not agree, and that the diversity of their experience takes away the credit that might otherwise attach to it. But is the experience referred to so diverse? There are innumerable opinions and speculations about the Divine Being. These are as different as the opinions about the organs

of the human body were before it was actually examined and observed; as different as the opinions about the heavenly bodies before Galileo and Copernicus and their successors accurately observed the heavens. All of which simply shows that speculative opinions differ as much as individual minds. But when we come to collate the results of the consciousness of those who know and love God, we find them in substantial agreement. Nothing shows this more plainly than the fact that they use and enjoy the same hymns of love and praise, though their books of dogmatic theology differ.

The high Anglican praises his Saviour in the strains of Luther and Isaac Watts, Gerhardt and Doddridge; the severe Puritan and Independent rejoices in the sweet and gracious songs of Keble and Faber, Newman and Lyte; the keen and rigid Presbyterian feels his soul uplifted as well by the hymns of Bernard and Xavier, Wordsworth and Maçon Neale, as by the Psalms of David. And this unity in praise and worship, which so transcends and cancels the distinctions of community and sect, but expresses the unity of the faith and fellowship of the heart in the Son of God. In the regions of the higher devotion and the purer love all differences cease.<sup>1</sup>

2. But it may be asked, How do you discriminate between the spiritual perception of one and the wild visions of another? Which is the authentic evidence on which you ask us to rely?

We answer: Divine knowledge, like all other knowledge, is progressive. It must be learned gradually, by faithful endeavor, and after long experience. Doubtless to some it comes more readily than to others. As with the individual, so with the race. For centuries God had been educating man and preparing him for the fuller perception of spiritual truth. He did not leave himself without witness among men. But not until Christ came into the world did the race perceive what was possible to man. Christ showed in his own person that it was possible for man to perceive divine truth, and to be transfigured by it. His life was full of beauty and power. Metaphysical discussions about his nature have somewhat obscured the truth he taught, that man could become partaker of the divine nature, that God would dwell in him, and he in God. In the world of spiritual

<sup>1</sup> Fairbairn, "The Place of Christ in Modern Theology," p. 20.

knowledge Christ fills the place that Copernicus and Newton do in astronomy. Like Columbus, he gave to man a new world. And if the seeker after spiritual truth is willing modestly to learn of Christ, he will know by his own experience the truth of what Christ taught.

Thus, therefore, we reply to the reader's question—we discriminate between the true and the false teaching, the counterfeit and the genuine, by a comparison between it and the teaching of Christ—"the Way," as the early disciples loved to call it, and as their foes learned to call it, too. Consider any of the discoveries of science that have changed the face of civilization. Once a great truth or valuable method is discovered and verified, it makes the standard and becomes the basis for future investigation. To put the eye in the point of the needle made the sewing-machine possible, and has formed ever since the basic principle of the sewing-machine. To transform a piece of soft, inert iron into a living, attractive magnet by a current of electricity made the electric telegraph and the electric motor possible, and this has ever since been the basis of electric machinery. The discovery of the law of gravitation was the basis of astronomical progress. So the possibility of a divine life in man, that was revealed by the life of Christ, the extent of the knowledge of divine truth to which Christ showed that man might aspire, henceforth became the basis of all genuine spiritual life and truth. He revealed it, and the experience of man verifies it.

Here we anticipate two objections—one from the doubter, and one from the orthodox member of some Christian organization.

3. The doubter may say, Doubtless the life of Christ is admirable. But the lives of his professed followers do not satisfy my ideal. Theirs is just the contrary of his. He was serene, they are disputatious; he was self-denying, they are greedy and selfish; he was brave and tranquil amid all his sufferings, they are worried and anxious; he told Peter to put up his sword, but they have tried to spread the religion of Jesus by fire and sword.

It is with sorrow that one must admit there is truth in this statement. The only answer is that the men of whom the

objector speaks were either not real Christians or very imperfect ones. They did not know the truth from their own experience. They may have believed in Christ as a historic personage, and given intellectual assent to the correctness of his doctrine. But their hearts were not enlightened, their wills were not guided.

All this Christ very plainly predicted. No teacher ever cared so little for formal assent or outward show. The people he talked to were always asking for some external and material manifestation of the kingdom of God. And he always answered, "The kingdom of God is within you." It was the man who would do his will that should know of the doctrine.

Hence this objection, when rightly considered, is a proof of the truth of Christ's teaching. Nevertheless it must be admitted, and all professed Christians should take it to heart, that the inconsistency of their lives and the selfishness of their conduct are the greatest hindrance to the more general knowledge of Christian truth.

4. The other objection, from the orthodox, is this: What do you make of the Christian Church? You seem to attach all importance to the individual consciousness. Would you rest the truth solely upon the conviction of one man, however sincere or earnest?

To which we answer—Certainly not. It is the experience of many men in every generation since the birth of Christ. And who are these men? They are "the blessed company of all faithful people"—the true Church, made up of Christians of every name—known well to the Lord.

We do not undervalue organization. It is necessary and useful. We must unite to accomplish the best results. But every organization, political, philanthropic, or religious, has its dangers. The greatest is that the members of the organization shall come to look upon it as more important than the truth it was formed to teach. And then man falls into the most surprising estrangement. Take, for example, the life of Philip the Second. This was diametrically opposed to the life of Christ. Yet he was a rigorous observer of the exterior requirements of the organization to which he belonged. To him the organization was all, its vital principles nothing. And so, by the law

of reaction, he became the embodiment of all that is cruel and selfish and lawless in human nature.

The higher the value that any one sets upon the Christian Church as an organization, the more sensible he ought to be of the responsibility which devolves upon each of its members. "By their fruits ye shall know them." If the fruits are not Christlike, we may be sure that the individual is at least very backward and has much to learn. Therefore it is that we emphasize for the individual, and most of all for those who are in communion with Christian churches, the necessity of that personal knowledge of divine and spiritual truths which strengthens and directs the will to the practice of the Christian virtues.

For there is a distinct type of virtue, which Christ was the first to manifest fully, and which is not hard to recognize. It is more gracious to take an instance from one of another communion. Let us mention, therefore, as one of many in all communions, the writings of Fénelon. These evince the same sweetness of temper, serenity of soul, keen discrimination of moral and religious truth and steadfast courage in its advocacy, that are characteristic of Christ. Great teachers before him had said wise things, but he spoke with power, that is still mighty in his true disciples, and powerful even in the weakest of them.

There is no power in the human soul that can compare with the perception of divine truth. It compels loving obedience, it frees the heart from a thousand burdens, and bestows the glorious liberty of the children of God. It is the parent of generous and unselfish thoughts and noble and helpful actions.

Read the description of it as a keen observer, himself the coolest of logicians, wrote it down more than one hundred and fifty years ago:

"They say there is a young lady in New Haven who is beloved of that great Being who made and rules the world, and that there are certain seasons in which this great Being, in some way or other

invisible, comes to her and fills her mind with exceeding sweet delight, and that she hardly cares for anything except to meditate Him; that she expects after a while to be received up where He is, to be raised up out of the world and caught up into Heaven; being assured that He loves her too well to let her remain at a distance from him always. There she is to dwell with Him, and to be ravished with His love and delight forever. Therefore, if you present all the world before her, with the richest of its treasures, she disregards and cares not for it, and is unmindful of any pain or affliction. She has a strange sweetness in her mind, and singular purity in her affections; is most just and conscientious in all her conduct; and you could not persuade her to do anything wrong or sinful, if you would give her all the world, lest she should offend this great Being. She is of wonderful calmness, and universal benevolence of mind; especially after this great God has manifested Himself to her mind. She will sometimes go about from place to place singing sweetly; and seems to be always full of joy and pleasure, and no one knows for what. She loves to be alone, walking in the fields and groves, and seems to have some one invisible always conversing with her."<sup>1</sup>

Not every follower of Christ attains in this life to such a degree of spiritual knowledge. As in music and art, it is given to some to have keener perception of truth than it is to others. But it is possible for every one to have a knowledge of spiritual truth. Witnesses whom no man can number have found this the most precious possession to which man can attain, and therefore best worth striving for. To him who doubts they reply: "Come and see." And those that hearken will learn to declare, as believers have from the beginning:

"Now we believe, not because of thy saying: for we have heard him ourselves, and know that this is indeed the Christ, the Saviour of the world."

<sup>1</sup> Jonathan Edwards, in a letter quoted in "Yale Review," 1891, p. 447.

# Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Addresses Before the New York State Conference of Religion.** Series I. No. 1. April, 1903. Paper, 10c.

Contents: "The Crisis in Morals in the Churches," by Professor Ladd, of Yale; "Religions Many, Religion One," by Professor Jastrow, of the University of Pennsylvania; "The Conference and its Message," by Dr. Josiah Strong; and the question, "Can Jews and Christians Pray Together?" (Address the Rev. Owen R. Lovejoy, General Secretary, Mount Vernon, N. Y.)

**Annual Literary Index, 1902 (The).** Edited by W. I. Fletcher and R. R. Bowker. Office of the Publishers' Weekly, New York. 7x10½ in. 281 pages.

**Barbara: A Woman of the West.** By John H. Whitson. Illustrated. Little, Brown & Co., Boston. 5x8 in. 314 pages. \$1.50.

Strength and color characteristic of good stories of the West mark this novel. It deals with ranch life on a Kansas prairie, life in the "Gold Camp of the Rockies," at San Juan and San Diego. The heroine is for a time editor of a newspaper in Cripple Creek, whither she has gone looking for her husband, who had dropped suddenly and mysteriously out of her life. From Colorado she goes to California, pursuing her quest with a faithfulness that calls Longfellow's Evangeline to mind.

**Between the Lights.** By Alice Herbert. John Lane, New York. 4½x7 in. 67 pages.

**Captain Kettle, K.C.B.** By Cutcliffe Hyne. The Federal Book Company, New York. 5x7¾ in. 352 pages.

Readers do not seem to tire of Mr. Hyne's Captain Kettle, who, in a measure, has the same kind of fascination that Mr. Hornung's Raffles and Conan Doyle's Sherlock Holmes have, although he is not at all like those gentlemen. Sea-captain, adventurer, half-pirate on occasion, a seeker for loot in remote corners of the earth, a fiery little chap in a fight, at the same time a devout patron of a queer little English sect, a man really sentimental in his domestic feelings, and in his leisure moments an enraptured composer of very bad poems—certainly this is an original character, and Mr. Hyne has rare skill in getting him into and out of scrapes. The incidents are mostly brutal, but they are not real enough to hurt the moral consciousness very much. May we deprecate the wretched portrait of Kettle on the cover, and, indeed, the whole blazing-colored cover design?

**Conquering of Kate (The).** By J. P. Mowbray ("J. P. M."). Doubleday, Page & Co., New York. 5x8 in. 315 pages. \$1.50.

The scene is laid in "Burgeonville," in Pennsylvania, where "none could tell by the flora, architecture, or color of the servants that he was not in Virginia, the misty peaks of which

were sometimes discernible across the intervening strip of Maryland." The author (now known to be the late Mr. A. C. Wheeler, who as a journalist formerly won popularity under the pseudonym Nym Crinkle in a quite different field of writing from that occupied by "J. P. M.") follows the usual trend by making the Southern heroine absurdly impractical (and of course very charming); she is a fair foil to her Northern lover, a most capable "overseer" to her plantation, a "swell gentleman," and a very energetic man of business. The story is sweet, wholesome, and human; certain passages ring with deep and sincere pathos.

**Constitutional Ethics of Secession (The); and "War is Hell."** Two Speeches of Charles Francis Adams. Houghton, Mifflin & Co., Boston. 5x8 in. 41 pages. 25c., net.

A reprint of two recent speeches of Professor Charles Francis Adams, one delivered before the New England Society at Charleston, S. C., in December last, and the other one at a dinner of the Confederate Veterans' Camp of New York.

**Contemporary France.** By Gabriel Hanotaux. Translated by John Charles Tarver. In 4 vols. Vol. I. (1870-1873.) G. P. Putnam's Sons, New York. 5¼x9 in. Each vol. \$3.75, net.

It is with satisfaction, on taking up one of the most important contributions to history, to find the work so sympathetically and exactly translated as is M. Hanotaux's "Contemporary France." Such a translation fits the American reader to appreciate the work in all of its excellence. The work itself might be called a continuation of Henri Martin's "History of France," the more enthusiastic of M. Hanotaux's friends would have us believe that this continuation will one day rank with the histories of Guizot, Tocqueville, and Thiers. Be that as it may, the first of the four volumes of "Contemporary France" challenges our attention from start to finish because in it we recognize not only the work of the careful, trained scholar, but also that of the first-hand observer. Here is not only accuracy of outline, but vividness of color. M. Hanotaux's history opens with a brilliant summary of the causes and events of the Franco-Prussian war. He was sixteen years old at the time. He found Paris dejected after the war, and this led in his mind to certain questions: What had been the causes of French greatness in the past? What were the causes of French defeat now? What would be the moving forces in a French resurrection? These three questions come before us like the *motifs* of a Wagner opera as we turn page after page and pass through scene after scene of the history which comprises an account of the Prussians in Paris, of the Government at

Versailles, of the Commune and its suppression, of army reconstruction, of the delimitation of the new frontier, of the Thiers government, and of the struggle of political parties during the Grévy administration. Through all this maze M. Hanotaux guides us with a very personal hand; on every page he gives us recollections of the great men whom he himself has known—Gambetta, Jules Ferry, Challemeil-Lacour, Spuller, and others. For few have had M. Hanotaux's opportunity for knowing the most distinguished French statesmen and publicists. Though still a comparatively young man—he is not yet fifty—he has behind him a political career which older men might look back upon with complacency; to us Americans he is chiefly known as the Minister of Foreign Affairs during that troubled period for France covered by the Græco-Turkish war and the Spanish-American war. The reader of this volume will await with keen interest the publication of the others. Together, the four should form a monument of contemporary history indispensable to the library of the student either of recent history or present politics.

**Darrel of the Blessed Isles.** By Irving Bacheller. The Lothrop Co., Boston. 5x7½ in. 410 pages.

The best part of Mr. Bacheller's new story, it seems to us, is to be found neither in the plot (which is somewhat mechanically mysterious) nor in the character who gives the book its title—an old clock-tinker who was a great criminal once, but now does good by stealth, is Santa Claus to a whole countryside, goes to jail to save a young friend, talks in a queer mixture of Irish brogue and stilted and sentimental thee-and-thou diction, and quotes tags of Shakespeare incessantly. Mr. Bacheller seems to feel the need, since the great and deserved success of his character Eben, of putting a quaint old man in every book; frankly, the present old gentleman to some readers will border closely on a bore. About this, however, opinions may differ, but all readers will delight in the really spontaneous love of the woods, in the glimpses of outdoor life, and in the genuine, wholesome human nature seen, for instance, in the manly young school-teacher, who is a character well worth having. In short, the book has enough of flavor and of racy rustic life, enough of sound admiration for energy, honesty, and simplicity, to give genuine enjoyment and win wide approval.

**Der Timotheos-Papyrus, Gefunden bei Abusir** am 1. Februar 1902. Lichtdruck-Ausgabe, 10x14 in. M. 12; in Leinenmappe, M. 15. Timotheos der Perser, aus einem Papyrus von Abusir, im Auftrage der Deutschen Orientgesellschaft, herausgegeben von Ulrich von Wilamowitz-Möllendorf, mit einer Lichtdrucktafel. 6¼x9½ in. M. 1. Lemcke & Buchner, New York.

The fortunate discovery of this papyrus by Dr. Borchardt is a matter of the highest interest to Hellenists. The most ancient Greek MS. now known, its date is pronounced by the most competent judges not later than the time of Alexander and Aristotle. Timotheos himself flourished somewhat earlier, 446-357 B.C. He was a poet and musician of

the highest rank in popular esteem, although fond of setting his lyrics to artificial and intricate music, and criticised as an innovator. This work of his, "The Persians," continued to be a favorite with the Greeks for two centuries. It is of the type of lyric poetry known as the dithyramb, a form of festal song. Of its 253 lines about one-eighth are in a more or less broken condition. Its subject is the overthrow of the Persian fleet at Salamis, B.C. 480. This is described quite realistically from the onset to the rout. In the presentation of a work of this character, specifically termed a *nóme*, the poet accompanied his song with his lyre. The discovery of "The Persians" gives a more precise knowledge of the *nóme* than has hitherto been possessed, and leads to interesting results for the history of music and poetic art. The folio edition, with its seven photographs of the papyrus, original size, contains a general introductory account of it; the octavo edition supplies a full philological equipment for the study of it by specialists.

**Easy French: A Reader for Beginners.** By William B. Snow and Charles P. Lebon. (Heath Modern Language Series.) D. C. Heath & Co., Boston. 5x7 in. 152 pages.

**Essay on the Theory and Practice of the Christian Religion (An).** By P. R. Benson. Published by the Author, Anoka, Minn. 5x7½ in. 251 pages.

**Fire and Sword in Shansi.** By E. H. Edwards, M.B., C.M. Illustrated. The Fleming H. Revell Co., New York. 5¼x8¼ in. 325 pages. \$1.50.

The catalogue of Protestant missionaries and their children who fell victims to the Boxer fury three years ago contains one hundred and fifty-two names. The present memorial of those martyrs is mainly devoted to the thirteen who perished at the Shou Yang mission, most of whom were Dr. Edwards's personal friends. The cost of this mission, with which Dr. Edwards was connected as a physician for eighteen years, was largely defrayed by himself and his relatives. His narrative is the first complete and authentic account of its destruction. The one light in its gloom is the noble steadfastness of Chinese Christians amid the terror and agony of the time. Its account of the present is not reassuring. The need of vigilant, firm, and unrelaxing pressure by the Western Powers to prevent things from drifting back into the old ruts, and producing a recrudescence of Boxerism, is strongly affirmed as both necessary and not yet realized by those with whom the responsibility remains.

**God and the Individual.** By T. B. Strong, D.D. Longmans, Green & Co., New York. 5x7¼ in. 112 pages. 90c., net.

These four addresses to Anglican clergymen are concerned with the problem which belongs equally to religious and to political life, viz., a duly proportioned regard for our individual and for our social development. Dr. Strong combats the exaggerated individualism in religion which he finds prevalent. For this he finds no justification in the New Testament. He goes so far as to represent membership in the Church as "the normal condition of real and

direct access to God." More true to the Scriptures and to facts would it be to represent it as the condition of a complete religious development. What is true, in a social view of individuals, of the hermit, as compared with the active member of a community, is true in a religious view of any one who declines to apply for his self-development the human instinct of association.

**Greek Composition for Schools, with Exercises** Based on *Anabasis III.*, College Entrance Papers, and Original Selections. By Robert J. Bonner. Scott, Foresman & Co., Chicago. 5x7½ in. 248 pages.

**Haydn.** By J. Cuthbert Hadden. Illustrated. (Master Musician Series.) E. P. Dutton & Co., New York. 5½x7½ in. 232 pages. \$1.25.

No one who knows anything of Haydn can think of him without some feeling of both intimacy and reverence. Simple in his tastes, independent in his choices, absolutely devoid of pettinesses, cheerful, sane, indefatigable, humorous, his personality, great as it is, does not seem aloof from ordinary mortals. Mr. Hadden has written his life in a style that befits it—clear, unpretentious, dignified. In the minds of many, Haydn's character seems somewhat prosaic because it lacks the romantic traits of some other composers or the sustained excesses of others. But Mr. Hadden has succeeded in presenting in well-measured terms a truer and at the same time a more interesting view of Haydn. The good sense that characterizes this volume is well exemplified in the treatment of Haydn's position in the household of Count Esterhazy. Haydn's life is commonly thought of as uneventful, but Mr. Hadden has made it interesting by showing how human it was. He has indicated, too, that it was not wholly lacking in picturesque elements. This volume is one of "The Master Musicians" series. It is incomparably better written than the companion volume on Mozart.

**How to Keep Household Accounts: A Manual of Family Finance.** By C. W. Haskins, L.H.M., C.P.A. Harper & Bros., New York. 4¼x7 in. 117 pages. \$1. net.

Professor Haskins has produced a little classic on the commonplace subject of household accountancy. He traces the history of domestic science from Xenophon's "Economics" down to the present day, when 2,500 books on domestic economy can be found in the English language alone. In the branch of accountancy, decadence, he says, has been noticeable since the sixteenth century. It was customary for women of the Middle Ages to audit their "servants' accounts" and carefully to keep their own. The art of household accountancy, he says, ought to be revived, and to this end he contributes simplified methods by which home bookkeeping may be made easy.

**In and Around the Grand Canyon: The Grand Canyon of the Colorado River in Arizona.** By George Wharton James. Illustrated. Little, Brown & Co., Boston. 5½x8½ in. 346 pages. \$2.50.

A handsome, moderate-priced new edition of a recognized, authoritative, and valuable work on the Grand Cañon, heretofore, we believe, obtainable only in a ten-dollar edition. The author spent years in exploring and studying

trails and routes, and much of the book was actually written within view of the places described. There are many pictures.

**Kaiser's Speeches (The).** Translated and Edited by Wolf von Schierbrand. Based upon a Compilation made by A. Oscar Klausmann. Harper & Bros., New York. 6x9 in. 333 pages. \$2.50, net.

Mr. von Schierbrand's latest volume comprises a collection of the speeches of William II., translated and edited with particularly luminous annotations. These speeches form a character-portrait of the young Kaiser. They give an insight, not only into the policy, but into the life, of one of the most interesting of contemporary rulers. Americans will be naturally most interested in those addresses in which the Emperor touches upon American affairs and upon topics of interest to Americans. It is difficult to believe, after reading the monarch's words, that his ambition, towering as it is, will ever lead him to sacrifice friendliness for a nation which numbers already fifteen million Germans, for the doubtful profit of possessing a South American colony. Mr. von Schierbrand has therefore rendered a distinct public service to the American people in giving to them a first-hand view of the German Emperor—a view which will be taken at its actual worth, affording as it does many contradictions to the warped estimate given of William II. by our yellow press. The speeches comprise both those to his own subjects and those delivered in foreign lands. We notice that the latter are rarely if ever flamboyant; the Kaiser evidently reserves his lurid language for the more emotional Germans.

**Kent Fort Manor.** By William Henry Babcock. Henry T. Coates & Co., Philadelphia. 5x7½ in. 393 pages.

The story is incoherent. Roderick Claiborne would be a unique character if every other man in the book were not made to talk in the same fashion that he does—were not modeled on him, so to speak.

**Life and Labour of the People in London.** By Charles Booth, assisted by Jesse Argyle, Ernest Aves, George E. Arkell, Arthur L. Baxter, and George H. Duckworth. Third Series: Religious Influences—Summary. The Macmillan Co., New York. 5½x8½ in. 432 pages.

Reserved for later notice.

**Marjorie.** By Justin Huntly McCarthy. Illustrated. R. H. Russell, New York. 5x7½ in. 292 pages.

A tale of the sea, of a simple sea captain who ought to have known better, but who sets sail with a crew of rascals manning his ship and a buccaneer in charge. There is mutiny brewing when they are well out to sea; and a shipwreck and battle follow on apace. There are lovers of course. But the story is a poor one in spite of all the stirring events and melodramatic characters that compose it.

**Minor Moralist (The): Some Essays on the Art of Every-day Conduct.** By Mrs. Hugh Bell. Longmans, Green & Co., New York. 5x8 in. 247 pages. \$1.60.

Mrs. Bell treats manners from the ethical standpoint. She calls attention not only to the influence of our manners upon others, but to their reflex influence upon ourselves, and to their effect upon the question of our suc-

cess or failure in business, social, and home life. In handling her subject she penetrates to the spirit of courtesy, she gives the philosophy of etiquette. It is not enough to teach a child a few fixed rules of conduct; we must impart to him the habit of courtesy. It is not enough to do things; our aspiration should be to do things in the best manner. Mrs. Bell thinks there ought to be a Night School of Manners which busy adults could attend, and in schools for children a special course in manners. It may be incidentally remarked that the Japanese are ahead of us in that their schools have long had such a course. The author is a thoughtful and timely advocate of the minor moralities and graces that should invest the big current of life with some of the charms of serenity.

**Nature-Study Idea (The).** By L. H. Bailey. Doubleday, Page & Co., New York. 6x8½ in. 139 pages. \$1. net.

Beginning with the history of the nature-study movement in this country, Professor Bailey gives his views of what influence it must have upon child-life. He offers suggestions as to methods by which the child may be interested and taught, insisting that it shall not be through books, but by being placed in direct touch with nature, and by being led not only to see her facts, but to perceive her spirit. "The Growing of Plants by Children—The School Garden" is a timely chapter. He believes the nature-study idea is fundamental to the evolution of popular education, and that it is bound to have a tremendous influence in carrying a vital educational impulse to farmers, to whom accustomed methods of education are less applicable than to other people.

**Old Squire: The Romance of a Black Virginian.** By B. K. Benson. The Macmillan Co., New York. 5x8 in. 431 pages. \$1.50.

This is one of the best Civil War novels that we have read. It is difficult to see how it can offend sensibilities North or South—a bit of praise that can be given to few publications of its class. "Old Squire," the "Black Virginian" and the hero, is a citizen of whom any State might be proud. He is sure to win the affection and respect of the reader. Many Southerners have some such humorous, wise, faithful, kind old negro friend enshrined in loving and reverent memory. Old Squire as a character is a distinct and worthy addition to literature. Mr. Benson's dialect is to be commended. His spelling reproduces better than that of any other writer the sound of certain words as the negroes spoke them—"shu" for "you," for instance. Mr. Benson's purely military novels, such as "Who Goes There?" have had a wide reading; it is pleasant to find him so much at home in a slightly different field.

**On the Mountain Division.** By Kirk Parson. Eaton & Mains, New York. 4¼x7½ in. 255 pages. \$1.

**Our Northern Shrubs and How to Identify Them.** By Harriet L. Keeler. Illustrated. Charles Scribner's Sons, New York. 5¼x8 in. 521 pages. \$2. net.

Simple, clear descriptions that a child can understand are given of shrubs that find their

congenial home in the region extending from the Atlantic Ocean to the Mississippi River, and from Canada to the boundaries of our Southern States. The volume is intended not only for the amateur botanist and the nature-lover, but "to serve those who are engaged in the establishment and decoration of city parks, roadways, and boulevards; those who are seeking to beautify country roadsides, school-yards, and railway stations, as well as those who, in the decoration of their own home-grounds, would gladly use our native shrubs were their habits and character better understood." The book serves a worthy purpose in stimulating interest in our native flora, and in encouraging the practical application of the knowledge which it imparts. The illustrations are of exceptional beauty and variety.

**Pearl Island.** By Andrew Caster. Illustrated. Harper & Bros., New York. 4¼x7½ in. 267 pages. \$1.35, net.

A story for boys. Two lads cast away on an island in the Indian Ocean have many adventures, find gold and pearls and encounter strange birds and beasts. The descriptions of vegetable and animal life in the tropics make the only part of the book that is of any special value.

**Philippine Islands, 1403-1803 (The).** Translated from the Originals. Edited and Annotated by Emma Helen Blair and James Alexander Robertson. Illustrated. Vol. II., 1521-1569. The Arthur H. Clark Co., Cleveland, Ohio. 6¼x9½ in. 335 pages.

**Prince Charles Edward Stuart.** By Andrew Lang. (New Edition.) Longmans, Green & Co., New York. 5x7¼ in. 476 pages. \$2.25, net.

A new unillustrated but well-printed edition of a book heretofore not easily obtainable at a moderate price. That the subject had a peculiar fascination for Mr. Lang, and that it is a thoroughly readable narrative of the life of the favorite hero of romance, need hardly be pointed out.

**Real Benedict Arnold (The).** By Charles Burr Todd. A. S. Barnes & Co., New York. 5x8 in. 233 pages. \$1.20, net.

Mr. Todd is not convincing in this defense of Arnold, or rather apology for him. He does succeed, however, in arousing our sympathy for the man during his struggles against the prejudice and injustice of envious enemies who hindered or discredited him, robbing him of honors really his due when he was fighting bravely, planning wisely, and working energetically for his country. His decadence and treachery Mr. Todd attributes to "the fascinations, the persuasions long continued, the intrigues with the British, of a wife madly loved, and which, if discovered, he knew would tear her from his arms." It cannot be said that he proves his premise, yet his conclusion seems reasonable. The attitude of Congress towards Arnold, its recurrent harassings and condemnations, prepared the way for the Tory wife's influence. Yet Washington trusted Arnold and befriended him—that ought surely to have been ample offset to any coldness or injustice on the part of Congress. Mr. Todd's defense or apology is not sufficient. He does not succeed in whitewashing Arnold.

**Rise of Roderick Clowd (The).** By Josiah Flynt. Illustrated. Dodd, Mead & Co., New York. 5x7½ in. 370 pages. \$1.50.

The biography of a thief—a failure if regarded as a novel, but a faithful description of criminal life as seen from within. It is the earlier chapters, describing the parentage and childhood of the thief, that are most at fault. The Irish girl, whose illegitimate child Roderick is, seems quite unnatural, and her old Irish neighbors, to whom she insists upon returning after her disgrace, are not only un-Irish but altogether unreal. When one of the old neighbors remarks that she will speak to the mother but "won't look at the young un," and another knowingly observes that it is the illegitimate babies that "pull through," and the child goes without any name whatever, first or last, until it is old enough to be in school, though not sent there because of disdain for unprofitable book-learning, the reader is tempted to lay aside the book, with the conviction that the author knows nothing about life among the poor, and lacks the dramatic imagination to deal with human nature in unfamiliar surroundings. When, however, Roderick Clowd is at last given a name—different from that of either mother or father—and enters upon his criminal career, the book is full of scenes evidently taken from real life, and full of observations showing that the author's long familiarity with tramp life has also given him an insight into the psychology of the criminal classes—an insight all the deeper because curiously sympathetic.

**Sculptures of the Parthenon (The).** By A. S. Murray, LL.D., F.S.A. Illustrated. E. P. Dutton & Co., New York. 6¼x9½ in. 173 pages. \$6.50, net.

From the author of a standard work on Greek sculpture we have a right to expect a very luminous treatment of perhaps the most impressive particular triumph of Greek art, the sculptures of the Parthenon; and the present volume does not disappoint us. As becomes such text, the book is superbly printed and illustrated, its most important feature in the latter domain being a map in one long folding sheet, affording almost in its entirety a view of the Parthenon frieze, which, it will be remembered, is over five hundred feet in length, sculptured all along with figures nearly half life-size, the whole in low relief and executed with wonderful detail. Dr. Murray does not give us a similarly comprehensive view of the whole of the metopes, those groups of two figures, about two-thirds life-size in high relief, which are placed just above the columns; he does not do this, as he says, because a large proportion of those still existing on the Parthenon are deplorably damaged, and, secondly, because the metopes of the east and west fronts, even had they been well preserved, could not rightly have been dissociated from the pediment (or gable) sculptures immediately above them. An immense group of statues was included in each of these pediments, the smallest equal to life-size, the central figures colossal. Finally, copies are shown of the gold and ivory statue of Athene. This statue was one of the great achievements of Pheidias, who directed the whole of the Parthenon work.

**Social England.** Edited by H. D. Traill, D.C.L., and J. S. Mann, M.A. (Illustrated Edition.) Vols. III. and IV. G. P. Putnam's Sons, New York. 7x10½ in. 864 pages.

The present volumes cover the period from the accession of Henry VIII. to the death of Anne—or the two centuries in which the religious and the political reformation of England took place. Of the historical value of these later volumes we have spoken in our reviews of the unillustrated edition. We need here only add that the exquisitely wrought illustrations increase and vivify the historical information imparted by the text. The illustrations are almost as instructive as they are beautiful. The chapters on the public health of England are among those least susceptible of effective illustration, but even these chapters are made more instructive as well as attractive by pictures of old hospitals, old surgical implements, coins to cure the king's evil, etc. The fact that this history does deal exhaustively with the progress of medicine and sanitation gives it a peculiar value, for even in medical schools the history of medical science is conspicuously untaught. To students of morals the history of social England during the seventeenth century is singularly significant, and suggests many interesting generalizations regarding the close relationship maintained between puritanism and republicanism. Self-restraint in private life and radicalism in politics almost continuously went together, while self-indulgence in private life was almost the sure accompaniment of political conservatism.

**Temple Bible (The): Ecclesiasticus.** Edited by N. Schmidt, D.D., LL.D. The J. B. Lippincott Co., Philadelphia. 4x5½ in. 179 pages. 60c.

**Triumph of Life (The).** By William Farquhar Payson. Harper & Bros., New York. 5x7½ in. 424 pages. \$1.50.

This novel is tiresome and high-flown. And this is the more reprehensible in that the author has really a first-rate situation to handle. His hero is a literary Jekyll and Hyde. Under one name he writes a great and good book (Mr. Payson says so) which does not sell; under another, trashy, *risqué* novels which do sell. He is under the spell of two women as different as his books.

**Turk and His Lost Provinces (The): Greece, Bulgaria, Servia, Bosnia.** By William Ekeroy Curtis. Illustrated. The Fleming H. Revell Co., New York. 6x9 in. 396 pages. \$2, net.

Reserved for later notice.

**Wordsworth.** By Walter Raleigh. Longmans, Green & Co., New York. 5x8 in. 232 pages.

An admirable piece of interpretative criticism and biography written from a sympathetic point of view, but with intelligence and restraint. The introduction ought to be in the hands of every critic of books, so judicious, so broad and fair-minded is it; while the discussion of Wordsworth, in its insight, its breadth, its clear discernment of his strength and his weakness, and its general interest, will easily take rank among the very best which have been given to the world.

**Youth of Famous Americans.** By Rev. Louis Albert Banks, D.D. Eaton & Mains, New York. 4x6½ in. 302 pages. 50c., net.

## Race No Bar to Friendship

*To the Editors of The Outlook:*

Two recent occurrences in one locality may, for those at a distance, throw light on one aspect of present-day relations between the Southern whites and the negroes. A few weeks ago an old colored woman of this city died in the home of the family which she had served, as slave and as servant, all her life until age and infirmity compelled her to accept without return the care that was freely bestowed on her. She was buried from the home of her employers. In the front parlor, around the coffin, were her colored friends and relatives, while the white family she had served so long sat in the back parlor with a few intimate friends who had known the old woman well.

Still more recently occurred the funeral of General Jackson, the owner of the Belle Meade stock farm, well known throughout the country. He was a man known and honored in the South by many who had never seen him; but those who knew him in his home knew also his old servant Bob. Bob was born on the Belle Meade place eighty years ago, during the lifetime of Mrs. Jackson's grandfather. He had served three generations in his first master's family, and had lived to see the third generation of Jacksons. At the General's funeral he was given the post of honor at the head of the coffin, where he sat and delivered a running fire of comment and approval on the officiating minister's remarks. At the close of the services the clergyman, a lifelong friend of the family, gave the old negro his arm, and the two headed the sad procession through the grounds to the family vault.

The General had long been in failing health, and when his illness became pronounced, a colored man living in the city requested the privilege of nursing him, giving up a good position to do so and remaining with him for several months until the end. He is the son of the woman who presided over the Belle Meade nursery and ruled two generations of its children.

The pall-bearers were eight workmen on the place, sons of the slaves who during the war stood guard over their mas-

ter's family and estate while he fought in the Confederate army. They sat in a body among those whom a common sorrow had drawn together from far different ranks in life. No one could fail to see the appropriateness of their office, remembering how the dead man had delighted to call them "not servants, but friends."

It may be said that instances like this are rare in the South. To this it may be replied that great faithfulness to duty, tested through a long term of years, is rare the country over. But wherever it is found, in business or in domestic life, in high places or in low places, it is recognized and honored, North, South, East, and West, without regard to riches, poverty, race, color, or previous condition of servitude.

## Alcohol and Drugs

*To the Editors of The Outlook:*

In your issue of April 11, 1903, under the title "Prohibition—Pro and Con," I find a great number of communications, and among them some allusions to a paper which I read before the New York Medico-Legal Society some time ago, entitled "Stimulants in Forensic Medicine," and therefore I assume that you will grant the privilege of my offering a word upon the subject.

At the time of writing this paper I had no intention of entering into a discussion, to any great extent, of the use of alcoholic stimulants, but wished more especially to call attention to the increasing habit or addiction to the use of drugs so noticeable among all classes of society. Believing that all human beings crave or make use of some stimulant, and that a law prohibiting the use of alcoholic stimulants might be enforced, then I inferred that in Vermont persons prohibited from obtaining alcoholic stimulants might be driven to the selection of others more dangerous and destructive. The paper was based upon this hypothesis, and this led me to investigate the consumption of stimulants in Vermont, more especially opium, cocaine, Indian hemp, chloral, and quinine. The information I received in answer to my letters of inquiry was most

astounding, and what I have stated in this address represents only about one-third of the amount consumed, as I should now be able to prove.

Evidently this branch of the subject of temperance has received very little attention from so-called reformers, because, after this address was issued in a legitimate way, and after receiving notices in newspapers and medical journals printed in all parts of the civilized world, and many letters requesting a copy of the address, I found it necessary to order a great number of extra copies, and, at the request of a gentleman in New York, I consented to his issuing about two thousand extra copies at his own expense for private distribution. Among all the notices I have received of my address from newspapers, journals, magazines, etc., I think only two offered adverse criticism to my statements or attempted to answer the points therein made, except by ignoring them as untrue or considering them the effusions of an iconoclast.

It would seem, from reading most of the communications sent to your valuable journal and similar statements in others that favor a prohibition law as the best means of correcting an evil, that all other persons not so disposed to think were advocates of intemperance and laborers in the cause of developing drunkards. No doubt a great many persons are honest in their convictions that the only way to control intemperance is to enact laws prohibiting the sale of alcoholic stimulants; but are such persons so narrow and opinionated as not to accord to others, who are anxious to secure the same beneficial results through different channels, the merit of being equally earnest and honest?

If among the many contributors to your valuable magazine there is *one* who is honestly interested in the control or regulation of the use of alcoholic stimulants, I would respectfully ask him to forget temporarily the existence of the "saloon," and procure from the Massachusetts Board of Health an official report (Public Document No. 34, pp. 614 to 620, inclusive) of the analysis of sixty-one "patent" or "proprietary" medicines sold under the titles of "tonics," "bit-  
ters," etc., from which he might secure information that alcohol is not solely fur-

nished over the "bar" or in the "saloon." This report, issued from the Massachusetts Board of Health, shows that sixty-one samples of these so-called tonics or medicines were examined, and that all of them contained a percentage of alcohol as high as or higher than is found in lager-beer or ale. Thirty-four samples contained one-fifth or more of alcohol; fifteen samples contained one-fourth or more of alcohol; ten samples contained one-third or more of alcohol; four samples contained nearly one-half alcohol. As a sample, of one of these preparations labeled "sulphur bitters," and stated to contain no alcohol, the report of the Board is: "As a matter of fact, it contains no sulphur, but one-fifth alcohol by volume."

During the recent discussion of this subject before the Legislature of Vermont, where prohibition had existed for fifty years, all sides of the question were brought up, and finally a law was enacted favoring local option. I favored the enactment of this law because I had become satisfied that the prohibitory law was not enforced; that under that law no revenue was obtained by the State for such illicit business; that under that law the sanctity of an oath was destroyed (which in a moral point of view makes any law obnoxious); that the law had in no way prohibited, but had fostered, clandestine and irregular methods of obtaining alcoholic stimulants, and that after so many years it had been proven to my mind that the law was ineffectual and that any other method substituted might be an improvement. When it became necessary under the law to vote upon the question of whether the city of Burlington should have license or not, I voted against the granting of a license; and this in no way is inconsistent with my willingness to advocate a law which gives to every citizen the right of saying whether he wants license or not; and upon this basis alone, to my mind, can the enforcement of law be established.

I am very sure that if a majority of the people of this city had voted against granting a license, it would have been enforced; but it is well understood that under the prohibitory law it was never enforced, and could not be, because a majority of the people were opposed to it.

[Dr.] A. P. GRINNELL.

## American Treaty Rights in China

Last week, eight days after Secretary Hay had acknowledged the Russian Government's assurance of honorable intentions in the Chinese province of Manchuria, it was rumored that Russia had reoccupied the southern part of that province, had garrisoned the forts overlooking the Liaotung Gulf and had built others in the interior. It was also rumored that Russia had established a Consulate at Mukden (although she had objected to the establishment of an American Consulate there), had sent an army to occupy the Liao Valley, thus barring access to Mukden and to the interior of Manchuria save by very round-about routes, and had occupied Tatung-kau, a proposed treaty port. Closely following her disavowal of the reported demands made upon China, this action by Russia seemed incredible, and we are glad to learn that the Russian troops have now retired from the reoccupied places. Among the Powers having treaty rights in Manchuria, America stands chief; our trade interests with the principal Manchurian treaty port exceed those of any other country. Mr. Hay has repeatedly received through the Russian Ambassador at Washington assurances that Russia has no thought of attacking the principle of the open door; though to the last assurance of this kind, given week before last by the Russian Foreign Minister to Mr. McCormick, American Ambassador at St. Petersburg, is added the important qualification, "as that principle is understood by the Imperial Government of Russia." Russia has occupied the province of Manchuria since the Boxer rebellion, as a guarantee for the security of a great railway which she has been constructing. Though that railway is now finished, it may still need police protection, and the large commercial interests

which Russia has developed in Manchuria may need such protection. To establish and maintain this, however, it is not necessary to disregard by word or deed the historic and increasingly valuable rights of other nations. Russia has also repeatedly promised to evacuate Manchuria, but has always imposed some condition precedent to such evacuation. It is supposed that she excuses her slight temporary re-occupation of last week as an offset to the arrival of foreign war-ships in the Gulf of Liaotung, consequent upon the reported new demands upon China by Russia. At all events, we hope that the statement by the Russian Ambassador, Count Cassini, may be justified by the facts: "When the whole truth is known, it will be found that Russia has not violated a single pledge made to any nation, nor does she intend to do so."

## England and the Persian Gulf

Last week in the House of Lords the Marquis of Lansdowne, British Foreign Secretary, definitely notified the competing European Powers that any attempt on their part to establish a naval base or fortified port on the Persian Gulf might mean war with Great Britain. "I say without hesitation," he declared, "that we should regard this establishment as a very grave menace to British interests, and should certainly resist it with all the means at our disposal." He affirmed that, so far as the navigation and fortification of the Gulf were concerned, Great Britain held a position different from that of the other Powers, because it was owing to British enterprise and expenditure of life and money that the Gulf was now open to the commerce of the world, and because the protection of the sea route to India necessitated British predominance in the Gulf. Week before last, in the House of

Commons, Premier Balfour announced that his Government had decided not to participate in the Turko-German Bagdad railway scheme; the general impression was that the British Government would not sanction a railway which was expected by the Germans ultimately to reach Koweit on the Persian Gulf, owing to the strategic question involved. In their comment upon these notable declarations the London papers point out the analogy of the present proceeding to the American policy of Monroeism, the "Westminster Gazette," in particular, holding that the British motive—namely, the protection of the sea route to India—exactly corresponds with the motive of Americans in excluding European Powers from American waters because American territory would thereby be threatened. The London papers also point out the fact that Lord Lansdowne and Mr. Balfour are but repeating one of the arguments used by Captain Mahan in a recent article in the "National Review." He declared that, as the Persian Gulf was to be one terminus of an interoceanic railway, this road must be considered both as a line of commercial communication and as having military significance. Great Britain and Russia are the two States most immediately and deeply concerned in this matter. Great Britain has charged herself with establishing order on and about the Gulf, and has actually maintained it there for several generations. To Great Britain, as Captain Mahan acutely points out, the question which now arises is one of the first importance, because of British security in India, the safety of the sea route to India, and the economic and commercial welfare of India, which politically can act only through the British Empire.

Russia, Germany, and  
the Persian Gulf

☉  
In defense of Russian  
aggressions in Turkey,  
Persia, and in China,

however, it must be admitted that water communication with foreign countries through ports of her own is the greatest need of the Czar's Empire. As compared with the China seas, where Russia now seems to have obtained a vast empire practically for nothing, she would not benefit so much commercially by access to the Persian Gulf; for in

China Russia is much closer to the entire Pacific Ocean and especially to the American continent, and Australia is slightly nearer Port Arthur than to the Persian Gulf. The great advantage to Russia in an outlet on the Gulf would be in the nearer approach to India and Africa; but this benefit to Russia hardly presents to Great Britain enough of a motive towards the concession of a position not only so vital to British ascendancy in India, but also to the British naval position throughout the Eastern Hemisphere, and to the Imperial tie between Great Britain and Australia. While it is true that the actual railway now building in Asia Minor with a prospective outlet on the Gulf is being financed by Germany, a country restlessly intent not only upon commercial but also upon territorial development, the ultimate foe to British interests, in our opinion, is the proposed Russian railway to the Gulf, not the German. For Germany has a necessary common interest with Great Britain in the Suez route to Asia; and since the trade of both depends upon its security, the two must, in the long run, work together. In another recent article Captain Mahan pointed out that, as the British power lies across and flanks every sea route by which Germany can reach the outer world, friendship with Great Britain is evidently a far cheaper and more efficacious way of helping Germany than any attempt to destroy British power; in other words, Great Britain's naval power is just as real a factor in the future of Germany throughout the world as every thinking American must recognize it to be in our own external policy. Sooner or later may it be recognized that the respective interests of America, England, Germany, and Japan have so much in common and so little not in common that friendly co-operation, no matter how unofficial, is as inevitable as it is desirable.

☉

Macedonia Taking advantage of the revolution of European feeling caused by the Bulgaro-Macedonian outrages in Salonika, the Turkish Government caused a wholesale arrest of Bulgarians throughout the Empire last week. It also closed all the Bulgarian schools in Macedonia by imprisoning the teachers, and arrested in Constantinople about sixty suspected

Bulgarians, besides making numerous domiciliary visits. These included one to the residence of the Secretary of the Bulgarian Diplomatic Agency, whose papers were seized. The Porte also—and not unnaturally—addressed a vigorous note to the Bulgarian Government calling attention to the continued incursion of Bulgarian bands and to the importation of explosives into Macedonia. Because of what is described as its “offensive terms,” the note was returned by the Bulgarian Government to the Ottoman Commissioners at Sofia. England, France, and Italy have informed the Porte that it would be held responsible for the injuries to the lives and property of their respective citizens by reason of the Salonika disaster. So far as is reported, the German Government has made no protest, which would indicate that two of that Government's policies coincide for the moment—(1) not to oppose Russia at Constantinople, but, (2) whenever questions with other European powers arise, to support Turkey; for Germany's purposes in Asia Minor would seem to be best realized by strengthening Turkey as a European power. The usual weekly list of conflicts between Bulgaro-Macedonians and Turks throughout Macedonia furnish another impressive indication that the Bulgarians, being of the same race and religion as the great majority of the Macedonians, naturally sympathize with them, and, as far as possible, share in their effort to be free from Turkish domination. Writing to *The Outlook* on this subject, a missionary who has just returned from the Balkans declares that “there never can be peace in Macedonia so long as Turkey holds sway. Discontent and disquiet in that province have been greater year by year until they have culminated in the present serious condition.”

●

Last week the Irish Land

The Bill passed its second reading in the House of Commons by the remarkable majority of 443 votes to 26. It is not surprising that the huge majority of 417 should be hailed by the Gladstonian Liberal newspapers in London, not only as a notable historical event, but also as “a great conversion” to Mr. Gladstone's impressive declaration

in Parliament: “The ebbing tide is with you and the flowing tide is with us.” Quite another light, however, was thrown on the matter by Mr. Wyndham, Chief Secretary for Ireland, in closing the debate before the vote. He made light of what he called the “bogey of Home Rule,” showing that his bill followed Gladstonian traditions only so far as land was concerned. Mr. Wyndham proved again how baseless was the fear of a general repudiation of Irish obligations. He declared that the best security was the unanimous desire of the whole people for a peasant proprietary, but he added that the present cash security was ample and that past records of land purchase transactions showed hardly any risk to the State. The vote on the bill is not so surprising in view of the speech of Mr. John Morley, the Liberal leader, who, after declaring the measure to be a revolutionary extension of the land purchase system, and saying that he had never known a bill that could be so riddled with objections, concluded that, though its remedies were abnormal, it was a creature of social necessity; therefore he would support it. The Irish members, while criticising some details of the bill, defended it, feeling, in the words of Mr. O'Connor, that “the House must now choose between a great measure of land purchase and chaos.” An analysis of the vote shows that all the Nationalists, the main body of the Ministerialists, and almost all the Liberals voted with the majority. Such a vote gives abundant ground for hope that a new era of peace and good will has dawned for Ireland.

●

Mr. Carnegie  
on Employees as Partners

Mr. Carnegie's speech in London last week as the newly elected President of the Iron and Steel Institute was of profound interest. After expressing the wish that international hostilities held as small a place in the realm of politics as in the realms of science and invention, Mr. Carnegie proceeded to review his own business life and explain the secret of his success in securing the effective co-operation of so large a force of subordinates. In a word, Mr. Carnegie attributed it to his policy of making the heads of every department partners in his business. In this, he

says, he was aided by the fact that his manufacturing company was a partnership and not a corporation with stock listed on the exchanges. The men holding responsible positions were allotted a certain interest in the business at a price representing only capital actually invested—no charge being made for the value of the good will of the concern. The shares thus allotted were gradually paid for out of the surplus profits of the business—the subordinate partners receiving only their salaries until the payments were complete. Even then the partners were not allowed to transfer their interests to absentee investors, but must sell to their associates at cost price if they retired from the concern. In this way the Carnegie company was always in the hands of men vitally interested in its success. The limitation of the plan was that it did not extend to the manual workers. Among them, too, Mr. Carnegie believed that its principle would have given new life to the work in every department; but the hazards of the business, the doubts that would arise in the minds of poor men not in intimate touch with the management, and the inability of wage-earners to bear losses, had led the company to promote home ownership among them by a liberal savings bank system instead of factory ownership through profit-sharing. Nevertheless, continued Mr. Carnegie, the effective co-operation of capital and labor is not secured until, as in the old fishing vessels, crews of partners take the place of crews of employees. The United States Steel Corporation had taken a further step forward through its plan of enrolling its employees as stockholders. This plan Mr. Carnegie praised as a singularly enlightened one, full of promise for the future, but at present handicapped by the fact that the shares of the wage-earners—as well as all others—were open to sale on the exchanges, and were liable to occasion loss to the investors. Upon this point Mr. Carnegie said:

The workman whose thoughts are upon the speculative surprises of the Exchange will not prove desirable. Speculation is the parasite of business, feeding upon values, creating none, and is wholly incompatible with the satisfactory performance of other regular work requiring constant care and caution. The workman's investment should never be at risk, for if his thoughts are upon the Stock Exchange they cannot be upon the machinery, and ma-

chinery, like art, is a jealous mistress, brooking no rival claimant to its absorbing demands. In the interest of the employer, therefore, as well as that of the workman, the savings of the latter should be secure; here, as in other respects, their interest is mutual, and hence I believe the needed change will be made by the Steel Corporation in the near future.

Mr. Carnegie did not further outline the change he would commend in the Steel Corporation's plan, but it would appear that if workingmen stockholders received their shares at a special price—instead, perhaps, of receiving double interest as now—and if the Company bought back their shares at cost price when they passed out of its employment, Mr. Carnegie's criticisms would be met. The workingmen would no longer have their attention turned to stock speculation, and would be secured against loss. They would thus have, in proportion to their holdings, the privileges of the partners in the old Carnegie company.

•

#### Labor Troubles in New York

While May Day passed without any marked increase in the number of industrial conflicts, it was partly because the usual spring upheaval had begun before the usual date, and still more because the demands of the unions were generally granted. In New York City the concessions made to the skilled workmen in the building trades bring the level of wages nearly thirty per cent. above that prevailing six years ago. Carpenters, for example, are now getting \$4.50 a day, and masons \$5.60. Similar advances, though not to such high figures, are being made in most of the smaller cities—the New York unions themselves making a difference of half a dollar a day in favor of the suburban boroughs where rents are lower. In New York the industrial conflicts which now disturb building operations spring from the quarrels of different unions in the carpenter's trade, and from the entrance of unionism among the unskilled trades. The carpenters' quarrel—between the "Amalgamated" and the "Brotherhood"—is as complicated as the dynastic struggles in mediæval history, and almost as distressing to the suffering public, which cannot understand what it is all about. Apparently the "Amalgamated" has the better mechanics, and has been getting the pick of the work.

The "Brotherhood," which is the larger order, has in sheer jealousy attempted to force the smaller order to give up its organization and become an integral part of the "Brotherhood." To this end the "Brotherhood" refused to allow its members to work alongside of the "Amalgamated" men. The other building trades unions, however, sided with the "Amalgamated," which seems to be winning the contest. More serious in its results has been the attempt to unionize the yards of building material dealers. The dealers, seeing that this step would bring the entire industry under the control of the Building Trades Council, locked out their workmen, and unitedly resolved not to open their yards except upon the condition that they should be free to employ non-union as well as union drivers. The Mason Builders' Association has supported the dealers in this action, and agreed not to buy of any building material dealer who does not stand with his association in the present conflict. Thus the boycott becomes a two-edged sword.

#### Labor Troubles in the West

In Omaha, Nebraska, the organization of a general employers' association—

upon substantially the lines recommended by President Parry at the recent manufacturers' convention in New Orleans—has not sufficed to check the strike of the union team drivers, which has in a large degree prostrated industry in that city. Last week Judge Munger, of the United States District Court, took a hand in the conflict by enjoining the union not only against committing many enumerated illegal acts, but also against almost every form of picketing, and even against continuing to maintain their organization. This injunction, issued by a Federal court on the ground that drivers at Omaha took part in inter-State commerce, seemed at first to take the whole matter from the jurisdiction of the State and local authorities, and added materially to the bitterness of the struggle. Subsequently, however, Judge Munger withdrew that portion of his injunction which seemed to forbid any activity on the part of the union. This extreme injunction was provoked by the extreme demand of the teamsters' union that employers should permit its members to boycott non-union

firms; but provocation is not justification, and the evils of industrial warfare to both parties are only increased by the use of extra-legal methods on either side to coerce the other. Just at present the full employment of labor everywhere tempts the unions to make arbitrary demands, but their excesses are sure in the near future to react against them. Already at Chicago the unions show signs of perceiving that they are carrying their demands too far, and the two hundred and fifty-two labor unions belonging to the Chicago Federation of Labor have voted (250 to 2) that hereafter no one of them may order a strike without submitting its grievance to the executive board of the Federation and letting that body attempt to secure a peaceful settlement. From all this confusion worse confounded we see no hope of permanent relief except that change of spirit suggested by President Hadley in a recent address in New Haven: "We need something more than contracts between companies and operatives, or conspiracy laws, or municipalization of industry. We must get back to the conception of some higher motive than self-interest, and some better measure of value than self-aggrandizement."

#### Signs of Progress in Minneapolis and St. Louis

Two incidents of last week are to be counted among the

indications that even in the most corrupt of cities the sense of decency and honor, when it does find expression, is finally the prevailing element in public opinion. One of these incidents was the conviction of Dr. Albert Alonzo Ames, formerly Mayor of Minneapolis, who was charged with accepting, while holding office, bribes from houses of ill fame. The story of the partnership between the city government and the criminals, as it was told in "McClure's Magazine" by Mr. Lincoln Steffens, was reported to our readers in The Outlook for January 10. The arrest of the chief corruptionist, after his flight from the city to a hiding-place in New Hampshire, his trial, and now his conviction, have been as truly blows for the preservation of American liberty as any battles could be. The only defense this man's counsel could present was the plea of insanity, and it did not avail. The case will probably be appealed. The other incident of

last week which promises well for civic righteousness in American cities was the honor paid to Circuit Attorney J. W. Folk, of St. Louis, who has brought sixteen men to trial for corruption and secured fifteen convictions. A committee of citizens offered to him the gift of a house to be purchased with a fund of \$15,000 subscribed by a hundred business men of St. Louis, as an expression of their admiration for his services as public prosecutor. Mr. Folk expressed his appreciation of the offer, but promptly and positively declined it. He is reported to have said, "Your action satisfies me that what I am doing in an official way is with the approval of the best citizens of this community, and that is reward enough." There is no doubt whatever that the most substantial business men of St. Louis, as well as the great majority of the people, are supporters of Mr. Folk in his very quiet but very courageous and effective measures for punishing political corruptors. He is opposed, of course, by some men of high social standing because of their own part in the bribery of office-holders; but even their opposition has not prevented many of the machine politicians from giving him at least outward support. So far the issue has not really been presented to the voters; the political leaders have managed to make up their party tickets and prepare their party platforms so that the issue between clean and unclean city government was avoided. Only in two or three cases have men been elected to the House of Delegates (the lower house of the city legislative body) distinctively as supporters of "New St. Louis." In these few cases, however, and in one of them notably, party lines were broken over. Contrary to reports which were first widely circulated, Mr. Folk, as we have heretofore pointed out, indorsed no candidate and repudiated none. He has kept silently at the work he has undertaken to do, and has left the people to do their own choosing. It has been this unobtrusive but effectual course on the part of the Circuit Attorney that has done more than anything else to create in St. Louis a feeling of confidence that there is really to be a "New St. Louis," and that honesty is a practicable thing in city government.

**A Groundless Accusation** An illustration of Josh Billings's saying, "It is better not to know so many things than to know so many things that are not so," has been recently afforded by two journals of National reputation, to which their readers are accustomed, justly, to look for painstaking endeavor to report the news fairly, although the news may not confirm their political principles or may even jar their political prejudices. First the New York "Evening Post," then the Springfield "Republican" following the "Evening Post," brought the charge against General Wood of having co-operated with a Lieutenant Runcie in the preparation of an article for the "North American Review" against General Wood's predecessor in Cuba, General Brooke, and having afterwards, at the command of the War Department, called Lieutenant Runcie publicly to account for so gross a breach of discipline, and as a penalty removed the Lieutenant from several commissions and offices in which he was engaged. Such incredible baseness, if it could be believed of a man who had always borne an honorable reputation, would have been quite sufficient to deserve expulsion from the army and social excommunication in private life. And these charges were preferred against General Wood without giving him a hearing, when he was out of the country and could not be heard in his own defense, and as part of a very evident endeavor, instigated we know not why nor by whom, to disgrace him before the public. The charge was so definite and specific that General Wood's friends were able to demand proof; and, as a result of this demand, the "Evening Post" made further inquiries into the truth of the accusation to which it had given such currency, and satisfied itself that the charge is wholly groundless. "We accordingly," it says, "withdraw the charge unqualifiedly, with sincere apologies to General Wood. It is not necessary to add that our Havana correspondent ceases to be such with this date." The Springfield "Republican," which had given editorial sanction and added currency to the "Evening Post's" original charge, makes honorable haste to give equal sanction and currency to the withdrawal, and to add: "Our old confidence in his honor returns in full

force now that this matter has been satisfactorily cleared up." We cannot agree that it has been "satisfactorily cleared up." For a telegram is published in the New York "Tribune" of Monday morning of the present week, dated Havana, stating that "the New York 'Evening Post' correspondent denies that he ever sent from here the alleged libelous Runcie-Wood article that paper printed as a special from Havana." It appears, therefore, in this case that there has been not only a liar but a forger at work. One would like to know what motive of malice has been the inspiration of this fraud, falsehood, and forgery. It appears to us that it is now in order for the New York "Evening Post" to employ some detective to find out what the source of this villainy is, a villainy which might have accomplished more if the liar and forger had not chosen as the medium for circulating his groundless libel a journal quick to give the story a denial as soon as its falsehood was discovered. The most searching criticism of political policies and public conduct is always in order; and it becomes necessary at times, as part of the duty of independent newspapers, to make personal charges against public officials. But such charges ought never to be made unless definite proof is in hand with which to substantiate them. The reputation of a man like General Wood is part of the moral capital of the country; to belittle such a reputation without good cause is to diminish that capital and is a very serious offense against the public welfare.

⊙

#### The Red Cross Controversy

At a meeting held in the city of New York on the 6th of April last, the Executive Committee of the American National Red Cross, through its Chairman, W. P. Phillips, suspended "from membership and all privileges of membership" General John M. Wilson, John W. Foster, ex-Secretary of State; Hilary A. Herbert, ex-Secretary of the Navy; Rear-Admiral Ramsey, Rear-Admiral Van Reyepen, William H. Michael, Chief Clerk of the State Department; Mrs. Cowles, sister of President Roosevelt; Miss Mabel T. Boardman, and fifteen other incorporators and members, upon the charge that, in a letter to the President of the United States and in a memorial subsequently sent to

the United States Senate, they had assumed an attitude that was "unbecoming" as well as "hostile to the interests of the Red Cross," and had "attempted to disrupt the organization." Lately the suspended members sent to Mr. Phillips the following reply: "The undersigned members of the American National Red Cross, in answer to your notification of their suspension, deny your power or authority to suspend them." In a statement to the public, made at the time this reply was sent, the suspended members allege that the new by-laws, under which the Executive Committee assumed to act, were improperly and illegally adopted; that they are inconsistent with, if not directly in violation of, the charter granted to the Red Cross by Congress; and that, if legally adopted, their effect would be to confer autocratic power upon the President, and virtually to deprive the incorporators and members generally of the control that they have a right to exercise over the organization and its officers. They assert, furthermore, that under the by-laws thus adopted the President may be, and has been, elected for life; that in the event of her illness or absence she may delegate her supreme authority to any person whom she may choose to select; that, with the sanction of two members—or even a single member—of the Executive Committee, she may suspend hostile or obnoxious incorporators at her own discretion; and that "the extraordinary powers now possessed by three persons—or it may be by two—can never be taken away from them without their consent, or the consent of the President," whose term of office has been made perpetual. In conclusion, they declare that unless such methods "are abandoned, the society cannot retain public confidence, which is essential to its success. By-laws so extraordinary and so adopted," they say, "should not be submitted to without protest, nor should they continue in force without being brought to the knowledge of the great public for whom this society exists and by whom it is supported."

⊙

The Red Cross, in the Past and Future of the Red Cross United States, is the creation of Miss Barton. It was mainly through her influence and persistent agitation that the Government

of the United States became a party to the Geneva treaty; she organized at the city of Washington in 1881 the first American Red Cross society; and she controlled its operations and directed its activity through a long series of campaigns, beginning with the Michigan forest fires in 1881 and ending with the Galveston disaster in 1900. That the practical results of her administration and of Red Cross work in these years were beneficent there can be no reasonable doubt. Large sums of money, contributed by the public, were wisely expended; human suffering was alleviated on many widely separated fields; and thousands of persons were helped to get on their feet after they had been stricken down by catastrophes of nature or the operations of war. The first question that was raised with regard to the administration of Red Cross affairs had its origin in what were alleged to be loose and unbusinesslike methods in the matter of keeping accounts. The society, it was said, failed to make and publish properly audited statements of its receipts and disbursements. As long ago as the beginning of the Spanish War, a number of business men in New York, who desired to co-operate in Red Cross work, offered to give the organization all the money they should contribute or collect, if Miss Barton would allow them to send a representative to Cuba to supervise expenditures and audit accounts. Miss Barton declined to accept this proposition, and the business men organized what was afterward known as the New York Red Cross Auxiliary, which controlled its own expenditures and at the end of the campaign published a detailed statement of its receipts and disbursements. At that time and subsequently it was suggested, in as delicate a manner as possible, that the best interests of the Red Cross would be promoted if Miss Barton, who was nearly eighty years of age, would consent to retire from the active management of the society, holding the position of honorary president for life, but allowing some capable business man (the late Colonel Waring was suggested) to direct and control the society's work and manage its finances. It is said that Miss Barton at one time consented to this arrangement, but subsequently changed her mind, obtained a charter from Congress, and reorganized the society. Com-

plaints, which were soon afterward made by some of the newly elected members, with regard to the accounts, vouchers, and financial management of the Galveston campaign, led to internal friction, and Miss Barton and her friends, fearing, apparently, that an attempt would be made by the "Washington faction" to oust them from control, adopted, without previous notice to the members, an entirely new set of by-laws intended to increase and consolidate their power; elected Miss Barton president for life with practically supreme authority; and finally suspended all the malcontents who disapproved and protested against such action. The suspended Washington members are all well known to the American people, many of them have occupied high official positions, and it is not to be assumed, without conclusive proof, that they desire to "disrupt" the Red Cross, or that, in protesting against certain administrative methods, they are actuated by improper or unworthy motives. If, as Mr. Phillips contends, they are only a factional minority, bent on rule or ruin, the Executive Committee would run no risk in calling a general meeting of the society and turning over to it the duty of disciplining them for their "hostility to its interests" and their general "unbecomingness" of attitude.

®

**Two Pleas for Negro Rights in Mississippi** In Mississippi—where the negroes were practically disfranchised by the new Constitution of 1890—a spirited contest is now going on over the civil and educational rights of the race. The attack upon their civil rights is being made by sporadic mobs of Whitecaps, who by brute force, in defiance of law, have driven the negroes out of many localities. The attack upon their educational rights is being made in a political campaign to secure the nomination of a Democratic candidate for Governor who demands a division of the school fund, so that the schools of the negroes shall no longer be aided by the taxes of the whites. A Mississippi correspondent writes us that both of these attacks are condemned by a majority of the white people of the State, though, for various local reasons, Major Vardaman, the gubernatorial candidate demanding a division of the school fund, may secure

the Democratic nomination. As expressive of the sentiment of the better class of whites toward the Whitecap depredations, our correspondent sends us the statement made last week by Judge Powell, of the Lincoln Circuit Court, in addressing the Grand Jury. After condemning the "destruction of all legal government and the enthronement of naked brute force as the governing power in the community," Judge Powell concluded as follows:

I confess, gentlemen, I can't understand this foolish hostility to the negro. He is here without his consent, and here undoubtedly he must remain in large numbers. He has been eliminated by our Constitution and laws from all political control. He asks not for social recognition. He only asks the poor privilege of working for his daily bread in peace and to indulge the hope that the coming years may bring something better to his posterity. We of the white race have all the offices of power, from Governor to constable, and the negro is simply the creature of our mercy. It strikes me that for us to oppress where we should protect, to debase where we might lift up, is unmanly and unworthy of the proud race to which we belong. Stand by the nobler traditions of your race, and let it be understood once and for all in Lincoln County that no man or set of men are so powerful that the strong arm of the law cannot reach them, or so lowly that the broad shield of the law cannot protect them.

Still more significant of the attitude of the more humane whites toward the anti-negro movements is our correspondent's inclosure of an editorial from a paper edited by a negro, satirizing the professions of friendship for his race made by those who would deny it equal educational rights. "The black men," says this negro editor, "cannot understand the friendship that abuses them on the hustings as unfit for citizenship because they are benighted with ignorance, at the same time attempting to take from them the lamp of opportunity that was given to light their way to intelligence." The white people of Mississippi cannot afford to turn a deaf ear to such appeals for fair play. The good name of their race and of their Commonwealth forbids.

Another Advance for  
the Torrens System

Illinois, the first State in the Union to make provision for the voluntary registration and transfer of land titles by the Torrens or Australian system, has now taken another step in

advance by passing a law designed to make the operation of the system compulsory. The Torrens system, it will be recalled, provides for the public registration of titles, so that the land thereafter may be transferred without any re-searching of titles, by simply recording the transfer in the registry. The Illinois law passed in 1897 applies only to such counties as may adopt it by referendum vote. The majority in favor of adoption in Cook County, in which Chicago is situated, was very large. Although the operation of the Torrens system has met with general approval, the number of registrations under it have been comparatively small. One reason is that under the Illinois law it takes two years to complete the public registration of the title, and some landowners fear that during this transition period the chances of sale may be injured. Last fall the real estate men who had been instrumental in securing the passage of the law started an agitation for its amendment so as to require all land while going through probate court to be registered under the Torrens system. It was argued that land while going through probate was tied up for about two years under any system. The Real Estate Board at a first and again at a second meeting voted approval to this project, but at a third meeting at which proxies were allowed the vote was 97 for the proposition to 118 against it. The charge was made that many of the opposition proxies were brought out by the Chicago Title and Trust Company, which actively fought the progress of the bill at all stages. After this defeat in the Real Estate Board, the men who had begun the agitation formed a new organization for carrying it on. They have succeeded in getting the measure approved by both branches of the Legislature. A veto is not anticipated. This amendatory measure, like the original law, is not to go into effect in any county until approved by popular vote. It will be submitted to a referendum in Cook County at the fall election of 1904. The chief argument made by the opponents of the bill was that the heirs of a landowner ought not to be obliged to do with a piece of land something that the owner himself did not choose to do in his lifetime. The answer of the friends of the measure was that the general adoption of the Torrens system

would be a good thing for the community, and that the most convenient time to require registration was while the land was going through probate. It is estimated that this law will bring all land in the county that adopts it under the Torrens system in about thirty-five years. There is little doubt that Cook County will adopt the law when voted on, for the Torrens system is popular with the voters of that community. Since the Torrens system first went into operation in Illinois, laws establishing similar systems have been enacted by Massachusetts, California, Oregon, Washington, Montana, and Minnesota. Probably in due time other States will follow the latest move of Illinois in this respect and make the use of the Torrens system of registering and transferring land titles compulsory.

#### Mayor Johnson's New Plans

The new Code for Ohio cities adopted at the special session of the Legislature last winter became operative May 4. On this occasion an entire change of government took place in every city in the State, and in lieu of the previous chaos of administrative methods a uniform method was provided under a compromise system. In Cleveland, power heretofore lodged in the Mayor under the centralized system of the federal plan is now distributed among a half-dozen officials elected by the people, while control over contracts, purchases, and public work generally is confusingly divided between the Council and the Board of Public Service. It was believed that this plan would so destroy the individual power of Mayor Johnson as to render ineffectual his attempts to equalize taxation, introduce competition in street railway service, and carry out other projects of a radical nature. A natural nemesis followed this attempt to override the local wishes of the people of Cleveland, and the entire Democratic ticket was returned by a large majority, all of Mr. Johnson's friends being elected. The first act of the new administration was the introduction of preliminary plans for a three-cent-fare street railroad on eleven different street routes. Ordinances will shortly be introduced providing for bids, and within a few weeks' time it is predicted that proposals will be

before the Council for the construction of railroads to be operated on a three-cent-fare basis. The new administration also submitted a report to the Council for the construction of a municipal electric lighting plant, not only for public purposes, but to supply light and power for commercial purposes as well. The report is based upon an investigation made by C. E. Phelps, Jr., an electrical engineer of Baltimore. His estimate involved an expenditure for plant construction of \$375,000. Upon this basis, the cost of arc lamps for street lighting, inclusive of all fixed charges and depreciation, is \$54 per annum, as against \$75 now paid by the city to a private company; while the cost of power at the station is placed at one cent per kilowatt hour. The report further states that, adding interest at four per cent. and a sinking fund provision of three per cent., light and power can be supplied to private consumers at three cents or four cents per kilowatt hour, or less than half the usual rate. The Mayor's message to the Council covered a full discussion of home rule for cities, the necessity for a readjustment of taxation so that the public service corporations should be taxed upon their franchise value, and the construction of new and competing street railway lines and an electric lighting plant, the latter to be conducted by the city upon a civil service reform basis.

#### Meeting-Rooms for the People

Three plans are proposed in New York City, not inconsistent, not rival, but legitimately co-operative, for the purpose of securing gathering-places in the poorer quarters of the city for the people of moderate means. The first of these, which, if carried out, is the largest in its scope and the most comprehensive in its promise, is the building of an assembly hall for lectures, concerts, and other gatherings in connection with every new school building in the city. The lecture courses already being given under Dr. Leipziger have proved a great instrumentality for adult education, and incidentally for neighborhood fellowship, and have gone far to show that the school-house could be made, with proper architectural provision, a social center. The second

plan is that of the Social Halls Association, incorporated under the laws of New York. This Association has under construction a five-story and basement fire-proof building for recreation and entertainment purposes, upon a plot near the terminus of the new East River Bridge. When completed it is to contain two restaurants, in one of which men can smoke, halls for dancing, etc., lodge and club rooms, bowling alleys, billiard-rooms, roof garden, baths, etc., and is to be so administered as to pay not only the expenses of the administration, but a fair interest on the investment. The total amount needed is estimated at less than two hundred thousand dollars, of which about one-half is already subscribed. The third plan is that of a People's Palace, to serve as a home for the People's Institute, which by its six years' experience in the use of rented rooms at Cooper Union has already demonstrated a public demand for the work it is doing. The plan includes a large hall with organ and stage, to be used for popular lectures, public addresses and discussions on problems of the day, symphony and other concerts, presentation of great dramas either enacted or by recitation, and Sunday evening religious and ethical addresses. In addition to the large hall, the plans would contain smaller halls, class-rooms, roof garden, a gallery for art exhibitions, a reading-room, etc. A public meeting was held last Sunday night at Cooper Union, at which a number of men known for their public-spiritedness spoke in support of the scheme. Professor Charles Sprague Smith, to whose energy and practical wisdom the success of the People's Institute is due, and who has initiated this movement, is proceeding in the right direction in insisting that the people to be served shall make the first contributions toward the necessary fund for the erection of this building. There are two very good reasons for this: first, that it is necessary to know how much the people for whom this building is supposed to be constructed really want it, and, secondly, because few money-makers will be prepared to contribute to the erection of such a building until there is a financial demonstration that it is really wanted and will be used by the people for whom it is to be erected. We hope for all three of these plans great

success. All three of them would not, in our judgment, furnish too great a supply for even the existing demand, and the demand will increase as provision is made for supplying it.

#### Railway Men and Religion

Last week the Conference of the Railway Men's Young Men's Christian Associations at Topeka, Kansas, was made notable by an address by President Roosevelt. The interest in this gathering, however, was due not more to such a distinguished speaker than to the cause itself, for the attendance was as great at the closing meeting as on the evening when the President made his address. The audience was estimated at about four thousand men. There were no less than fifteen hundred delegates present from the nearly two hundred railway associations of North America. Foreign governments were also represented—Mexico by four delegates, Germany by two, France and Denmark by one each. The mileage traveled by all the delegates exceeded two million miles. The railway companies furnished free transportation—the value of which to ordinary travelers would be \$60,000; while the concessions made by the Pullman Company exceeded \$5,000. While the railway companies provided every facility to advance the convention, in no case did they, as such, have a voice or a vote in the meeting. We may add that the companies have now given over a million dollars for Association buildings, and contribute nearly a quarter of a million a year toward the current expenses. The Topeka Conference was presided over by Colonel John J. McCook, and among the prominent railway men who took part in the discussion were President Stevens, of the Chesapeake and Ohio, and General Manager Mudge, of the Atchison roads. The delegates were from all positions in railway service, from flagmen to engineers; they represented the fifty thousand members of the railway branch. While religious differences were not mentioned at the Conference (about one-third of the membership has Roman Catholic affiliation), religious life was the subject most enthusiastically discussed. An incident of the Conference was the laying of the corner-stone of the new Railway Asso-

ciation Building now being erected at Topeka by the Atchison Company and its employees, at a cost of \$30,000. No branch of the work of the Young Men's Christian Association has shown greater progress in every direction than has its railway department; and it is significant for social as well as for industrial solidarity that its financial support is equally divided between employers and employed. The work which the Young Men's Christian Association is doing, in caring for the physical and social comfort of the men, to say nothing of the educational and religious features, is a very important public service, and without something of the kind railway employees would be in far greater moral peril than at present.

#### A Notable Commemoration

The beautiful historic village of Tarrytown-on-the-Hudson was the scene of an unusual celebration on Thursday of last week, which took the form of a semi-centennial commemoration of the work of the Rev. J. Selden Spencer as assistant rector, rector, and rector emeritus of Christ Church. Mr. Spencer's association with the parish dates back to 1858; and among his parishioners at that time was Washington Irving, a devout attendant on the services of the church, whose charming home at Sunnyside attracted many visitors, and to whom the interests of the church were very dear. Mr. Spencer's reminiscences of Irving, read to his friends a few years ago, delightfully illustrated his own qualities of nature and of style, his consecration to his work, his generosity, his humor, and his geniality. The exercises on Thursday consisted of a service of commemoration in the morning, at which Bishop Potter presided, which was largely attended by the Episcopal clergy of Westchester County and the neighboring Hudson River districts, and by the clergy of other churches in the community. At the close of Bishop Potter's address the Rev. Dr. John Knox Allen, pastor of the First Reformed Church, presented Mr. Spencer with an address of congratulation signed by over five hundred residents of the town. The communion service followed; and later a luncheon was served, at which many visitors were entertained with characteristic hospitality. In the afternoon hun-

dreds of friends presented their congratulations and expressed their warm affection to Mr. Spencer at the Parish House; and in the evening a public dinner was given to him, at which Major Marshall H. Bright, editor of "Christian Work," presided, and brief addresses full of affection and respect were made by the Rev. Dr. Allen, by the President of the village, and by other representative citizens. It is not often in this age that a minister remains in one parish and pulpit for half a century. The traditions of Tarrytown are quite in harmony, however, with this long pastorate; the blameless life, the consecration to his work, the kindliness of spirit, and the delightful personal qualities of Mr. Spencer have endeared him to the whole community.

#### Black Smoke Banished

When the coal strike was at its height, and the skies of New York were as black as those of other soft-coal burning cities, many people were convinced that the metropolis had lost forever one of its greatest charms, and that, the use of soft coal having been introduced in hundreds of factories and other buildings, it would be impossible again to drive it out. The Outlook expressed its faith not only that the regulation against black smoke could be enforced, but would be enforced, and its faith has been justified. To-day the sky is absolutely clear; only two or three columns of black smoke can be observed rising from any point in the city, and the statement of Dr. Lederle, the Health Commissioner, that the city is freer from black smoke than it has been for a number of years past, is evident to any one who will look over the island from any elevated point. The only offenders remaining seem to be the power-houses. Why these should be allowed to violate the statute has not been explained. Undoubtedly the Commissioner who has effected a change which entitles him to the gratitude of all New Yorkers for all time to come is for the moment balked in his endeavor to abate the nuisance in two or three instances. Whatever action he may be able to take he may rest assured will be backed by the citizens of New York. The brief experience of foul skies was sufficient to make the citizens of the metropolis value, as they have never valued before, not only

the beauty but the personal comfort of breathing clean air and looking at pure skies.

## The Books of a Season

The survey of the books of the present season which *The Outlook* gives its readers this week does not bring to light many important books. The contributions to religious and economic thought and scholarship have been, in three or four cases, of considerable importance. A single poetic comedy rises above the average of good, well-constructed, but largely uninspired verse-making. In the field of fiction four or five stories have appeared, or are to appear, which are likely to attract a good deal of attention and to deserve the consideration of the most serious readers.

This dearth of books of the first rank is not to be interpreted either as indicating a decline of literary vitality or of popular interest in good books. The journalistic treatment of literature tends to make the public think of the production of books as it does of the production of wheat and corn, and to estimate the value of the crop at the end of the season in exact terms. Intelligent estimates of literary movements and of literary productivity, it is hardly necessary to say, cannot be made in this manner.

It is not surprising that in such an engrossing movement of industrial activity as has been going on during the past three or four years books should be less talked about than formerly, and that there should be less apparent interest in them. When the work of the hand is so pressing, so varied, and so profitable, it takes the first place in public interest; when that work begins to slacken, a great many men who move with the current begin once more to think of the higher occupations and the interests of the human spirit. More books are sold to-day than ever before, and the army of readers quietly making themselves acquainted with good literature in all parts of the country increases instead of diminishes; but until the tide of prosperity ebbs somewhat, or until society has adjusted itself to the immense increase of wealth and the immense extension of practical activities and multiplication of the instruments of

practical service, literature will not receive the recognition which belongs to it as one of the supreme interests in American life.

The fact that, for the moment at least, no novels are selling with the rapidity with which a few novels were sold two or three years ago is by no means an unhealthy sign. The sales of good stories remain phenomenally large compared with the old figures, and will remain large because there has been a great extension of the reading public. The rush of the crowd to read a book which may have no literary merit or vitality, either of material or of presentation, simply because it is talked about, is never wholesome; and if the crowd has grown more critical and clear-minded in its judgments, and has ceased to move upon sudden impulse and learned to decide for itself, the loss will fall, not on writers of real merit, but on a few whose rewards were generally beyond their deserts. The average of literary work in this country in many departments is high. If great books are not produced in large numbers, good books are produced in very considerable numbers; and in soundness of knowledge, in good taste and literary workmanship, a great advance is evident over the work of an earlier generation. It is a period of quiet progress; a time of preparation rather than a time of accomplishment.

## 'The Carlyle Love-Letters'

Love-letters ought never to be published. They are not written for the public; true love-letters are written with an abandon which makes them incomprehensible to the public. The lover reads into the letter which he receives what the writer has meant but could not say; and if he fails, the failure only leads to more correspondence and those misunderstandings and explanations which are the torturing delight of all true lovers, and have been since the world began. But if love-letters are published, they ought to be either left without interpretation, like the Browning love-letters, or else they ought to be interpreted by an editor who has imagination and can understand the difference between

<sup>1</sup> *New Letters and Memorials of Jane Welsh Carlyle*, Annotated by Thomas Carlyle and Edited by Alexander Carlyle. With an Introduction by Sir James Crichton-Browne, M.D., LL.D. With Sixteen Illustrations. 2 vols. John Lane, New York.

a blow and a caress. The Carlyle love-letters have fallen into the hands of editors without imagination. One would surmise that neither Mr. Froude nor Sir James Crichton-Browne, M.D., nor perhaps Alexander Carlyle—though his notes do not attempt to do the work of interpretation essayed by Sir James Crichton-Browne's Introduction—had ever been in love or had ever read love romances enough to know love language. So Mr. Froude subjects the correspondence to a cold analysis, a sort of post-mortem examination, for the purpose of finding out what was the matter with this couple, and concludes that Thomas Carlyle was a bear; and Sir James Crichton-Browne, in his Introduction, subjects them to another post-mortem, and concludes that Mrs. Carlyle was half crazy. To neither of the two skillful but unimaginative anatomists does it occur that the matter was that both Thomas Carlyle and Jane Welsh Carlyle were madly in love with each other, and so remained with a pertinacity of enthusiasm rare even in Scotch characters.

We say even in Scotch characters; for among the curious delusions of literature and history the delusion that the Scotchman is a cold and unemotional character must take high rank as an inexplicable curiosity. Scotchmen cold and unemotional! And Scotland has given to the pulpit Chalmers and Guthrie and Mattheson; to poetry Robert Burns; and to romance Scott, Macdonald, Barrie, and John Watson. The Scotch are Celts, with all the passion of Celts burning in their blood. Only with them the fire is not that of a forest lighting up the whole horizon with a ruddy glare to be extinguished by the first smart rain; it is that of a mine burning under ground, without flame, with little smoke, but with a heat which nothing can extinguish. And Thomas Carlyle and Jane Welsh Carlyle were both Scotch; and they loved with a Scotchman's inextinguishable but also inexpressible ardor. They did not always understand each other: when did two lovers ever always understand each other? They are never understood by their unimaginative editors; when did unimaginative lookers-on ever understand true lovers?

That they were lovers and always lovers, devoted to each other with the

devotion of youthful lovers, and carrying that devotion throughout their lives, undiminished, is a fact which reveals itself on almost every page. We turn at haphazard the pages of the "New Letters and Memorials of Jane Welsh Carlyle," and we find love-sentences hanging like blossoms on every bough—with this difference, that blossoms do not outlast the spring, and these blossoms winter could not kill. He rarely calls her by her name. She is "My brave little Woman;" or "Beautiful Soul;" or "Generous Heroine;" or "My Darling;" or "Goody;" or simply "She," Jean being the only "she" in all the world to him. And this, let the reader note, not in the first days of courtship, not in the supposedly blissful hours of the honeymoon, but throughout their married life. He imputed to the rest of the world his own undisguised though generally unexpressed admiration for her. "Everybody felt the all-pervading, simple grace, the perfect truth and perfect trustfulness, of that beautiful, cheerful, intelligent, and sprightly creature." She was his one companion, his sunshine without whom the world was dark indeed: "Oh my love, my dearest, always love me; I am richer with thee than the whole world could make me otherwise." "The Herzen Goody must not fret herself and torment her poor sick head. I will be back to her, not one hour will I lose. Heaven knows the sun shines not on the spot that could be pleasant to me were she not there, so be of comfort, my Jeannie."

Nor is he less to her than she to him. Her letters are redolent of her passionate affection for him. "Will you believe it, Mr. Carlyle has been within sixteen miles of me for three weeks and we have not once seen each other's face. Now is not this a pretty story? Positively, I am expecting to have my name transmitted to posterity along with the Patriarch Job's; for the *woman* who could undergo this thing and yet not die of rage, could also survive, with a meek spirit, the carrying away of oxen and asses, the burning up of sheep, and even the smothering of sons and daughters." "We see great numbers of people here, and are always most content alone. My husband reads then, and I read or work, or just sit and look at him, which I really find as profitable an employment as any other." "Oh that he

were indeed well, well beside me, and occupied as he ought. How plain and clear would life then lie before us. I verily believe there would not be such a happy pair on the face of the whole earth." "Often when he has talked for an hour without answer, he will ask for some sign of life on my part; and the only sign I can give is a little kiss. Well! that is better than nothing, don't you think?" Then to her husband: "What progress you will have been making with Burns in my absence. I wish I were back to see it; and to give you a kiss for every minute I have been absent. But you will not miss me as terribly as I did you. Dearest, I do love you! Is it not proof of this that I am wearying to be back at Craigenputtoch *even as it stands*, and while every one is trying to make my stay agreeable to me?" "Write instantly to me how you get on, to the minutest item." Even her criticisms are a homage: "Beware, however, dear Jean, how you encourage that little morsel of yours to follow the trade of being a Genius—it is a considerable risk—one way and another—and for my part, if I had the power of administering it, I should advise it much as our good Doctor used to do with his Senna—'you had better give it him—or perhaps you had better not.'"

But both Mr. Froude and Sir James Crichton-Browne find that the course of love did not always run smooth, and so conclude, one that Thomas Carlyle was to blame, the other that Jane Welsh Carlyle was to blame. Bless the dull critics, do they not know that it was love that was to blame! When did the course of true love ever run smooth? The thirteenth chapter of First Corinthians is no true picture of passionate lovers' love. Lovers' love is exacting and self-sacrificing; it is querulous and admiring; it is critical and indiscriminating; it is tempestuous and peaceful; it is self-accusing and self-defending; it is torture and bliss; it is everything self-contradictory. And these two were passionate lovers; all their life long passionate lovers. They both had the intensest of intense natures; and neither could find language strong enough to express their inexpressible life. The drama of such a love-life cannot be interpreted by the rule of three. It was in their nature, and in the nature of the

intensity of their love, that they should be at times at cross purposes: though he was no brute and she no crazy woman.

He was sometimes self-absorbed in his work and careless of her; it is doubtful whether she would have had him less absorbed. For she was proud of that power of concentration which was a part of his genius. He was something of a bear and sometimes growled at his wife as he did at visitors; but she loved him none the less for that. She writes of him, "The victim . . . is consuming his own smoke in a manner which rather frightens me by its novelty. . . . I wish he would growl a bit." She had terrible headaches, was excessively nervous, and often morbid and sometimes not herself; but that did not lessen her love for him nor his for her. As to the misunderstandings and criss-cross purposes, and on her part jealousies, doubtless perfect souls would not have had them; but they were due, not to want of love, but rather to the excess of it, or, let us say, to a certain unrestrained extravagance in loving. For even love should be temperate. Mrs. Carlyle has given in one letter—a letter to her husband—the key to it all. The two quotations which follow are in the original probably a couple of pages of letter-paper apart. She is with Mr. and Mrs. Sterling when she writes:

"I now perceive the use my company is to them both, better than I did when we set out: I furnish, as it were, the sugar and ginger, which makes the alkali of the one and the tartaric acid of the other effervesce into a somewhat more agreeable draught."

She has the same capacity for making the life at Chelsea "effervescent," and she recognizes the fact in this curiously self-revelatory letter:

"I said to myself you were no better than when you left me, and all this absence was gone for nothing. I wanted to bring you into something like cheerfulness, and the length of a kingdom was between us—and if it had not—the probabilities are that, *with the best intentions*, I should have quarreled with you rather. Poor men and poor women! what a time they have in this world by destiny and their own deserving. But, as Mr. Bradfute used to say, 'tell us something we do not know.'"

"But words are cheap." Doubtless,

Mr. Critic, words are cheap; but the love of these two lovers was shown otherwise than in words; shown by both in self-sacrifices of which these letters afford many hints, one of which, with the common failure of the commentators to comprehend it, must serve here to illustrate them all. Mrs. Carlyle had no fondness for the country. That is a quite evident fact. "The thought," she writes to Carlyle, "you are apt to dwell on too exclusively: that 'God made the country and man the town,' is to be taken with large reservations;—is, indeed, to be '*strongly doubted*.' You may depend upon it, Sir, Man and even the Devil have had a very considerable hand in making the country also." Nature even at its best had no great charm for her. "The drive from Wells to Tunbridge was really as picturesque as the lover of Nature (not I) could possibly desire." *Per contra*, Thomas Carlyle had no fondness for the town. Its noise, and whirl, and strenuous life, and stream of society were all odious to him. "I am better in health, however," Mrs. Carlyle writes to a friend, "and do not dislike London as Mr. C. does." One incident will suffice here to show that this his distaste for London life was known to all who knew him. He is at Ecclefechan, and she is sending him some buttons: "When I said to Helen [the maid], I must go and get some buttons for you, she tossed her head with an air of triumph and remarked, 'Well, it's a mercy there is *one* thing which the Master fancies is to be got in *London* better than in *the Country*!'—a small mercy, for which let us be duly grateful." But the society-loving wife goes down with the solitude-loving husband to Craigenputtoch and keeps house there for him and with him in what she characterizes to a friend as "the stillest, solitariest place that it ever entered upon your imagination to conceive; where one has the strangest shadowy existence, nothing actual in it but the food we eat, the bed one sleeps on, and (praised be Heaven) the fine air one breathes; the rest is all a dream of the absent and distant, of things past and to come." And, leading there this solitary life, she writes so charmingly of it to a friend in London that one editor is apparently deceived into thinking that she really liked it, while it is

quite apparent that her letter is purely defensatory, a wisely making the best she can of the life to which her love for her husband calls her: "If people we like and take pleasure in do not come about us here as in London, it is thankfully to be remembered that here 'the wicked cease from troubling and the weary are at rest.' If the knocker makes no sound for weeks together, it is so much the better for my nerves. My husband is as good company as reasonable mortal could desire." And the other editor cannot pardon the husband for taking his wife to so dull a life, and cannot conceive, or does not, that a wife in love with her husband finds a great joy, perhaps her greatest joy, in denying herself for his sake, provided only that the self-denial is a little recognized and appreciated by him. So much she does gladly for her love for him: Presently they transfer themselves to the London which is odious to him and settle there in such quarters as they can afford, where he adapts himself to his surroundings, for his love for her, despite the fact that he is far from an adaptable man. That this involved any sacrifice on his part or indicated any love in him for his wife we do not think Mr. Froude, in his *Life of Carlyle*, anywhere recognizes.

The "New Letters and Memorials of Jane Welsh Carlyle" were needed to correct the false impression which was unhappily produced on the public mind by the publication of Mr. Froude's first *Letters and Memorials* in 1883, though even then the imaginative and discriminating reader gave to them, partial and imperfect as they were, a very different interpretation from that which Mr. Froude gave to them. There are other elements of interest in these "New Letters" than the light they throw on the home life of Thomas and Jane Welsh Carlyle. They are graphic in description, keen in dissection of character, sparkling with wit and humor. To one who is fond of character study they are more entertaining than a novel and more vitally dramatic than a drama. But these aspects we have no space here to illustrate. Their most notable feature is their revelation, on the one hand, of the loves of two life-lovers—her latest letters, written in 1865, after nearly forty years of married life, are as lover-like as the earliest—and, on the other hand, of the

dullness of two unimaginative critics—perhaps we should say three, adding to the other two Alexander Carlyle—who have undertaken to interpret letters all aflame with love though apparently they have never learned the meaning of love's language.

## The Kindergarten Against the Street

In the sections of New York in which the population is densest the streets are the nurseries, playgrounds, libraries, and theaters of the children. These children are housed in rooms so few, small, and crowded that they are driven out-of-doors for space to breathe, play, and live. The close, hot sitting-room, dining-room, bedroom, and kitchen combined, in which many of them live with fathers, mothers, brothers, and sisters, becomes intolerable at times even to the youngest child, and the street is the only refuge. It becomes a retreat for the suppressed and imprisoned personality of the child; it gives him room for activity; for letting out his energy in noise and play; it makes a place for his individuality; more than this, it affords plenty of companionship, for it is full of boys and girls sent from similar homes by the same conditions. There the child finds the drama of life going on before his eyes in its most pathetic and often in its most repulsive forms. The chase of the thief by the policeman, the rattle of the ambulance, the rush of the fire-engine, the cries of the hucksters, the bickerings and fightings, are the sights and sounds to which the child of the tenement-house is accustomed from the time he can walk down stairs; in the streets he learns the first lessons of life, and as he grows into boyhood the street becomes more and more his theater. He becomes familiar with the most degraded men and women, and knows the worst vices from infancy.

The free kindergarten is the antagonist of the street. It rivals and passes the street in interest, and it puts the best education in place of the worst. It is a place which pleases the eye and the ear, and excites and satisfies the curiosity. It opens a clean, airy room, with plenty of light. In this room there are flowers, sometimes birds; there are always things

that are novel in form and color. The two teachers who are in charge know how to catch and keep the attention of children, because they know their habits, tastes, faults, and are in sympathy with them. They know how to open the eyes of the child to things that it has never seen before, and to open its ears to sounds that charm and win its attention. They are not bound by hard and fast rules; they do not impose on the child a method from which it rebels. They take the child as they find it—a semi-barbarian of the street—and teach it cleanliness, order, obedience, courtesy. These lessons come as naturally to the child as the lessons it has learned in the street, and they soon make it over into a civilized child. It finds the play in the pleasant room, led by older playmates, more interesting than the play in the street; a thousand objects are presented to it that excite its curiosity, and it learns the fundamental lessons of life without knowing that it is being educated.

From the pleasant room, with pleasant faces, kind voices, music, and flowers, the child carries new ideas to its home, and presently the mother is interested. The teachers and the room have something for her as well as for her child; and she too begins to learn cleanliness, order, the sweetness of life. More than this, she is taught to help the teacher by making her home like the kindergarten; and so the influences and habits of the streets are fought and overcome, not only in the kindergarten but in the home, and the kindergarten becomes an oasis in the desert of the tenement-house life.

The street, with its evil education—a school in which all kinds of vice are taught—has no enemy so effective, so thoroughgoing, so dangerous, as the kindergarten; and nothing would clean New York morally more radically and permanently than the opening of kindergartens in such numbers that all the children could be taken out of the streets and taught the primary lessons of wholesome living and of good citizenship.

This fight against the street the New York Kindergarten Association and similar organizations in other cities are carrying on at every point where they can command the money to equip and support a school. They are doing a work which

the public schools cannot do; they are organizing the skirmish-line in the fight to save the children of the tenement-house. This work is fundamental; it is done at the most receptive age; and it is the only real answer to that pathetic "cry of the children" which rises in the streets of our great cities, and to which no generous man or woman can be indifferent. That cry ought to be heard and heeded in every home in which children are loved and guarded.

## The Childless Church

We accompany an article in this week's Outlook on "The Childless Church" with two comments: one to the parents, one to the ministers.

*To the Parent:* The prime cause of the childless church is the prayerless home. If there is not truth in the home, there will not be sincerity in society; if not honesty in the home, not honor in business; if not patriotism in the home, not purity in politics; if not devotion in the home, not the spirit of devotion in the church. For homes are the springs that feed the life of the Nation; and if they run dry, there will be drought in the Nation. It cannot be otherwise.

If, then, your children do not care to go to church, inquire first if the fault be not in your home before you look for it in the church. Criticism, like charity, should begin at home. If you do not go to church, it is worse than useless to send your children. If you go reluctantly, it is in vain to expect them to go gladly. If you go to criticise, they will not go to worship. If you go because conscience or convention compels you, they will not go unless they are compelled. And if you love your church and it ministers to your highest nature, they will catch your love for it, though they know not why nor how.

But if the church does not minister to our higher life? What if there is no reason for going but personal habit or social convention? We answer by another question: What if your grocer serves you with stale eggs, or your butcher with tough meat, or your newspaper with lies for truth? You do not abandon either for one failure, or for two; but you do not go on indefinitely for no other

reason than personal habit or social convention. If your church does not minister to your higher life, and the fault is not in your own critical attitude, set yourself to improve the church if you can. And if you cannot, change it for a church that will minister to your higher life.

*To the Minister:* Read the article and ponder it with care. What are you trying to do for the children in your parish? Anything? You have in mind the pew renters: the income of your church depends on them. You have in mind the deacons and elders: the peace of your church depends upon them. You have in mind the active workers, men and women: the efficiency of your church depends upon them. You have in mind the sick and the mourning: your sympathies are appealed to by them. But the children: do you think of them? do you plan for them?

If you ask of methods, these occur to us; perhaps correspondents, out of their experience, can suggest others. You can bring your morning service within an hour—as long a time as children should be asked to sit still; and you can so shape both service and sermon as to appeal to children as well as to adults—a difficult but not an impossible achievement. You can make two services of the one service; and, after a five-minute sermon to the children, dismiss them and go on with the remaining service and the sermon to adults. You can hold a special service for the children, such as is described in the article. You can make the Sunday-school a children's service as well as a children's school, and leave them to find therein their religious instruction and inspiration. Which you shall do must depend partly upon your church, partly upon the community, partly upon yourself. All men have not the ability to instruct and inspire children. Such ministers must recognize their own limitations, and find others to do for them what they cannot do for themselves. So did Henry Ward Beecher; so did Phillips Brooks; both of them loved children; children loved them both; but neither of them could preach to children. Unless, directly or indirectly, you do something vigorously, earnestly, enthusiastically, for the children of your parish, blame not them, blame yourself, if your church is a childless church.

# What are College Students Reading?

By James H. Canfield

Librarian of Columbia University

SOMETHING more than a year ago, in these columns, the writer of this had something to say about the administration of a modern college or university library. The gist of that article was the enlarged opportunity of undergraduate students in the use of libraries—the longer hours, the open shelves, and the generally increased liberality of management. Since that statement appeared there have been many inquiries as to whether undergraduates are really profiting by these increased opportunities; whether they are reading more, and more wisely, than in past years; and whether there is an increase, not only in the reading habit, but in the taste for good literature and in the enjoyment of it.

It is not easy to answer these questions in an entirely satisfactory manner. There are certain outward and manifest conditions which may be remarked, and which are common to many if not to all institutions of learning. For instance, there can be no question that undergraduates are devoting more hours of each academic year to reading than was the practice of, say, twenty-five or thirty years ago. It is also true that the greater part of this reading is more wisely selected, because the work is done under the direct supervision and upon either the requirement or suggestion of instructors. How much these students are reading outside of these requirements or these suggested and collateral courses, and how far the requirements and the suggestions result in creating a taste for good literature, are quite other questions.

It may be interesting, however, to men and women of middle life, who may not be in close touch with the modern educational world, to know something in detail of the present methods of bringing undergraduates and books together. These methods do not differ greatly in different institutions, especially if one is thinking only of those institutions which are really worth while. The same general plan is followed at such universities as Columbia, Harvard, Yale, Princeton, and Cornell,

and at such colleges as Williams, Amherst, and Brown; and these may be taken as types of their class. In each the personal element is a very strong factor. Faculties in which the older men and the older spirit are still dominant cling more closely to the older methods. Younger men are urging the newer thought, and are more liberal in their treatment of the entire field of any given subject; although it must be confessed frankly that some of them carry this to an extreme, and sacrifice quality to quantity, substituting breadth for depth. As an illustration of the temper of the earlier day may be quoted the remark of a college president of distinction, to a gentleman who had been asked to consider a call to a position in his faculty. After a prolonged conference the younger man said, "Now, I would like to know something about my lecture-room, which I hope has my study immediately adjoining, in order that I may be in close contact with my students; and also about what are the chances for a department library, and for developing the interest of my students by required courses of reading, and so forth." To him the president replied, "My dear young friend, you have been called here as a teacher of history, not as a revolutionist." But that was long ago!

In these days the work of nearly every department is conducted with a judicious admixture of text-books, lectures, conferences and discussions, required readings and suggested readings. Few institutions have sufficient financial resources to permit the duplication of books to the extent necessary if classes or sections of any size are to withdraw from the library the titles designated for either required or suggested reading. These are generally withdrawn from circulation, and kept on what are known as reserve shelves, and are loaned for a short time only; in some instances for one or two days, in many courses by the hour only, and for use within the library building. The printed syllabi accompanying these courses, and the library records of the "special re-

serves," make it possible to determine with considerable accuracy the work which undergraduates are doing.

Taking Columbia University as a fair illustration of these more approved methods—though, because of the number of its students and the resources of its library, the figures will necessarily run somewhat in advance of those of smaller institutions—nearly 6,000 different titles are placed on special reserve during each academic year. The number so held at any given date varies somewhat, but there is rarely a week during which fewer than 3,500 volumes are on the shelves. At present writing (the first week in April) rather more than that number are on reserve, for some fifty classes or sections, representing fifteen departments or divisions. Nearly every department is represented at some part of the year in this special collection, and makes demands upon it through its students. The science work has collections of its own, immediately adjoining the laboratories, and therefore makes less use of the special reserve shelves. The greatest use is by the language and literature departments, the department of history, the departments of political and economic science, and the departments of philosophy and education. As more specific illustrations, taken quite at random: For the History of American Literature, a course carried for three hours (each week) through the academic year, the required reading covers six hundred and fifty pages of prose, fifteen essays and orations, seventy-five poems, and about twenty complete volumes; while the suggested reading calls for a reserve list of about seventy-five volumes more. The study of the English Essayists of the Nineteenth Century (three hours, through the year) makes heavy draughts upon Walter Pater's works, and those of Matthew Arnold and other essayists—demands which call for hard reading at least six hours each week of the course. A course on the outlines of Industrial History, carried for three hours during the first semester, requires the reading of twelve hundred pages for English Industrial History, and about four hundred pages for the Industrial History of the United States, and keeps on reserve about one hundred titles. To the History and Principles of Education three hours are

given through the year. Two text-books are used, with which students must become familiar—"The Meaning of Education," by President Butler, and the "Psychologic Foundations of Education," by Dr. W. T. Harris. Students taking this course are required to read Davidson's "Aristotle and the Ancient Educational Ideals," De Garmo's "Herbart and the Herbartians," Eliot's "Educational Reform," and Shaw's "School Hygiene." In addition to this, about three hundred titles are reserved under the head of suggested readings. It may be well to note here that "suggested reading" sometimes refers to the author entire, but more often designates certain pages to be read in connection with certain lectures or other portions of the work.

The course on the Labor Problem runs two hours a week during the second half of the year. Students are required to be entirely familiar not only with the lectures and the results of discussions in the classroom, but also with Cooke-Taylor's "Factory System and the Factory Acts," Von Plenar's "English Factory Legislation," and Abraham and Davies's "Law Relating to Factories." To the Constitutional History of England (to 1689) two hours are given during the year. For this work such books are reserved as Trevelyan's "Peasants' Rising and the Lollards" and "England in the Age of Wycliffe," Ramsey's "Lancaster and York," Gardiner's "Paston Letters" and "Life and Reign of Richard III.," Busch's "England under the Tudors," Froude's "History of England," Brewer's "Henry VIII.," Prothero's "Select Statutes," Adams and Stephen's "Select Documents," and Gardiner's "Constitutional Documents;" and we of the Library can testify to the faithfulness with which these authors are consulted. For the general work or general course in Ethics (three hours a week during the second half of the year) we reserve such titles as Brown's "Principles of Ethics," Kidd's "Morality and Religion," Clifford's "Lectures and Essays," Caird's "Philosophy of Religion," Dorman's "Ethics," Pfeleiderer's "Philosophy and Development of Religion," Pollock's "Essays in Jurisprudence and Ethics," Schurman's "Belief in God," James's "Will to Believe," Aristotle's "Nichomachean Ethics" (two translations), Grant's "Ethics of Aris-

totle," Grote's "Aristotle," Zeller's "Aristotle and the Earlier Peripatetics," Martineau's "Essays" and "Types of Ethical Theory," Blackie's "Four Phases of Morals," Mayer's "Ancient Philosophy," Sidgwick's "History of Ethics," and Hughes's "Natural and Supernatural Morals."

Not much ephemeral literature is suggested, though in civics and economics and general science the best articles in the current periodicals are under constant reference. Indeed, in some departments there are regular student-reports on current periodical literature bearing upon the course or theme then under discussion; and some science periodicals are taken expressly for required reading.

In addition to these specific demands should be noted the large amount of systematic reading accomplished by students in their own undertakings, such as their inter-class discussions, the work of the various literary societies, and the inter-collegiate debates. This work is now more or less under the direction of instructors, always heartily seconded by the librarians. Special bibliographies are prepared, and students are aided in every possible way to find and consult the most approved authorities and the latest utterances.

In many libraries bulletins are posted from time to time, calling attention to new books just received, or to magazine articles of especial interest and value. Short bibliographies are also "hung up," covering approved readings on the more important questions of the day. In some libraries all new books are kept on inspection for a week before being placed on general circulation.

These statements have been made quite *in extenso*, because in this way, possibly better than in any other, will the lay reader come to understand the length and the breadth of the field traversed by the student. It is not difficult to believe that an undergraduate who carries this work faithfully, in a manner which will be satisfactory to his instructors, and which will enable him to secure proper credits at the end of the year or of the semester, will cover in a systematic way far more ground than the average undergraduate ever thought of covering, say, in the early sixties, or even twenty-five years ago.

This method brings each student into contact with the very best literature on the subjects under his consideration. The quantity of work assigned is determined, or ought to be determined, on the same principle as that which covers all other assignments—what the average man will be able to accomplish with reasonable success. As in the other work of the course, the man above the average will either have more spare time (not necessarily idle time) and will read more widely and more carefully, or he will add what are sometimes known as unnecessary courses—that is, he will carry more work than is really needed for a degree, or he will undertake to shorten his course in time. It is quite possible, therefore, that men in the upper half of the class may accomplish more general reading than that which is set forth above. As for the men in the lower half of the class, in the matter of reading as in everything else, they are obliged to content themselves with the scantiest return for their labors, graduating at last, if at all, either quite by chance or just barely pulling through.

Science students spend in their laboratories much of the time which other students spend in the library. Conversely, it is entirely proper to speak of the time which students spend upon required or suggested reading as laboratory work, and this phrase is now quite generally used in connection with the humanities.

If a student is taking more than one course in which much collateral reading is required, he probably has very little time for voluntary work; which is only one more way in which electives fail to elect, and bring to the student more required work than was known under old-time fixed curricula. The requirements of such courses lead the student to specialize, as is shown by the fact that science students do not read very extensively on lines of general literature, and the students in the arts courses do not make very heavy demands for science authors.

It must be admitted that there is serious danger that in the midst of this required reading a student may not acquire a sense of proportion. This is not a necessary result, however, and is an error on the part of members of the faculty which ought not to be charged to the system itself. It is still true, perhaps it is more

true than it was years ago, that officers of instruction, especially the younger officers, are intensely devoted to their own work, and pay very little attention either to the work of others and its relation to their own departments, or to the symmetrical development of the college or university as a whole. Demands are frequently made which the average student cannot meet, which even the brighter students cannot meet, without seriously neglecting other work. This is a detail of administration, however, to be cared for as institutions have more experience and their officers grow wiser and more unselfish.

Just how far the present methods result in a taste for good literature is, of course, still a question. That which is done under compulsion is often positively distasteful, and all sane instructors recognize the deadening intellectual and spiritual effect of required work, of all work which is done, not with a love of it, for its own sake, but with a view to "satisfy some one else." The personal element is a strong feature in this entire problem—the personality and the temper and the inheritance of the reader as well as the personal power of the instructor. It is quite possible that there shall be, as there undoubtedly is, far more diversified and extended information about literature than was known even twenty years ago. But the chief value of all reading, after all, is that intimate acquaintance which comes from prolonged and careful study of the character and thought and purpose of the writer as these appear in his printed works. Possibly this may never be accomplished within the limits of undergraduate life. It is entirely true that all or nearly all of the work of a college course is that of opening many doors, of giving opportunity, of setting men at the beginnings of things, of start-

ing them right and along straight lines—rather than demanding complete mastery. The impressions of college life, even though vague and somewhat confused, have more to do with the development and after-life of the student than any exact form of knowledge that he may acquire. Lowell's remark that it was the smell of leather in his father's library that made him a literary man has much philosophy in it. It is worth something, it is worth much, to bring these undergraduates into contact with great masses of literature, to give them some sense of the extent of literature, to let them know what has been sought and what has been accomplished, even if they know of it in bulk only. The present methods of dealing with this whole question seem somewhat to contravene the old proverb; for we are able not only to lead a horse to water but to make him drink as well; with the hope that if he drinks largely of pure water he will acquire a distaste for everything else.

But here again for the hundredth time, as in every other phase of student life, are shown the place and power of the individual instructor who gets near enough to his students to impress them with his own personality. It is undoubtedly true that all real love for good literature springs from within, and cannot be imposed from without. But it is equally true that this taste may be stimulated by close personal contact with those who know the delights of constant communion with the best minds of all ages. We may be reasonably sure that, no matter what the systems or devices may be, they will prove but mechanical and formal and will be sure of failure unless back of them stands an inspiring teacher and through them is felt the uplift of a strong character and a devotion to all that is noble and pure and true.

## To the Song-Thrush

By Edwin Henry Keen

Singer, whose music does not cloy,  
Thy gladness we would borrow;  
The songs of birds arise from joy,  
The songs of men from sorrow.

# A PREACHER'S STORY OF HIS WORK<sup>1</sup>

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

## VII.

EVERY day of my life I more profoundly believe that the instrument God uses for the development of his kingdom among men is exactly the same to-day as on the day of the Pentecost; the symbol of that ministry is the tongue of fire, the message of man to man by word of mouth; and personally, while I know there are many reasons advanced for believing that the pulpit cannot hold anything like as important a place in social life as it did a generation ago—the magazines compete with it, the daily papers compete with it, the University Extension movement competes with it, a thousand and one methods by which education is presented to the "herd" are all supposed to compete with it and do compete with it in a sense—still, I profoundly believe that when a man has a vision of God on the one hand, and, on the other, the needs of the people in his heart, that man will get a hearing. No writing, no literature, no diffusion of knowledge, no religious or pedagogical press, or anything else, can take the place of that sort of preaching. Again and again I have seen churches doing good work, and when I have come to analyze their strength, I have found it lay in wise organization to meet the needs of the people, and patient maintenance of that organization; but these things, good and necessary though they be, cannot take the place of preaching. I see also fully—I have proved it in my own ministry and in the ministry of my clergy—how important visiting is; anything that brings you in vital touch with people is important and useful; but it does not take the place of preaching. When I say "preaching," I am using the word in the widest sense. It may be preaching at the dinner-table, in the study, on the street, on the political platform; it *must* be preaching in the pulpit; the giving forth of the message that a man has when he stands up

and will not sit down until he has delivered it, subordinating time, method, manner, everything, to that. That is what impresses people; that is the way still to reach all sorts and conditions of people.

I try to make myself the mouthpiece of my parish. What I mean by that is this: I do not think there ever was a man as fortunate as I am in the band of lay workers that surrounds him. Many of them have been with me now for almost twenty years. We need each other, love each other, and trust each other. They give me of their best. For instance, I am going to speak to the Sunday-school. I go to my superintendent: "What do you think I ought to say? What do they most need just now?" Or, if I am speaking to my Working-Girls' Society: "What should I talk to the girls about?" If it is the young men of the club, I ask in some sort the same question. The result of my questioning is that my friends who know the inward needs of each of these organizations, and the young people who make them up, give me their own sermon to preach, and I preach it. They can see what I cannot see. They hear and know what I have not had an opportunity to hear and know. The sermons I often preach are more often theirs than mine.

Such experiences make a man's ministry very rich, and keep his preaching very much to the point. I suppose the time will come when our business men will help us in the same way. Alas! they do not yet do it. When, for instance, a great railroad president, or a great lawyer, or a great politician, will tell the clergyman he trusts something of the inwardness of the hour, will tell him the struggle between light and darkness going on in the business field, between truth and lies, between knavery and righteousness, bribery and honesty—when, I say, he does this, the man who speaks in the pulpit can speak with power. As it is, the clergy fail to make their special messages go home because,

while they are right in the main, they are almost sure to be wrong in the detailed statement of their case. And men sneer at them and say, "Let the shoemaker keep to his last. Don't bring politics or business into the pulpit; you do not understand them. Give us the old doctrines of Christianity. Preach to us the Gospel." And, of course, all this sort of talking I hold to be little short of hypocrisy, if it falls short of it at all. If the laity would help us to preach, the pulpit would have more power than it has, the ministry would be more vital than it has been. But I am bound to say that I think the fault is often, with the preacher more than with the laity, for the preacher doesn't impress on his people how anxious and ready he is to borrow their knowledge and experience, and use it freely in pressing home the great message of truth and righteousness on the conscience of the community.

There is great danger of the laity seeking God away from the Church, unless clergymen set themselves resolutely to restating old truths; and they are not doing that as they should. What we need to-day in the Church is a restatement of the truth in terms that men can accept. The Church fails to recognize that men do not want to give up the great doctrines; but they find it impossible to accept them as they are often given to them. Many of the laity attached to St. George's I got on the basis of restating old truths in a way adapted to the thought of to-day. Of course the free church idea had something to do with it; but, even if you cast your fly over a fish, it does not follow that he will take it; you must give him the right sort of fly. What we need is earnest, persistent effort on the part of the clergy to restate old truths—truths men learned at their mother's knee—in terms that they can accept to-day; the terms in which they were taught thirty years ago will no longer touch them. These truths now live in men's minds as a memory; we must restate them so that they will become a living power; as Paul said, "Let us commend ourselves to every man's conscience in the sight of God." That is the way to get the laity; and this is not impossible. I have had no difficulty in getting the laity in the last twenty years' experience.

Neither had I any difficulty in Toronto.

I came to Toronto on the crest of an extraordinary spiritual wave. Moody had not been there; no revival had been there; the movement that burst out in New York in the sixties and seventies came years later in Canada; I happened to be the match that lit the fire—that is all. If I were to go to Toronto to-day and preach the sermons I preached twenty-five years ago, I could not get the people at all in the same way. I firmly believe that if you keep constantly before men the truth that the essence of the Gospel of Jesus Christ is the Love of God, and therefore the brotherhood of men, they will respond to it; there will be a great and growing response.

Just as there is a difference between the preaching needed to-day and that needed when I began to preach, so there is a difference between the sort of call upon people a minister should make to-day and that made a generation or so ago. My visiting of course began in the East of London and in Norwich, the eastern part of England; and in those days the people expected the visits to be of a distinctly clerical, professional type. I remember I made it a rule in those early days that, if possible, I would never visit without praying or reading the Bible, and that was the common expectation of the people on whom I called. I sometimes found it very irksome, but I went through with it from a sense of duty. I made it a rule in those early days never to go into a railway carriage without trying to read my Bible, or talk to people about their souls. It was a terrible standard I set for myself, and caused me much trouble. I fear it was not very acceptable to my neighbors; but I stuck at it until I saw a better way. That sort of thing did not have the appearance of unreality nor seem as unreasonable thirty years ago as it would to-day; it would not be possible now here in the States, and I doubt whether there is as much of that sort of thing in England.

And yet, in a modified way, I still try to pursue that policy. I think the smoking-room of a Pullman car affords a great many opportunities for earnest conversation. One naturally begins with politics, then the next step is sociology, which is the first cousin to religion. I recall an extraordinarily interesting conversation that I had in a Pullman car two or three years ago. I

had been preaching at Yale, and got into the New Haven train. There were three or four men in the smoking-room; we talked politics, and then slipped gradually into an earnest sociological discussion and so into a religious one. I was led on from step to step until I dwelt on what I have already said has been an immense power in my life—the relation of man to God because he is man; of the Fatherhood of God; that men were children of God, not because they had been converted or baptized, but because they were born the children of God; and as I went on, I suppose I put a certain sense of energy and earnestness into what I said. At any rate, after I had been talking about three-quarters of an hour, one of the men arose (they were all perfect strangers to me), wrung my hand, and said: "I've got to get out here, sir; but I want to thank you, and to say to you that I am a Senior Warden of an Episcopal church, and I have never heard that before, and that is God's truth." I would not think of getting into a train and pulling out my pocket Bible, or talk to people about their soul and ask them if they were saved, as I did years ago in England; such practices are impossible; but I do think there are great opportunities, if we are only ready to take them in our daily intercourse with our fellow-men, of bringing in such subjects, and generally you find them as ready for discussion as you are yourself. Then, such discussions are robbed of all professionalism—a great advantage.

I remember an illustration of the same thing in a very different environment, years ago when I was in the Far West. I was in a very wild part of the country; for five or six weeks I had been away from every kind of civilization, and of course I dressed as everybody else did there. One day I was riding with a friend (who was a lawyer, by the way) to the next United States Army post. I wore no coat; my shirt was heavily spattered with blood from butchering our own meat and carrying it into camp on my shoulders; just before we reached the post we met three or four rough Western fellows; they looked at me and at my friend, gave us the time of day, as they always do there, and passed on to where our outfit was behind; they hailed the drivers of our pack horses and said,

"Who are those two fellows in front?" "One is a lawyer and the other's a parson." "Suppose the big fellow is the lawyer?" "No, he's the parson." "Well, he looks big enough to work for his living," they answered, as they rode on. I had a chance to speak to those same men at the post the next Sunday; and coming in contact with them in this absolutely natural way was a splendid introduction.

In regard to visiting by a rector in New York, often it is quite impossible to introduce the subject of religion at all; that is not the chief function—the thing is to come in touch with the people—to break the ice and know the life we are trying to appeal to; only when we know and understand it are we in a position to appeal to it wisely and well. Most clerical appeal is insufficient because the clergyman does not know, and most clerical intercourse with the people is so horribly professional that the clergyman never learns. I always say to my younger clergy, "Let us try to be natural." That is the only way to succeed with them. We have got to know these people before we can help them, and we cannot know them unless we come in contact with them; a great city like this does not offer any opportunities of knowing people except by visiting. In many cases, when you get to know them well, you can go right into the home and magnify your office, and preach, and speak, and pray. I can cite an interesting illustration. One of my assistants had been visiting for some time a man, a noble sort of fellow, who had been through the war and had fallen into ill health through the results of a heroic effort to save three men fallen down a well into a poisonous vapor—the strain on his heart and lungs had been so terrible; and, as I said, one of my assistants had been visiting him for years. He would talk to him of the weather, the events of the day, and all sorts of things—never of religion; but instinctively the sick man knew the young man came to him as a friend and a brother. My assistants do not wear clericals, as a rule; they can if they wish, but they usually follow my example. After fully two years' constant visiting, this brave old man—for he suffered bravely—said to my assistant: "I want the Holy Communion; I never was baptized in the Episcopal Church, but though I have not

been baptized in the Episcopal Church, don't you think I could take the Holy Communion?" And he added later: "You are the only minister I ever asked for the Communion." A beautiful result of wise and patient visiting for years. I know, too, that the bravery and fortitude with which the old man bore his sufferings was of immense help to the young clergyman. Often the visitor gets as much benefit as those who are visited. I have made it a rule with myself, whenever I feel particularly depressed and down-hearted—as we all feel at times—to go visiting. I don't like it; I have to spur myself to do it; but I do not know of any better stimulant for the soul than to visit sad, sick, and suffering people; it is an immense help. I urge visiting for that reason; not merely because it helps the poor people, but because it is of great benefit to the visitor.

In St. George's Church we do not urge the Holy Communion on any one, but it is a great help; and to those brought up in the Lutheran Church, or in our Church, it is an immense help as a confession of faith. Of course in a great many churches private communion is urged; we do not do that; but we hold ourselves ready at any

time to administer it to those who seek it; we never urge it, as some churches do.

Practically, I have found my best material for my sermons in visiting. In talking with people I have found out the subjects about which they wished to be instructed; I have found out the mistakes they have made, and in the objections offered I have found my text. I have also found it very helpful to bring up in conversation, while visiting, the subject on my mind; and some of the very best suggestions and the best points I have made afterwards I have gained by contact with people in visiting. We do not fully appreciate the value of knowing people—how they live and what they think. Just as the sonship of man to God is only about dawning on men's minds to-day, so it follows that the brotherhood of men to one another, which follows after the first, has not yet been accepted at all; and it seems to me that the constant intercourse I have spoken of affords all sorts of opportunities to illustrate this revolutionary gospel and press it home. The brotherhood of man is a gospel that is not preached yet; it is not understood, but it is bound to come because of the sonship of man to God.

[TO BE CONTINUED]

## Types of the Unemployed

By Percy Alden

Honorary Warden of Mansfield Settlement, London

**B**ALZAC in "Père Goriot" refers to "dramas that go on and on."

Such are the tragedies of the unemployed, recurring with monotonous iteration during every period of industrial depression.

Almost my first experience of East London was a visit to the Dock Gates in the Custom-House district some thirteen years ago. It was a raw, cold winter morning, and at 6 A.M. a northeaster was sweeping with such force over the waters of the Albert Dock that I began to regret my rashness in coming out at that early hour without a sufficiently thick overcoat. A small steam ferry took me to the south side and landed me near a ship that had been berthed soon after midnight, and was now discharging her

cargo, which consisted chiefly of products of the Far East.

About ninety extra men were to be taken on, and I naturally expected to see some inconsiderable surplus of labor; but as I reached the end of the dock-shed I saw, to my surprise, a struggling and seething mass of humanity—nearly a thousand men—facing the foreman who was vainly endeavoring to make a selection from the ranks of the workingmen. A very few minutes sufficed, for proper selection was impossible.

It was a sickening spectacle. If an envoy from a savage tribe in central Africa had been told that these men, with faces bleeding and clothes torn in the mad rush to obtain a ticket, had been fighting for the privilege of a few hours'

work, he would have surely smiled at this pitiful outcome of our civilization.

Some of the big-limbed and slouching claimants for work were obviously bucolic. Addressing one of them, I found that he was from a farm not one hundred miles from Braintree in Essex, and had been compelled to come up to London owing to the fact that the farmer who had employed him, from the time he was a boy sent into the fields to scare away birds, had been unable any longer to find work for him. It was the old story of land going out of cultivation and being laid down in grass. The man, with his wife and three children, had trekked to London. Unable to find regular employment, he had drifted with the tide of casuals to the Dock Gates. The wife eked out her husband's precarious earnings of less than twelve shillings a week by charring and washing. I paid her a visit, and found her two small rooms spotlessly neat and clean. She had not yet accustomed herself to the dirt and smoke of London, and fought for her ideal of cleanliness with the energy of despair. Like Dr. Johnson's washerwoman, she had little time to weep, for when I remarked that it was almost heartbreaking to have to slave all day, leaving her children without a mother's care and attendance, she grimly observed:

"If I don't work they will starve, and I have no time to think about my heart or anything else but just how to keep the wolf from the door."

Several years after, I lighted on the same couple in a still slummier district. I found that degeneration had set in—East London had claimed its own. Both man and wife had been assimilated to their environment; hopelessness had led to drink, and drink had created a still more direful form of poverty. The one room which they occupied was filthy and comfortless. The two remaining children (one had happily died) were by this time genuine slum children. Upon their old-world wizened faces was stamped the hallmark of the East End, for poverty brands the children whom she adopts.

The story is typical of the fate of many thousands who have left the farm and the sleepy village for the noisy factory and town. Some of them migrated into the big towns because village life was monotonous and dull. To them the city was a kind

of Eldorado where fortunes were readily made and where work was to be found whenever it was wanted.

London is a huge magnet whose attractive power is irresistible. It is a leviathan which yearly swallows up with voracious maw thousands of men, women, and children. There are many, like the laborer I have mentioned, who leave village and hamlet because derelict farms and waste lands can no longer sustain the tillers of the soil, whose ancestors reaped and sowed ages ago in merry England.

The problem has not changed during the last twenty years, except that it has become increasingly perplexing and difficult. During one decade forty thousand acres of land went out of cultivation in the county of Essex. London grows apace like some gigantic fungus. Considerably less than half a century ago it was possible in South West Ham, the extreme East of London, to shoot wild fowl upon the marshes which are now smothered with thousands of small brick boxes in which men, women, and children exist. Everywhere mean streets drag their weary length along the riverside and dock. It is the apotheosis of the sordid.

To-day in East London twenty thousand casual laborers compete for work at the docks; a third of them may find that work during the twenty-four hours, the rest go empty and hungry away. Thousands of these men have come from the country districts, and many are still racy of the soil and longing to go back to the land that would at any rate give them a decent and honest livelihood if only the opportunity of work were found. It ought not to be beyond the reach of statesmanship to find useful employment on the land for all who are willing to return, and we may depend upon it that until we have taken this step we have not touched even the fringe of the unemployed problem. "An unemployed man," said Sir John Gorst on one occasion, "whether he is a Duke or a docker, is living on the community. If you set him to grow food, he is enriching the community by what he produces. Therefore, my idea is that the direction in which a remedy for the unemployed evil is to be sought is in the production of food."

Here is the idle laborer, and there the vacant land. A careful selection of these

men should be made, and derelict farms purchased by the Government. On these lands they should be established with their wives and families, and if necessary subsidized for the first few years while these village settlements are reclaiming the waste places. The construction of garden villages and garden cities is only a matter of time and patience, but I very much fear that front-bench men are lacking in imagination, and in all probability the initiative will have to come from below and not from above.

It is not merely "the man with the hoe" who finds the city a stern and pitiless parent. *He* is only an adopted child; what of those who are born in her midst?

A procession of about five thousand unemployed has just passed the house. Four abreast they march—these wrecks of humanity. It was almost the saddest sight under God's heaven, these ghosts of men that were. "The scum of the earth," mutters the cynic. Granting that this is the case for the sake of argument (though I do not admit it), who made them so? As they shuffle hopelessly and wearily along, half of them seem to be too weak and anæmic to work. It would take six months of fresh air and good food before they were fit to do a spell of real hard labor.

During the severe winter of 1895 I acted as Honorary Secretary of an unemployed Relief Works Committee in West Ham, which gave some thousands of men employment in laying out cricket pitches and football grounds and in planting trees along the streets of the borough.

Many of these men were found to be too ill and weak to work until they had been fed up, and those who had been unused to such labor struggled on with bleeding hands and aching backs.

Even those who were unwilling to work were men who once might have been made useful servants of the community if they had been systematically employed and trained before it was too late. You cannot get a good day's work out of a man whose strength has deteriorated owing to lack of food, and whose morale has been undermined by want of employment.

How much does the average West-End-er know of the lives of these laboring folk—where born, how reared and fed

and clothed? Who is responsible, the man or his parents, that he was born the son of a casual dock-er? Maybe neither; possibly the guilt rests upon the society that does so little to remove the many blots on its escutcheon.

I once knew just such a man, born and bred in Limehouse—his father an ignorant dock-er, whose work, to say the least of it, was irregular. The wages of the father, Charles M., averaged fifteen shillings a week. He and his wife, a well-meaning but somewhat futile woman, had five children; the youngest was the man I knew for several years. He told me that when under ten years of age he helped his father and mother by working all day Saturday to eleven o'clock at night and all Sunday morning in a barber's shop as lather-boy. It is quite possible that here he sowed the seeds of the consumption that gradually laid its hand upon him. As soon as he was old enough to go to the docks he became a "casual." It was the usual commonplace story of loafing and lounging, of no work and overwork. One bitterly cold, wet night, while "working a ship" that was going out on the morning's tide, he contracted a chill and went home to his wretched one-roomed tenement to linger out the rest of his life.

The struggle to live or to die lasted two years, during which time he did little or no work. The night he died he sent for me about one o'clock, and there, in that little mean room—the sole furniture a bed, a broken chair, a saucepan, and two or three cups and plates—he told me the pitiful story of his wasted existence. It was a sad contrast to the picture torn from some illustrated magazine and pinned over the mantel-shelf, which represented a scene in a West End ball-room. I leaned over him and asked him—his wife standing near by with a hopeless look upon her careworn face—how he had managed to live during the past two years, for I had lost sight of him for a while. "Well, sir," he said, in a weak, gasping voice, "my pal Jim, wot lives down below—he used to work alongside me in the docks—when I was took ill, he said, 'You come along with me, Bill; I'll take care of you;' and for two years, sir, he has given me and my missus board and lodging for nothing."

The man died that day, and when I

went to thank the good Samaritan who lived down below, he merely shook my hand and said:

"I don't need no thanks. We working chaps have got to help a man what's down on his luck. He'd 'a' done just the same for me if I'd been in the same fix, and I couldn't bear to send him to the work-house."

"Misguided sentiment!" some good people may say. Perhaps it was, but all the same I wish there were a little more of it among our legislators, among the people who have power and influence and money.

The question I would like such to put to themselves is this: How far are we responsible for this enormous army of irregulars whose dirge-like chant is—

"Us the naked night  
Slays from street to street."

Schiller's *Moor* soliloquizes, "O Heaven, that I could be as one of these day-laborers!" If he had known what the life of a day-laborer in East London really was, he might have changed his mind on the subject. It is not the actual toil that is the difficulty, it is the weary looking for work and finding it not. It is because no man hath hired us that we stand here at the street corner all the day idle.

It must never be forgotten that the question of unemployment is not merely a question of so many hundreds and thousands of idle men, or so many millions of wasted days. The fact that is too often lost sight of was emphasized the other day by a large employer of labor.

"There are," he said to me, "fifty-five per cent. of skilled men out of work just now. During the long spell of idleness any one of these men invariably deteriorates. In some cases the deterioration is very marked. The man becomes less proficient and less capable, and the universal experience of us all who have to do with large numbers of workmen is that nothing has a worse effect upon the caliber of such men than long spells of idleness."

The men themselves are not wholly to blame if in the end, as a result of such disorganization in our industrial system, they have become inefficient, ineffective factors in the work of production.

Once a man has fallen out of the race,

he continues to fall. "When a rich man has fallen, he hath many helpers," but the poor man who stumbles has very few who will take the pains to lift him up.

In any case, he must be lifted up in the right way. It is not charity, but constructive statesmanship, that is required. Charity has become a byword and a reproach; we need that our charity should take the form of associated effort on the part of both local and national authorities. It is not charity that the workingman asks for, but merely scant justice. "Before you condemn," he says in effect, "give me the opportunity of work."

There are few occasions that I can recall with any degree of satisfaction when charity seemed to injure neither the recipient nor the giver. I remember on a certain day, during the winter I have already alluded to, that a man came into my office whom I had known fairly well some years before. He was a stevedore, and he came for relief, like many hundreds of others during those dark days.

"Charlie," I said to him as he entered the room, "you are the last man I expected to see."

He was a tall, gaunt man with a hard, set face, and the effort to come and ask for help had evidently been very great. He began to tell me his story; as I knew him so well, I could easily fill up the gaps for myself. He had met with an accident in the docks, a compound fracture which involved many months of pain and uselessness. Finally he ran out of all benefits, pawned and sold all his little household gods, and then, as "a last straw," when he was once more able to work, there settled down on London a long and continued frost.

I stopped him as he was telling the story and gave him assistance, feeling that he deserved far more help than I could render. I think he felt the regard and the sympathy behind the gift, for suddenly his face began to soften and his lip to quiver; then, without warning, his head fell forward on his arms and he sobbed like a little child. Perhaps there is no harm in confessing that he was not the only man crying in the room.

I felt then and I feel now that, however careful we are in the distribution of charity, it is no solution whatever of the problem, and we ought to feel devoutly

thankful if it does not injure the recipient. Justice to the willing worker and the welfare of the nation alike demand that productive work should be found and offered to all who are able to work.

As to a remedy, or remedies, it is sufficient to say that our civilization would be absolutely discredited if there had been no solutions to offer at the National Conference which was held in the Guildhall,

London, on February 27 and 28 last. Many suggestions were there made for meeting the difficulties which this complex problem presents. Some of these suggestions, I feel sure, may be found helpful, and if the Government could only be induced to set itself resolutely to the task of helping the genuine unemployed, it would have the hearty and enthusiastic support of the nation in its attempt.

## The Childless Church

By Charlotte Brewster Jordan

**A**MONG the various theories advanced to account for the increasing falling off in church interest, there is one reason which is largely responsible for this deplorable condition of things which is yet almost universally ignored. This reason is not peculiar to the city church, to the workingman's church, to the conservative, sectional, or suburban church. It is inherent in each; it cuts off the future of all. It lies in the fact that the church of to-day is becoming a practically childless church.

It is an organization which deliberately throws away its golden opportunity of stimulating the intelligent devotion of the ranks from which all future congregations must be drawn. It is progressive with its order of service, its choral uniform, its individual communion service, and its methods of raising money for various missions; but what progress has it made in rendering its service magnetic to the children who enter its walls only under compulsion? Appealing more or less to the intelligence of the adult, the modern church, while exacting regular attendance of the child, and upbraiding bitterly if it be lacking, fails to bestir itself either to awaken or to retain the child's loving interest in church matters. Its youthful congregations are expected to learn what they can through some blind system of absorption, and through the habit of enforced attendance to develop the love of church-going and worship.

Ask any truthful child in America whether he would rather go to church or to the circus. Ponder on the overwhelming reply, and probe for the remedy. Go about it logically, in a businesslike way,

and with the independent sanity which characterizes the general attitude toward other matters relating to the symmetrical development of childhood. Does it not all come down to this: If we do not wish our children to prefer other recreations to church interests, we must look to it that our church services shall be more attractive than these other diversions? In other reforms it is customary to begin with the children. If our Church is dwindling, why not interest the children in its rebuilding? In the recent Spanish-American war the policy of Spain in sacrificing her tender youth to the exigencies of war was severely criticised. If it be impolitic for a national army to throw its seed-corn into the hopper, upon what grounds is such a proceeding justified in our Church army?

Many feel that when they have sent their children to Sunday-school they have fulfilled their whole duty. To many others the Sunday-school seems to have wandered (as was ably shown in an article in *The Outlook* a few years ago) far from its original purpose of affording Bible instruction to those having no home advantages, and is, therefore, largely accountable for much shirking of spiritual matters among capable but indolent parents. Even under the most ideal conditions the Sunday-school, while it may supplement, can never really take the place of, the church. As well expect the tender to take the place of the locomotive!

Many of the unawakened will doubtless point the finger of triumph to Children's Day, now a recognized annual feature in church work. Once a year the adults trim the church, train the children in

song and recitation, and substitute this children's service for the regular morning session. In many instances I have known this elaborate celebration to last two hours and a quarter, very frequently two hours. And the prolonged strain of seriousness has begotten frantic restlessness and consequent misbehavior, and a positive hatred of all church functions. Even where this service is really one of joy, brief and interesting, causing no aching little legs nor rebellious little hearts to feel that they have been decoyed into enduring a performance worse than the stereotyped one, is it right that the children should feel that but one of the one hundred and four yearly sessions is reserved for their enjoyment? If we *wish* them to attend church but once a year, then a brief, well-conducted Children's Day might possibly answer our purpose; but since we wish them to attend fifty-two times a year, why should they not have fifty-two enjoyable services as their right?

To the mother breaking in her little ones to the church-going habit, there is a choice of four methods, each of which has serious drawbacks. First, she may calmly ignore their ill-adjusted existence, their aggressive restlessness, thereby causing unspeakable annoyance to the would-be worshipers in neighboring pews; or up her sleeve she may carry pencils and coils of string with which to punctuate the tedium of the service, or she may bribe the small feet up the steeps of spiritual form by means of earthly sweets periodically distributed; she may permit her children to file out of church just before the sermon begins, thereby strengthening the impression that the subtleties of discourse are not for childish minds; or, worst of all, she may train her children, by threat or bribery, to the attainment of that so-called good behavior in church which is really the masking of the far-away thought under the attitude and expression of attention. This last method of settling down to reverent inattention is really the most dangerous of the four courses, for it is a systematic laying of the foundation of mind-wandering, the bané of our maturer years. For this reason, a thoughtful parent, realizing too late that she had thus deliberately taught her children to simulate an external standard to which nothing internal corresponded, and so had

fastened on them a habit of mind-detachment almost impossible to break, declared that if she had it to do over again, she would (since no service came down to the understanding of young children) keep them from church until they were twelve years old—old enough to give the service their intelligent attention. She believed that the truest evangelical doctrine is that out of the heart are the issues of life—not out of concession to uncomprehended forms. Whether we agree with her viewpoint or not, we cannot but open our eyes to the straits to which the inflexibility of the church puts its would-be adherents. The parent must take the church as she finds it, and no amount of expediency can alter the fact that in its present form it is insufferably dull and painful to the normal child. As well force a teething child to feed on roast beef as to expect a child's immature brain to relish the concentrated spiritual food offered in the regulation adult service.

The only course now open to the mothers is to insist upon attendance upon the church as it is; to insist upon the uncomplaining swallowing of bitter medicine. In other matters, do we give bitter medicine, expecting the child thus to acquire a relish for it which will render it indispensable to maturity? Is it not preposterous! It would be humorous were it not so pitiful. In any other enterprise, do we struggle to foster fondness through dislike? I say "struggle," for it is a weekly struggle in two-thirds of our so-called Christian homes. Children always have rebelled and always will rebel against attendance at a practically unintelligible service. This rebellion in maturity constantly swells the ranks of the non-church-goers. Do not the zealous parents who insist upon regular church-going in the belief that so they are forming a commendable habit, practically defeat the object which they so earnestly desire, by giving children a pronounced distaste for religious things? They make no allowance whatever for that recoil from rigidity which leads to laxity and indifference; they forget that the atmosphere of artificial unworldliness is entirely alien to child-nature. I believe that, if the statistics could only be ascertained, it would be found that insistence upon unsatisfied church-going makes ten renegades

from the Christian army where it makes one recruit. It has been computed that not more than three per cent. of the male population of New York City are members of Protestant churches. Allowing for the large foreign population swayed by the powerful ritual of other churches, there is still a large percentage of absentees to be accounted for. Is it not reasonable to suppose that, had these men been kept in the Church in childhood through the force of love rather than through the force of a distasteful habit, they would not now be classed among "the spiritual restaurateurs," or the religious driftwood of a large city?

Do adults exact of themselves such a dose of unmitigated duty as they administer to their children? Do they not combine *some* spiritual refreshment with their sense of duty? Why, then, should the diminutive adult's part be one of duty only? Is it not possible to devise for them a weekly service where they may enjoy what their elders enjoy, adapted to their years and stage of development? Such a service *is* possible, with no pinchbeck attractiveness either, but based upon the solid beauties and substantial foundations of the Church glorious. There are a few sporadic instances of children's service founded upon the belief that far better results may be obtained from a weekly half-hour of joyous reverence than from a yearly two-hour session of joyless restraint; such services do exist, but they are pitifully rare.

In western New York there is such a weekly service—a real church service, no annual wretched travesty, two-fifths prosy address and three-fifths recitations, but a real Children's Day every Sunday in the year. Promptly at four o'clock the children enter the body of the church, singing, "Brightly gleams our banner." Then follows the regular church service, identical in its usual order, yet with each of its component parts as brief as may be. There is, for instance, but one Bible reading—some brief but interesting or strengthening selection. The hymns are the grand old church hymns—no religious two-steps—and they are printed in full on the leaflets with which each child is supplied. The choir and organist do what they can to lead and supplement the childish voices. The children pass

the collection-baskets. The interminable prayer is omitted, but two earnest, simple prayers are offered, such as a little child in touch with its Father would be apt to utter. Then the sermon is preached as usual, from a text, yet is entirely within the comprehension of the little ones, no longer restless, because they are interested and because they know that this direct little talk never exceeds ten minutes, rarely eight. Happy in the consciousness that they have done right, they go out, singing with spirit "Onward, Christian Soldiers." The session lasts just forty-five minutes, and the children know that they can depend upon its *never* being prolonged. At the close there is an exquisite, truly sacred concert by the choir and organist for all who care to remain. To me, one of the most beautiful features of this children's church is the happy co-operative look on each child's countenance. It is *their* service; they are doing all in their power to make it an acceptable one. Do you think they would miss that afternoon church? Not if it could be helped. More than that, their parents would not miss it either. And not the least of the benefits arising from this service is that it is one which the entire family may enjoy. It is quite safe to assert, on the other hand, that when entire families attend the regulation service, several fail to enjoy it.

Contrast this voluntary service with the dreaded ordeal which the average child endures. By some mild form of intimidation, vague hints of punishment here or hereafter, he is inveigled into sitting out a service which, as far as he can see, has not the remotest connection with his eternal welfare. This is insisted upon by an otherwise gentle mother, strongly conscious of her child's viewpoint, yet haunted by a vague, compulsory feeling that, while there seems to be much bungling and maladjustment, still, since this order of things has been dragging along for many hundred years, it will probably be erring on the right side to stick to so well established a custom.

To those who believe in the economy of Christian effort, the children's weekly church service might well take the place of the numberless junior prayer-meetings attended by mere handfuls of the large number to be reached through the church.

Or even the Sunday-schools where groups of children are at the mercy of different individuals might, if no other expedient suggest itself, give place to a Sunday afternoon service, where the entire flock would be under the guidance of one spiritual shepherd.

In our city churches it would be easy enough to arrange an attractive Sunday afternoon service. The desire of large city populations for diversions within the pale of respectability is pitifully noticeable. Watch the crowds at the side door of the Academy of Music when a notorious preacher is advertised to speak! They come in throngs, and wait long and patiently in the biting wind until the doors are opened, filling the house as compactly as upon grand concert nights. Many are doubtless attracted entirely by the music, thereby proving the truth of George Herbert's lines—

"A verse may find him who a sermon flies."

Be the initial attraction what it may, they seem also to enjoy all of a service so brief, so songful, and so entirely within the comprehension of the youthful mind as these popular meetings are apt to be.

In suburban churches a regular Sunday afternoon service for children might be substituted for the regular evening service. And if it be desirable to add the enthusiasm of numbers, the churches might unite in a union service, thereby giving the children an opportunity to witness a practical exposition of that interdenominational unity of which we read so much and see so little.

"But," argues a minister of experience, "it is all but impossible to round out a sermon or to elaborate a helpful thought in less than twenty minutes." Doubtless it is, and it would indeed be a great pity if the fine, trenchant sermons which spiritually uplift so many thousand persons should be maimed and curtailed, simply that our restless little ones may be appeased. Surely the highest ministerial efforts should not be suborned to the demands of the immature mind! No, a thousand times, no! But is it too much to ask that our little ones be fed, too? That mature sermons be reserved for the morning session, and that a Sunday afternoon service adapted to their limitations, requiring as much thought, though differ-

ent in kind, be regularly set aside as the children's own?

In his able plea for rational methods of Sunday-school instruction, Patterson Du Bois, in his "The Point of Contact," says:

The Sunday-school can as little afford to ignore or to repudiate those fundamental pedagogical laws upon which all great educators are now practically agreed, as can the secular school. Education is education, no matter what name the school goes by. The Sunday-school suffers from a hallucination that, because it is a religious institution, it must educate by some method peculiar to itself—a method which too easily presumes on God's willingness to make good our sentimentally lazy shortcomings.

What is true in Sunday-school matters is even more true in church matters. Lack of rationality has caused us habitually to overlook the enormous power of childhood as the factor of churchhood. Fifty years ago the same unreason prevailed regarding the initial schooling of little children. Froebel came to the rescue with his mother-instinct, and knowledge was thenceforth garbed so attractively that every little kindergarten hugs it to its heart. Would these little enthusiasts prefer three-hour sessions in kindergarten, with lessons arranged as varying diversions and outlets for childish restlessness, to the one and a quarter hours of modern church, unintelligible and slightly varied?

Let those who sincerely deplore the waning of church interest rise from their lethargy, bring reason to the rescue, and make the church an attractive spiritual home where children will love to go, of which they will have happy memories, to which they will wish to dedicate their children when they, in turn, become a part of the older, guiding church. Then will the transition from the loved church of childhood be gradual, almost unconscious, to the loved church of mature years.

The world waits for the coming of the one who will do for the children's church what Froebel did for the children's school. When that one comes, the reproach of the childless church shall be taken away. The Church will then rise in its might and renew its strength, and its place as the head of Christendom shall not be challenged as now. It will gather the little ones in its arms and so fulfill happily and intelligibly that request, now nearly two thousand years old—"Suffer the little ones to come unto me, and forbid them not."

the forest people. And here, unlike the Aromatic Shop, were none of the products of the Far North. All that, I knew, was to be found elsewhere, in another apartment, equally dim, but delightful in the orderly disorder of a storeroom.

Afterwards I made the excuse of a pair of moccasins to see this other room. We climbed a steep, rough flight of stairs to merge through a sort of trap-door into a space directly under the roof. It was lit only by a single little square at one end. Deep under the eaves I could make out row after row of boxes and chests. From the rafters hung a dozen pair of snowshoes. In the center of the floor, half overturned, lay an open box from which tumbled dozens of pairs of moose-hide snow-shoe moccasins. Shades of childhood, what a place! No one of us can fail to recall with a thrill the delights of a rummage in the attic; the joy of pulling from some half-forgotten trunk a wholly forgotten shabby garment which nevertheless has taken to itself from the stillness of undisturbed years the faint aroma of romance; the rapture of discovering in the dusk of a concealed nook some old spur or broken knife or rusty pistol redolent of the open road. Such essentially commonplace affairs they are, after all, in the light of our mature common sense, but such unspeakable ecstasies to the romance-breathing years of fancy. Here would no fancy be required. To rummage in these silent chests and boxes would be to rummage, not in the fictions of imagination, but in the facts of the most real picturesque. In yonder square box are the smoke-tanned shoes of silence; that velvet dimness would prove to be the fur of a bear; this birch-bark package contains maple sugar savored of the open wilds. Buckskin, both white and buff, bear's claws in strings, bundles of medicinal herbs, sweet-grass baskets fragrant as an Eastern tale, birch-bark boxes embroidered with stained quills of the porcupines, bows of hickory and arrows of maple, queer half-boots of stiff sealskin from the very shores of the Hudson Bay, belts of beadwork, yellow and green, for the Corn Dance, even a costume or so of buckskin complete for ceremonial—all these the fortunate Child would find were he to take the rainy-day privilege in this the most wonderful attic in all the world. And then, after he had

stroked the soft fur, and smelled the buckskin and sweet grasses, and tasted the crumbling maple sugar, and dressed himself in the barbaric splendors of the North, he could flatten his little nose against the dim square of light and look out over the glistening yellow backs of a dozen birch-bark canoes to the distant, rain-blurred hills beyond which lay the country whence all these things had come. Do you wonder that in after years that child hits the Long Trail? Do you still wonder at finding these strange, taciturn, formidable, tender-hearted men dwelling lonely in the Silent Places?

The Trader yanked several of the boxes to the center and prosaically tumbled about their contents. He brought to light heavy moose-hide moccasins with high linen tops for the snow; lighter buckskin moccasins, again with the high tops, but this time of white tanned doeskin; slipper-like deerskin moccasins with rolled edges for the summer; oil-tanned shoe pacs, with and without the flexible leather sole; "cruisers" of varying degree of height—each and every sort of foot-gear in use in the Far North, excepting and saving always the beautiful soft doeskin slippers finished with white fawnskin and ornamented with the Ojibway flower pattern for which I sought. Finally he gave it up.

"I had a few pair. They must have been sent out," said he.

We rummaged a little further for luck's sake, then descended to the outer air. I left him, to fetch my canoe, but returned in the afternoon. We became friends. That evening we sat in the little sitting-room and talked far into the night.

He was a true Hudson Bay man, steadfastly loyal to the Company. I mentioned the legend of *la Longue Traverse*; he stoutly asserted he had never heard of it. I tried to buy a minkskin or so to hang on the wall as souvenir of my visit; he was genuinely distressed, but had to refuse because the Company had not authorized him to sell, and he had nothing of his own to give. I mentioned the River of the Moose, the Land of Little Sticks; his deep eyes sparkled with excitement, and he asked eagerly a multitude of details concerning late news from the Northern posts.

And as the evening wore, after the manner of Traders everywhere, he began to

tell me the "ghost stories" of this station of Cloche. Every post has gathered a mass of legendary lore in the slow years, but this had been on the route of the *voyageurs* from Montreal and Quebec at the time when the lords of the North journeyed to the scenes of their annual revels at Fort Williams. The Trader had much to say of the magnificence and luxury of these men—their cooks, their silken tents, their strange and costly foods, their rare wines, their hordes of French and Indian canoemen and packers. Then Cloche was a halting-place for the night. Its meadows had blossomed many times with the gay tents and banners of a great company. He told me, as vividly as though he had been an eye-witness, of how the canoes must have loomed up suddenly from between the islands. By and by he seized the lamp and conducted me outside, where hung ponderous ornamental steelyards on which in the old days the peltries were weighed.

"It is not so now," said he; "we buy by count, and modern scales weigh the provisions. And the beaver are all gone."

We re-entered the house in silence. After a while he began briefly to sketch his own career. Then, indeed, the flavor of the Far North breathed its crisp bracing ozone through the atmosphere of the room. He had started life at one of the posts of the far Northwest. At the age of twelve he enlisted in the Company. Throughout forty years he had served her. He had traveled to all the strange places of the North, and claimed to have stood on the shores of that half-mythical lake of Yamba Tooh.

"It was snowing at the time," he said, prosaically; "and I couldn't see anything, except that I'd have to bear to the east to get away from open water. Maybe she wasn't the lake. The Injins said she was, but I was too almighty shy of grub to bother with lakes."

Other names fell from him in the course of talk, some of which I had heard and some not, but all of which rang sweet and clear with no uncertain note of romance. Especially haunts my memory an impression of desolate burned trees standing stick-like in death on the shores of Lost River.

He told me he had been four years at Cloche, but expected shortly to be transferred, as the fur was getting scarce, and another post one hundred miles to the west could care for the dwindling trade. He hoped to be sent into the Northwest, but shrugged his shoulders as he said so, as though that were in the hands of the gods. At the last he fished out a concertina and played for me. Have you ever heard, after dark, in the North where the hills grow big at sunset, *à la Claire Fontaine* crooned to such an accompaniment, and by a man of impassive bulk and countenance, but with glowing eyes?

I said good-night, and stumbled, sight-dazed, through the cool dark to my tent near the beach. The weird minor strains breathed after me as I went.

*"A la claire fontaine  
M'en allant promener,  
J'ai trouvé l'eau si belle  
Que je m'y suis baigné,  
Li y'a longtemps que je t'aime  
Jamais je ne t'oublierai."*

The next day, with the combers of a howling northwesterly gale clutching at the stern of the canoe, I rode in a glory of spray and copper-tasting excitement back to Dick and his half-breed settlement.

But the incident had its sequel. The following season, as I was sitting writing at my desk, a strange package was brought to me. It was wrapped in linen sewn strongly with waxed cord. Its contents lie before me now—a pair of moccasins fashioned of the finest doeskin, tanned so beautifully that the delicious smoke fragrance fills the room, and so effectively that they could be washed with soap and water without destroying their softness. The tongue-shaped piece over the instep is of white fawnskin heavily ornamented in five colors of silk. Where the top joins the foot the slipper is worked over and over into a narrow cord of red and blue silk. The edge about the ankle is turned over, deeply scalloped, and bound at the top with a broad band of blue silk stitched with pink. Two tiny blue bows at either side the ankle ornament the front. Altogether a most magnificent foot-gear. No word accompanied them, apparently, but after some search I drew a bit of paper from the toe of one of them. It was inscribed simply: "Fort la Cloche."

[TO BE CONTINUED]

# THE BOOKS OF A SEASON

## *A Record and Review*

THE present publishing season does not promise a large number of books of permanent value—a fact which will bring no distress to the lovers of good literature. There are far too many books issued for the interests of good writing or of thoughtful readers. A large proportion of the volumes of fiction and of verse published would better remain in manuscript for the kindly perusal of friends. Many are not badly written, but they lack reality, freshness, force, or beauty. Vital books, or books which bear the touch of art, appear every season; but they are almost lost in a mass of publications which have no real claim on public attention. These last are fairly well written, but they are essentially commonplace in thought, feeling, and form. Among the serious works of the spring must be counted the volumes of Carlyle and Darwin letters, the biography of Bishop Westcott, the studies in contemporary biography by Mr. Brice, Georg Brandes's account of Poland, the initial volume of Mr. Liddell's edition of Shakespeare and the earlier issues of the First Folio Shakespeare, the Centenary Edition of Emerson's works, Mr. Foster's "American Diplomacy in the East," Mr. Chadwick's biographical study of Channing, "A New Book of Essays" by that clever young English journalist, Mr. G. K. Chesterton, Professor Flint's "Agnosticism," Dr. William Adams Brown's "The Essence of Christianity," Professor Hilprecht's "Explorations in Bible Lands During the Nineteenth Century," Dr. W. DeWitt Hyde's little book entitled "Jesus' Way," and President H. C. King's "Theology and the Social Consciousness." Some of these have already been reviewed, others are spoken of in this issue, a few must be treated later.

## The New Novels

Among the host of novels a small group of significant works may be selected. Mr. James Lane Allen's new story, "Crypts of the Heart" (Macmillan), is promised for the early summer, and is understood to be a careful and interesting study of character presented with the charm of style which is the possession of the author of "Flute and Violin." This story is certain to take a foremost place among recent novels. A good deal is expected in connection with Mr. Jack London's "Call of the Wild" (same publishers), which is regarded as the best piece of work which this forcible writer has given the public, and as likely to make a deep impression by reason of its power and its unusual theme. It tells, with intimate human association, the story of a great and noble dog who is stolen from a range in southern California, carried to Alaska, slowly changes his nature under brutal treatment, moves further and further away from civilization, and at last consorts with wolves and becomes a creature of the wild as his ancestors were

before him. This remarkable story, full of incident and of striking descriptions of life and landscape in the far north, contains a deep truth which is embedded in the narrative and is all the more effective because it is never obtruded. The appearance of Mr. F. Hopkinson Smith's collection of short stories, "The Under Dog," will be awaited with interest by the wide circle of readers who have learned to expect from this vigorous and accomplished writer fresh incident, direct style, vivacity, genuine feeling, and abundant humor. (Scribners.)

The discussion about the indebtedness of Mrs. Ward to the "Correspondence of Mlle. de Lespinasse" for some of the material in "Lady Rose's Daughter" (Harpers) ought not to divert attention from the real issue—the quality and vitality of the novel. Concerning these things there can hardly be two opinions, however wide may be the differences of judgment touching particular incidents in the tale. It is far and away the best piece

of fiction that Mrs. Ward has given the world; and that is saying much, for she is a woman of great ability, a tireless and exacting worker, and a most conscientious artist. In construction, contrast of character, variety, and freshness, above all, in lightness of touch and ease of mood, Mrs. Ward has done nothing which ranks with her latest novel. "Lady Rose's Daughter" deals with a very complex character, with many elements which were difficult to harmonize, and with a moral problem not easily solved. She has scored a notable success under very exacting conditions. Her novel is profoundly interesting; it moves forward not only with dramatic unity, but with increasing intensity of emotion; and the moral question is fairly met and answered. The story bears the marks of distinction throughout; it is, from many points of view, a novel of unusual significance. Its connection with the well-known letters of Mlle. de Lespinasse may be dismissed with a very brief comment: Mrs. Ward got from those letters a study of a very unusual and interesting temperament, hints of several relationships or incidents of importance, and occasional descriptions and analyses of emotion. This she had a perfect right to do so long as no concealment of her indebtedness was made or intended. The correspondence is so well known that a woman of Mrs. Ward's intelligence—to say nothing of her character—would never have dreamed of using such accessible material without detection; the first name of the heroine is taken from the correspondence; and the correspondence is mentioned several times in the novel. Mrs. Ward's mistake was in not foreseeing the criticism of those literal people who never understand a writer's intention or attitude unless it is stated in words of one syllable, and prefacing her story with a note explaining the use she had made of a well-known publication.

Since the publication of "Red Rock" Mr. Thomas Nelson Page has given us several short stories, but nothing so important as "Gordon Keith" (Scribners)—a novel of serious purpose and generous dimensions, crowded with actors and full of incident. The South has had no such studious and thorough interpreter of the successive stages of its life as Mr. Page.

In his earlier short stories, of which "Mars Chan" and "Meh Lady" are delightful examples, he recalled the charm of the old régime, with its gracious hospitality, its generous ideals of life, the touch of the chivalrous in its manners and speech. In "Red Rock" the conditions which prevailed during the so-called Reconstruction period were presented with convincing clearness; and the misery, humiliation, and anarchy of those years of misgovernment were sketched with a firm hand. In "Gordon Keith" the new South comes into view, and the conditions of twenty years ago are reproduced from first-hand knowledge and in the fullest detail. Gordon Keith, the son of an old Virginia planter of the bluest blood, is brought face to face, at the close of the Civil War, with the wreck of the family fortunes, the destruction of the old social order, the dispersion of the old society, the disappearance of the world in which his fathers had lived. He inherited the best traditions of the vanished life—its keen sense of honor, its chivalrous feeling toward women, its courtesy, its courage. With these traditions and loyal to the ideals they have bred in his soul, the young Virginian quietly accepts the changes which have taken place, adjusts himself to the new conditions, and works out his deliverance with high-minded resolution and courage. The novel is a study of the spirit of the old South dealing strongly and successfully with modern conditions. It is, above all, a portrait of an American gentleman; a man whose integrity has ripened into that finest of fine things—a delicate and real sense of honor.

Mr. Page has the courage of emotions as well as of convictions, and has filled his story with incident and adventure; shifting the scene rapidly from tidewater Virginia to the mountains where Gordon teaches school and has his first love affair, to the newly exploited section where a mining town springs up like a gourd in a night, and to the city of New York, where society and Wall Street are described with many effective touches and much wholesome satire. "Gordon Keith" is, in fact, a good, old-fashioned romance with some improbabilities of plot; a genuine, uncompromising love story, with strong contrasts of character and a

great variety of happenings of many kinds. It is not equally convincing in all parts, and it lacks, by reason of the material with which it deals, the charm which invests "Meh Lady" and has given it a place among American classics; but it is a strong, sincere, and deeply interesting novel of character and of manners as well.

A more striking contrast in manner, method, and selection could hardly be found than that which exists between "Gordon Keith" and Mr. Henry James's latest volume, "The Better Sort" (Scribners). This group of short stories shows Mr. James at his best, in comparison with his later work. The charm of "The Passionate Pilgrim" is not on these tales, nor can any one of them be ranked with "The Real Thing;" but they are admirable studies of the subtle and complex problems of character and temperament with which Mr. James loves to deal. Much of his later work has been the joy of those who delight in psychology under the impression that they are reveling in literature. "The Wings of a Dove," as fiction, was quite beyond the limit of the art whose chief function is to deepen and freshen the sense of life—to interpret, portray, and suggest simply, lucidly, nobly, and convincingly. These stories are less obscure and are written in a much better style than "The Wings of a Dove." Two or three of them really make their drift and movement clear, and all of them abound in those delicate touches and shadings of which Mr. James is a master.

To open the attractively made reprint of Mr. Arthur Cosslett Smith's two recent stories, "The Turquoise Cup" and "The Desert," after reading "The Better Sort," is to emerge suddenly from a very rich, dim interior to the light and beauty of a terrace overlooking an Italian garden. There is a suspicion of artificiality in the surroundings; but how clear the sky is and how delightful the prospect! These stories, like "Monsieur Beaucaire" and "The Cardinal's Snuff-box," are not made of the substance of human life, but are skillfully devised and delicately made objects of art, which give us delight by reason of the deftness of their workmanship and the vivacity and charm of their manner. (Scribners.)

The intellectual refinement and delicacy of a thoroughly trained New England

mind have rarely been more interestingly disclosed than in Miss Annie Eliot Trumbull's latest story, "Life's Common Way," a study of a group of people in a small New England city who are thrown into very intimate relations by reason of the long living together of the families, by affinities of taste, and by circumstances. The story is not only a very keen study of character, but it is full of capital satirical touches on the excesses and extravagances of the so-called modern woman, with incidental comments on those features of women's clubs and associations which mark what might be called the overflow of the movement for liberation. Miss Trumbull's wit is the true New England type—clear, keen, delicate. The heroine of the story, Ursula, is a charming creature, whose mind plays with almost infallible precision, who is sure to say the most effective thing at the critical moment, and of whose talk the reader never tires. It might have been difficult to live up to her, but it is extremely interesting to live with her in a book. "Life's Common Way" is written with the utmost care; is subtle without being too subtle, and refined without being over-refined. It must be counted one of the best pieces of work of the season. (A. S. Barnes & Co.)

It must be admitted that M. Zola in his later books carried to an excess the elaboration of detail, and came to ignore altogether a thing to which he never paid much attention—the idea of unity, proportion, and construction. His last book, "Truth," is, accordingly, laborious reading; it is an argument illustrated by fictitious incidents rather than a novel of character or action. Yet its relation to the Dreyfus case, in which the author played the noble part of champion of justice, and its denunciation of clericalism in education and politics, make it worthy of attention. It parallels the Dreyfus case in part only; the author, whether from tact or because he hated clericalism worse than the corrupt army ring, entirely eliminated the latter element from his story. The hero is a Jewish schoolmaster falsely accused of a hideous crime really committed by a priest; to save the priest the whole power of the Church is exerted—perjury, subornation of testimony, villainy of every kind, all are used without compunction by those high in authority. The convic-

tion, torture on a penal island, agitation for a rehearing, and final partial exculpation of the Jew, follow the Dreyfus facts rather closely. The minute study of clerical influence on schools has a direct bearing on the Associations laws. Considered as an attack on the Church as it exists in France, the book is weak because of its passion and the extreme positions taken; charges of immorality on a large scale are based on purely imaginative or fictional dramatic episodes; altogether too much is assumed to be true without the adducing of evidence. It is quite clear that in this way a novel may be made to appeal to prejudice and passion altogether unfairly; and, making all allowance for M. Zola's earnestness and fundamental love of justice, "Truth" still leaves the impression of being only half truth and half bitter and probably unjust denunciation. (John Lane.)

"The Circle," by Katherine Cecil Thurston, has something more than promise; there is good actual performance, especially in the earlier chapters, which visualize characters and incidents in a quite unusual way and make the jaded novel-reader feel that the author has a power and a clear-cut method of her own. The principal woman character, Anna Solney, has life and an impulsive, eager personality that well fit her course around the "circle" of poverty, ambition, success, love, and self-abnegation. There are improbabilities in the plot, and in at least one character, Mrs. Maxstead, a lack of convincing reality, but all in all the story is out of the ordinary, and the reader leaves it with the feeling that the author may be looked to for other novels of serious value. (Dodd, Mead & Co.)

When "The Leaven in a Great City" appeared, *The Outlook* reprinted one of its chapters, and commended it as a serious and well-considered attempt, based on thorough, first-hand knowledge, to describe conditions in tenement-house sections of New York, and the means and instruments, some in the experimental and some in a well-developed stage, which have been shaped to meet those needs. Mrs. Betts has followed her first book by a second, "The Story of an East Side Family" (Dodd, Mead & Co.), which is primarily a story, with narrative and dramatic interest, with contrasted types

of character, and involving a working out of motives, and the action and reaction on character, which constitute plot. Some of the chapters were first printed in *The Outlook*. As a story the book will win its own readers, who will find it fresh in feeling, vivid in its portraiture of character, and dealing with the fundamental problems of life. The book has, however, another interest. The material with which it deals will be new to far the greater majority of its readers. It is a story of life on the East Side. Usually in fiction of this kind the people whose lives are described are studied and reported from the standpoint of people in an entirely different station, and often with an unintentional but unmistakable air of condescension. In this book Mrs. Betts has studied the people from their own point of view; it is their own story that is told, and the characters are drawn from their own class, without the admixture of men and women of a different social training. It is realistic in the sense that it describes existing conditions with great detail, and with that fresh feeling which characterizes all Mrs. Betts's work of this kind. It is unlike most stories, however, in that it is a novel of growth—the record of an evolution of character. It begins with marriage, and traces the evolution of family life and the changes in conditions wrought by economy and intelligence on the part of the young man and woman whose story is told. This gives Mrs. Betts the opportunity of presenting the family life of the East Side as it is, with its own standards, its own point of view, its own social gradations, amusements, occupations, its virtues and its vices. In doing this she draws freely on her large and close observation and infuses into her narrative the vitality of her own sympathy with the men and women she presents.

We have already spoken of the charm and the unconventional personal narrative of Mr. Henderson's "John Percyfield" (Houghton, Mifflin & Co.), a book with not a little of what is called "bumptiousness" Down East, with here and there pages or sentences that "rub the reader the wrong way," and with a touch of sentimentalism; yet as a book it pleases and even delights by its graceful description and vivid telling of personal experience and adventure; of Mr. Paul

Gwynne's "The Pagan at the Shrine" (Macmillan), in which a singularly brilliant and witty rendering of Spanish village life serves as background for the tragedy of a priest's sin and penance; of Mr. Stewart Edward White's "Conjuror's House" (McClure, Phillips & Co.), which combines a curious picture of the conditions far North in the Hudson Bay Company's territory with a forcible story of danger and love; of Mr. G. C. Cook's "Roderick Taliaferro," an exciting romance of México in Maximilian's time (Macmillan); of Mr. Irving Bacheller's

story of country life called "Darrel" (Lothrop); of Mr. Will Harben's wholesome novel of North Georgia character, "The Substitute" (Harpers); of Alice C. Hegan's lively and amusing "Lovey Mary" (Century), which carries on some of the highly original creations of "Mrs. Wiggs" and introduces new ones; and of several other works of fiction which help redeem the recent lists of fiction from the too common and too broad charges of inferiority. Still other stories are spoken of in this issue under the head Books of the Week.

## A Group of Noteworthy Books

The revised edition of the Variorum "Macbeth" (Lippincott), first published by Dr. Furness in 1873, is prefaced by a very interesting introductory note in which the editor calls attention to the fact that almost as many years now separate us from the first volume in this edition as, at the time of its publication, separated it from the Variorum edition of 1821; that during these years so much has been added in the way of criticism and illustration that the word "new" as applied to the earlier volumes has become almost misleading, and there is a demand for a "newest new" Variorum. Dr. Furness has used in all the Variorum editions so far, except the first four, the First Folio text; and this text is now substituted for the composite text originally used in the earlier "Macbeth." It will be remembered that Dr. Horace Howard Furness, Jr., has been associated with his father in this great enterprise, which reflects the highest credit upon American scholarship. Upon him has devolved the work of revision; and he calls attention to the fact that the change to the First Folio text has necessitated a new collation of all the texts. The next play in this series, it is announced, will probably be "Richard III." Scholars and lovers of Shakespeare who are able to follow the work of Dr. Furness will be deeply interested in this note: "Surely, the instances are not many where a literary task begun by a father is taken up and carried forward by a son; still fewer are they where the father can retire within the shadow with such conviction, as is now mine, that the

younger hands are the better hands and that the work will be done more deftly in the future than in the past."

Mr. Laurence Hutton is one of the men who, like Charles Lamb, loves not only persons but places. He has what may be called the local genius; the feeling for Penates and the lesser gods; the happy faculty of getting at the significant details; those things which preserve the most intimate associations. In the list of "Literary Landmarks" which have come from Mr. Hutton's hands, nothing, on the whole, has been so attractive and so well done from the standpoint of happy use of rich material as "The Literary Landmarks of Oxford" (Scribners), a beautifully made book to the eye and a very interesting book to the imagination. It was written under the spell of the old university city, and it was written for the lovers of Oxford. Mr. Hutton spent a summer in Professor Max Müller's house and saturated himself with the atmosphere, studying each college individually, working up its traditions, learning its literary associations, and with the skill of an expert following all the clues. It is not the fashion in Oxford to know much about the literary associations of the college, as it is not the fashion for the men who live in the larger colleges to be aware of the existence of the smaller colleges. Oxford etiquette is as complicated and as unfathomable as the organization of some of the colleges; no man knows its principle, although a good many men know its practice. Mr. Hutton has taken the walks, gathered the material, and, although he deals with a

great number of separate localities and with a large group of men who are not related to one another, has managed to give his account the narrative touch, and therefore the narrative interest. The illustrations are fascinating, and admirably interpret the text. There are some errors in the volume which have escaped the eye of the proof-reader.

Mr. James Bryce brings very full knowledge of his own time, the habit of a trained observer, and an admirably lucid style to his "Studies in Contemporary Biography" (Macmillan). These studies begin with Disraeli and close with Gladstone, and include portraits of Trollope, Parnell, J. R. Green, T. H. Green, Mr. Godkin, Cardinal Manning, Henry Sidgwick, and other well-known and interesting personalities. In every case Mr. Bryce has drawn the portrait of a friend; but friendship with Mr. Bryce, it is hardly necessary to say, does not mean blindness to limitation and defect. It means sympathy, but it also means intelligence—the two prime qualities in human portraiture, and, for that matter, in all criticism. The dispassionate spirit in which this volume is written, its clearness of analysis, and its human interest are indicated by this quotation from the study of Lord Beaconsfield:

He felt himself no Englishman, and watched English life and politics as a student of natural history might watch the habits of bees or ants. English society was then, and perhaps is still, more complex, more full of inconsistencies, of contrasts between theory and practice, between appearances and realities, than that of any other country. Nowhere so much limitation of view among the fashionable, so much Pharisaism among the respectable, so much vulgarity among the rich, mixed with so much real earnestness, benevolence, and good sense; nowhere, therefore, so much to seem merely ridiculous to one who looked at it from without, wanting the sympathy which comes from the love of mankind, or even from the love of one's country. It was natural for a young man with Disraeli's gifts to mock at what he saw. But he would not sit still in mere contempt. The thirst for power and fame gave him no rest. He must gain what he saw every one around him struggling for. He must triumph over these people whose follies amused him; and the sense that he perceived and could use their follies would add zest to his triumph. He might have been a great satirist; he resolved to become a great statesman.

Mr. Georg Brandes is a brilliant if not always a trustworthy critic, combin-

ing the thoroughness of the modern physiological criticism with the freedom of the purely æsthetic critic. His study of Shakespeare is an example of painstaking investigation and of very free use of fancy. The series of volumes which he is now issuing on "Main Currents in Nineteenth Century Literature," upon which comment has been made in these columns, brings out very clearly both the fullness of his knowledge and his occasional audacity, not to say willfulness, of generalization. His latest volume, or the latest to be translated, "Poland: A Study of the Land, People, and Literature" (Macmillan), is really a contribution to the series of "Main Currents," for it is essentially a study of the genius and temper of the Polish people. The volume records impressions gained in Poland during successive visits, with an appreciation of Polish literature of the last century, based on long study. Mr. Brandes, it is hardly necessary to say, is in profound sympathy with the Poles; for no man of imagination and of heart could be in that unhappy country without being touched and overshadowed by one of the greatest of national tragedies. He finds in Poland the finest and purest expression of the Slavonic genius and character, "the perfect blossom of the Slavonic race," and he interprets her as "a symbol of all which is best that the human race have thought and for which they have fought." The poetic temperament of the Pole, his extraordinary sensibility, his power of feeling, which make him the artist he has proved himself to be in so many fields, Mr. Brandes understands and conveys in these very interesting impressions. No modern man is more elusive than the Pole for readers of the English-speaking race, and none, perhaps, is more provoking to the imagination. His brilliancy, his sensitiveness, his apparent inconsistency, so admirably depicted by Cherbuliez, so splendidly offset by his long if unavailing resistance and by his passionate devotion to his country, are clearly brought out.

Mr. John C. Van Dyke has already written several volumes for the purpose of putting people of general intelligence who have not had the advantage of art education in the way of understanding nature and art. His latest volume, "The Meaning of Pictures" (Scribners), is an

endeavor, in six chapters, to analyze clearly and simply the elements of painting, so as to enable the observer to see what is in a picture, to judge of its quality, and to feel its charm. Mr. Van Dyke discusses truth in painting, individuality, imagination, pictorial painting, decorative quality, and subject; and he succeeds in conveying a great deal of information without being didactic. His illustrations are drawn from the whole range of art. At times he is somewhat vague in statement; but the treatment is so essentially sound and rational that one is not disposed to linger over minor defects, but to commend the volume as a really successful endeavor not so much to popularize art as to enable the observer untrained in artistic matters to use his eyes, his imagination, and his intellect to good purpose. The volume is illustrated.

One of the most delightful foot-notes on contemporary history is Madame Mary King Waddington's "Letters of a Diplomat's Wife," which have been appearing serially in "Scribner's Magazine." Madame Waddington, it will be remembered, was the daughter of the late Mr. Charles King, President of Columbia College. In 1874 she married M. Waddington, who was subsequently sent by the French Government as Ambassador Extraordinary at the coronation of the Czar, and held the position of French Ambassador at the English Court for ten years. Madame Waddington had, therefore, extraordinary opportunities of seeing court life and meeting distinguished people in all departments. She was a very clear-headed, sensible, keen-witted American woman, with an eye for the picturesque and with a very clear understanding of the conditions in which she was placed; not in any sense overawed by the splendor that surrounded her, but entering into court life with zest and appreciation of its unusual human phases. Her letters to her family, which have been collected in this book, gain rather than lose by their familiarity. The pictures which they give of Queen Victoria; of the members of her family, and of many contemporary royal personages on the Continent are well drawn; and the correspondence was well worth preserving in book form. (Scribners.)

There has been an undeniable increase

of interest in the last few years in what are now called generically nature books. Among the books of this class of quite recent publication, special interest attaches to "The Story of a Bird Lover," by Mr. W. E. D. Scott, because the author—who is the curator of the Museum of Ornithology in Princeton University—gives a novel and immensely picturesque view of the relations between birds and human beings. Mr. Scott has for many years studied the habits of living birds, and for this purpose he has in his house at Princeton a collection of some four or five hundred living birds. This collection and Mr. Scott's methods and purposes of studying it are, we think, absolutely unique. In the present book one finds not only the result of the author's investigations, but a readable account of the explorations, travel experiences, and scientific observations of a man who has spent almost all his life in nature-study. (The Outlook Company.)

Readers of The Outlook know that Mr. Alfred Hodder's "A Fight for the City" not only presents the story of Mr. Jerome's campaign against Tammany and city corruption from the point of view of an eye-witness and participant, but that it also furnishes in a finished literary form a keen analysis of municipal dangers and a recognition of the direction where lies hope for the future. The chapters which originally appeared in The Outlook, together with some passages omitted in the serial publication, two entirely new chapters, and a most interesting preface, now appear in book form (Macmillan). It was fortunate that the subject was thus taken up by a writer who has the novelist's sense of humor and dramatic action as well as the political philosopher's ability to connect cause and effect, and with these something of Mr. Jerome's own burning hatred of oppression and love of civic righteousness. As Mr. Hodder says, the interest of this campaign is neither local nor ephemeral.

Among books of biographical or semi-biographical interest, in addition to the "Letters of Darwin" (Appleton), of which we hope to speak at length soon, and two or three other works spoken of elsewhere in this issue, there should be mentioned the "Life of Miss Yonge" (Macmillan), an adequate and interesting record of a sweet-

the art of Botticelli is delicate as has been that of few painters, yet he could be a realist too, if he chose, as witness the Sistine frescoes. Here Mr. Streeter's volume is specially valuable, as was Mr. Douglas's recently published biography of Fra Angelico. These books call the attention of men away from the popular easel pictures by Fra Angelico and Botticelli in Florence, Paris, and London to the less-known frescoes in the Vatican—frescoes which reveal an art both virile and vital to a hitherto unsuspected degree. Lastly, the latest biography of Botticelli is of peculiar interest, if for no other reason than that his works are placed in a new chronological order. Classification according to period is certainly a more scientific and critical method than classification according to subject—a method followed by too many biographers of artists, who treat the various canvases under the captions of religious works, allegorical works, historical works, and portraits. In his relation to the first caption, Botticelli is apparently to our author, as indeed to most observers, of most importance. He was, in truth, an exponent of what Symonds was wont to call "the double mind of the Renaissance," a mind both Christian and Hellenic. Even the tyro in art may observe in the Botticelli pictures the opposing ideals of Christian sanctity and pagan culture, and queries, "Does not this artist miss the full significance of both?" In those pictures, however, painted under Savonarola's influence, Botticelli did rise to a wonderfully affecting expression of Christian faith and sentiment, while in every picture he handled Christian themes with a caressing tenderness of touch well-nigh unique in the whole domain of art. He is, as Mr. Wiley claims, almost the only painter of Scripture scenes who gives to us a Greek simplicity, a Gothic fervor and sometimes grandeur, together with a truly Renaissance-like illumination. In this last element he was the painter of joy, as witness his many "Adorations of the Magi" and Madonnas, themes which he loved to dwell on. To him the joyful Incarnation was the all-important subject for illustration—not the gloomy Passion and Crucifixion. He was the representative painter of the sacred scenes in the Christ story as preached by St. Francis of Assisi.

A century later and we stand in Germany, "the last country in which the Renaissance came to flower, and the first in which it faded to nothingness." One reason for this was the German absorption in something even more important than the Renaissance—the Reformation. As we study his pictures it seems sometimes as if Botticelli would not or could not bring himself face to face with life, death, sin, and pain—questions the meaning of which he did not seek to fathom. On the other hand, the enthusiasm and the *abandon* characteristic of Botticelli, and favorable to the fullest development of the Renaissance, were wholly foreign to the nature of Albrecht Dürer. His slowness and dignity, says Mr. Wiley, were an inheritance from long lines of ancestors who had lived and fought beneath the misty canopy which hung over the Elbe and the North Sea.

So long had those forefathers struggled with bitter winds and still more bitter foes of beast and man; so long had they coaxed with infinite pains their tiny crops from an ungrateful soil; so long had they gazed at the specter of death in all its grisly shapes of terror, that at last the quality of gloom and earnestness had been imbued into the Teutonic nation. This high seriousness is perhaps the most characteristic and persistent trait of the Teutonic race, and one quite beyond the experience or comprehension of the Latin mind. So, when the awakening came to Germany . . . something else was aroused than arts or letters. . . . The Reformation was, nevertheless, part and parcel of the Renaissance impulse. . . . The Renaissance emancipated the mind of Europe; the Reformation gave freedom to the soul.

Albrecht Dürer was the first great interpreter of Bible scenes during Reformation times. His religious views were influenced by the Reformation; perhaps for this reason, during his later years, he represented saints and apostles without halos or any indication of their superior holiness. While Mr. Wiley and Mrs. Eckenstein—the two latest Dürer critics—are careful to make mention of the influence of Mantegna on the German artist, although not at such length as many would welcome, what is of more importance, both critics bring out the fact that Dürer gave vital aid to the Reformation. Alexander VI. had just issued a bull, directed principally against the Germans, anathematizing the publication of unauthorized books, but he was ignorant of a new influence in Germany already

undermining his own—the art of wood-engraving. The art of drawing *per se*, Dürer's latest biographer reminds us, has its votaries especially on this side of the Alps. "In the South, nature speaks through the medium of color. In the North, the contrasts of light and dark strike the eye and engage the hand." During the fifteenth and sixteenth centuries the art of engraving on wood served in Germany not only as a means of spreading abroad the lessons taught by religion, it also "afforded the possibility of reproving those who tyrannized and oppressed the folk." These facts gave to the art an importance, and, indeed, raised it to a dignity, which it never again attained. Contemporary rivals in painting might outstrip Dürer, but in engraving on wood and especially on copper he was unexcelled; indeed, he brought the art of engraving to such a height that Vasari justly called him "the inventor of a new and noble system of thought." This system became an educative influence of distinct and notable importance: "in Italy only the palaces and great churches had paintings and works of sculpture; but in Germany, through Dürer's achievements, every home had its engraving, generally of some religious subject, emphasizing Protestant rather than Roman Catholic Christianity, and becoming a perennial sermon, especially to the Hausfrau and to her children."

After all, Dürer was a true child of the Renaissance. In his love for the real he had the comradeship of the whole group of the Renaissance artists; but Mr. Wiley actually claims that in his devotion to nature in her every mood he had but one rival—Leonardo! Mr. Wiley even declares Dürer's knowledge of nature to have been truer and sincerer than Leonardo's; the Italian artist never gave as much attention to the setting of the picture as to its main theme; the contrary was true of Dürer. Finally, both critics dwell with emphasis upon Dürer's realism—a realism so intense that the German's work fails to approximate ideal beauty; it gives instead "the harshness and ruggedness of the German life of his day; its lack of grace and loveliness was revealed in his art." This is not altogether surprising, for, as Mr. Wiley has so impressively pointed out in his distinction

between the German and the Italian Renaissance, the ever-present idea of death was something from which not only the German but still more the mediæval man could not escape, as did the man of the Renaissance. In the thirteenth and fourteenth centuries there had been more plagues, wars, dangers from sun, beast, and the elements than in the later time, as the early "Death Dances" show. The spirit which created these was emancipated in Flanders and Germany by two men—Hans Memling and Albrecht Dürer. Their pictures have well been called "the books of the illiterate."

But a greater post-Renaissance light was to appear in the North as a painter and etcher of Scriptural scenes. Ten years ago M. Michel marshaled carefully and critically the facts of Rembrandt's life and work and set them down in an ample biography which has justly become a standard book of reference. Mr. Malcolm Bell attempts to do this popularly and in small compass; also including the latest information concerning the great artist about whom too much still remains unrevealed. The homely truthfulness of the Dutch art of Rembrandt's time occasionally resulted in details which offend the taste of our own age; but the art was nevertheless well adapted to set forth the humanizing side of the Scripture incidents. Whether by pen or brush, Rembrandt's illustrations of our Lord always showed Him to be more the Son of Man than the God Incarnate. As Mr. Bell points out, Rembrandt's Virgin Mary has none of the delicate beauty conceived for her by the Italian painters; she is, instead, and beyond all, the type of Motherhood. Again, Rembrandt's Apostles have none of the heroic dignity of Michelangelo's, for instance; yet they are, without question, devout, devoted fishers of men. Now, this lack of the Botticelli wish and power to idealize, this persistence in search of the truth, and in a certain willful neglect of the beautiful, unites Dürer with Rembrandt. The latter seems to us the greatest of all Bible illustrators, not only in variety of subjects and in realism of technique, but also because of a particularly truthful interpretation of the Bible. As has been well said, "In his interpretation of the Scriptures he did not seek to give dignity by a factitious

magnificence or by elevating personages above their social rank, but by inspiring respect for them and interest in them *as they were*." Take those in one gallery alone—for example, that of the Hermitage in St. Petersburg. Rembrandt there illustrates for us in separate achievements "Abraham Receiving the Angels," "The Sacrifice of Isaac," "The Sons of Jacob Showing Him Joseph's Coat," "Joseph Accused by Potiphar's Wife," "The Dis-

grace of Haman," "The Reconciliation of David and Absalom," "Hannah Teaching the Infant Samuel to Read," "The Holy Family," "The Parable of the Master of the Vineyard," "The Parable of the Prodigal Son," "The Incredulity of Thomas," "The Descent from the Cross." All these are treated with a frankness, breadth, vigor, above all, with an apparently arbitrary chiaroscuro, marvelously conducive to its purpose of Scripture illustration.

## A Life of James Martineau<sup>1</sup>

IT is not to be doubted that this is to be regarded as the official biography of James Martineau. It shows abundant evidence of careful study of Dr. Martineau's writings, and careful inquiry into the more notable events in his uneventful life. It is painstaking, and characterized by every appearance of scientific accuracy of detail. It possesses also a great number of Dr. Martineau's letters, which throw light on his published writings and still more on his personal character. But the biographer's narrative possesses neither imagination nor feeling. It is simply "Annals," in which incident and event follow each other in a chronological order, with little or no attempt by the historian to indicate any vital nexus, any process of development, any philosophical significance, or any spiritual meaning. This lack of literary quality is the more evident because everything that Dr. Martineau himself wrote is so distinctly literary. His letters are not less perfect in form than his more carefully studied essays. And this beauty is more than in expression; it is in a certain indescribable delicacy of thought suffused with an equally indescribable refinement of feeling. Refinement is, indeed, the one word we should choose to characterize Dr. Martineau. It distinguishes his face, his thought, his spiritual experience, his form of expression. His excellence is his defect. He is not a suggestive writer. He is not suggestive because he throws out no seed-thoughts. Everything is perfect. One can never safely quote Dr.

Martineau unless he does so in Dr. Martineau's own words. If he makes the attempt, he is liable to misquote him, or at least to be accused of misquoting him.

An amusing illustration of this truth is furnished in this biography. Dr. Allon was one of the ablest and most scholarly preachers in Great Britain; broad in his intellectual culture, catholic in his sympathies. No one who knew him would ever think of accusing him of being either narrow or unintelligent. But he was not of Dr. Martineau's school. He believed in a dogmatic basis for Church union, Dr. Martineau did not; he believed in the Messianic claim of Jesus Christ, Dr. Martineau rejoiced in "the disappearance from our faith of the entire Messianic mythology." Dr. Allon ventured to animadvert on "some of Dr. Martineau's supposed positions." His biographer naively says, what we do not believe Dr. Martineau would ever have said, that "Dr. Martineau, though reluctant to engage in any controversy, thought it necessary to bring his meaning down to Dr. Allon's level, and published an 'Appendix' to the Addresses, in which he endeavored to make his meaning plain." The truth is, Dr. Martineau did not always make his meaning plain. He himself recognized the failure, and regretted it. This was not for want of lucidity in style; it was because he was essentially a mystic, and dealt with themes which transcend exact definition. He criticises John Henry Newman because John Henry Newman lacks "immediateness of religious vision." Dr. Martineau is always trying to give expression to his own "immediateness of religious vision;" and it never can be exactly expressed,

<sup>1</sup> *Life and Letters of James Martineau, LL.D., S.T.D.* By James Drummond, M.A., LL.D., Litt.D. And a Survey of His Philosophical Work. By C. B. Upton, B.A., B.Sc. (With Portraits.) Dodd, Mead & Co., New York. In 2 vols.

Very early in life the boy showed indications of that independence of thought and individualism of judgment which characterized the man throughout life. His mother found him one Sunday afternoon reading the Bible in Isaiah. She expressed some surprise that he was reading in that particular book, and when he assured her that he had read the Bible through to that point since chapel, and she rebuked him for telling what to her it was quite evident could not be true, he replied, with charming innocence of any irreverence, "Skipping the nonsense, you know, Mamma." It is hardly possible to realize that as a student he was specially fond of mathematics, and still more difficult to understand and accept the statement that a little later in life he expected to be an engineer, "for which he had a distinct aptitude." It is difficult to think of James Martineau as an engineer, or indeed as anything but a teacher of philosophy and religion. His absolute devotion to truth, as he perceives it, was early tested and demonstrated. At the age of twenty-six he refused to accept for his church in Ireland aid from the State, because he believed in the entire separation of State and Church; and rather than compromise on this issue he resigned his pastorate, and went out, not knowing whither he went or on what he could depend for a livelihood for himself and his young wife. This uncompromising honesty remained a distinguishing characteristic throughout life. His confidence in his own perceptions of right and wrong was never weakened because his friends did not share his convictions with him, as frequently they did not. That his vision did not agree with theirs never disturbed him in the least, and never, apparently, raised a question in his mind whether their vision might not be correct and his vision need correction. He never endeavored, and apparently never desired, to enforce his conscience on others; but he followed it absolutely and unhesitatingly himself.

This uncompromising honesty was so clear, so unhesitating, and his loyalty to the voice within so unquestioning that it never occurred to him that others could fail to understand it. His sister and his sister's friend united in writing a book. The book is now known in literature only

because Dr. Martineau wrote a review of it. It was his official function so to do, and he would not shirk his duty. In the review he was apparently courteous, as he always was. He did not violate the proprieties of journalism or go beyond the bounds of legitimate criticism. But he dissected the book mercilessly, though making some attempt to shield his sister. The result of his critique on her friend, whom for the nonce she regarded with a curious veneration as a sort of master, so offended her that she broke off all intercourse with her offending brother, and steadily rejected all attempts on his part to pacify her feminine temper and secure a reconciliation. In somewhat similar spirit he, at a later period of his life, successfully resisted the appointment of a certain candidate to a professorship in the college in which he was himself a professor, for reasons which appeared to his conscience quite satisfactory; his own son was shortly afterward appointed to the vacant chair, and Dr. Martineau was entirely surprised that the motives of his own opposition to the unsuccessful candidate should be suspected by any one. The suspicions were indeed quite unfounded, but, considering the provocation for them, it must be regarded as a remarkable testimony to his character that they got so little circulation and so speedily died away.

This uncompromising adherence to his own conscience, partly the cause, partly the effect, of his faith in his own "immediateness of religious vision," was at once his strength and his weakness. As a cause of it he belonged to no party. He could not belong to the Established Church, because he did not believe in the union of Church and State, and because there were portions of its liturgy which he could not accept and therefore would not use; yet he wished to "nationalize" the Church and make it broad enough to include all devout souls. He could not belong to the Presbyterian or the Congregational Churches, because they are built on a doctrinal foundation, and to their doctrinal foundation, or parts of it, he had philosophical objections. In philosophy he was a Unitarian; in some respects he was more radical than the English Unitarians, in other respects more conservative; but throughout his

life he protested against a Unitarian creed or even the title Unitarian as attached to a church, for he wished the Church to be broad enough to embrace men of widely different creeds. In his declining years he says frankly that he sees more hope for the religious future of Great Britain in the Congregational churches of England and the Presbyterian churches of Scotland than in those which are called Unitarian.

We have heretofore expressed our admiration for James Martineau as a religious and philosophical thinker. In our judgment, no man did more than he to counteract the tendency of half a century ago toward materialism in philosophy

and formalism in religion. We are glad to have so full an account of his external life and so large a reflection of his inner life in his personal letters as these volumes afford. But we regret that the material had not fallen into the hands of some one who possessed a larger portion of Dr. Martineau's spirit—his catholicity of faith, his philosophical perceptions, his spiritual imagination, and his tenderness of feeling; some one both spiritually akin to Martineau and familiar with the intellectual and religious conditions of Great Britain in the nineteenth century, and so able to make the life and the times of the poet-prophet of that century mutually interpret each other.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**About Money: Talks to Children.** By Perry Wayland Sinks. The Fleming H. Revell Co., New York. 5x7½ in. 106 pages. 50c, net.

With the exception of a few phrases here and there, no one would think that this book is for children except for the statement of its title-page. It is sound enough in its teaching, but lacks the strength and vividness needed especially at the present time, and deals too much in generalities to arrest attention or leave a lasting impression.

**Adventures of Harry Revel (The).** By A. T. Quiller-Couch. Charles Scribner's Sons, New York. 5x7½ in. 346 pages. \$1.50.

The early part of this tale of Cornwall in the first years of the last century has notable literary charm and grace, while the latter part abounds in plot interest—stirring and exciting events follow one another, indeed, almost too quickly in these latter chapters to make the construction and proportion quite artistic. Mr. Quiller-Couch's work as a fiction-writer is always sound and strong, and the reader here rejoices particularly in the narrative of the little orphan boy hero. For once in fiction an orphan is treated kindly in an orphanage and also, as a rule, by the people into whose hands he falls—a happy variation of the "Oliver Twist" theme. But fate throws him into strange and exciting adventures with smugglers, sailors (there are some delightful coasting sailor-people in the story), murderers, and queer fish generally. These adventures make a lively and pleasing tale.

**Alaska Frontier (The).** By Thomas Willing Balch. Illustrated. Allen, Lane & Scott, Philadelphia. 7x11 in. 198 pages.

This timely volume states concisely but luminously the title of the United States to a

continuous strip of territory on the Northwest American continental shore between Mount St. Elias and 54° 40' north latitude. As is well known, Canada now claims a considerable slice of our territory of Alaska; this would imply the possession by the Canadian Government of substantial facts upon which to base its claim. That the facts so far put forth in support of the Canadian contentions are alleged, not proved, has not prevented many, perhaps most, Canadians from believing that their claim has a sound foundation. In his excellent monograph Mr. Balch sets forth some important and vital facts omitted by those who have argued in favor of the Canadian demands. Perhaps his most pertinent query is the following: "Why has no Canadian considered chart 787 of the British Admiralty, which in 1901 (three years after the assembling of the Anglo-American Joint High Commission at Quebec, which marks the formal claim of the Canadian Government) shows the frontier so as to give to the United States its continuous, unbroken strip of territory?" Mr. Balch has collected his facts and evidence, not only in Alaska, but also in St. Petersburg and other European capitals. His work is of signal value as being a painstaking and emphatic refutation of the Canadian claim.

**Beginning German: A Series of Lessons with an Abstract of Grammar.** By H. C. Bierwirth, Ph.D. Henry Holt & Co., New York. 5x7½ in. 214 pages. 80c.

This brief manual seems likely to prove a useful book.

**Better Way (The).** By Charles Wagner. McClure, Phillips & Co., New York. 4½x7 in. 265 pages. \$1, net.

Reserved for later notice.

**Book of the Country and the Garden (A).** By H. M. Batson. Illustrated. E. P. Dutton & Co., New York.  $5\frac{1}{2} \times 9$  in. 320 pages. \$3, net.

In a pleasant, leisurely manner the author sets forth her experiences in rural life in England, giving most attention to hours passed in her garden. The twelve chapters bear each the name of a month, and tell the appropriate thing to be done in that month with seeds and plants in greenhouse or outdoors. The book begins with "March" and ends with "February," so that there are budding things and promise and hope at each end. Everything that ought to be in a garden is in this one—flowers, and birds, and nests with little ones in them, children and lovers, an entertaining gardener and gardener's boy. Even books about gardens are not left out of this pleasure. In its quiet humor and pleasant calm and fine sympathy with nature lies the restful and wholesome charm that belongs by right to a garden book.

**Broader Elementary Education (A).** By J. P. Gordy, Ph.D., LL.D. Hinds & Noble, New York City.  $5 \times 7\frac{1}{2}$  in. 304 pages.

Rational, enlightening, stimulating. The idea of a liberal education, confined in current opinion to the higher schools, Dr. Gordy contends should pervade the elementary and the secondary schools also. He has no toleration for the bread-and-butter idea of education. To live a rational life is the only worthy end that a school of any grade, even the lowest, can rightly propose for its pupils; and this includes knowledge, discipline, a true estimate of the values of things, and an effective will. These a liberal education must cultivate for the three-fourths whom it is not desirable to put through college, as well as for the more competent few. The current system in our lower schools emphasizes memory; it should make man and nature the central objects of study. Dr. Gordy's fundamental maxim is that the greatest good of all is through the highest development of each that his endowments permit. The most important problem of school administration is to facilitate the advancement of the most competent pupils. Various details are discussed—the educational value of the several branches of study, the curriculum of different grades, school management, etc. The main stress, however, is more strongly laid than in other works on this subject upon fundamental principles. This seems to be just now the one thing needful—a higher general ideal is the main requisite for a genuine liberalizing of education, whether in the primary school or the college. This is the thing which Dr. Gordy's book has undertaken to promote.

**Cap'n Simeon's Store.** By George S. Wasson. Houghton, Mifflin & Co., Boston.  $5 \times 7\frac{1}{2}$  in. 287 pages. \$1.50.

Capital in character-sketching, quaint in dialect, rich in humor. In Cap'n Simeon's store, somewhere down Gloucester way (the frontispiece presents the store and its grizzled habitués realistically), sit and yarn ancient sea-captains of a distinct type but of equally distinct individuality. The old-time "works" of witchcraft done with bridles and charms still find full credence with these sea-worn veterans, and almost equally strange happen-

ings of fishing-boats, with the more ordinary tragedies and comedies of the fisherman's life, make up the varied narratives. The book records and makes permanent by the art of fiction a phase of American life and character which has now almost disappeared.

**Complete Poetical Works of Alexander Pope.** (Cambridge Edition.) Houghton, Mifflin & Co., Boston.  $5\frac{1}{4} \times 8\frac{1}{2}$  in. 672 pages. \$2.

The latest addition to the admirable one-volume reprints of standard poets in the Cambridge Edition. This volume includes all of Pope's poetic works in an approximately chronological order. It presents Pope's own notes, except in the case of certain comments on "The Dunciad" which were so long or so trifling that it seemed wise to omit them. The text is based on the Crocker-Elwin-Courthope edition, and the edition is supplied with the usual introductory biographical sketch, notes, and a very complete index.

**Earthly Discords, and How to Heal Them.** By Malcomb James McLeod. The Fleming H. Revell Co., New York.  $5 \times 7\frac{1}{2}$  in. 216 pages. 75c, net.

This is a strong and incisive book. Ethically as well as religiously it is keen and earnest. It deals with sins rather than with sin, and with some, not all, of the sins most flagrant in society. The style is that of good editorial paragraphs, crisp and terse, and it abounds in illustrative anecdote and quotation. Some of these anecdotes are rather surprising, like some in the newspapers.

**Educational Conquest of the Far East (The).** By Robert E. Lewis, M.A. The Fleming H. Revell Co., New York.  $5 \times 8$  in. 248 pages. \$1, net.

Reserved for later notice.

**Fifty Songs.** By Robert Franz. Edited by William Foster Aphorip. (The Musicians' Library.) Oliver Ditson Co., Boston.  $9 \times 12\frac{1}{2}$  in. 138 pages. \$2.25.

A discriminating selection of songs by one of the greatest song writers, with a critical introduction by one of the most competent of American musical critics. Reserved for later notice.

**Fight for the City (A).** By Alfred Hodder. The Macmillan Co., New York.  $5\frac{1}{4} \times 7\frac{1}{2}$  in. 246 pages.

We speak of Mr. Hodder's book in another column.

**Flower Beautiful (The).** By Clarence Moores Weed. Illustrated. Houghton, Mifflin & Co., Boston.  $6 \times 9\frac{1}{2}$  in. 138 pages. \$2.50, net.

A presentation, with abundant illustrations, of the decorative use of flowers for securing artistic effects in the house. This delicate art, of which the Japanese are such masters, is very little understood in this country, where flowers are often used in such a way as to overpower instead of to please, and with such profusion as to conceal their beauty instead of revealing it. It is Mr. Weed's hope to bring about a more artistic and tasteful use of flowers for interior decoration; and under such title-heads as "The Relation of Flowers to One Another," "The Relation of Flowers to the Receptacle," "Relation of the Position to the Environment," with chapters on vases, jars, and other receptacles, he states the principles of what will be, for most of his readers, a new

art. The book is well made and interestingly illustrated.

**Internal Improvements in North Carolina Previous to 1860.** By Charles Clinton Weaver. (Johns Hopkins University Studies, Historical and Political Science.) The Johns Hopkins Press, Baltimore. 6x9½ in. 95 pages. 50c.

**Joyful Life (The).** By Margaret E. Sangster. The American Tract Society, New York. 5x7½ in. 218 pages. \$1.

"Each chapter of this book," in the author's words, "is a simple and friendly talk on some theme of homely interest, and the aim has been to suggest something helpful in each as to life and conduct." It is an argument for courage, cheerfulness, hopefulness, serenity in domestic, business, social, and spiritual life.

**Life and Destiny; or, Thoughts from the Ethical Lectures of Felix Adler.** McClure, Phillips & Co., New York. 4½x7 in. 141 pages.

Reserved for later notice.

**Memories and Portraits.** By Robert Louis Stevenson. Herbert B. Turner & Co., Boston. 4x6½ in. 271 pages.

A new edition of these very characteristic papers, identical in form with the volumes of "Essays" and "Familiar Studies of Men and Books," bearing the same imprint.

**Middle-Aged Love Stories.** By Josephine Daskam. Charles Scribner's Sons, New York. 4½x7½ in. 290 pages. \$1.25.

Miss Daskam's originality, cleverness, and wit are again made evident in this volume of short stories, held together by a slender thread of common applicability. "The Valley of the Shadow," "A Philanthropist," and two or three other of these light and readable tales will compare well with the author's best work.

**Misérables (Les).** By Victor Hugo. Edited by O. B. Super. (Heath's Modern Language Series.) D. C. Heath & Co., Boston. 5x7 in. 349 pages.

**New Portrait of Shakespeare (A): The Case of the Ely Palace Painting as Against That of the So-called Droeshout Original.** By John Corbin. John Lane, New York. 6x8 in. 95 pages.

**Place of Industries in Elementary Education (The).** By Katharine Elizabeth Dopp. The University of Chicago Press, Chicago. 5x7½ in. 208 pages.

This is technical reading, yet the mother no less than the kindergarten and the grammar-school teacher should find the volume helpful. The theory that each child in its development to maturity passes through all the stages of race evolution is foundation for the argument that the plays and industries of childhood should be graded and guided accordingly. Whether this theory—accepted by most educators of the day—is affirmed or denied by the reader, he or she will appreciate the suggestions in regard to the intelligent direction of childish energy into appropriate amusement and occupation.

**Popular Handbook of the Birds of the United States and Canada.** By Thomas Nuttall. New Revised and Annotated Edition by Montague Chamberlain. Illustrated in Color. Little, Brown & Co., Boston. 5½x8½ in. 431 pages. \$3.

The standing of this book as a popular work on American ornithology is unquestioned. The present edition is the first to be put forth in one volume. It has been revised and annotated by Mr. Montague Chamberlain, and

contains over a hundred color illustrations, showing five hundred or more birds in their native hues. The rendering of the colors is more satisfactory than in any nature-book we have seen of late.

**Republics Versus Woman.** By Mrs. Woolsey. The Grafton Press, New York. 5x7½ in. 179 pages.

Contrasting the position of woman in aristocracies with that which she occupies in democracies, Mrs. Woolsey holds that all advantages are with the former. A woman may be the ruler of a monarchy, but never of a republic. Russia, she states, was the first government in Christian Europe to grant wives the right individually to hold and control property, the first government to grant political recognition to women; women there "have held for centuries the privilege of voting direct or by proxy, and wives have been mistresses of their own fortunes." Giving figures and specific data, she carries on the comparison between the attitude of republics and monarchies towards women—sometimes with a warmth of feeling which impairs the effect of her testimony. The book has, in a condensed form, a great deal of information upon a subject of intense interest to many people.

**Rôle of Diffusion and Osmotic Pressure in Plants (The).** By Burton Edward Livingston. (The Decennial Publications. Second Series. Vol. VIII.) The University of Chicago Press, Chicago. 6x9 in. 149 pages.

**Rose of Normandy (A).** By William R. A. Wilson. Illustrated. Little, Brown & Co., Boston. 5x8 in. 378 pages. \$1.50.

This is a stirring story of the times when Canada was "New France" and when Louis XIV. sent the Sieur de la Salle and his lieutenant, Henri de Tonti, on that voyage of exploration which proved to be one of the most remarkable in the world's history, and resulted in the discovery of the Mississippi and the planting of the French standard on the soil of Louisiana. Louis's gay court, Quebec, and the virgin forests of the New World furnish a varied setting for the love story of Tonti and Renée, the "Rose of Normandy."

**Stirrup Cup (The).** By J. Aubrey Tyson. D. Appleton & Co., New York. 5x7½ in. 208 pages. \$1.25.

The wooing of Theodosia Prevost by Aaron Burr is the central theme of this novelette. The wooing was daring, the lady lovely and noble, the time that of the American Revolution. Distinguished enemies of her country surrounded Madame, among them Sir Edward Moreton and Major André; Benedict Arnold's sweetheart was her guest. General Washington concerned himself with her affairs. Altogether Mr. Tyson keeps us in excellent company and entertains us well. Incidentally it may be mentioned that he reinforces Mr. Todd's recent efforts to reverse or modify judgments that his contemporaries pronounced against Burr.

**Story of an East Side Family (The).** By Lillian W. Betts. Dodd, Mead & Co., New York. 5x7½ in. 342 pages. \$1.50.

We speak of this book elsewhere in this issue of *The Outlook*.

**Teaching of English in the Elementary and the Secondary School (The).** By George R. Carpenter, A.B., and Franklin T. Baker, A.M., and Fred N. Scott, Ph.D. (American Teachers' Series.) Longmans, Green & Co., New York.  $5\frac{1}{4} \times 8$  in. 380 pages. \$1.50.

Not till the last quarter of the nineteenth century did the teaching of English begin to be properly provided for in American schools, and we can hardly be said to have advanced more than half-way to a realization of the purpose. As contributory to the end in view the problems raised by past discussion are here succinctly stated, and the views at present held by those whose judgment is entitled to respect are summarized. Experienced teachers will find this volume useful for reference; to the inexperienced it will be a helpful guide and mentor. To the latter, especially, the chapters on "The Teacher and his Training" will be serviceable. A very valuable feature of the work is presented in its copious bibliographies.

**Text-Book of Organic Chemistry (A).** By William A. Noyes. Henry Holt & Co., New York.  $5 \times 7\frac{1}{2}$  in. 534 pages. \$1.50.

A vast field is included in this treatise, offering opportunity for students to specialize variously therein with advantage.

**Thyra Varrick.** By Amelia E. Barr. Illustrated. J. F. Taylor & Co., New York.  $5 \times 7\frac{1}{2}$  in. 343 pages.

Scotland in 1745, when she "wanted her own King Charlie and no Union with England," is the scene of this story. One feels that the heroine is ill drawn. Her deceit and trickery in the first part of the book prejudice the reader against her, and one is prone to think that Sara MacArgall would have made a more satisfying heroine and the mate worthy of Robert Thorson. Maran Flett, trickster too, comes out happily wedded to the man whose humiliation she plotted. The friendship between Thyra and little Lord Donald, and the development of her character through love and service to the child, make pretty chapters, after which Thyra is nobler and sweeter than it seems possible such a trickster could become. Local color and the temper and customs of the people and the times are given with the charm that might be expected of Mrs. Barr's pen, which is always graphic and graceful in such particulars.

**Trees, Shrubs, and Vines of the Northeastern United States.** By H. E. Parkhurst. Illustrated. Charles Scribner's Sons, New York.  $4\frac{1}{2} \times 7\frac{1}{4}$  in. 451 pages. \$1.50, net.

This volume describes very fully, for purposes of identification by the unscientific reader, the native trees, shrubs, and vines of this part of the country, treating with special fullness the principal foreign hardy trees, shrubs, and vines found in Central Park in this city.

**True Estimate of Life and How to Live (The).** By G. Campbell Morgan. The Fleming H. Revell Co., New York.  $4\frac{1}{2} \times 7\frac{1}{4}$  in. 240 pages. 80c, net.

Practical and vital sermons by one who is strongly spiritual and well acquainted with common human nature. His work illustrates the fact that qualities often considered mutually contradictory may be possessed by one mind and expressed in a fine way—a strongly evangelical spirit, a conservative though not

reactionary view of the Bible, and a broad and rational view of life.

**Twenty Original Piano Compositions.** By Franz Liszt. Edited by August Spanuth. (The Musicians' Library.) Oliver Ditson Co., Boston.  $9 \times 12\frac{1}{2}$  in. 147 pages. Paper bound. \$1.25.

The music of Franz Liszt, brilliant, sentimental, bizarre, theatrical, and essentially sensational, is, and for some time will continue to be, the subject of discussion that often waxes violent. As an artist Liszt was recalcitrant. He was out of patience with the conventional. He tried to be revolutionary. No musical composer has had more zealous partisans; none has had severer critics. Liszt himself was a good deal of an animal—though he was a generous animal; and the materialism that seemed to dominate his nature shows not only in his music, but also in the theories of music which he deliberately attempted to promulgate. This volume furnishes very good material from which a conception of his piano compositions may be formed. Mr. Spanuth, the editor, in his introduction has wisely avoided expressions of blind adulation, and has succeeded in putting the case for Liszt as strongly as it could readily be put in the space.

**Un Beau Mariage: Comédie en Quatre Actes.** By Émile Augier et Édouard Fournier. Edited by Stuart Symington, Ph.D., Louis R. Herrick, B.S., and Louis E. Cadieux. Henry Holt & Co., New York.  $4\frac{1}{2} \times 6\frac{3}{4}$  in. 133 pages. 35c.

**Water-Fowl Family (The).** By L. C. Sanford, L. B. Bishop and T. S. Van Dyke. Illustrated. The Macmillan Co., New York.  $5\frac{1}{2} \times 8$  in. 578 pages. \$2, net.

There is a well-considered combination of sportsmen's information and scientific data in this volume; and in this it is like the other volumes of this American Sportsman's Library, which is edited by Mr. Caspar Whitney. The chapters on the shooting of ducks, geese, rail and shore birds, written by Mr. Sanford, are supplemented by chapters on the Pacific coast water-fowl by Mr. T. S. Van Dyke, and there are condensed diagnoses of families and genera. We may note again the handsome type-page of these volumes, the charming cover design, and the pains evidently taken in the illustrations.

**With the Trees.** By Maud Going. Illustrated. The Baker & Taylor Co., New York.  $4\frac{1}{2} \times 7\frac{1}{2}$  in. 335 pages. \$1, net.

An attractive and comprehensive volume with a good claim to popular favor in these days of enthusiastic nature-study. It is a handbook one would be pleased to take along in a woodland ramble, the better to understand the things one sees. Educators may find it useful; and it is not too technical to interest the school boy or girl who wants to know about trees. To botanical descriptions are added some account of forest folk-lore and superstitions, statements of the uses and values of trees and of the parts birds, bees, and various four-footed creatures play in nature's economics. The "spirit of the woods and the poetry of green places" are not lost in the telling of facts.

**Works of Shakespeare: Cymbeline.** Edited by Edward Dowden. The Bowen-Merrill Co., Indianapolis.  $6 \times 8\frac{3}{4}$  in. 212 pages.

"THE NAME IS EVERYTHING."

## Mason & Hamlin Organs At Stirring Price-Reductions

Mason & Hamlin Organs have an international reputation for excellence in every quality that goes to make up a successful instrument.

Those who wish to own one of these famous organs will be greatly interested in these exceptional offerings of Mason & Hamlin organs, in a number of styles, at much below their regular cost.

We have taken most of them in exchange for larger organs, or pianos. Some of them are almost new; all have been thoroughly overhauled and put in first-class condition. The new prices indicate savings of \$10 to \$400 on single organs.

If desired, any of these organs may be bought on the easy plan of small monthly payments. Here is the list—we shall be glad to furnish further details:

CASE	No. of Stops	Regular Price	New Price
<i>Oak Case, High Top, with Mirror</i> . . . . .	9	\$115.00	\$60.00
<i>Walnut Case, with Cabinet Top</i> . . . . .	10	100.00	65.00

Books of the Week.....	243

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

# MENNEN'S

**BORATED  
TALCUM**

## TOILET POWDER

**DELIGHTFUL AFTER BATHING, A LUXURY AFTERSHAVING!**

**Beautifies and Preserves the Complexion.**

A positive relief for **PRICKLY HEAT, CHAFING and SUNBURN**, and all irritations of the skin. For sore, blistered and perspiring feet it has no equal. Removes all odor of perspiration. Use **MENNEN'S** (the original), a little higher in price, perhaps, than worthless substitutes, but there is a reason for it. Sold everywhere, or mailed for \$1.00. *Among many agents, write now.* (Sample Free).

Counter-Injunction  
Against Employers  
in Omaha

The sweeping injunction issued in Omaha week before last by Judge Munger, of the United States District Court, proved a disappointment to the employers' association which secured it. Not only did the strike go on as before, but it became more widespread. Fortunately, the injunction did not have the effect of taking the control of the situation out of the hands of the local authorities. According to the Omaha "Bee," both the Mayor of the city and the Sheriff of the county have acted with decision, increasing their forces, closing the saloons, and preventing all disturbances. "The strikers," says the "Bee," "seem to be fulfilling their word given to the Mayor and the Chief of Police to co-operate with them in maintaining order and suppressing violence." The Governor of the State has refused to call out the troops and has induced the Business Men's Association to enter into a conference with the trades-union leaders to promote a settlement of the troubles. The work of the officers of the law, therefore, seems to have been well performed. The complications caused by the interference of the courts of equity, however, did not end with the new bitterness injected into the struggle by the sweeping terms of the injunction. The attorney for the unions applied to Judge Dickinson, of the local district court, for a counter-injunction against the Business Men's Association, and obtained one more sweeping in its terms than that issued by Judge Munger. Among other things, it restrained the Association—

From refusing to sell to employers of union labor and from discriminating against such persons in the prices charged.

From threatening or intimidating in any manner any person into joining the said Business Men's Association.

From imposing any fines upon its members or any person for violating any agreement not

to employ organized labor or not to recognize a labor union.

From receiving or paying out any money whatever in pursuance of any agreement to break up labor unions, except attorneys in this action.

From importing or engaging agents or servants to import any laborers in the city of Omaha or State of Nebraska in pursuance of any existing plan to destroy labor organizations or under any similar or new arrangement or plan.

From bringing any other injunction suits or actions in pursuance of any general plan of prosecutions to break up labor unions or of any new or similar plans connected directly or indirectly with any existing plans.

Some of the things forbidden in this injunction are as clearly wrong as were many of the things forbidden in Judge Munger's injunction reported last week. An agreement, for instance, of business men not to sell goods to employers of union labor is as clearly and violently a contract in restraint of trade as the agreement of the teamsters not to deliver goods to employers of non-union labor. Both are boycotts of a thoroughly indefensible kind. But, on the other hand, employers have as clear a right to import workmen to take strikers' places as the unions have peacefully to persuade such workmen not to take these places. The Omaha injunctions against both these acts are plainly usurpations of authority on the part of courts of equity. The final item in Judge Dickinson's injunction is more excessive still, and has in it an element of caricature of the whole system of "government by injunction." The defendants are enjoined from bringing any further injunction suits. Had Judge Munger thought to insert this item in his writ, the present injunction could not have been issued. It suggests the humorous possibility of putting an end to injunctions by injunction. But even this caricature of the process was exceeded in Omaha before the end of the week, when, according to

a despatch to the New York "Times," an injunction was issued on petition of a landlord restraining a woman tenant from talking to other tenants. In a report made some time since to the Social Reform Club of New York by a committee headed by Mr. John Brooks Leavitt and Mr. John D. Kernan, attention was called to a Texas writ enjoining a wife from ever again talking with a friend of whom her husband was jealous. The committee remarked that in this writ the Court attempted to establish marital fidelity by injunction, and wittily suggested that we might one day have "etiquette by injunction." In the light of the Omaha injunctions the possibility is worth considering.

**Counter-Organization by  
Employers in New York**

The contagious strike fever in New York City, which has extended from the skilled workmen in the building trades to the half-skilled teamsters and the totally unskilled Italian laborers who handle the picks and shovels, has produced its inevitable reaction in a strong counter-organization of employers. The newly organized unions among untrained workmen have, as usual, been the most pugnacious, and the Italian workmen employed on the subway have not only rejected the terms offered them by their employers, but have repudiated the agreement negotiated for them by the representatives of the Central Federated Union, and have refused to return to work pending arbitration, even when threatened with the forfeiture of their union charters. They are men, it is explained, who have but recently been emancipated from the padrones, and who suspect their present representatives much as they suspected their former bosses. But, whatever the explanation of their excesses, the temper of employers and of the public has been further exasperated, and the feeling that employers must organize to resist impositions has gained further headway. On Friday night of last week a call for united action in the building trades brought together nearly eight hundred delegates, representing fully four-fifths of all the contractors in the city. Fortunately, the meeting was in the hands of men who wished to resist abuses on the part of organized labor, and not of those who wished to initiate a class war for the

annihilation of unions. Mr. Charles L. Eidlitz, who presented the plans for a central organization, said:

What has made it possible for these men, many of them ignorant, most of them without a dollar laid aside, to demand surrender from their employers and have practically all their demands granted, sometimes without a show of resistance, lately almost invariably with only a grunt of disapproval?

What, I ask you? The fact that, while they have organized throughout the city and throughout the country as a central body, under practically one head, and have stood together in want and privation, with nothing in sight but a return to work at best, we men of intelligence and affairs have tried to deal with them singly or at best as only a one-trade organization.

The organization which was planned was one that should be the counterpart of the building trades section of the Central Federated Union, and should insist upon conditions under which "employers shall be more secure in the conduct of their business, workmen more secure from interference with their opportunity to work, and the public generally more secure from interruption to business resulting from strikes and lockouts." These are all reasonable ends, and organization to secure them will meet with public approval. Where there is a conflict of interests, justice is always promoted by the equal organization of both parties to resist injustice. Everything depends upon the spirit in which the organization is carried forward, and in the present case the organization seems to be not for the purpose of aggression, but for the purpose of defense. Mr. Eidlitz, when asked after the close of the meeting regarding the plans agreed upon, said: "We are going to act, and without delay. The details of our plan will be kept secret, but we are in this to stay. Remember, though, that we are not trying to destroy labor unions." What they do intend to destroy was illustrated by another contractor, who said:

Not long ago, in the construction of a great building, there arose a dispute between electricians and masons as to who should pierce certain holes in the wall. There was a delay while the central body decided the controversy, and in the interval, although neither set of workmen pierced the holes, the contractor had to pay all the workmen from both their full daily stipends, while they did not a stroke of work. That is one example of the hundreds of things we are fighting. We are going to get rid of them or know the reason why.

### A Strike Against a Government

In less than five days the Victorian Government completely crushed the strike begun on the State-owned railroads Saturday before last. The strike was occasioned by the refusal of the Ministry to withdraw its order that the Railway Employees' Association withdraw from the Victoria Trades Hall—the headquarters of trades-unionism in the colony. The Ministry took the position that as the railway employees were public servants, they had no right to enter into such affiliations with outside labor organizations as might lead to a suspension of the public service through a sympathetic strike. The Engineers' Association notified the Ministry that unless the order was withdrawn they would leave their locomotives wherever they happened to be at the hour designated for the strike. The Ministry did not yield, but announced to the employees that those who struck would forfeit their right to pensions, while those who did not strike would receive double pay during the next two months. When the strike was begun, Parliament was summoned, and a drastic bill submitted dealing with the situation. Premier Irvine stated that the country faced a long-meditated revolt against established authority. The strike had thrown the State into confusion and would be fought to a finish. The bill submitted was not retroactive and was not to remain in force after the end of the strike, but provided that any railroad employee leaving his work without giving four days' notice would incur a penalty of five hundred dollars fine or a year's imprisonment, and would be ineligible to future employment by the Government. An amendment was offered promising that Parliament would consider the grievances of the railroad men if they returned to work, but this was voted down by a majority of nearly two to one. The passage of the act was certain, and the following day the leaders of the strike gave in their unconditional surrender. From the first the strike had been condemned by public opinion. It was felt that a strike of public servants against the terms accorded them by the public was even more indefensible than a strike of private employees against the terms accorded by a board of arbitration. It was regarded as a direct

attack upon the sovereignty of the State, and the Ministry secured the support of nearly all disinterested elements in a democratic State when asserting the finality of the State's decisions. The case is interesting as indicating, though not fully demonstrating, the truth of the Socialists' claim that public ownership of public utilities would put an end to labor wars respecting such utilities.

### More Corruption Exposed in Missouri

Last week Circuit Attorney Folk probed deeper still into the corruption of the Missouri Legislature. Two ex-Senators, whose guilt had been pretty clearly established by previous testimony, made full confession, and their testimony in its turn promises to force still further confessions or convictions. The first of these ex-Senators, named Schweickhardt, testified that he was one of a group of Republicans who had handled a bribery fund of \$5,000 raised to defeat an election bill, and had personally given \$1,500 of this sum to Frank Faris, a Democratic leader—of anti-referendum prominence—to smother the measure. Faris, he said, had returned the bribe when he found that the bill would pass despite his efforts—an incident indicating that a certain kind of honor has to be maintained among boodlers as well as thieves. Ex-Senator Schweickhardt was confronted with the other Republicans whom his testimony had implicated, and one of them, a well-to-do baker named Busche, who had previously testified before the Grand Jury in his own defense, came before it again the next day and made a clean breast of his part in legislative corruption. While making his confession he twice broke down and wept bitterly. Among other things, he said:

I have "boodled" practically from the first week of the 1889 session. In 1897 I received \$1,000 for voting for the school text-book bill. In 1899 I was paid \$250 for refusing to call up a resolution demanding that certain bills be reported. I got \$500 for my vote on the St. Louis Transit Bill. I received a salary from the lobby to take care of railroad and other legislation, usually amounting to about \$700 for the session. As near as I can figure, I made about \$15,000 out of my legislative experience. I had to do these things. There were circumstances that made a fellow take money or else get the worst of it. Money was offered on pretty nearly everything of impor-

tance. The steam and street railway interests were always very active and their representatives paid us.

Ex-Senator Busche's statements were very specific regarding the bribe-taking on the part of several fellow-Senators and the bribe-giving on the part of the school-book trust as well as the street railway companies. The "cohesive power of public plunder," which formerly held the corruptionists together, seems to have been broken, and the boodlers who formerly stood together are going down like a row of unmortared bricks.

The United States and  
the Orient

President Roosevelt's  
speech at San Fran-  
cisco on America's

destiny on the Pacific seems to have aroused some needless excitement in German circles. The gist of this speech is contained in the following paragraph:

America's geographical position on the Pacific is such as to insure our peaceful domination of its waters in the future if only we grasp with sufficient resolution the advantages of this position. We are taking long strides in this direction; witness the cables we are laying and the great steamship lines we are starting, steamship lines some of whose vessels are larger than any freight carriers the world has yet seen. . . . We must keep on building and maintaining a thoroughly efficient navy, with plenty of the best and most formidable ships, with an ample supply of officers and men, and with these officers and men trained in the most thorough way to the best possible performance of their duty. Only thus can we assure our position in the world at large, and in particular our position here on the Pacific.

The majority of Americans are hardly yet alive to the fact that there is a Pacific Ocean, and that we have eight hundred and fifty miles of coast line, exclusive of Alaska, upon that ocean, and that thus we are much nearer China and Japan than any of the European Powers. We doubt whether even the people of the Pacific coast have fully grasped the significance of this geographical fact. Mr. Brooks Adams has shown that in the past imperial supremacy has depended largely upon commercial supremacy, and that in turn upon geographical considerations. Our geographical relations to the Pacific coast, and so to the Orient, may involve our commercial supremacy in the Pacific. It certainly involves moral obligations of which we must take account. Comparisons are odious, and it seems to us unfor-

tunate for us to enter into public discussion with other nations respecting our relative advantages and prospects, either commercially or politically; but it is right that we should come to a consciousness of our National opportunity and our resultant obligations to the world at large, and that in this consciousness we should so shape our legislation as to enable us to avail ourselves of our opportunities and fulfill the obligations which they devolve upon us. We cannot, if we would, maintain a policy of isolation, and escape the obligations, both commercial and political, which our geographical relations to the Orient impose upon us.

The New  
Pennsylvania Libel Law

It is probably true that the Grady-Salus Libel Law, just approved by Governor Pennypacker, of Pennsylvania, is to be deprecated rather for its animus or intention than because it actually does seriously impair the liberty of the press. The comments of Governor Pennypacker show the kind of political feeling that has called out this legislation; in fact, the Governor of the State has subjected himself to almost universal ridicule by his assertion that in England a century ago an offender who should draw such cartoons, as, for example, one which represented Governor Pennypacker himself as a dwarf on a stool, would have been drawn and quartered. The best newspapers in Pennsylvania agree that the law would never have been framed if it had not been for the usually righteous attacks on political corruption and corruptionists. No doubt these, in form, have not always been in good taste, and may sometimes have been unjust, but neither in Pennsylvania nor in any other State can the privilege of the press to comment freely on political acts be curtailed or even threatened without such a general expression of disapproval and revolt as has now been called out. The new law provides that a paper must publish in each issue the name of its owner or publisher, and editor; that action may be brought against any newspaper "to recover damages resulting from negligence in the ascertainment of facts, and in making publications affecting the character, reputation, or business of citizens;" that

compensatory damages may be recovered for injury to business and reputation, and also for physical and mental suffering endured by the injured party; and the law specially refers to pictures and cartoons as one method of such possible injury. There is comparatively little difference between this law and the common law, under which civil suits for libel are brought in New York State. Thus, "negligence in the ascertainment of facts and in making publications affecting the character, reputation, or business of citizens" is actionable under the common law; compensatory damages may be recovered under the common law for injuries to business or reputation, and also damages for physical and mental suffering; punitive damages are also recoverable under the common law, in the jury's discretion. The differences between this statute and the common law are that the new law makes it easier to ascertain the responsible parties and suggests to the jury that pictures, cartoons, or any other matter calculated especially to attract attention demand punitive damages, and it also widens somewhat the range of responsibility for libel, by allowing suit against owners, proprietors, publishers, and managing editors of newspapers, apparently making all equally responsible.

**The New Libel Law:  
Is it Constitutional?**

The only effect so far of the new libel law has been to provoke a series of rather keen cartoons in Pennsylvania papers ridiculing the Governor, who is treated as the author of the law, and who is thus pretty directly challenged to set its provisions in operation by a suit for libel under them. The journals probably depend largely on the well-known disinclination of juries to convict in libel suits; but also probably in part upon the question of the constitutionality of the new law. Reference to the Constitution of Pennsylvania shows that not only is there laid down a general principle that "the printing-press shall be free to every person who may undertake to examine the proceedings of the Legislature or any branch of government, and no law shall ever be made to restrain the right thereof," but that no conviction may be had for the publication of news or com-

ment relating to the official conduct of officers or men acting in public capacity when it is established to the satisfaction of the jury that the publication was not maliciously or negligently made. The general principles which should govern utterances of the press on public men and public affairs are perfectly clear: no restraint prior to actual publication, that is, no censorship, no inspection of proofs before publication; but, on the other hand, full responsibility under the law by the press for all utterances, and liberal treatment by courts and juries of persons who have been injured by wrongful statements in the papers. Damages should not be necessarily confined to actual proven money loss; injury to reputation or mental suffering and discomfort should also be considered; and carelessness as well as actual malice should be made to pay the damages which a false and injurious publication causes. There is no reason why the press should claim exemption from responsibility for its wrongful acts.

**The Kishenev Massacre** Last week confirmation was received of a terrible two-days' massacre of Jews which had occurred at Kishenev, in southern Russia. Information from many sources seems to reveal a prearrangement as to the riot; for it started in a number of places in the town at the same time. The inciting cause of the outbreak, according to the Russian "Novosti," was the death of a servant-girl who had taken poison and was placed in a Jewish hospital of Kishenev. The anti-Semites claimed that she was killed for sacrificial purposes. In consequence, according to the "American Hebrew,"

Not only did the rioters kill and maim people, but they vented their brutish instincts upon the bodies of the dead. Nails were driven through their nostrils, bodies were opened and stuffed with feathers, tongues pulled out, breasts cut off the bodies of women. Nor were these the only ghoulish acts perpetrated. Jews tried to save themselves in every way. Many sought safety in flight only to find, as they reached the railroad station, that mobs were awaiting them who tore them from their carriages and beat them to death.

According to most accounts, about fifty persons were killed, hundreds wounded and mutilated, and a thousand homes wrecked. When the authorities at St. Petersburg were

tardily informed of the riot, orders were given to the military to use rifles, if necessary, to suppress the outbreak. On the first show of determination by the troops—a few volleys fired into the air—the assailants of the Jews slunk back. The majority of the persons arrested for participation in the outrage, says a despatch from St. Petersburg, have now been tried and sentenced to varying punishments; although they were mostly arrested on returning to their homes after the second day's pillage with their arms full of plunder, all the prisoners protested their innocence and pleaded that they found the things in the streets and were taking them to the police station. Count Cassini, Russian Ambassador at Washington, says:

I am sure that the reports have been grossly exaggerated. The most drastic measures have been taken by the Russian Government to prevent repetitions of the troubles, and the Government always has done all that is possible to prevent them. The Governors of provinces have been ordered to exert themselves to the utmost to preserve order, and have been informed that they will be held responsible for the peace of their provinces. The guilty, as apprehended, will be dealt with to the full extent of the law.

It seems incredible that in a Christian country such a massacre could have taken place; in endeavoring to repress similar atrocities in Turkey, Russia will now hardly have clean hands. At the same time, it must be admitted that the peasant population in southwest Russia, between Odessa and the Rumanian frontier, is hardly of a higher grade than that represented by the Turks. With characteristic promptness, the Jews in this country have organized a great relief fund, and have transmitted by cable generous amounts to the heads of Russian Jewish congregations for distribution.

**British Tariff Discussion** On the same day last week Messrs. Balfour and Chamberlain, respectively Prime Minister and Colonial Secretary of the present British Cabinet, made speeches regarding the tariff which seemed at first decidedly divergent in aim. Addressing a deputation of members of Parliament who protested against the remission of the grain duty, Mr. Balfour gave no indication of conceding their demands. Without the slightest intention on the part of the

Government, he said, the tax had given some protection to the millers, thus indirectly and unexpectedly helping the farmers, but the Government must not be blamed for remitting the tax; it was never intended to be a protective measure. Protection, he declared, could not be introduced silently, as if by accident, and without a broad public indorsement of such a change in the national policy. However, he did not intend to say that the present system was necessarily permanent. New conditions had arisen since the old free-trade policy was adopted; and he could imagine circumstances under which Great Britain, by way of retaliation, would no longer consent to be made a passive target for other countries living under different conditions. While personally he believed in universal free trade, he would welcome some closer fiscal union between Great Britain and the colonies. This last phrase forms a bond of union between Mr. Balfour's and Mr. Chamberlain's speech. The reason for the latter may be found in another address, made seven years ago by the Colonial Secretary, inviting the attention of British Imperialists everywhere to the desirability of what the Germans call a Zollverein, or Customs Union. It was perhaps because of his prejudices in this direction that Mr. Chamberlain took no part in the discussion in Parliament excited by the announcement of the new budget, which remitted the grain tax. Mr. Chamberlain declared last week, as he did seven years ago, that, in order to preserve the Empire, the trade of the colonies must be secured. Canada had offered exceptional advantages which England did not dare accept because of "the narrow interpretation of the doctrine of free trade." Great Britain seemed so wedded to its fiscal system that it could not defend its colonies—a position, he claimed, not intended by the pioneers of free trade, who, if they were alive to-day, would agree to a treaty of preference and reciprocity with the Empire's children; he pointed out that Cobden had made and that Bright had approved a preferential treaty with France. "There are two alternatives before you: first, to maintain the free-trade policy in all its severity, although it is repudiated by every other nation and by your colonists; second, to insist that we be not bound by

any purely technical definition of free trade." In comparison with England's commerce with the rest of the world the actual trade between England and her colonies is small. No matter how much stimulus Mr. Chamberlain's plan might give to colonial commerce, such a stimulus would do little to compensate for the inevitable loss in general trade.

**Russian Diplomacy  
Regarding Manchuria**

Last week, in the British House of Commons, Lord Cranborne, Under Foreign Secretary, officially announced the Russian Government's reply, in response to independent communications from the American and British Governments, concerning the rumored Russian reoccupation of the Chinese province of Manchuria. This reply intimated that the Russian Government would adhere to its engagement to evacuate Manchuria, although the evacuation was temporarily delayed. The Russian Government also explained that it had no intention of adopting any measure tending to exclude foreign consuls in that province or obstruct foreign commerce in the use of the ports. The tone of the reply, however, indicated that Russia, not China, is master in Manchuria. The tone is not unwarranted from a power which, since its occupation, has increased the telegraph and port charges to its own advantage. Unofficially, the Russian Government also allowed an explanation to be made in St. Petersburg to the effect that the supposed reoccupation of the principal Manchurian port was "the re-entrance there of troops after the Russian evacuation, merely to pass through the town to embark on the waiting transports." Whether this explanation be regarded as reasonable or not, we trust that, so far at least as the letters of inquiry from the American Government are concerned, Russia now sees that any precipitate action in Manchuria, with explanations, reasonable or otherwise, afterwards, would be hostile to national as well as to international interests; in other words, that it will be much more to Russia's present commercial advantage in Asia if the United States continues for a time to enjoy in Manchuria the treaty rights heretofore guaranteed. It is not surprising that, having

spent a great deal in life and money in developing the trade and transportation of Manchuria, the Czar's Ministers have no intention either of abandoning the rich Chinese province or of permitting any permanent increase of foreign influence. We are glad to note, however, that, in addition to recalling the reported "demands" on China, for the moment Russia has removed the passport obligations in Manchuria instituted some time ago. While the Russian Government has thus paid regard to Mr. Hay's letter of inquiry (diplomatically so called, really a protest), the reply of the Russian Minister of Foreign Affairs contains two statements which might inspire some caustic comment. The first of these is that negotiations between Russia and China did not require the approval of the United States Government; to which we reply that if negotiations violate our treaty rights, they certainly do require our approval; the second observation is that Russia intends to observe the policy of the open door "as the phrase is understood by the Imperial Government;" in reply to which the London "Times" pertinently says: "That is not the way in which self-respecting nations are used to have their conventional rights interpreted. They do not leave others to construe the promises made to them; they do the construing themselves."

**Turkey Warned** Last week the atmosphere in the Balkans became clearer because of the simultaneous action of Russia, Austria, and France, in warning Turkey to refrain from too vigorous measures in punishment of the Salonika outrages. The three Powers decline (1) to accept the Turkish theory that the Bulgarian Government is responsible for the disasters there or elsewhere in Macedonia; or (2) to permit Bulgaria to be held responsible. The communication closes with the pertinent advice that the Porte's first duty is to carry out the general plan agreed upon between it and the Powers for Balkan reforms, repress the Albanian agitators, and punish the murderer of the Russian Consul, adding significantly: "If Turkey persists in diverting attention by menacing Bulgaria, the ambassadors of the Powers may shortly remind the Porte what the Powers expect." They expect (and they

have thus far expected in vain) that the Sultan shall pay some proper regard to his political and moral obligations as defined in 1878 by the Treaty of Berlin. The ultimate stigma, however, rests, we believe, not so much upon this Oriental ruler as upon the Occidental Powers themselves. By reason of jealousy among themselves, they have permitted Turkish misrule in every province of the Turkish Empire, whether in Europe or Asia. The thousands of innocent Macedonians and the hundreds of thousands of other victims who since 1878 have suffered from Turkish cruelty and outrage are, as Mr. W. E. Curtis explains in his recent work on the Balkans, the victims of that jealousy. When the Czar imposed upon Turkey the Treaty of San Stefano, England, Austria, Germany, and France intervened and tore it up, for fear that Russia might obtain a port on the Mediterranean, and so enlarge the sphere of Slav influence to a degree prejudicial to their own interests. The Treaty of San Stefano, which fixed the terms of peace exacted by the Czar from the Sultan after the war of 1877, would almost have restored the boundaries of the ancient Bulgarian Empire, thus reducing European Turkey to a rather narrow strip of territory. Not only was this treaty, which had been accepted by Abdul Hamid, abrogated by the jealous Powers: the treaty which they substituted for it restored Macedonia to Turkey under conditions which they have allowed to remain unfulfilled; indeed, not one of the many stipulations of that treaty has ever been faithfully fulfilled. Though a Christian was once appointed Governor-General of Macedonia and served in that capacity for five years, he permitted himself to be used as a screen to shield his Mohammedan subordinates who murdered, robbed, and tortured the members of his own faith. Last week's joint note, therefore, is a cheering sign that at last the Powers are holding Turkey to stricter account.

**The Passive Resistance  
Movement in England**

Last week, in the City Temple (Congregational), in London, a remarkable scene occurred at one of the midday services. The pastor, the Rev. R. J. Campbell, the successor of the late Joseph Parker, announced his

adhesion to the "Passive Resistance" movement against the Education Act recently passed by Parliament. This act has produced wide dissatisfaction among the English Nonconformists, of whom Mr. Campbell is sometimes regarded as the head. Voicing their determination, he declared that personally he would tender payment of the portion of the rates for education which was not to be devoted to sectarian purposes, but that, for the balance, the collector would have to seize his hall clock and other chattels. On this, the congregation, numbering about three thousand persons, stood up and cheered lustily. The pastor then added that, if Mr. Chamberlain, Colonial Secretary, advocated the imprisonment of those who participated in the "Passive Resistance" movement, and actually imprisoned the pastor of the City Temple, the Colonial Secretary's days would be numbered, for Nonconformity represented at least half the religious life of the nation. Mr. Campbell's course consistently follows out the threats of many Nonconformists after the introduction of the Education Bill in Parliament, that, as Hampden had refused to pay his quota of the ship money, so they would refuse to pay the taxes to carry out the provisions of the bill. Among the most active opponents of the measure has been Mr. Perks, the well-known Liberal leader. Speaking at Oxford some weeks ago, he said that "if, two or three years back, Nonconformists had been told that a Government would come into power and make it one of its cardinal measures to sweep out of existence the great school boards of England and to strengthen priestly control over the elementary education of children, it would have been beyond belief." Certain features in the Education Act, Mr. Perks declared, Free Churchmen never could and never would admit: (1) in every volunteer school in the country the majority of the foundation managers are not elected by the people; (2) thousands of appointments of head masters and head mistresses in the voluntary schools are subjected to sectarian tests, and as none of these appointments can be legally held by Nonconformists, the provision not only limits the area of choice, but also tempts an applicant to change religious opinions in order to secure a public appointment. In conclusion, Mr. Perks declared

that it was not the duty of Free Churchmen to pay a rate for the propagation of tenets which they believed to be obnoxious.

#### Education and Religion

While the Education Act has apparently unified the English educational system, it is also true that it has not registered a definite advance in the direction of unifying the supporters of education. According to Mr. Middlemore, the Liberal Unionist statesman, the bill has now divided England into two hostile camps, Churchmen and Dissenters; and according to Mr. Bryce—than whom there is no greater authority on education in the ranks of the Opposition—the bill was devised “purely in the interest of sectarian schools; the claim that it was to unify and organize is really a pretense; the Education Bill was not devised to bring order out of chaos, and does not do so. It does more harm than good, and turns education back.” Mr. Bryce calls special attention to the former Board schools—which are now altogether abolished because school Boards are abolished, but which practically continue under the name of “provided” schools. He declares that they were not secular, as was claimed by the supporters of the Education Bill: “on the contrary, they gave excellent religious instruction, but unsectarian, and this gave satisfaction to all but the Roman Catholics and a small section of the Church of England;” and that “none of the Voluntary (or Church of England) schools were better than the Board (or public) schools, and very few as good as the best Board schools.” Furthermore, “the Board schools were not more mechanical than the voluntary; on the contrary, the Board schools secured nearly all the best teachers.” By the operation of the new Education Act the two classes of schools have been united in a way probably insuring greater economy in management, but giving to the Church of England a far greater control than Non-conformists like. The result of the agitation on the cause of education will be only for good, in upholding the clauses of the new law which make for real, lasting unification, and ultimately in obliterating those clauses that compel English citizens to pay taxes for the support of schools

which represent a part of the people and not the whole people. Sooner or later Englishmen may realize that America has already solved this problem, and may find our system worthy of imitation.

#### Rabbi Hirsch on Christianity

The recent massacre of Jews by Christians in Russia lends point to this excerpt from an address by Rabbi Hirsch, of Chicago: “So far as the modern Jews are concerned,” said he, “they regard Jesus as one of the noblest spiritual teachers that ever appeared in the world. . . . The Jews have furnished the only shining example of obedience. The so-called disciples of Jesus have persecuted the Jews with savage ferocity for ages, and the Jews have borne these persecutions with lamb-like gentleness and silence.” These sentences are taken from a lecture given by Dr. Hirsch before the Epworth League of St. James’s Methodist Church, Chicago. The climax occurred when the lecturer exclaimed: “If Jesus Christ should return to the earth to-morrow, he would be welcomed in every Jewish synagogue in the land, and every Jew would say with David, ‘Lift up your heads, O ye gates; and be ye lift up, ye everlasting doors; and the King of Glory shall come in.’ And Jesus himself would answer: ‘Who is this King of Glory? God the Lord, he is the King of Glory.’” It is interesting to note how Dr. Hirsch approached this climax. “The Jews,” said he, “do not believe at all in original sin and inherited depravity. They believe that every man is a responsible, free agent, and is not involved in the guilt of his fathers or his children. Of course, therefore, they do not believe the story of the fall of man in the Book of Genesis in its literal sense. They accept the teachings of the higher criticism, and consider the story of the Garden of Eden an allegory. As they reject the doctrine of original sin, they reject, of course, the doctrine of redemption from sin. They believe in a Messiah, but the Messiah of the Old Testament is a temporal prince, who shall reign over the Jews after they shall have been reunited and become a nation again in Palestine. At least the orthodox Jews believe this, but the liberal Jews do not believe in the Messianic prophecies at all.”

This distinction between orthodoxy and liberalism among Hebrews is not as generally understood as it should be; and the general view of Jesus held among all classes of Jews is perhaps also not understood. This is that Jesus preached nothing but Judaism. Dr. Hirsch claims that those things which we are accustomed to associate peculiarly with Christ's teaching were taken from Jewish writings—the supremacy of the commandment to love God and man, the doctrine of the Fatherhood of God, the doctrine that the Sabbath was made for man, the abrogation of the law of retaliation, the obligation to love one's enemies, and even the Lord's Prayer, which, added Rabbi Hirsch, "we readily admit is the sublimest petition ever framed in human language." It was fitting that the meeting should close with the Lord's Prayer, Dr. Hirsch repeating it in unison with his Christian friends.

⊙  
Catholic Tendencies  
in the  
Episcopal Church—I.

Two important utterances in the Episcopal Church indicate the truly catholic tendencies within that communion, with which, it can hardly be necessary to say, The Outlook is in the heartiest sympathy. The first is a sermon preached in April by Canon Henson, of Westminster, on "The Sacrament of Unity." In this sermon he takes the ground that the Church has no right to bar from communion Christian men living Christian lives, who fulfill the apostolic conditions of baptism and faith. "Members of Christ's mystical Body they are; how can they be refused permission to affirm the fact?" The exclusion from the communion of those who have not been confirmed in the Episcopal Church he rightly declares is alike inconsistent with the spirit of the Prayer-Book and with the spirit of the New Testament. It cannot be harmonized with the declaration of the Prayer-Book which affirms the oneness of Churchmen with "the whole congregation of Christ's flock, dispersed throughout the whole world;" and he asks by what authority, after making that declaration, can the priest exclude from the communion-table any of Christ's flock who come to partake of the Lord's Supper. This principle of exclusion is equally inconsistent with the words of St. Paul, "Grace be with all them that love our Lord Jesus

Christ in uncorruptness:" for "surely all who can be so described ought to be gladly welcomed to the Lord's table." This interpretation of the invitation to the Lord's Supper is, of course, widely held among Churchmen, and was illustrated in the service at Tarrytown, N. Y., reported last week, when the clergymen and laymen of non-Episcopal churches in the town were expressly invited to participate in the Holy Communion.

⊙  
Catholic Tendencies  
in the  
Episcopal Church—II.

The other utterance is a letter in "The Churchman" by the Rev. Edward Abbott, D.D., rector of St. James's Parish, Cambridge, Mass. The present law of the Episcopal Church forbids the rector or officers of a church to "permit any person to officiate therein without sufficient evidence of his being duly licensed or ordained to minister *in this Church*." The italics are ours. Dr. Abbott proposes to allow the rector of any parish, his Bishop being cognizant of his intent and not objecting, to permit any baptized person to address his congregation on occasions, himself being present. Such an amendment would not allow the rector to invite a non-episcopally ordained minister to act as priest in the administration of the sacraments or in the general conduct of the service; but it would allow him to invite a non-episcopally ordained person, whether layman or minister, to preach in his pulpit. We cannot understand how the most exacting High Churchman can, on principle, object to such a change in the law of the Church. The Old Testament discriminated clearly between the priest and the prophet. The priest was ordained to his office, and no unordained person could perform priestly functions; the prophet was not ordained to his office, and any person could prophesy. The preacher is the successor of the prophet, not of the priest. The Churchman who believes that there is an official priesthood, charged with the duty of administering the service of the Church, a service which he may also think partakes of a sacrificial character, legitimately objects to invite any one not a priest to perform such service. But there is no ground in Scripture, and we cannot see any ground even in ecclesiastical history, for refusing

to the officers in charge of a church the right to invite any man who, in their judgment, is intellectually and spiritually competent to act the part of teacher, preacher, or prophet, in connection with the services of the Church. If the amendment which Dr. Abbott suggests were adopted, a long step would be taken toward the visible unity of Christ's Church. Since most non-Episcopal ministers do not believe that the priesthood has been continued in any form, because they think it was consummated and brought to its end by the priesthood in Jesus Christ, they could not object that the Churchman does not recognize their priesthood; and if all baptized disciples of Jesus Christ were welcomed to the communion-table of the Episcopal Church, and the door were opened so that any competent minister might preach in the pulpit of an Episcopal church, with the approval of the rector and the consent of the Bishop, one of the now apparent lines of division in Protestant Christianity would be removed.

President King  
of Oberlin

The inauguration of President Henry Churchill King at Oberlin was attended

last week by a large gathering of the university and college fellowship, some sixty institutions being represented. His inaugural address, and the address of President Tucker, of Dartmouth, which followed it, were notable for emphasis on ethical aims and influences. "The Primacy of Persons in College Education" was Dr. King's subject. The conditions imposed both by the complexity of modern life and the unity of man called for a leadership of greater social efficiency. The college, mediating between the strict supervision required in the secondary school and the complete freedom proper to the university, has for its special sphere the training of minds to act influentially as leaven in the life of society. The university must lay its main emphasis on the intellectual element. Attempts to transfer the university spirit to the college had been damaging to the true college ideal. More than highly trained specialists the college needs the close personal touch of mature men of marked interest in the wide range of others' life with character-begetting power. The address pleaded both for a

broad curriculum and for the correlation of college studies with all the interests of the outside world, affirming that education must emphasize high ideals in the pursuit of the most varied interests. The prime factors in such education were not things, not books, but persons. Great and high personalities in the teaching force were the supreme need. President Tucker took up the question, "Can the Subject Matter of Modern Education with its Attendant Method be Idealized?" The new material of modern knowledge had been largely adjusted intellectually, but not ethically. The traditional mind is still prone to ignore the ethical possibility of the new education, and the educational world needs an ethical revival at its heart. While moral power is latent in all active intellectual discipline, modern education needs to be permeated with the sense of social obligation. The "hard sayings" of to-day are concerned with integrity, justice, courage, charity, and sacrifice. The average man needs training for duties that are exacting for the exceptional man. The idealizing process culminates in righteousness. The clear and sharp issue of to-day is, Can we put ethics at the heart of modern education?

The Martyrs' Memorial  
at Oberlin

These inspiring addresses, of whose range and force but meager hints have been given, were followed by an inspiring scene the day after the dedication of the Memorial Arch, whose corner-stone was laid at the meeting of the Board of Foreign Missions last October. It was at Oberlin that the Shansi Mission, devastated by the Boxers with such destruction of precious lives, originated some twenty-five years ago. Of the thirteen American missionaries whose sacrifice the Arch commemorates, seven were alumni of Oberlin. Dr. Frank S. Fitch, of Buffalo, who gave the dedicatory address, spoke of them as the victims of a heathen fury, provoked, not by their religion, but by commercial and political influences. Not far distant from great centers of trade and industry, their Memorial embodies a noble ideal of life, and witnesses for the sacrificial ideal of Christianity. After the dedication services the Monument Ora-

tion was delivered by Mr. P. L. Corbin, of the senior theological class, and responded to by Mr. G. H. Lemon, of the middle class. The seventieth Commencement of the Theological Seminary, which occurred that day, was further distinguished by the inauguration of Professor Edward I. Bosworth as Dean. President Henry Hopkins, of Williams College, gave the Commencement address on "The Call of Christ to the Ministry of Christ."

**The Bach Festival  
at Bethlehem**

In the quaint and beautiful town of Bethlehem, Pennsylvania, was held last week the Third Bach Festival—the other two having been given in 1900 and 1901. It consisted of the Christmas Oratorio, the Matthew Passion Music, and the B Minor Mass, with short cantatas interspersed. These works were composed for the use of church worship, and they were rendered in Bethlehem with the same devotional spirit with which they were composed and first performed. From the foundation of the town as a Moravian missionary center, the old German chorales have constituted very largely the music of the church there, as in other Moravian communities. It is because Bach made such extended use of these chorales in his works that Bethlehem has found it perfectly natural to give a week of Bach's music. The festival consisted of nine "sessions," as they were called, not concerts. These sessions partook nearly of the character of services. After the beautiful Moravian custom on special occasions and church festivals, each session was announced, not by a bell, but by the trombone choir, which played chorales from the belfry of the church. The chorus, and to some degree the orchestra, were composed of men and women from Bethlehem and its environs. The calm beauty of the town, with its old ivy-covered brick buildings and its wooded burying-ground, the serene harmonies of the chorales as they floated among the afternoon shadows or through the twilight from the belfry of the church, the enthusiasm of the people of the town, and, not least, the fine spirit of Mr. J. Fred. Wolfe, the conductor of the festival, combined to create an ideal setting for the music. The one disturbing element was contributed

by certain people from elsewhere who went to Bethlehem with the notion that they were attending ordinary musical performances, and therefore not only missed the spirit of the entire festival, but by their actions did much to dispel it. Noticeable among these were certain New York musical critics, one or two of whom behaved like ill-bred children in the church. Their accounts in the newspapers, censorious and patronizing by turns, were not only, as might well have been expected, altogether valueless as interpretations of the festival, but also, as criticisms, strangely interlarded with technical blunders. Musically, the most praiseworthy work was done by the local singers and players; and in proportion as the visiting professional soloists caught the spirit of these amateurs they contributed to the real effectiveness of the festival. The continuance of these festivals, which epitomize a devotional and musical spirit none too common in America, ought to be assured by some form of endowment. An article giving some interpretation of Bethlehem, and its religious and musical spirit, written by a staff correspondent who was present at the Festival, will appear in a future issue of *The Outlook*.

## Ralph Waldo Emerson

The celebration in almost all parts of the continent of the one hundredth anniversary of Emerson's birth on Monday of next week shows that his service to the higher life of America is not without recognition. The materialism which he foresaw and against which he strove has come in with a tidal force which he could not foresee; far more than at the time when the words were spoken, this is "great, intelligent, sensual, avaricious America." But the end is not yet; there are other stages of growth before us; we shall not always be content with the works of our hands; the time will come when we shall passionately desire and seek the works of the spirit; for nations, like men, cannot live by bread alone. When that time comes, no prophet who has arisen in the New World will be held in higher honor than he who predicted *The Fortunes of the Republic* in memorable words: "I see in all directions

the light breaking. Trade and government will not alone be the favored aims of mankind, but every useful, every elegant art, every exercise of imagination, the height of reason, the noblest affection, the purest religion, will find their home in our institutions, and write our laws for the benefit of men."

Emerson was one of the little band of liberators who, in the second and third decades of the nineteenth century, effected the intellectual and spiritual emancipation of the new nation in the new world. The American republic is the youngest of the great nations in date of organization, but in political experience and education it is the oldest. People are often misled by the modern date of the United States into thinking of the American people as a folk who have arrived late on the stage of history, and who must therefore be content to take their place at the feet of the older races like untaught children. If fullness and ripeness of knowledge of life are the real evidence and test of age, we are older than India and China. The older races formed their political and social systems when society was in its youth; we formed ours when society had attained full growth; and our Constitution has evoked such unstinted admiration from the great publicists of the Old World because it embodies the fruit of so much experience, the wisdom of so wide a contact with life. It is really the oldest political document of its kind in the world. All the great races contributed to its adjustments of local and general power, its protection of individual rights, its breadth, its sanity. Greece, Rome, France, Holland, and England furnished the framers with rich capital of political wisdom. The Constitution is the capitalized experience of the world to the very date of its framing. We are the youngest of nations, but we are the oldest of peoples.

When Emerson was born in the little capital of New England, on the 25th of May, 1803, the colonies had been politically independent for two decades. They were not yet a nation, and did not become a nation until sixty years later. They were a group of provinces, which had severed their political connections with the Old World, but sat at its feet in all matters of literature, art, and science, accepted its standards of taste, and lived

in the light of its intelligence. When Irving published "Knickerbocker's History of New York," in 1809, he gave the new people its first distinctive work of literature. Edwards, Franklin, and Woolman had touched doctrinal or autobiographic writing with the delicacy, the power, or the charm of literature; Freneau had written a few graceful lyrics in the intervals of his partisan and satirical activity; but there was no literature, in the strict sense of the term, until Irving wrote the first American literary classic in New York. He and Longfellow rendered a double service to the old people in the New World; they interpreted the Old World afresh for them in charming verse and prose, and they dealt with new material in such distinctively American pieces as "Evangeline" and "Hiawatha," "The Legend of Sleepy Hollow" and "Rip Van Winkle." Poe, the most sensitive and subtle artist who has yet appeared among us, gave the world a new magic in his "Ligeia" and "The Fall of the House of Usher," his "Lines to Helen" and "The City Under the Sea." And Hawthorne's "Mosses from an Old Manse" gave promise of the delicate and highly individual genius which was later to give him first place among American writers.

Original and independent work of high quality had been done in America before 1837, but it was in that year that Emerson put into words the rising conviction of the New World and proclaimed its intellectual and spiritual independence. In one of the two most important addresses of his life, the epoch-marking if not epoch-making address on "The American Scholar," delivered at Cambridge in 1837, he declared that the time had come when "the sluggish intellect of this continent will look from under its iron lids and fill the postponed expectation of the world with something better than the exertions of mechanical skill. Our day of dependence, our long apprenticeship to the learning of other lands, draws to a close. . . . We will walk on our own feet; we will work with our own hands; we will speak our own minds. . . . A nation of men will for the first time exist, because each believes himself inspired by the Divine Soul which also inspires all souls."

This sublime independence, or, to be more exact, this independence, Emerson

based on more massive foundations than political freedom; he rested it on a fundamental conception of the immanence of God in the world and the divinity of the human soul. He translated the old doctrine which had carried the passion for civic freedom wherever it had been taught with clarity and power, that all men were kings and priests unto God, into the universal speech and justified it to the universal experience. He interpreted Democracy as faith in all men because there is something divine in all men which may be trusted; and this acceptance of the fatherhood of God he followed to its logical conclusion by the admission of all the children of God to the common privileges and responsibilities of a self-governing family. In his exaltation of man as man Emerson reveals the very soul of Democracy; that glorious truth at the heart of it which justifies the longest patience with its halting practical experiments and the most unshakable faith in its ultimate triumph. The fortunes of the race are bound up with it because it is the one political order which recognizes all men as the children of the Infinite and equal members of one family. The government established by the American people is the most sublime example of practical idealism yet furnished the world; and when the most arrogant and eloquent of doubting Thomases confronted Emerson, in the memorable meeting at Stonehenge, with a challenge to define the meaning of America, the great Idealist made no evasions and took no refuge in material achievements, but boldly reaffirmed the supremacy of love and justice, predicted the "bankruptcy of the vulgar musket-worship," and the ultimate brotherhood of the race.

It was an audacious answer to the scornful question in the shadow of a great and venerable history, but it was the only true answer. If America does not mean love and justice in practical application to national and international affairs, it would better have followed the ancient way of monarchies and aristocracies. More profoundly than its greatest statesman, Emerson has defined and interpreted the American idea. Before science had given the facts a truer interpretation, he rejected the whole semi-atheistic doctrine of the fall of man; be-

fore the churches had learned to read the parable of the Prodigal Son in the light of the love of God instead of the fear of the Devil, he held it primary truth that all men are born the children of God. No man ever had a more gracious and winning manner than Emerson; he was a prince among gentlemen because he so profoundly respected his fellows.

His idealism was not only lofty and persistent, but it was applied to affairs with a simplicity and native good sense which have given it persuasive influence among a very practical people. He had the Platonic spirit, but he never lost touch with Concord. He was a poor farmer, but everybody conceded that he kept his fences in repair. To his sore inconvenience there gathered about him the unbalanced, the dreamers, the abstract reformers, the well-meaning but wholly useless wool-gatherers of every kind and degree; but he went his own way with a quiet resolution and an unfailing sense of the difference between the actual and the ideal, which proves, as nothing else could prove, his sanity, his poise, his clearness as well as his penetration of vision. He is a convincing witness to the reality of the Ideal because he saw the real with such perfect distinctness.

In the midst of the tremendous tasks set for men to do on this continent Emerson was sent of God to say again, as the prophets and poets have always said, that the spiritual world is the only real world in the sense that it is the only world in which men really live; that that world incloses us on all sides and presses upon us so closely that we can ignore it only by willfully becoming deaf and blind; that work, tools, material, wealth, and power are valuable only as they stand for character and are used for spiritual ends; that to be great is not to be rich, but to be strong; that to be successful is not to acquire, but to bestow; that failure is not missing the goals, but mistaking the path; that freedom is the most rigorous kind of self-government; and that a nation takes rank, not because of the things it does with its hands, but because of the things it fashions with its spirit.

This is a young country, and Emerson was pre-eminently a preacher of the wisdom of youth—the wisdom of faith, hope, enthusiasm. His doctrine involves purity

of heart and the clean hand. No man has spoken to the spirit of youth so directly, so persuasively, with such authority of sympathy and insight. The spirit and substance of his teaching are expressed in those words spoken to the literary societies of Dartmouth College which George William Curtis declared touched the highest mark of American eloquence:

You will hear every day the maxims of a low prudence. You will hear that the first duty is to get land and money, place and name. "What is this Truth you seek? what is this Beauty?" men will ask, with derision. If, nevertheless, God have called any of you to explore truth and beauty, be bold, be firm, be true. When you shall say, "As others do, so will I: I renounce, I am sorry for it, my early visions; I must eat the good of the land and let learning and romantic expectations go, until a more convenient season"—then dies the man in you; then once more perish the buds of art, and poetry, and science, as they have died already in a thousand thousand men. The hour of that choice is the crisis of your history, and see that you hold yourself fast by the intellect. . . . Why should you renounce your right to traverse the starlit deserts of truth, for the premature comforts of an acre, house, and barn? Truth also has its roof, and bed, and board. Make yourself necessary to the world, and mankind will give you bread, and if not store of it, yet such as shall not take away your property in all men's possessions, in art, in nature, and in hope.

To this wisdom of the pure heart and the clean hand, this faith in the reality of the highest truths, the present pressure of work with materials opposes its preoccupation and deadening weariness. To this divination of youth is opposed also much of that wisdom of age which comes to us from the older races; the wisdom of weariness, disillusion, skepticism; the prudential wisdom distilled from centuries of experience, the chief maxim of which is to keep one's possessions snug, to avoid great risks, to be content with near things. If this were the wisdom of those who had striven and dared greatly, it would count for much; but it is the wisdom of those who have warmed their hands by the fire of life instead of giving themselves to its great adventures, who have sought comfort rather than greatness, and have compromised with life rather than resolutely wrestled with it for the best it has to give. Whether the youth of America are to believe with Emerson or to doubt with the Decadents, whether they are to follow the divination of the pure heart or the lower

wisdom of those who have lost the vision, is perhaps the most vital issue to be settled in the next half-century. If we go with Emerson, we shall make a new way for humanity; we shall bring freshness and health into the close air of the world; we shall bring in the kingdom of God.

Emerson shares with Hawthorne and Poe the primacy of American letters. Whitman must be counted with them as an original force in poetry. His imagination had more volume and flow; he had command, at his best, of a telling freshness and effectiveness of phrase; but in power of organization, in discernment of spiritual qualities, he falls far below the Concord poet. For it is as a poet that Emerson must be reckoned with; the limitations of his prose, the lack of order in his thought, and of thorough and large structure in his style, are due to the poet's method in dealing with his subjects. He has enriched our literature with a few poems of such directness of vision, such captivating simplicity of imagery, such ultimate felicity of phrase, that they will lay hold of the imagination of remote generations. He was not great in volume of emotion, in tidal force and sweep of imagination, in that fullness of life which comes to the poet whose genius is charged with elemental power as was Dante's and Shakespeare's. He did not look at Christianity with the fresh and original insight which he brought to other subjects. He saw the disorder of society, but he did not seem to realize the tremendous significance of sin as moral evil. And although he said striking and profound things about Christ, he failed to take the measure of the divinest personality in history—a failure due in part to the force of the religious reaction in which he lived, and in part to his fundamental view of life.

In spite of these limitations, he remains in many respects the finest product of the old race in the new world; the loftiest interpreter of its fundamental idea and mission; one of the deepest and noblest of its teachers; of a life so simple, so blameless, so nobly poised between vision and task, that to recall it is to catch a glimpse of the spiritual order of life, and to believe in the dreams of the pure and the great.

## Two Typical Leaders

Professor W. E. B. Du Bois ; Booker T. Washington : they represent different types of character, different conceptions of the race problem, different methods for its solution, and they deal with it in a widely different spirit. These differences are strikingly illustrated in two volumes—one by Professor Du Bois, just published, "The Souls of the Black Folk," the other by Dr. Washington, published four years ago, "The Future of the American Negro."

To Professor Du Bois the negro and the American are ever separate, though in the same personality. The American negro is "two souls, two thoughts, two unreconciled strivings;" he is ever the subject of a "double consciousness;" dominated by a "sense of always looking at oneself through the eyes of others, of measuring one's soul by the tape of a world that looks on in amused contempt and pity." To Dr. Washington the negro race is a great race; during the Civil War the negro exhibited a remarkable "self-control," and was "to the last faithful to the trust that had been reposed upon him" by his master, yet was always "an uncompromising friend of the Union," and never, either in freedom or slavery, under a suspicion of being a traitor to his country; and since emancipation has he given abundant evidence that he can "make himself a useful, honorable, and desirable citizen." To Professor Du Bois the negro is a problem, and the question is ever present in his consciousness, and from it he confesses himself unable to escape, "How does it feel to be a problem?" To Dr. Washington America is the problem, and the white race is as much a part of it as the black: "The problem is how to make these millions of negroes self-supporting, intelligent, economical, and valuable citizens, as well as how to bring about proper relations between them and the white citizens among whom they live." Professor Du Bois is half ashamed of being a negro, and he gives expression to his own bitterness of soul in the cry which he puts into the mouth of his race, "Why did God make me an outcast and a stranger in mine own home?" Dr. Washington rejoices in the honorable record of his race; in his address at Hampton's last Commencement

he cries out to his white auditors, "We are as proud of our race as you are of yours;" and his negro auditors applauded his declaration with great enthusiasm. The sense of amused contempt and pity for his own race, caught from the white people, is reflected in the title of Professor Du Bois's book, "The Souls of the Black Folk;" the spirit of race pride, of national patriotism, and of hope for the future of his race is reflected in the title of Dr. Washington's book, "The Future of the American Negro."

We shall speak hereafter more fully of Professor Du Bois's interesting and valuable book, as we have heretofore spoken of Dr. Washington's; here we take the contrast between the two as a text for some reflections on two parties or tendencies or influences in the negro race, which the two respectively represent. One of these parties is ashamed of the race, the other is proud of it; one makes the white man the standard, the other seeks the standard in its own race ideals; one demands social equality, or at least resents social inequality, the other is too self-respecting to do either; one seeks to push the negro into a higher place, the other to make him a larger man; one demands for him the right to ride in the white man's car, the other seeks to make the black man's car clean and respectable; one demands the ballot for ignorant black men because ignorant white men have the ballot, the other asks opportunity to make the black man competent for the duties of citizenship, and wishes no man to vote, white or colored, who is not competent; one would build the educational system for the race on the university, the other would build it on the common school and the industrial school; one wishes to teach the negro to read the Ten Commandments in Hebrew, the other wishes first to teach him to obey them in English; to one labor is barely more honorable than idleness and the education which makes "laborers and nothing more" is regarded with ill-concealed contempt, to the other industry is the basic virtue, and the education which makes industry intelligent is the foundation of civilization. The first view has frequently crude representation in negro journals and by negro orators—political and religious; but the ablest and most cultivated expression of it which we

have ever seen is afforded by the volume of Professor Du Bois, albeit presented with qualifications which in this brief summary it is impossible to represent; of the second view the pre-eminent representative is Dr. Washington. The Outlook heartily accepts the second view. Something like this is what it would say to its Afro-American readers:

I. Have faith in yourselves. Cultivate the spirit of self-respect; only he who respects himself will be respected by his neighbors. Decline to look at yourselves through your white neighbor's eyes; look at yourselves through your own eyes. Do not take the white man as a standard; make your own standards. Be not imitators. There is no more reason why you should imitate the white man than why the white man should imitate you. No man can make himself into another man; no race can make itself into another race. The missionary makes a mistake who tries to convert the negro into an Anglo-Saxon; the negro makes a greater mistake who desires for himself any such conversion. The Anglo-Saxon was once a subject race; it did not win its present position by trying to be Norman. Do not try to be an Anglo-Saxon; be an Afro-American, and be proud that you are one.

II. Do not push yourself forward; do not allow would-be leaders to push you forward. Do not be ambitious for social equality, or industrial equality, or political equality, or any kind of equality. Be ambitious to be men, and trust that in time the manhood will make for itself a place; it always does. The whole power of the Federal Government did not suffice to give you political power; it failed because you had not the necessary preparation for the exercise of political power. The United States Supreme Court has decided that it cannot give you political power by a judicial device. The slower way is the quicker way. Get political competence, and trust that political power will follow in due time. In most if not all the Southern States the possession of about three hundred dollars' worth of taxable property entitles you, under the amended constitutions, to a ballot. Set yourselves, by honest and intelligent industry, to get the property; then ask for the ballot. If registrars deny it to you, when you go before them

with your tax receipt, appeal to the State courts to enforce the State law. If ignorant, shiftless white men vote, so much the worse for the State. It is neither for your interest nor for that of the State that you should be represented by an ignorant and shiftless negro vote. Nothing is for your interest that is not for the State's interest.

So also in the industrial and the social world. Acquire intelligence and virtue, and what usually accompanies them in this country, a moderate property, and the doors of industry and the respect of your fellow-men will follow. What Dr. Washington said at Atlanta, what Professor Du Bois calls the "Atlanta Compromise," is no compromise; it is a principle of universal application, just as true and just as applicable in the Northern factory as the Southern plantation: "In all things purely social we can be as separate as the five fingers, and yet one as the hand in all things essential to mutual progress." Never forget this principle; never demand social recognition; social recognition is never given on demand. Always work for mutual progress. What member of your race has risen to the position of social respect, won the opportunity of useful industry, and acquired the political influence of Dr. Washington? Follow in the path he has blazed for you, and you will arrive, sooner or later, at the same destination.

III. Therefore seek education—first, last, and all the time. But do not fall into the notion that education means ability to read and understand Homer and Dante. Do not let Professor Du Bois's picture of Socrates and Francis of Assisi deceive you. There are already enough "brothers of the poor" of your race in America; you do not need to add to their number. The first duty of every man is to earn his living; after that comes the duty of adding to the life of others. Seek for yourself, seek for your race, first the ability to earn a living. Is this materialism? Very well! materialism is the basis of life. What not only your race, what the great mass of the American people, need to-day is a broader education rather than a higher education. No education for any race, or for any individual of any race, is adequate which does not include manual training; and no education is worthy of the name which leaves

its recipient helplessly dependent on his neighbors for his livelihood. Are you a teacher, or a preacher, or a doctor, or a lawyer, or a merchant? can you read Greek? can you enjoy Homer and Dante, Raphael and Titian, Beethoven and Brahms? Very well; but do not content yourself by the endeavor to pass your knowledge along to your race; use it to make them first of all self-respecting and self-supporting citizens; second, practical contributors to the welfare of the community in which they live. It is not true that Dr. Washington asks "that black people give up, at least for the present, three things—first, political power; second, insistence on civil rights; third, higher education of negro youth." It requires all our charity to think that Professor Du Bois really believes that Dr. Washington has ever asked anything of the sort. He asks his fellows to get political power by proving their capacity to exercise it; civil rights by obedience to law; and higher education by building it on a foundation of a broad industrial and ethical education. In this he is absolutely right. Political power without previously acquired capacity to use it is always dangerous to others and generally dangerous to the possessor; the civil rights of a freeman the lawless are not entitled to; and higher education without a foundation laid in elementary education is a castle in the air, which collapses at the first rude awakening of the ill-bred scholar to the exigencies of actual life.

IV. Do not think about yourself. Do not think about your woes or your wrongs. Meditate, not on "the souls of black folk," but on "the future of the American negro." Look out, not in; forward, not backward. Put your thought on your work, not on your soul; and take council of your hopes, not of your discouragements. Do not look too long on the one-roomed cabins, or on the mortgaged farms, or on the usurious rates of interest, or on the Jim Crow cars, or on the short-term schools. Remember that forty years ago few negroes in Virginia owned themselves, and that now they own seventeen and a half million dollars' worth of taxable property; that forty years ago it was a penal offense to teach a negro to read, and that now there are public schools for him, supported at public cost, in every Southern State; that

forty years ago no negro could vote, and now that negroes are registering and voting and having their votes counted in every State and in nearly every county in the South.

The negro still suffers injustice; he is still subject to a sometimes cruel prejudice. The Outlook does not condone the first nor apologize for the second. But what is the remedy? Not Federal Force Bills; not Supreme Court decisions enforcing political equality; not a veneer of culture on a nature ill developed in the essentials of practical life; not self-assertiveness and clamorous demand for political rights or social equality. Character. Character—developed by broad systems of education in the negro and not less in the white race. Character—wrought in the individual and extending by a gradual process throughout the community. Character—the foundations of which are truth, honesty, chastity, temperance, industry, intelligence, the superstructure of which is material property, mutual respect, personal culture, political freedom, and social peace.

## Richard Henry Stoddard

Since the venerable figure of William Cullen Bryant vanished from the streets of New York, Richard Henry Stoddard has been the senior member of the group of working literary men in this city. His physical infirmities, and the sorrow which came to him in the death of his wife and his son, bore heavily on his spirit and on his body; and for many months past he had been rarely seen on the streets, or at the clubs which he once loved to frequent. The son of a sea captain, there was something virile and sturdy about Mr. Stoddard which deepened the pathos of his partial disablement; and the news of his death at his home in this city on Tuesday of last week, while it brought a shock to his friends, also brought a feeling of relief, for it meant escape from very hard conditions, and freedom from wearing limitations.

Born at Hingham, Mass., on July 2, 1825, the son of a sea captain, Mr. Stoddard lost his father at an early age, and was brought to New York in his tenth year, where he first attended a public

school, and later entered a law office, from which he passed to a newspaper office. Then he tried to learn the tailor's trade, and after that the trade of a blacksmith; at the age of twenty-one he was working at iron-molding. While he was passing from one avocation to another, in that uncertainty of mind which is the lot of many young men of original force and ability, Mr. Stoddard was writing poetry and learning by practice the art of writing. His first volume, published in 1849, when he was twenty-four years of age, was entitled "Footprints." He was an early contributor to the "Knickerbocker." In 1851 he married Elizabeth Barstow, a woman of great force of intellect and marked individuality of character, a writer of poems and novels of distinctive quality. Readers of *The Outlook* have not forgotten the reprint of three of Mrs. Stoddard's stories which was made a few years ago, and which recalled their striking excellencies and equally striking defects to a generation which had slight familiarity with them. From 1853 until 1870 Mr. Stoddard had a place in the Custom-House in this city. By this time he was devoting himself regularly and persistently to writing, had formed the acquaintance of Bayard Taylor, between whom and himself there was a devoted friendship, had begun to write reviews for the "Tribune," was responsible for the literary work of the "World" from 1860 to 1870, and for more than twenty years past held the position of literary editor of the "Mail and Express."

During all the early period while he had been trying his hand at various avocations, Mr. Stoddard had been fitting himself for his real vocation, which was that of a writer of lyric poetry. He was an essayist, a biographer, and a critic; but, first and foremost, he was a song writer. A working man of letters who for many years lived by his pen, Mr. Stoddard had remarkable command of his literary resources, wide knowledge of books, rapidity of judgment, skill in the use of the various forms of literature; but it was through his lyric poetry that he most distinctively and directly expressed himself. Mr. Stedman, who lightened the lonely months of his last year, and who was beside his bed on the last day of his life, has defined his characteristics as

"affluence, sincere feeling, strength, a manner peculiarly his own, very delicate fancy, and, above all, an imagination at times exceeded by that of no other American poet. This last quality pervades his more ambitious pieces, and at times breaks out suddenly in his minor efforts, by which he was best known."

It is safe to predict that it is through these shorter pieces, which have the pure lyric quality, that Mr. Stoddard will be remembered, rather than through his more ambitious pieces. Although he tried his hand successfully at many kinds of writing and had an intimate acquaintance with a wide range of literature, his true success is to be found in the field of pure song. He has left a few records of his feeling, his experience, his sentiment, and his aspiration, which, by reason of their quality, their spontaneity, their freshness, and their melody, are likely to live long. He was a true singer, not in any sense a great one; with an imagination which had the power of kindling, a manly warmth of heart, and the courage of his emotions as well as of his convictions. He is at his best when he is least ambitious; and his real gift shows itself, not when he is experimenting with difficult meters, but when the rill of song flows free and untrammelled in natural measures. That quality which cannot be defined, but of which only the real poet is the master, is shown in these verses, among the simplest and yet at the same time among the most characteristic that he has left the world:

How are songs begot and bred?  
How do golden measures flow?  
From the heart, or from the head?  
Happy Poet, let me know.

Tell me first how folded flowers  
Bud and bloom in vernal bowers;  
How the south wind shapes its tune,—  
The harper, he, of June.

None may answer, none may know;  
Winds and flowers come and go,  
And the self-same canons bind  
Nature and the Poet's mind.

A man of Mr. Stoddard's gifts is best described in his own speech; and no characterization can convey so fully and clearly his quality as his own work. Mr. Stoddard's thoughtfulness, his sentiment, his imagination, and the delicacy and freshness of his phrasing are seen at best

in two little songs, one of which is likely to appear and reappear in American anthologies of the future for many decades to come. His description of Thackeray following the Angel of Death in "Adsum," published forty years ago, contains some striking lines:

Into the night they went;  
At morning, side by side,  
They gained the sacred Place  
Where the greatest Dead abide,—  
Where grand old Homer sits  
In godlike state benign;  
Where broods in endless thought  
The awful Florentine;  
Where sweet Cervantes walks,  
A smile on his grave face;  
Where gossips quaint Montaigne,  
The wisest of his race;  
Where Goethe looks through all  
With that calm eye of his;  
Where—little seen but Light—  
The only Shakespeare is!  
When the new Spirit came,  
They asked him, drawing near,  
"Art thou become like us?"  
He answered, "I am here."

But most effective and most characteristic is a little song, the pathos of which must have come back to the old poet again and again in these later months of loneliness:

#### IT NEVER COMES AGAIN

There are gains for all our losses,  
There are balms for all our pain,  
But when youth, the dream, departs,  
It takes something from our hearts,  
And it never comes again.

We are stronger, and are better,  
Under manhood's sterner reign:  
Still we feel that something sweet  
Followed youth, with flying feet,  
And will never come again.

Something beautiful is vanished,  
And we sigh for it in vain;  
We behold it everywhere,  
On the earth and in the air,  
But it never comes again.

A dinner in Mr. Stoddard's honor was given by the Authors Club in this city six years ago. It brought together many of his friends, and evoked expressions of regret from many men of letters who were compelled to be absent; but the most effective and impressive expression of the evening came from the old poet himself; and the closing lines of the verses which he read on that occasion may be spoken as a kind of postlude to his own arduous career:

When this life-play of mine is ended,  
And the black curtain has descended,

Think kindly as you can of me,  
And say, for you may truly say,  
"This dead player, living, loved his part,  
And made it noble as he could,  
Not for his own poor personal good,  
But for the glory of his art!"

## The Spectator

The Spectator was in Boston lately, and luckily happened to be there upon the third Monday and Tuesday of the month. For the benefit of those outside the Hub it may be well to explain that unless one is in Boston in the first or third week of the month one stands no chance of seeing "Fenway Court," Mrs. "Jack" Gardner's new Italian palace, known more accurately as "The Isabella Stewart Gardner Museum in the Fenway, Incorporated." And, as the popular song goes,

"I tell you it's something to see!"

Perhaps the difficulty of penetrating its gates heightens the appreciation of the visitor, for, being on exhibition only four days out of each month, from eleven to three, and but two hundred tickets, at one dollar each, being issued for each day (the majority of which are taken up months beforehand by canny Bostonians), the chances of admission for the transient comer are decidedly slim.

The Spectator cannot undertake to unravel fully these mysteries of admission. He learned, however, that the palace, as a palace, belongs to Mrs. Gardner, while the museum part, as a museum, belongs to a special corporation of which she is the guiding spirit and the treasurer. The palace is a creation made possible only by the possession of two great fortunes by its mistress; the museum, on the contrary, is to be self-supporting, and to turn over any surplus to the cause of art education. Out of these facts arise naturally the apparent contradictions and complications of the limited admission. The museum is for the public, and yet the palace is extremely hard for the public to get into. Most amazing of all, when one is in at last, he beholds no museum, but solely and only a palace, where every object of art, from Titian's "Rape of Europa" to the carved stone lions in the

cloisters, is a part of a splendid whole, and not a ticketed item in a collection.

In this way Mrs. Gardner, always noted for her social originality, has now given Boston, and indeed all America, a new artistic sensation. Museums are as plenty as blackberries, even in the most inartistic of our cities. The typical rich American likes to buy pictures, new and old, and the American public likes to have permanent collections of pictures established for its benefit. But nowhere in America, up to this time, has any one done what this American woman of fortune has accomplished—made an artistic and complete setting for a number, not only of great pictures, but of beautiful examples of architecture and handicraft, so that the whole is more exquisite than even its most beautiful part. There are, the Spectator was told, over five thousand separate objects of art built into or adorning this palace on the Fens; yet the Spectator has an unforgettable and complete impression, not of five thousand beautiful things, but of one thing of beauty, one artistic whole. Underneath this impression is another, equally complete, that no one but a woman could have done it. The Spectator did not need to be told that Mrs. Gardner, though she employed architects, was herself the designer of every arcade, every entrance, every vista and corner; that she, with her own hand, showed the workmen how to mix and dash on the pink-and-white plaster which gives the walls of the great interior court their exquisite rose-flushed glow under the sunshine that streams through the iron-ribbed glass roof; that she gave to each window, each balcony, each bit of marble railing and stair, each gargoyle, each pillar, that special place which seems so naturally to belong to it. The various pillars and pedestals in Fenway Court are a study in themselves—variously unlike, yet fitted into the general design of court and cloisters, with an unerring harmony of taste that makes each one belong just where it is, and produce no discord with the others. Pillars of porphyry, of granite, of marble, carved, twisted, Doric, Saracen, standing alone amid the palms or built into arch, window, balcony, or arcade—they are only one

feature of the palace, but they show the problem that has been met and solved here, of combining modern material and modern work with the proper setting of the antique. American workmen, under Mrs. Gardner's direction, have here done what is associated in most minds with Venice or Granada instead.

The great court, the keynote of the whole palace, seems, indeed, more Spanish than Italian. It is truly a patio, with its fountain dripping its waters leisurely from the mouths of marble dolphins, its palms and oleanders and acacia-trees, its mosaic pavement from the Villa Livia at Rome in the center, set in a wide border of brilliant flowers, and the whole surrounded by arched cloisters except at the further end, where a double stone staircase descends to it from a carved balcony. High up in the sunshine of the upper stories birds are constantly singing, and the perfume of the hyacinths and lilies fills the quiet air. How Mrs. Gardner has contrived a palace without draughts (which is certainly not according to Italian style) is one of her secrets; but the air is pure, cool, and still. The Spectator was told by his companion that at the first private reception given at Fenway Court, early in January, the heating apparatus was not satisfactory, and some wit remarked, apropos of the shivering assemblage, that "Mrs. Jack had added a new treasure to her museum—the Frieze of the Four Hundred." Yet, contrary to all expectation, including their own, not one of the distinguished guests had a cold in consequence, since there were no draughts to produce it. From this central court the Spectator wandered through the various rooms and corridors, always to come back to balcony or window for another look at its beauty. Though it was a decidedly cold day, with an east wind blowing across the Fenway as only a Boston east wind can blow, every window was open upon this roofed, inclosed, and sunshiny court, and it might have been truly a spring day in Italy that one was enjoying. In the wide, perfectly lighted rooms, grouped with unfailing taste, against wall-backgrounds of antique tapestry, stamped leather, or brocade, hung the splendid pictures by Raphael, Titian,

Velasquez, Rembrandt, Botticelli, Fra Angelico, Rubens, and the rest, which Mrs. Gardner has collected abroad and gathered here. "There are only twenty-nine things in the palace on which duty has not been paid," remarked the Spectator's Bostonian friend, "and the sum of two hundred thousand dollars has been spent in bringing in the others." These twenty-nine, it seems, belonged to the museum and not to the palace, but which they were the Spectator could not find out, and twenty-nine out of five thousand is a very small proportion indeed.

One of the few defects in the otherwise excellent taste of the palace is supposed to be the blue tint of the walls of the long galleries upstairs. The tones of the famous Chigi Botticelli, the "Madonna aux Épis," are said to be "shockingly impaired" by this inharmonious background. The Spectator is not an art critic, but only one of the general public, and so, though he records this criticism, he would never have known that the deeply, darkly, beautifully blue background was impairing the Botticelli at all, though he recognized that, for a celebrated picture, it was rather disappointing. Most of the famous paintings, however, are grouped in the great rooms—the Titian Room, the Raphael Room, the Dutch Room, the Veronese Room, and so on—and their setting is marvelously managed. The Dutch Room, for instance, with its green hangings, its two quaint long tables with a bowl of greenish orchids on each, its splendid Renaissance stone fireplace, gives every Rembrandt, Rubens, Van Dyck, and Terburg in it its full value and beauty. The pictures are not crowded on the walls, but have enough space not to look like an exhibition. In the Veronese Room the ceiling is by Paul Veronese—the "Coronation of Hebe," and though, to the Spectator's mind, the modern ornamental border does not suit it at all, the wall-hangings of stamped leather, profusely gilt, are exquisitely appropriate, and enhance its rich and florid beauty. In the Titian Room, the "Rape of Europa" hangs on one side of the doorway, and the "Philip the Fourth" of Velasquez on the other—two of the great pictures of the world—while through the wide triple

window one looks down upon the color and fragrance of the court below. The Raphael Room, with its background of crimson brocade, holds more than one Raphael, and a Lippo Lippi, a Francia, a Mantegna, besides an altar-piece by Fra Angelico, very charming in its delicate blues and clustering saints and angels. If Fenway Court were not a palace, it would still be a fine museum of art. But, then, museums of art are unartistic, and this, it must be added, is artistic to the point of genius.

Far up in the stories next the glass roof the Spectator could see sunny galleries with bay-trees in tubs, and more birds and flowers; and behind the wrought-iron grilles of the lower galleries a chapel with carved oak stalls open on one side, and on the other a vista of cases of rare books and manuscripts, armor, embroideries, bas-reliefs, and a long room beyond where the famous portrait of Mrs. Gardner by Sargent hung in view at the end. She herself, the Spectator noticed, came and went from this private part of her palace through the rooms where the visitors were admitted, and then vanished again behind the iron grilles. The palace is not opened unless she is present, and she admits only two hundred at a time, so that there will be no crowding and no danger of breaking or defacing her treasures. The Spectator counted ten stalwart policemen in attendance, besides a number of maids on the alert, and several friends of the hostess sitting in the various rooms, on guard, so to speak. There are problems in combining a museum with a palace lived in by the owner; but, as that owner has triumphantly surmounted far greater problems in creating her Italian palace at all, the Spectator feels sure of her ultimate successes in solution. The future of the "Isabella Stewart Gardner Museum in the Fenway, Incorporated," is safe in her hands. No longer young, a widow, and childless, there is some reason to suppose that the city will inherit from her, in the end, this palace of beauty among the Fens. At present, the public, whether of her own city or not, owes her a true debt of gratitude for giving it these glimpses of the new and exquisite possibilities of an Italian palace in the New World.

# The Personality of Emerson

By Thomas Wentworth Higginson

I HAVE always thought that one of the most charming of Browning's poems, perhaps because one of the shortest, is that in which he compares his contact with a man who had once seen Shelley to picking up an eagle's feather on a path. Every direct glimpse of a great man is an eagle's feather to us, and, at any rate, his personality is brought nearest by seeing him face to face. One of the most brilliant women I ever met once told me that she did not know which gave us most knowledge of an eminent man, to have read everything he had written and read of everything he had done, without having seen him—or, on the other hand, the very first moment's glance into his face. This is the translation into prose of Browning's eagle's feather.

My first eagle's feather, in respect to Emerson, belongs to the period when I was a boy of eleven or thereabouts, and went to the old-fashioned Lyceum lectures in Lyceum Hall in Harvard Square. There I first saw and heard Emerson, and was perhaps in the position of the old woman in Concord who, when asked if she understood his lectures, replied, "Not a word; but I like to go and see him stand up there and look as if he thought every one was as good as he was." ("Emerson in Concord," p. 148.) The memory of this was fixed indelibly on my mind by the very structure of the Cambridge Lyceum. In the old building, not the present one, there was a mysterious hole in the slanting floor among the upper seats, which was originally intended for a stove-pipe at least, and, being left open, became gradually the stairway for us village boys, who, naturally, dropped down it very soon with much unnecessary noise when we got tired of the lecture, which was usually early. Emerson set my playmates flying soon; but I kept my seat, and when I descended decorously at the very end of the lecture, which was, I think, on Martin Luther, I was received with indignation and contempt by my playmates. I pleaded guilty, like the old woman, to not understanding him, but said that I

liked to look at him and to hear his voice. This was my first eagle's feather.

Many years passed, and I saw and heard him at meetings and lectures, especially at some which touched on slavery, when the Southern law students, then numerous in Cambridge, went to scoff and, let us hope, remained as converts. The only point I distinctly remember of these lectures is that when, on one occasion, he was speaking on Eloquence, he said, in his staccato manner, "All Southerners are eloquent;" and then, with unbroken placidity, after a round of applause, "All negroes are eloquent," after which the applause came from another direction. It was later than this, however, and after my graduation, that I had actual communication with him. The contributors to the old "Dial" which he latterly edited have now, I think, all passed away, and I am perhaps the last among even the rejected contributors to the magazine. I sent to Mr. Emerson in its last years some verses called "Sunset Thoughts," which had, I fear, the commonplaceness of their title, but were very genuine and real to me, and were met by him with a verdict which has always seemed to me unsurpassable. His note read thus:

To W. H. Perhaps I shall not print the 'Sunset Thoughts' in the 'Dial.' They have truth and earnestness, and a happier hour may add that external perfection which can neither be commanded nor described.

"Which can neither be commanded nor described." Were ever the inevitable scissors of fate, cutting short the wings of young ambition, more exquisitely applied? A myriad times, at the age of twenty, did I dwell on those two felicitous epithets, and many a time in later years I have repeated them with equally smooth intent to applicants for criticism. I will not say that I did not glance longingly into the few remaining numbers of the "Dial," for Mr. Emerson had added a consoling postscript, "P. S. Perhaps after all I may publish your verses," but I submitted meekly and with a permanent love and reverence for my wise executioner.

My next eagle's feather came, as it were, amid the rush of mighty winds. It was on the question of admission of women to the Town and Country Club, in Boston, half a century ago. When that Club met in Boston, perhaps the best attempt at a really varied intellectual gathering ever made there, the question became inevitable, Shall women be admitted? and I, being younger than now, and not much wiser, was naturally enlisted in the effort to bring them in. One result of this may be seen in the following letter from Mr. Emerson to me:

Concord, 16 May, 1849.

*My dear Sir,* I was in town yesterday and Mr. Alcott showed me the list of subscribers to the Town and Country Club, and I read at or near the end of the list the names of two ladies, written down, as he told me, by your own hand [Mrs. Mary Lowell Putnam and Miss Elizabeth Peabody]. On the instant, I took a pen and scratched or blotted out the names. Such is the naked fact. Whether the suggestion I obeyed was supernal or infernal, I say not. But I have to say that I looked upon the circumstance of the names of two ladies standing there upon our roll as quite fatal to the existence of our cherished Club. I had stated to the Club the other day that "men" was used designedly and distinctively in the first draft, and the Club by vote decided that it should stand so. I had moreover yesterday just come from a conference with some gentlemen respecting the views of an important section of the members, who, alarmed by the pugnacious attitudes into which the Club was betrayed the other day, were preparing to withdraw, and whom I had assured that all those who had long been projecting their literary Club would not be deprived of their object, and something else thrust on them, when to my surprise I found this inscription of names of ladies. I erased them at once, that no man might mistake our design. I really wish you would join with us in securing what we really want, a legitimate Club Room; and very many of us will, I doubt not, heartily join with you in obtaining what is legitimate also, but not what we now seek, a Social Union of literature, science, etc., for the sexes. But we claim the priority of time in our project, and do not wish to be hindered of it, when it is now ripened and being realized. I am quite sure it is the right of the great majority of persons who have acted in it hitherto, to establish a Club-house; and you must let us do it, and you must heartily join and help us to do it.

Yours with great regard,  
R. W. EMERSON.

I will resist the temptation of fatiguing the reader with my answer to this letter, but will say only that I ventured to point out that the Club had not, at its meetings for organization, decided the question as he

supposed; that it had, on the contrary, expressly left it unsettled by adopting a resolution introduced by the Rev. Thomas T. Stone, of Salem, leaving it open, and that two of the leading founders, Mr. Alcott and Theodore Parker, took my view of the subject. I explained that my feeling was that the test of an actual nomination would leave the Club in an unequivocal position, while anything else would be evasive and unworthy of us. Mr. Emerson was afterwards an active member of several clubs including both sexes, especially of the Radical Club so called, which met for many years. I think that Mr. Cabot in his Life of Emerson gives a somewhat mistaken impression of Mr. Emerson's position in respect to women, through having relied wholly on a letter written by him in 1850, at the very outset of the modern innovations in that direction; whereas Emerson wrote a letter in 1862, which may be found in Kennedy's Life of him, and in which he says, "It is very cheap wit that finds it so droll that women should want to vote. . . . And for the effect of it, I can only say, for one, that certainly all my points would be sooner carried if women voted."

As for the Club, it soon went to pieces on other grounds. My audacious cousin, Ellery Channing, who lately died at Concord, said that the trouble was that the organization was an attempt to combine two widely separated classes—rich men in Boston, who expected to pay \$100 a year and have two or three elaborate dinners, and poor country ministers who expected to subscribe one dollar a year and get their board and lodging gratis every time they went to Boston.

Still another precious eagle's feather is a letter in answer to one I had written to Emerson after coming home from the Civil War, discharged because of a wound. I had written to him, I suppose, when I was trying to get myself adjusted to my old life and place and occupation—a readjustment which most men who went into the military service found rather hard. I quote but a part:

Concord, 18 July, 1864.

Col. T. W. Higginson.

*My dear Sir,*— . . . I rejoice that your case is taken in season, and to so good a hospital, wherein to heal your hurts, and if we lose you from the field, it is excellent to have a second and better arm. You will come back

to so many old studies with the basis and the rhetoric of new experience. So I am forced to give you joy in any view I take of your position.

It would give me much pleasure to talk with you—if obtrusive and all-absorbing politics permitted,—on the topics you suggest, of the moral aspects of society at this moment. I observe that in France, in England, in America, the same things are being said, or the same principle is implied, if not quite articulated; and I often feel that the appearance of an enthusiastic moral genius, a new Zeno or Buddha, thinking and acting with simplicity, would crystallize the chaos, and begin the new world. But this is for the beginning not the end of a note.

Yours in the best hope,  
R. W. EMERSON.

These are samples of the eagle's feathers; let us now turn to the flight of the eagle himself.

Undoubtedly the most remarkable example that we have had in America of the selection of leading names by a picked class of electors—a method which was the ideal of our ancestors, and which the Presidential electoral body unsuccessfully tried to put in practice—was in the voting for a Hall of Fame in New York, as given by a hundred men and women, or, more accurately, by ninety-seven men and three women, selected with what seemed to be the greatest care. It consisted of twenty-five chief justices, National and State; twenty-five presidents of colleges; twenty-five professors of history or scientists; and twenty-five publicists, editors, and authors. All but three of these cast their votes and succeeded in electing twenty nine candidates out of the possible fifty; a majority, not a mere plurality, being required. The first seven of these, as was natural, were taken from public life. Next to these, being eighth in order, came Emerson. Washington, alone among them, had every vote cast, 97; Lincoln and Webster had 96, Franklin 94, Grant 93, Marshall and Jefferson 91 each, Emerson 87. Every other author, every other poet, every great inventor, merchant, or scientist, remained below—only three other literary men being, indeed, included—Longfellow, Irving, and Hawthorne. The decision was not, of course, infallible, but it was a remarkable testimonial to the recognized leadership of our foremost literary man. Let us now ask, What was the key to his power?

It is a proof of the many-sidedness of

Emerson that so many people seek to determine this key, whether they grasp it or not. When a man takes quietly a supreme hold upon the thought even of his own country, it is inevitable to ask the source of his influence; and it is difficult to look back upon the great literary leaders of the world without seeing that they may be divided into the system-makers and the non-system-makers, and without also seeing that the latter class endure the longest, on the whole. Plato had so little system that we rarely know at any given moment whether he is speaking for himself or for Socrates, his master. Aristotle had his own system, and we care in comparison little for it. The great English, Scotch, French, and German philosophers pass in review, and we see how they succeed and replace one another. But Epictetus, Marcus Antoninus, Seneca, still live; their detached maxims outlast the systems of others; they did not displace each other; new versions of them constantly appear, perhaps to remind us that it is, after all, the fragmentary and unsystematic teacher that we most need. Renan's fine remark about the works of Marcus Antoninus, that "they will never grow antiquated, because they embody no dogma," might have been made for Emerson. I heard the same point made by that very acute thinker Mr. Griggs, who said of Emerson, "He did not aim to combine, and was therefore always fertilizing, like Plato." Of course the lack of system may be worse than any system, just as non-ostentation may become more offensive than ostentation; but it is the man who is oppressed by neither that we like the best. There may have been moments when Emerson yearned for a formal method—in his first lecture on "The Natural History of the Intellect" he seemed to be trying for it, but the second lecture of the course never came. He holds us by his detached sentences; if we take those to heart, each reader perhaps carrying away a different sentence, it is all we ask.

When he says, "We are too young by some ages yet to form a creed," we are reconciled to take all the wisdom that we can handle, and wait those ages for the rest. And when he says, "The end of life is an action and not a thought," he

gives us something to live upon; we fall back upon it; it becomes embedded in us like those cannon-balls you see embedded in trees at the Loyal Legion Museum on Columbus Avenue; the cannon-ball has not changed since the Civil War, but what interests us is to see how its silent presence seems to have entered the tree about it, so that the growing bark has at last almost concealed it.

It is well to remember that we have still explored but imperfectly the antecedents of Mr. Emerson, because we have looked but imperfectly at his maternal ancestors. We have had in literature a multitude of descriptions of the purely Puritan training. But we know, as yet, too little of the curious double influence which came in with the introduction of the Episcopal Church, as, for instance, in case of a family like the Haskinses, of which Emerson's mother was a member. Mr. Haskins was an Episcopalian; Mrs. Haskins, a Congregationalist; and at a certain age every child of the large household must make his or her own choice and give the reasons in writing. Mrs. Emerson chose the Episcopal worship. On Sundays they walked together to church, the children following them in pairs till at the corner of Washington and Winter Streets they turned different ways; and it is recorded that, when they reached that point, Mr. Haskins once said to a gentleman who was visiting them, "Do you prefer to go to meeting with Mrs. Haskins? Or will you worship with the saints and servants of the Lord at Trinity?" What the discipline was at home we know from another anecdote. One day, when the family were at dinner, a building near their house was seen to be on fire. The group of children instantly started from their places, but were checked instantly by their father, who, rapping on the table to command attention, returned thanks for the meal, as on other days. "The Lord be praised for this and all his mercies," he said, and then, after a short pause, added, "Now boys, run!" It is no wonder that Emerson's first verses as a boy of eleven years were written about this grandfather; and no wonder that his own mother, thus bred, should have been able in later life, when she had broken her hip by a fall during the night, to go back again to bed and lie till morning, rather

than ring the bell for her maid earlier than usual.

Drawing from these several inheritances so great a range of traits, it is not strange that no two observers give us the same Emerson. To Cabot he is one person, to his son another, to Holmes another, to Sanborn another, and to his last and perhaps acutest critic, John Jay Chapman, another still. Part of this difference was a difference of period, in that he came out of the established Puritanism earlier than others and therefore less completely. He had spent his life, he said, in the effort to get the frock off his shoulders, whereas younger men, even among the transcendentalists, had simply worn it, if at all, for convenience, or played with it, and had dropped it easily when the time came. He clung to a few conservative traditions; did not wish to have his children make a noise on Sunday, or to have morning prayers abolished at Harvard College. He may have had temptations to resist, like many of his followers, or failed, like many, to resist them. No one who ever saw him with his grandchildren on his knee could doubt that there was a child of gayety somewhere within the grandpapa himself. His formal definitions of love may sound like a crucifixion of the natural instincts, carried on systematically for two hundred years; but, after all, he was a father and a grandfather, not a celibate priest. He held the moral law to be the supreme truth, but he did not toss his little grandchild in his arms under the mere guidance of the moral law.

Yet we see in him a seeming want of all very intimate personal relation with men and women. The love of children rose easily in him, the younger the better; and no one has better touched by a single stroke the smiling discourse of the village girl with the shop-boy over the counter; but no lover ever yet found his essay on love anything but insufficient. He finds himself compelled to write even of Alcott: "It is not the sea and poverty and pursuit that separate us. Here is Alcott by my door—yet is the union more profound? No! the sea, vocation, poverty, are seeming fences, but man is insular and cannot be touched. Every man is an infinitely repellent orb, and holds his individual being on that condition. . . . Most of the persons whom I see in

my own house I see across a gulf; I cannot go to them, nor they come to me."

In other directions the same gulf existed. He had no real love for traveling, at least in historic regions. He loved the wild landscape under guidance of Thoreau and Ellery Channing, and afterwards on his trip to the Pacific; but Italy was to him "a rococo toy." Chapman says admirably, "If there is one supreme sensation reserved for man, it is the vision of Venice seen from the water." But Emerson's own description of it at the age of thirty is that it "looked for some time like nothing but New York. It is a great oddity, a city for beavers, but to my thought a most disagreeable residence. You feel always in prison and solitary. It is as if you were always at sea. I soon had enough of it." Yet Holmes says truly of him that his very smile was a writing out in living features of Terence's famous motto, "I am a man and find nothing human foreign to me;" and the New York journalist and poet, N. P. Willis, says of his voice, "It is a voice with shoulders in it, which he has not; with lungs in it far larger than his; with a walk which the public never see; . . . and with a gentleman in it which his parochial and 'bare-necessaries-of-life' sort of exterior gives no other betrayal of. . . . A heavy and vase-like blossom of a magnolia, with fragrance enough to perfume a whole wilderness, which should be lifted by a whirlwind and dropped into a branch of aspen, would not seem more as if it could never have grown there than Emerson's voice seems inspired and foreign to his visible and natural body."

The deficiency we reluctantly feel in Emerson is perhaps best hinted at by Plato's saying that "no sober man should knock at the door of the Muses." There is an obvious peril, especially to the literary man, in yielding to any carnal temptation; but there may be a drawback in being created incapable of being thus tempted. It was, perhaps, by a secret instinct that Emerson was latterly led to smoke a placid cigar, or half of it, as his son charitably specifies—to drink a little wine, not for his often infirmities, as the Scripture prescribes, but rather that he might keep within hailing distance of human weakness. The tale that he once ordered a mint julep, and the barkeeper

gave him a glass of water as more suitable to his appearance, is doubtless a pure invention, like the tale of Margaret Fuller and himself at the opera, but the fact of the invention is itself a criticism. I reminded him once that I had heard him speak in commendation of "our water-drinking poets," but he shook his head gravely and thought I must be mistaken. But I remained unconvinced. He certainly would have preferred in this, as in all things, to represent the intermediate, the judicial ground, and not the extreme. In public meetings where there might be two men, as Barrie describes his two Scotch schoolmasters, standing on their legs at the same time and imploring each other passionately to be calm, Emerson could be calm without passion. Notice, for instance, the high-bred tone of his approach to perhaps the most radical attitude he ever took, his espousal of the cause of John Brown, when he said, "All gentlemen are on his [Captain John Brown's] side. I do not mean by gentlemen, people of scented hair and perfumed handkerchiefs, but men of gentle blood and generosity, 'fulfilled with all nobleness,' who, like the Cid, give the outcast leper a share of their bed; like the dying Sidney, pass the cup of cold water to the soldier that needs it more."

As the Civil War drew near, Emerson wrote in his journal: "Do the duty of the hour. Just now the supreme public duty of all thinking men is to assert freedom. Go where it is threatened and say, 'I am for it, and do not wish to live in the world a moment longer than it exists.'" Accordingly he went, invited by Wendell Phillips, to an anti-slavery meeting in Boston, where a well-dressed mob silenced his voice. On hearing some rather shallow sermon against war, he wrote: "I felt while he spoke that it was easy, or at least possible, to open to the audience the thesis which he mouthed upon, how the divine order 'pays' the country for the sacrifices it has made and makes in the war. War ennobleth the country; searches it; fires it; acquaints it with its resources; turns it away from false alliances, vain hopes, and theatric attitude; puts it on its mettle—in ourselves our safety must be sought;—gives it scope and object; concentrates history into a year; invents means; systematizes every-

thing. We began the war in vast confusion; when we end it, all will be system." What a series of condensed aphorisms is this; in his own phrase, elsewhere used, it is "a shower of bullets."

It is curious, in view of all this, when we find some little English critic writing of Holmes's *Life of Emerson*, "The Boston of his day does not seem to have been a very strong place. We lack performance." Yet the English Earl of Carlisle had written of the old-time Abolitionists that they were "fighting a battle without a parallel in the history of ancient or modern heroism," and Lord Houghton had written to me, when I sent him the *Harvard Memorial Biographies*, "They are men whom Europe has learned to honor and would do well to imitate." But whence came, humanly speaking, the influence that gave them strength, let Lowell, writing on the spot, reply: "To him more than to all other causes together did the young martyrs of our Civil War owe the sustaining strength of moral heroism that is so touching in every record of their lives." This is what is meant in American history, at least, by performance; and if we go one step further back, and ask whence this strength came to Emerson, we must recall his mother, with her broken hip, and his aunt who taught her nephews the maxim, "Always do what you are afraid to do." It is curious how often, in writing of strong men, you trace their qualities back to some woman who was yet stronger.

In respect to his literary pursuits Emerson wrote once to Carlyle: "I am the victim of miscellany—miscellany of designs, vast debility and procrastination." But this was the price he paid for standing out for individual manhood in a dawning age of specialists. "Meek young men," he said in that great oration before the Phi Beta Kappa Society at Cambridge in 1837 which Dr. Holmes called our intellectual Declaration of Independence—"meek young men grow up in libraries believing it their duty to accept the views which Cicero, which Locke, which Bacon, have given; forgetful that Cicero, Locke, and Bacon were only young men in libraries when they wrote these books." I suppose that all the accumulated sentences ever spoken before in America had not done so much to induce young students to

think for themselves as that one sentence. To me, I know, the whole College Library became a servant, not a master, from that moment. The man who uttered the sentence paid the penalty in later years when he called himself the "victim of miscellany;" but what he was to younger contemporaries is best stated in what Lowell wrote to Holmes: "There was a majesty about him beyond all other men I have known, and he habitually dwelt in that ampler and diviner air to which most of us, if ever, only rise in spurts." (Holmes's *Emerson*, p. 361.)

Emerson's limitations, like those of all men, were definite. He had, for instance, no mechanical faculty, and it is recorded that his little son, seeing him at work with a spade, called out to him, "Take care, papa, you will dig your leg!" His friend George Ripley, a scholar by nature, declared his belief that Emerson never read ten pages of the books he quoted oftenest, Plato, Plutarch, or Montaigne. But he worked over his own writings with enormous labor, as is shown by the manuscript of his poem "Boston," which lay by him for many years, sometimes written part in pencil and part in ink, and evidently at different times. We have his son's authority for the fact that he "fitted the refrain to this work with some difficulty, as we see."

So severe was his self-scrutiny that out of these fifteen lines only seven appear in the "Boston Hymn" as printed, and even these sometimes with alterations, while eight of them were rejected, every word.

Emerson's last few years, his son tells us, were quiet and happy. Nature gently drew the veil over his eyes; he went to his study and tried to work, accomplished less and less, but did not notice it. However, he managed to look over and index most of his journals. He attended public meetings when he was not called upon to speak, went to lectures, and began to go to church again. "The instinct had always been there," his son says, "but he had felt that he could use his time to better purpose." His books, which the publishers had formerly called "very poor-paying stock," steadily increased in circulation. Many years earlier, after a walk with Thoreau, he had written in his diary that a walk in the woods was one of the secrets for dodging old age, and he wrote afterwards

this address "To the Woods:" "Whoso goeth in your paths readeth the same cheerful lesson, whether he be a young child or a hundred years old. Comes he in good fortune or in bad, ye say the same things, and from age to age. Ever the needles of the pine grow and fall, the acorns on the oak; the maples redden in autumn, and at all times of the year the ground-pine and the pyrola bud and root under foot. What is called fortune and what is called time by men, ye know them not. Men have not language

to describe one moment of your life." (Emerson in Concord, p. 192.)

Earlier still he had written in his journal (October 21, 1837): "I said when I awoke, 'After some more sleepings and wakings I shall lie on this mattress sick; then dead; and through my gay entry they will carry these bones. Where shall I be then?' I lifted my head and beheld the spotless orange light of the morning beaming up from the dark hills into the wide universe." (Emerson in Concord, p. 195-6.)

## A Preacher's Story of His Work'

By W. S. Rainsford

Rector of St. George's Church, New York City

### VIII.

**A** MINISTER ought to be able to make his people want to hear the doctrines he believes in. Of what use is a coachman if he cannot drive his team? Let him get off the box and get some team he can drive; the team is not there to drive him. I have seen men of brilliant promise in the seminary leave the seminary and take charge of a big church and be beaten by their churches; but a defeat like that, in my judgment, is the result of a wrong course. No man ought to take a church in which he thinks he is not going to have freedom—a clear road to go his way. As I look back, I thank God for my own experience. I was assistant for eleven years before I had sole charge; St. George's was my first sole charge. I deprecate the tendency of young men to take sole charge as soon as they leave the seminary; before they are ready for a big church. A boy who has learned to drive a pony in the country is not fit to drive a four-in-hand through the streets of New York; and the trouble with seminary boys is, before they have learned to drive ponies they want to drive a high-spirited four-in-hand; it cannot be done. A man who rides a bicycle may think he can drive a locomotive, but he can't.

But I know, too, that if only a man will not put self-seeking first, and if he has a

message in his heart, he will draw around him the people who want that message. If he cannot draw people around him, I doubt whether he was meant to deliver a message as a minister of the Gospel. God does not want ten thousand men who will just pass; he wants the two or three who know what truth is and are willing to die for it if necessary; not those who, after a day's march, must needs pause, duck their heads into the river, and take long draughts; but those who are content to keep on their way and lap up water in their hands.

Then, a man must have freedom; if a man is placed where he is not free, let him, first of all, make himself free. If he has not freedom as a clergyman, let him be a bootmaker, or anything else where he can be free. A clergyman is no use until he is free. If he cannot find freedom in his church, he has been mistaken in the church; if he has a vestry, deacons, or any board that ties him up, let him get out and find some place where he can go his own way; sometimes it is better to get the deacons or vestrymen out. A clergyman cannot give God or man his best service unless he has freedom. I have had considerable experience with young clergymen; and I cannot recall an instance of a man's failure who really tried to live up to this principle. A man must first get rid of self-seeking before he can deliver his message so that it will tell.

First let a man be fully persuaded in his own mind of his message, and then go to work. The world of men needs him. He will find his place. As I look back upon my own ministry, I know the reason why I succeeded long ago in England was because, so far as God gave me light, I was willing to give up everything—St. Giles's, London, or anything else that stood in my way—in order to be FREE. Later on, when I came to Toronto, and that second great season of darkness, of which I spoke, settled for eighteen months on my soul, I was, without quite knowing it, going through just the same struggle again. I was forced into a position in which I had the agony of seeing my work falling to pieces, my friends being disappointed in me, those who had been converted through my means saying, "You are tearing down what you built up; what are you doing!" and those in ecclesiastical authority saying, "If you respect yourself, you will resign," and not a soul to go to; and yet feeling that I could not preach what I did not believe to be true, nor could hesitate to say what I did believe to be true. If you are true to yourself, you cannot preach a thing until you are fully persuaded of it in your own mind; and when you are once fully persuaded, you cannot hold your tongue.

There is no downing a man who will get down on his knees and say from his heart, "Almighty God, I am willing to fail, if failure means the advancement of the kingdom of God." It sounds egotistical, perhaps, but I know from my own experience that the mistakes that have marked my own ministry have helped me to better things. Those eighteen months of darkness ground that into my soul: I would not and could not say what I did not believe, and when I saw things, I would not and could not fail to say them; and again and again in my ministry God in his mercy has brought me where I have failed, and I have been helped upward and onward.

I should like to give a specific instance or illustration of failure. I can look back now and see that God's hand was in it, but then it was nothing but bitterness. It was before I went to Toronto. I had been conducting a series of missions in different parts of the country, and I had been preaching some pretty good sermons

—it is very easy, as I have said before, to turn out some good sermons when you preach ten or fifteen over and over, repeating them as you visit each church. A call came to me to speak on missions at the Church Congress in Boston. This was in 1877. I was so ignorant of ecclesiastical matters that I did not know what a Church Congress was—I had an idea that a few clergymen met together to discuss clerical matters. I had to speak at this Church Congress, I think, on Wednesday or Thursday. I had been holding mission services at the Church of the Holy Trinity, One Hundred and Twenty-fifth Street and Fifth Avenue, New York, on the very morning I had to leave for Boston. I arrived in that city at 6:30, if I remember rightly, and I had to speak at 8:30. I went to the Music Hall about 8, and saw an audience of quite two thousand people—the place jammed, and two hundred and fifty clergymen and bishops on the platform. Cold shudders ran down my back. However, I knew my subject, or thought I did, and I was going to speak without notes—something I have never done since. My turn came after Father Benson, of Oxford. The whole place looked black to me; I got up, stammered and sputtered for five or six minutes—my time was twenty-five minutes—and sat down. I am not exaggerating in this; I did not say one clear sentence that would parse in that time. I sat down in darkness, and the meeting went on. At last people began to go, the men began to leave the platform; I did not know a soul. I sat there utterly cast down—a lonely youth indeed. All at once a large hand was laid on my shoulder, and a big, kind voice said: "Mr. Rainsford, will you preach for me in Trinity Church next Sunday morning?" That was my first meeting with Phillips Brooks. Was it any wonder I loved him? I did not know until afterward that Brooks had heard of my preaching, that he knew that a certain vestry of an important church were looking for a rector, and that he had engineered my speaking at the Church Congress in Boston. Naturally, after the display I made, the vestry did not want anything of me, and Brooks, out of his big heart, felt that this green boy had lost his head and failed, and determined to give him another chance at Trinity the next Sunday morning. I

preached there, and did nearly as badly; Brooks sat listening to me, and he was a very terrifying man to preach before; but after that I saw a good deal of Phillips Brooks until he died.

That failure was one of the best things that could have happened to me. I was entirely unprepared to take charge of a church in Boston. Had I gotten it, I should have had an early and cheap success, and then nothing. I should not have gained my knowledge of the country, nor my experience with different people; nor would the people in Boston have been as patient with me as they were in Toronto in the great struggle that came to me. The people in Toronto I had led myself, and they were ready to suffer my lapses and changes; even so, their patience almost broke down. But in a great city, had I followed the same up-and-down course, I should simply have lost my grip and made failure that would have been hard to recover from.

So, when you ask, How can a man succeed? my answer is, If a man comes to the point where he is willing to fail that God may succeed, he cannot be downed. I think we have a great advantage in the Episcopal Church, for we are about the freest Church, although we are supposed to be the narrowest, and so if a man in the Episcopal Church is fully persuaded in his own mind that a certain course of action is right, it is very hard to shake him out of his seat.

I do not think it is an easy thing to be a clergyman. It is an easy thing to draw a salary and make a fair success; but to make your mark among men, to do anything more than simply march in the ranks—that is a pretty hard thing to do. I think it is only fair to say that, from 1876, when I first came to New York, to 1883, when I left Toronto, though I preached in almost every State in the Union, I never received a call to a single church except to one Presbyterian church; and if I were to leave St. George's to-day, I very much doubt whether I should have a call to many churches, certainly not to many influential ones. The people at St. George's would not have called me only they were so hard up; the church was going down, and they had to take my conditions, after other men had refused the call; and I firmly believe that if I were

to close my relations honorably with St. George's now, there are very few churches in the United States that would have me. I was once presented to the Bishop for trial; and I do not think anything saved me from coming to trial but the fact that almost immediately afterward I broke a blood-vessel in my head when preaching, and for some time was near death. I had worked very hard, and I suppose my brethren of the clergy knew it, and the agitation slowly died down. The case never came to trial.

There are not only obstacles in the ministry, but influences that succeed in keeping young men from the ministry. I have known of strong influence at home brought to bear to suppress perhaps even only a boyish desire, which might yet have come to much, on the basis that there is no money in the ministry. For instance, the father earns \$20,000 or \$50,000 a year; he learns that his boy as a clergyman will never be likely to get more than \$5,000, and determines that he does not want his son in the ministry. This difficulty exists, unquestionably; but I think what keeps more men out of the ministry than anything else is the idea that clerical life seems unreal and a little unmanly, and this idea is fostered by our clerical training and the clerical environment. It is a great mistake to think to train a clergyman differently from other men. In his training he is kept apart; he begins at last to think he is different; and the first thing you know, he who should have his soul most open to truth, and who should be the keenest to appreciate what is vital in life around him, does not get at truth as quickly as other men. His atmosphere is unhealthful and unreal, and that is the thing I think every man who takes a high view of what the clerical calling ought to be wants to fight against, wants to change. Mere clericalism is a terrible hindrance to religious life.

I think theological students average much better to-day than they did twenty years ago; the standard is unquestionably higher. If we could only convince men that when they put on the garb of a clergyman they do not diminish the man under the coat, the average would be still better. The laity are largely responsible for this. I hate, when I come into a gathering of men, to have them drop

their voices because I am a clergyman. I would far rather have them swear, and not stop swearing when I am there. It is unfortunate that the seminaries should be in any way withdrawn from the universities. Men intended for the ministry are put away by themselves, they are taught that they are different from the rest of mankind, they dress differently, their methods of living are somewhat different, and so they get a certain professional stamp and twang which very often never wears off, and it is a hindrance; because, as I am trying to point out, the man who is merely clerical is going to play a diminishing part in this country; he has no place in democracy; he is an exotic; he is not a healthy growth; he is something imported from outside; he belongs to the past.

I am, of course, now speaking of the Protestant Church; the Catholic Church is more than clerical, it is sacerdotal. It has an enormous organization; it has the terrible *ipse dixit* of the Pope of Rome; it has a cast-iron system; it holds the keys of heaven and hell. An enormous proportion of the ignorant people are willing to accept all that, as an escape from themselves; but the ruling and controlling element in humanity is not going to yield to it. There is unquestionably a great deal of weariness as life grows more intense, and as knowledge increases more and more men can only gasp and say, "I cannot cover that; it is beyond me," and perhaps naturally seek relief in the Papal authority. Doubtless there are some people who are not willing to accept Romanism who find relief in the ritualism of the High Church; but I do not think those are the people who hold their own valiantly in the foreground of the battle of life; they are rather the maimed, the weary, the footsore. Democracy is not going to be led forward by them; nor is the minister going to succeed who ministers chiefly to them. The rest that I want, and the rest that will satisfy the poorest man, is not necessarily the rest which the Roman Catholic Church gives. I do not want the rest that comes with surrendering something that God has given me to defend, that I may gain strength in maintaining, using, and developing it.

Nevertheless, if a man only has a vis-

ion of God, he may be in the Roman Catholic Church, or anywhere else, and he will reach some people. Let men but stand for what they see and feel, and they will help their age. A man with this vision, if in the Roman Catholic Church, will reach thousands I never could reach; and I am thankful to God that he can help them; my message is not for them. My business is to get the light into my own soul, and then associate with those who can, generally speaking, march with me. I think as one grows older one grows more profoundly thankful that there are messages so absolutely different from one's own—different expressions of "the same spirit that worketh in every man severally as He will."

I fear that in what I have said about the clerical life I may appear to dwell entirely on the intellectual side, but that is not so. I spoke of my intellectual struggle, and the results of that struggle, but I do not want it understood that I believe in a purely intellectual ministry—that is not my idea at all. What I do maintain is that in a great majority of cases men will be stimulated and helped toward God by an intellectual effort to restate Gospel truth to them so that they can accept it without insulting their intelligence. Men do not want to give up the things their parents taught them—things that are sacred and sweet to them; but they can no longer accept them in the form their parents did. We must restate these things—awaken in them a sense of their sonship with God, and so stimulate their sense of service to their fellow-men. That is my experience. And this is exactly the point I have been working at all the time. There are great spiritual unities that bind men to one another—rich or poor, wise or unwise, learned or foolish; and if you approach men on those great basic unities, you win from them response.

One of the secrets of a successful ministry is to preach what you believe to be true, and nothing else. If it is true, it is going to win. A good deal of the success that has followed me in my ministry I lay to the fact that I was always sure of what I preached. I was sure I was right when I was talking to the people of Norwich, England, and when I was holding my missions in Toronto. I scored people; I abused them; I told them

exactly what they must do and what they must not do. It was the fault of evangelicalism that it was a system oversystematized, and I fell fearfully into the fault of that creed in the earlier days of my preaching. Now I have no definite system such as I had then, a tradition received from my fathers. But in giving up the old systematic faith I have felt no loss; this other is so much richer and bigger. I had a delightful sense of exhilaration when I grasped this great principle, capable of universal application—that people are the children of God. I tell them that, and it thrills me as I say it, no matter how commonplace the words are. If a man has a spark of the divine in him when he is born into this world a crying, helpless baby, that spark is not going to be extinguished; God is not to

be outdone, even by ten tons of muck. But in the old days, before I had this bigger faith, God blessed my ignorance in those dear, happy, early days as much as he blesses my ignorance at this moment. I was trying to do the best I could; I was trying to give to men the poor best I had. Oh, how imperfect and muddled it is even yet! I see some things now that I did not see then; but all along I only tried to do what God gave me to do, and that won the way for me. There is something in the soul of every man that responds to the divine reality in a messenger, if he is a real messenger. I believe that as firmly as I believe anything, and I repeat that to the young clergy, and my boys and girls, and all over the land wherever I have a chance.

[THE END]

## Some Phases of Immigrant Travel

By James B. Connolly

Author of "Out of Gloucester," etc.

**T**HIS is something of the writer's experience as an immigrant passenger from a European port to New York on one of the largest steamers crossing the ocean. She was nearly six hundred feet long, a seven-day boat, and carried, all told, about twelve hundred passengers, of which, on this trip, eight hundred were steerage, from southern and western Europe and from Asia Minor—made up mostly of Armenians, Russians, Greeks, and Italians, with a scattered few to each of a half-dozen other nationalities.

Of these steerage passengers there was no intention to make exhaustive studies. The writer's idea was simply to observe what was going on aboard ship, and to take unstrained whatever might be served out. He believes that he "got all that was coming to him" as an immigrant; certainly, of some things he bore away a vivid remembrance.

First—but only to touch it lightly—there was the matter of sleeping accommodations. Packed away in tiers, upper and lower, with only pieces of iron piping separating one from the other, a fairly broad-backed man, lying flat in his berth, could feel the piping touching his shoulders on either side. There was no room

to squirm about. Kick out and you kicked your neighbor. Remove the piping, and with every roll of the ship a row of from six to ten men would be thrown together as though in one large bed. In the narrow confines of this sleeping-place the immigrant had to remove such clothes as he found necessary to insure comfort in sleeping. He did not stand in the aisle to do this, because the aisle was too dirty. (For the lack of cleanness in the aisle the immigrants should, perhaps, be blamed equally with the company's servants, who could hardly be expected to prosecute with enthusiasm a work in which the passengers seemed not to be particularly interested.) There was a single nail on which to hang what clothes one took off. What would not stay on the nail might be laid on the greasy-looking floor, or tucked away in one's berth—preferably down at the foot as the least crowded section, although that invited the scattering of them about if during the night one's sleep should be restless.

From the evil-smelling confinement of this inadequately ventilated compartment, three decks down, where more than a hundred and twenty-odd men at close quarters had to sleep the night through.

the immigrant begins his day at sea by ascending to a wet, dirty deck. If anybody here feels inclined in advance to criticise the immigrant for not sticking to his berth during the early morning hours, then it may be said in his defense that after a night in the hold of the usual ocean liner a man's first thought is for a change of air. No man brought up on merely casual whiffs of fresh air could endure for long, after waking, the early morning vapors below. The exhalations of ten dozen unlaundered men packed away in jammed-up berths for eight hours or so do not bring into the mists of the morning any suggestion of a celestial atmosphere to come; and so, on awakening, came the hurried trip above and the giving of thanks if the good, sound stomach held fast while one was escaping. On one's way to the upper regions he finds a smell of dried sourness pervading the stairways, and on deck he sees the litter of the previous day still lying where ignorant or careless hands had dropped them. He remembers having heard the stewards say that they are not supposed to clean up after steerage messings, that that was a matter to be attended to when the crew wash down decks; and already he begins to feel the influence of the prejudice that all ship's attendants seem to hold for the steerage passenger.

This big deck, on which the cleanly immigrant is forced to spend a large part of his time, extends almost the length of the ship. The part given over to the steerage is the passageway between the high closed-in rail and the house, and the little area at each end of the ship between the house and crew's quarters. One would think that in this long gangway on either side, with the line of benches along the house, and in the open space fore and aft, the immigrant might manage to extract a little comfort; and so he would, and so he does sometimes, if the ship's people would but nurse a little commiseration for him.

In this matter of decks: even the first cabin knows that the deck is washed down early in the morning, so that at a reasonable hour, six or seven o'clock, all will be dry and immaculately clean for its promenading. It may not know, however, that much of the water used in cleaning upper decks comes down by way of flush scup-

pers and scupper-pipes to settle on the living deck of the steerage.

But so it is. In that morning deluge, considered merely as a deluge, there is not much harm—the steerage needs a washing down. But coming just so, it seems rather rough on the early risers of third class. This water from above comes down in a great volume, even as a waterspout that has burst, or a series of burst waterspouts in quick succession. It has a way of running over the outer edges of the upper deck and curling clingingly around to the under planks. It works its way above the gangway and drops on to the heads of the humbler people beneath. There is plenty of this water, for it comes in a thick stream from a good-sized hose, and there is plenty of steam behind the hose, and the whole ocean is there to draw from. A sufficiency of sluicing saves a great deal of "squeegeeing" by hand power, and so there is no lack of incentive to get out plenty of water.

The overflow from all this runs directly into the scuppers on the steerage deck, excepting that one little item which descends so clingingly, and at first so unsuspectingly, by way of the upper deck's under-planking. The scuppers, it may be said, are good and necessary things, only sometimes too much faith is placed in their capacity to conduct all the water of the ship into the ocean. Ordinarily, and almost in due season, the scuppers would carry off this water, and it would only be needful for the most part to keep the scupper-drains clear; but here the drains are carelessly attended to. They are allowed to become clogged with refuse—with cast-away food, peelings, and what not—dropped there by the ignorant or careless of the immigrants and by lazy stewards alike.

This water from above soon drives the promenading immigrant to cover. By hugging the house he may hope to escape getting it in shower bath form, but the overflow from the scuppers of his own deck is soon sure to encroach on the gangway. In time it will reach nearly up to the house. The irritated immigrant, if not too vexed for reason, may go clear forward to where the rise of the deck has helped to throw back all but the highest of the scupper-tides and there escape the worst of it. Still wet, even there,

of course, will be the planking beneath him, but by vigorously and persistently tramping back and forth on the more secluded parts he may eventually succeed in drying out a path for himself, and by this active exercise also warm his blood, which otherwise might have felt the chilling influence of the raw blast that comes off the North Atlantic in the early morning hours.

Outside of the thoughtlessness, or lack of sympathy, on the part of the washing-down gang, the behavior of the ship's men in general does much to reduce the comfort that the immigrant might manage to obtain from this long gangway. Stewards, deck-hands, stokers, and all, seemed on this ship to have a habit of charging up and down this walk, using it as a regular highway after their fashion and making a mess of it. The stewards, rushing along with supplies from the kitchen, did not seem at all to mind bumping into a third-class man and bowling him out of the way if he seemed slow to move or to comprehend the inflections of the particular patois they spoke. As about nine-tenths of the immigrants were not of the same nation as the ship's people, a little hesitation in interpreting the speech of these hustling stewards is not surprising. The deck-hands may be carrying soup and other rations to hungry anticipating messes below, and a little grease dropped here and there along the way is really no great matter when one's messmates are impatiently waiting—no.

And then there were the stokers. Truly the stokers were the lads! Other memories fade away when the stoker heaves in sight. Every blessed one of them emerges from below with a coat of coal-dust over his chest, or on his undervest, if he happens to have one on at the time. This coal-dust he sheds at every pounding stride. He will stand up and scoop it off his bare chest or shake it free from the folds of collar and sleeves, as it may be. In that fashion he will dislodge it in sheaves, and rejoice like a strong man at play while he is doing it. Really, the stoker is a cheerful beast when an immigrant is standing by and the stoker does not like his looks, as it often happens he doesn't. The ship's people do not themselves mind the stoker's trail along the deck. They generally wear sabots—heavy shoes of thick soles

and high leather freeboard—which make a shoe they extol to all—and within the shoes there are no socks to soil.

The immigrant patters in this slush until about eight o'clock, which means three or four hours of extreme discomfort. By that time a good part of the loose water has gurgled its way through the choked-up drains, the industrious walker has worn a dry path over the planks, there is a faint tinge of comfort ahead, and things in general begin to take on a cheerful hue, when along come some more bully boys—these with a hose. This crowd are cheerful idiots. As practical jesters are rated, they would rank one class above the stokers. It is a new watch, this, fresh from a good sleep, and they have just had an inspiring breakfast. They are boiling over with restrained energy, and immediately turn tons of water loose. This is one part of their work that deck-hands seem to enjoy, and their enjoyment is not lessened, one would say, when the worried immigrants show signs of taking to flight. It is fairly warm now, and the deck-hands, with feet and legs bare, and high-rolled trousers, make an aquatic carnival of it. They squirt playfully streams at the feet of some abstracted exile, a lonely Armenian or desolate Pole perhaps, one who may have been slow to move before the rush, or who has remained dull to the meaning of this idiomatic patois in a strange tongue.

The boys with the hose stick to their work until they have soaked that deck from stem to stern. Having thoroughly soaked it, they are disposed to slack up. No officer seems to concern himself in the matter of drying the deck, and the men gently pass a mop over their work as a finishing touch. If the sun is bright at this time, the immigrant may hope for a dry deck in two hours or so. If it is a chilly, foggy morning, it may take all day, or it may not get dry at all. While the deck is drying one may scramble for a seat on the benches of the gangway. If an immigrant wins a seat, he can avoid the dampness by holding his feet in the air—this, if he cares to sit while women stand. Should he not care for a seat under these conditions, he is privileged to take up his tramp until he has again worn a dry lane on the planks, or he may go below and try to stand it there until

affairs have been bettered above. He has his free choice—wet feet and chilly blood above, or nausea below.

In the afternoon, when luck has been with the steerage—when the sun has been out and the deck has become well dried—the stewards like to take the long mats of the saloon passageways out on the long gangway of the steerage and scrub down. It is a wanton thing, looked at with a steerage eye, but that is the way of it.

Incidental to the steerage life on board this ship was the matter of drinking-water. One would say that in the experience of this company there was no record that an immigrant ever developed a thirst that a cup of coffee in the morning or a dipper of chemical wine at noon did not entirely quench, for the supply of water for the use of the steerage was miserably insufficient. On this trip the steerage had to depend largely on the good nature of the crew to appease its thirst. The only drinking-water set regularly before them was the single measure brought down to the mess-table of each compartment at night. This was about an eight-quart vessel, and one can imagine how far that went with a hundred and twenty-odd thirsty men. It lasted just about the length of time it took a rush of impatient men to turn it into tin dippers. After that was gone there was no more until the next night, and those who became thirsty in between times had to look elsewhere for drinking-water.

Now, there were no appointed drinking-places, no regularly set-up fountains to which they could go in confidence. There were faucets, to be sure, on each side of the house, midway of the long gangway on the big deck. But with these the immigrants, if one were to judge from the behavior of those concerned, had nothing to do. The valves were kept locked and were opened only by ship's men, who took the keys with them after they had drawn their own supply. The only recourse for the immigrants was to haunt the deck at these faucets, and, when a crew man came to draw water, to besiege him for permission to fill their little jars and bottles. If they were not too many, and therefore not likely to detain the wonderfully busy ship's man, they might be allowed to get some. Sometimes this permission was

granted cheerfully; as frequently it was refused surlily.

When the immigrant was refused, he awaited the arrival of a less grudging servant of the company. Some immigrants, too timid to ask outright for this necessary thing after being refused once or twice, would hover in silence while a half-dozen or so of the crew came and went. By and by a ship's man, better natured than his mates, might take notice of the silent one and invite him to fill up, or the rejected one might get up his courage to ask again.

The poor little boys and girls who had to keep their elders supplied had a hard time of it. To keep a dozen or so going, they were compelled to come quite often to the faucets, and coming so often they put themselves in the way of frequent abuse. They dared not go back without the water, and so stayed there, for hours sometimes, if the impatient elders did not hunt them up in the meantime. Perhaps more galling to the onlooker even than the plight of the children was the experience of timid older men, who stood there patiently to have their jars or bottles filled. It might be a father—it usually was a father—with the children and the mother waiting somewhere below and really in need of a drink of water. When such a poor creature was refused water by a crew man, he did not seem to have the faintest notion that there could be any redress. He merely turned away and awaited another chance.

Now, it seems that petty tyranny and a large part of his discomforts might be eliminated from the immigrant's ocean life. Some will say that, after all, it is not so bad, and will refer to the days when several hundred people were compelled to come in the single crowded hold of a ridiculously small sailing vessel. The forefathers of most of us crossed in that way, they tell you—and so they did. But in these days there is hardly any need of that, and why further depress the spirits of those who are coming here to stay, and who are by and by to bring into the world so large a proportion of the men and women on whom the country will have to depend for its development? There is to-day crossing the ocean a line of ships whereon third-class passengers may sleep

with no more than four or six or eight in a room, and may enjoy during waking hours the privileges of smoking and reading rooms and social halls. And this company charges no more for a passage than was paid by the writer and eight hundred fellow-creatures. Is it an impossible thing to bring all steamship lines to this more humane standard?

A steerage trip across the Atlantic westward will be found to be not quite the same thing as the trip back. Most of the third-class passengers who leave this country for the other side have been living here for some time—five, ten, twenty or more years—and when they go back it is to visit the land of their birth, to see the old home folk, to renew the memories of younger days. During their residence here they have advanced in knowledge and developed their talents, have made great strides socially, and, generally, have put some money by.

Possibly all have not done well, even as their own moderate standards have it; but nearly all are much better off in a worldly way than when they first came here. Some intend to stay in the old country—the rush of life here does not suit them, perhaps—but most of them are coming back to America again. These things they will tell you, if you but frame your questions attractively. As steerage traffic east is light compared with that coming west, these returning citizens of ours make but a small mass in the great tides that are ever flowing this way.

But on any transatlantic liner, particularly on a Continental liner—say, one out of Havre, from which port embark the really cosmopolitan cargoes—one soon learns to pick out these returning citizens, merged though they be in the multitudes. Even if they did not discover themselves by their speech, by an involuntary American idiom now and then, they are sure to exhibit a dozen characteristics by which you may know them.

You will notice them because they are more alert in manner and better dressed than their companions; and their intelligence is more active. They are all over those parts of the ship from which third-class is not barred. They will be prominent during the progress of any bit of excitement aboard ship, early taking

position where they may best see what is doing, getting right into it when the action comes their way, and following close on behind if the course of activity goes by. They will be questioning everybody—deck-hands, stewards, and even the grimy, stolid men from below—questioning anybody at all likely to know anything, anybody who looks in the slightest degree intelligent, and many who do not. They will be forever poking in and about dark entryways, peering into mysterious passages, or hovering on the edges of forbidden, higher-class realms. They are striving to find out, after the fashion of their restless adopted countrymen, what manner of craft their ship may be, and what the prospects are for the voyage.

These have overcome the Old World inertia to which they were born. In the morning you will find them up betimes, walking the deck for exercise. Even then they will be taking note of things, marking the ways of passengers, particularly of the second class, towards whose standard they aspire. It is an indisputable proof of the American influence when they tip the steward for extras—for a little something extra in the eating line, for a little bit of supper before turning in, for a bottle of beer after hours. In the steerage it is surely only the American-born or naturalized who has attained to patronizing a steward in badge and livery.

These men are companionable and interesting. It is the first trip to the old home for most of them. It has been instructive and enjoyable, but they now like America all the better for it. They are glad they came. The restless longing for the old things has been quelled, and now they are convinced that in their new country they are much better off. But when they come again, if ever they do come, they tell you, they will come second class, for they see now that the steerage has its drawbacks. Steerage is more comfortable now than when they first came over, it is true; but seen in the light of better things it is not just the thing. They are sorry they did not pay the difference this time and come second class.

A little essay might be introduced here in eulogy of the capacity of the country that can bolt these huge masses at such frequent intervals and yet show no signs

of constriction in the act; of the resources of the land that can take care of these multitudes of unskilled laborers, provide them with an abundance of employment and at such a rate of wage that in a short generation the majority of them will wear good clothes, will own property, and will have money in the bank or invested in some small business—these that started with nothing or less than nothing, and were in debt perhaps for their

passage over. And those who have not attained to some standing in the community will at least have appreciably improved their condition, while the children of all, if but half-fairly dealt with, will have been put in the way of free schooling, sufficient to enable them to compete on something like equal terms with the highest-born for the world's prizes—if it is in them to compete. But to teach them this would be a sermon in social evolution.

## The Social Price

By Ethelbert Stewart

**I**F the price paid by the individual consumer of a commodity was the full and only price attaching to it, society could strike a balance-sheet each night like a bank. Unfortunately, too much of our production and commerce adds to the output an intangible social expense not carried to the price-lists nor paid by the consumer. Years, and sometimes generations, may pass before this running account against the Social Whole is presented for payment in a tangible form. Even then it comes through a collection agency so remote from the source of the original expense that Society is likely to forget all about it, grudgingly pay the bill it does not believe it owes, and charge it up to incidentals.

Most of our taxes go to pay the social price of commodities individually consumed long since by those who may or may not now be taxpayers. This was palpable when, under the Poor Laws of England, the wages of laborers were deliberately reduced by manufacturers and farmers alike, so that general taxation might be compelled to pay in poor-rates a part of the cost of production of all commodities. Social price is very apparent when Congress pays the sugar-producers two cents a pound bounty out of the Federal treasury, leaving the individual consumer to pay a first installment and take the goods. It is just as real though not so apparent when child-labor and old-age limits to employment throw upon society droves of morally and physically mal-developed adults, and still greater droves of practically blacklisted persons charged with the new crime of having gray hairs.

"Squeeze the lemon and throw away the skin," was said to be the motto of the railroad wreckers of the Erie school. When the famous engine 999 of the Empire State Express was made a switch-engine after six years of record-breaking service, the general surprise called out an interview with an American railroad manager. He said that while English and German roads coddled and repaired their engines, keeping them in service sometimes for forty years, and as "switchers" for twenty more, the American plan is to "hammer the road life out of an engine in five or six years, use it as a switcher for five or ten more, and then scrap-iron the whole engine at once. We believe it pays better."

At a recent milk-dairymen's convention the policy of milking cows to death in the shortest possible time was discussed from a purely business point of view. It was claimed that by means of milk-producing foods the quantity could be trebled. To the objection that such milk-forcing shortened the life of the cow, it was replied: "It does not pay to look to long life for a milker. If the life energies of a cow represent one hundred units of milk, and these can be marketed in five years under high-pressure feeding, why should the cow be kept ten years? If the milking possibilities of a cow can be gotten out of her in three years, it does not pay to keep her five."

With lemon-peels and engines society need not concern itself, nor will we sentimentalize over the application of humane ideas to milch cows; but when the economic doctrine embodied in these three

illustrations is applied to men, society has much to do with human engines sent to an early scrap-pile. The "age-limit to employment" is now, practically universal, and ranges from twenty-five to thirty-five years. Most concerns prefer to employ youths of twenty years when taking on new help. "Old men cannot stand the pace," says the employer, but neglects to add that a pace in any industry which a man of forty is too old to stand is one that puts a large element of social price in the product. Where the "premium plan" of increasing the pace has been adopted, it too frequently, though happily not always, happens that workmen who do not earn premiums are discharged. In reducing the number of employees, those who do not earn premiums or bonuses are always the first to go. A convention of bankers, ministers, and university presidents is called for Chicago to discuss the opposition to piece-work in the Machinists' International Union. Piece-work is the lemon-squeezer of most approved pattern. It is believed to be the quickest way to "hammer the life out of" a human engine and scrap-pile it all at once. It is the foundation of sweatshopism.

Taking the ages of gangs of men employed at street-cleaning and park labor in various cities recently, it was found that only three per cent. were young enough or physically strong enough to obtain employment in private establishments. Most of these men would have to be supported out of the public funds directly if they were not employed by the public on public work. If half their wages represents charity disguised, it is in reality the social price of commodities produced by them years ago "at a pace old men cannot stand." After all, is it charity to the old men that we are giving in our street departments and old people's homes, or is it subsidies to the "cheap commodities and high profits" mania with which we are fooling ourselves? The shoplifting which as "bargain-hunting" "lifts" only the social price, proudly paying the "marked down" one, is, unconsciously perhaps, second cousin to the shoplifting which takes all. Public or private contracts let to the "lowest bidder" merely postpone to a future day to be paid as social price the difference

between the lowest and the fairest bidder. Especially is it disastrous when articles of export are endowed with a large element of social price.

The glass bottle manufacturers appeared before the Illinois Legislature in opposition to a child labor bill with the statement that "glass bottles cannot be manufactured and sold on the market without child labor." Possibly the social price of glass bottles exceeds the net price to consumers. Silk from silk-mills "utilizing the labor" of the children in the anthracite fields, and sold by child clerks in department stores where "cash-girls" run for change and bundles, may accumulate a social price on the way that might render boycotts moral. Reform schools, houses of rescue, penitentiaries, are some of the large ways in which we pay the social price; night schools, social settlements, fresh-air funds, indicate some of the smaller ways. As intimated above, the circumlocution of the collection agency frequently obscures the origin of the debt. Half of our drunkenness, most of our social vice, much of the insanity, and all the general letting down of social status in mining and manufacturing centers, will be charged to social price when the tangles in our bookkeeping are straightened out. The Federal pension-roll convinces even political economists that we are still paying for the war of a generation ago; but their blindness to pension-rolls, growing out of their pet economic fetic of competitive industry and commerce, is hopeless. If profit and price could be net and actual in each transaction, society could afford to wait until these Kilkenny cats were gone and the last echo of their expiring yells had died away. But what profit cannot unload upon price, or price snatch away from profit, is by both dumped upon society and forms the Social Price. Before the days of political economy the Hanseatic League was obliged to include the cost of its navy in the selling price of its goods.

Old-age workingmen's pensions, a plan to which every commercial country must come in some form, are, in any form, a subsidy to non-self-supporting industries and the commerce growing out of such. In countries where old-age pension laws have been boldly and openly passed as such, they serve to show in bold

relief the element of social price attaching to our system. But we in America will probably keep on doing things by indirection, put our old men on street-cleaning

gangs, and growl at the cost of public work. It serves to disguise the real cause of the trouble, and, as a Chinaman would say, it "saves our face."

# THE FOREST

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

## Chapter XI.—The Habitants

**D**URING my absence Dick had made many friends. Wherein lies his secret I do not know, but he has a peculiar power of ingratiating himself with people whose lives are quite outside his experience or sympathies. In the short space of four days he had earned joyous greetings from every one in town. The children grinned at him cheerfully; the old women cackled good-natured little teasing jests to him as he passed; the pretty, dusky half-breed girls dropped their eyelashes fascinatingly across their cheeks, tempering their coyness with a smile; the men painfully demanded information as to artistic achievement which was evidently as well meant as it was foreign to any real thirst for knowledge they might possess; even the lumberjacks addressed him as "bub." And withal Dick's methods of approach were radically wrong, for he blundered upon new acquaintances with a beaming smile, which is ordinarily a sure repellent to the cautious, taciturn men of the woods. Perhaps their keenness penetrated to the fact that he was absolutely without guile, and that his kindness was an essential part of himself. I should be curious to know whether Billy Knapp of the Black Hills would surrender his gun to Dick for inspection.

"I want you to go out this afternoon to see some friends of mine," said Dick. "They're on a farm about two miles back in the brush. They're ancestors."

"They're what?" I inquired.

"Ancestors. You can go down to Grosse Point near Detroit and find people living in beautiful country places next the water, and after dinner they'll show you

an old silhouette or a daguerreotype or something like that, and will say to you proudly, 'This is old Jules, my ancestor, who was a pioneer in this country. The Place has been in the family ever since his time.'"

"Well?"

"Well, this is a French family, and it is pioneers, and it has a place that slopes down to the water through white birch-trees, and it is of the kind very tenacious of its own land. In two hundred years this will be a great resort; bound to be—beautiful, salubrious, good sport, fine scenery, accessible—"

"Railroad fifty miles away. Boat every once in a while," said I, sarcastically.

"Accessible in two hundred years, all right," insisted Dick, serenely. "Even Canada can build a quarter of a mile of railway a year. Accessible," he went on, "good shipping point for country now undeveloped."

"You ought to be a real estate agent," I advised.

"Lived two hundred years too soon," disclaimed Dick. "What more obvious? These are certainly ancestors."

"Family may die out," I suggested.

"It has a good start," said Dick, sweetly.

"There are eighty-seven in it now."

"What!" I gasped.

"One great-grandfather, twelve grandparents, thirty-seven parents, and thirty-seven children," tabulated Dick.

"I should like to see the great-grandfather," said I; "he must be very old and feeble."

"He is eighty-five years old," said Dick, "and the last time I saw him he was engaged with an ax in clearing trees off his farm."

All of these astonishing statements I found to be absolutely true.

We started out afoot soon after dinner, through a scattering growth of popples that alternately drew the veil of coyness over the blue hills and caught our breath with the delight of a momentary prospect. Deuce, remembering autumn days, concluded partridges, and scurried away on the expert diagonal, his hind legs tucked well under his flanks. The road itself was a mere cutting through the miniature woods, winding to right or left for the purpose of avoiding a log-end or a boulder, surmounting little knolls with an idle disregard for the straight line, knobby with big round stones, and interestingly diversified by circular mud-holes a foot or so in diameter. After a mile and a half we came to the corner of a snake fence. This, Dick informed me, marked the limits of the "farm."

We burst through the screen of popples definitely into the clear. A two-storied house of squared logs crested a knoll in the middle distance. Ten acres of grass marsh, perhaps twenty of plowed land, and then the ash-white-green of popples. We dodged the grass marsh and gained the house. Dick was at once among friends.

The mother had no English, so smiled expansively, her bony arms folded across her stomach. Her oldest daughter, a frail-looking girl in the twenties, but with a sad and spiritual beauty of the Madonna in her big eyes and straight black hair, gave us a shy good-day. Three boys, just alike in their slender, stolid, Indian good-looks, except that they differed in size, nodded with the awkwardness of the male. Two babies stared solemnly. A little girl with a beautiful oval face, large mischievous gray eyes behind long black lashes, a mischievously quirked mouth to match the eyes, and black hair banged straight both front and behind, in almost mediæval fashion, twirled a pair of brown bare legs all about us. Another light-haired, curly little girl, surmounted by an old yachting cap, spread apart sturdy shoes in an attitude at once critical and expectant.

Dick rose to the occasion by sorting out from some concealed recess of his garments a huge paper parcel of candy. With infinite tact, he presented this bag to Madame, rather than the children. Ma-

dame instituted judicious distribution and appropriate reservation for the future. We entered the cabin.

Never have I seen a place more exquisitely neat. The floor had not only been washed clean, it had been scrubbed white. The walls of logs were freshly white-washed. The chairs were polished. The few ornaments were new and not at all dusty or dingy or tawdry. Several religious pictures, a portrait of royalty, a lithographed advertisement of some buggy, a photograph or so—and then just the fresh, wholesome cleanliness of scrubbed pine. Madame made us welcome with smiles—a faded, lean woman with a remnant of beauty peeping from her soft eyes, but worn down to the first principles of pioneer bone and gristle by toil, care, and the bearing of children. I spoke to her in French, complimenting her on the appearance of the place. She was genuinely pleased, saying in reply that one did one's possible, but that children!—with an expressive pause.

Next we called for volunteers to show us to the great-grandfather. Our elfish little girls at once offered, and went dancing off down the trail like autumn leaves in a wind. Whether it was the Indian in them, or the effects of environment, or merely our own imaginations, we both had the same thought—that in these strange, taciturn, friendly, smiling, pirouetting little creatures was some eerie wild strain akin to the woods and birds and animals. As they danced on ahead of us, turning to throw us a delicious smile or a half-veiled roguish glance of nascent coquetry, we seemed to swing into an orbit of experience foreign to our own. These bright-eyed woods people were in the last analysis as inscrutable to us as the squirrels.

We followed our swirling, airy guides down through a trail to another clearing planted with potatoes. On the further side of this they stopped, hand in hand, at the woods' fringe, and awaited us in a startlingly sudden repose.

"V'là le gran'père," said they in unison.

At the words a huge, gaunt man clad in shirt and jeans arose and confronted us. Our first impression was of a vast framework stiffened and shrunken into the peculiar petrification of age; our second was of a Jove-like wealth of iron-gray

beard and hair; our third of eyes, wide, clear, and tired with looking out on a century of the world's time. His movements, as he laid one side his ax and passed a great gnarled hand across his forehead, were angular and slow. We knew instinctively the quality of his work—a deliberate pause, a mighty blow, another pause, a painful recovery—labor compounded of infinite slow patience, but wonderfully effective in the week's result. It would go on without haste, without pause, inevitable as the years slowly closing about the toiler. His mental processes would be of the same fiber. The apparent hesitation might seem to waste the precious hours remaining, but in the end, when the engine started, it would move surely and unswervingly along the appointed grooves. In his wealth of hair; in his wide eyes, like the mysterious blanks of a marble statue; in his huge frame, gnarled and wasted to the strange, impressive, powerful age-quality of Phidias's old men, he seemed to us to deserve a wreath and a marble seat with strange inscriptions and the graceful half-draperies of another time and a group of old Greeks like himself with whom to exchange slow sentences on the body politic. Indeed, the fact that his seat was of fallen pine, and his draperies of butternut brown, and his audience two half-breed children, an artist, and a writer, and his body politic two hundred acres in the wilderness, did not filch from him the impressiveness of his estate. He was a Patriarch. It did not need the park of birch-trees, the grass beneath them sloping down to the water, the wooded knoll fairly insisting on a spacious mansion, to substantiate Dick's fancy that he had discovered an ancestor.

Neat piles of brush, equally neat piles of cord-wood, knee-high stumps as cleanly cut as by a saw, attested the old man's efficiency. We conversed.

Yes, said he, the soil was good. It is laborious to clear away the forest. Still, one arrives. M'sieu has but to look. In the memory of his oldest grandson, even, all this was a forest. *Le bon Dieu* had blessed him. His family was large. Yes, it was as M'sieu said, eighty-seven—that is, counting himself. The soil was not wonderful. It is indeed a large family, and much labor, but somehow there was food for all. For his part he had

a great pity for those whom God had not blessed. It must be very lonesome without children.

We spared a private thought that this old man was certainly in no danger of loneliness.

Yes, he went on, he was old—eighty-five. He was not as quick as he used to be; he left that for the young ones. Still, he could do a day's work. He was most proud to have made these gentlemen's acquaintance. He wished us good-day.

We left him seated on the pine log, his ax between his knees, his great gnarled brown hands hanging idly. After a time we heard the *whack* of his implement; then after another long time we heard it *whack* again. We knew that those two blows had gone straight and true and forceful to the mark. So old a man had no energy to expend in the indirections of haste.

Our elfish guides led us back along the trail to the farm-house. A girl of thirteen had just arrived from school. In the summer the little ones divided the educational advantages, turn and turn about.

The newcomer had been out into the world and was dressed accordingly. A neat dark-blue cloth dress, plainly made, a dull red and blue checked apron; a broad round hat, shoes and stockings, all in the best and quietest taste—marked contrast to the usual garish Sunday-best of the Anglo-Saxon. She herself exemplified the most striking type of beauty to be found in the mixed bloods. Her hair was thick and glossy and black in the mode that throws deep purple shadows under the rolls and coils. Her face was a regular oval, like the opening in a wish-bone. Her skin was dark, but rich and dusky with life and red blood that ebbed and flowed with her shyness. Her lips were full, and of a dark cherry red. Her eyes were deep, rather musing, and furnished with the most gloriously tangling of eyelashes. Dick went into ecstasies, took several photographs which did not turn out well, and made one sketch which did. Perpetually did he bewail the absence of oils. The type is not uncommon, but its beauty rarely remains perfect after the fifteenth year.

We made our ceremonious adieux to the Madame, and started back to town

under the guidance of one of the boys, who promised us a short-cut.

This youth proved to be filled with the old wandering spirit that lures so many of his race into the wilderness life. He confided to us as we walked that he liked to tramp extended distances, and that the days were really not made long enough for those who had to return home at night.

"I is been top of dose hills," he said. "Bime by I mak' heem go to dose lak' beyon'."

He told us that some day he hoped to go out with the fur-traders. In his vocabulary "I wish" occurred with such wistful frequency that finally I inquired curiously what use he would make of the Fairy Gift.

"If you could have just one wish come true, Pierre," I asked, "what would you desire?"

His answer came without a moment's hesitation.

"I is lak' be one giant," said he.

"Why?" I demanded.

"So I can mak' heem de walk far," he replied, simply.

I was tempted to point out to him the fact that big men do not outlast the little men, and that vast strength rarely endures, but then a better feeling persuaded me to leave him his illusions. The power, even

in fancy, of striding on seven-league boots across the fascinations spread out below his kindling vision from "dose hills" was too precious a possession lightly to be taken away.

Strangely enough, though his woodcraft naturally was not inconsiderable, it did not hold his paramount interest. He knew something about animals and their ways and their methods of capture, but the chase did not appeal strongly to him, nor apparently did he possess much skill along that line. He liked that actual physical labor, the walking, the paddling, the tump-line, the camp-making, the new country, the companionship of the wild life, the wilderness as a whole rather than in any one of its single aspects as Fish Pond, Game Preserve, Picture Gallery. In this he showed the true spirit of the *voyageur*. I should confidently look to meet him in another ten years—if threats of railroads spare the Far North so long—girdled with the red sash, shod in silent moccasins, bending beneath the portage load, trolling *Isabeau* to the silent land somewhere under the Arctic Circle. The French of the North have never been great fighters nor great hunters, in the terms of Anglo-Saxon frontiersmen, but they have laughed in farther places.

[TO BE CONTINUED]

## Germany as It Is'

**M**R. von Schierbrand knows his subject, Germany, like a German, and he knows his American audience like an American. In addition to these qualifications for making us understand Germany, he is a critic of real acumen, whose sympathies are broad enough to enable him to understand movements with which he is not identified. When he states in his preface that his book is free from bias, the reader is inclined to expect a bias so deep that the author is unconscious of it; but after reading the book and following the author's observations upon movements on which his views differ from our own, we are ready to accord him the praise of having given us an unbiased description of Germany as it is.

<sup>1</sup> *The Welding of a World Power*. By Wolf von Schierbrand. Doubleday, Page & Co., New York.

After an introductory chapter upon Germany as a world power, which is about the least interesting in the volume, he contributes three chapters upon the personality and influence of the Kaiser. Though in sympathy with the Kaiser's world politics, he recognizes the reactionary character of most of the Emperor's views, and also recognizes the extent to which the Kaiser's self-confidence has proven unwarranted. Not only, he points out, has the Kaiser failed to win over the Socialists, as he told Bismarck he could do in a single year, but also he has failed to keep out the "undesirable" middle class from the ranks of officers in the army. He has, however, succeeded in a degree almost incredible in destroying the freedom of the press, in making the courts mere registers of his personal wishes in every matter before them, and in taking

Germany back from the ranks of a limited monarchy to that of an autocracy. The sources of the Kaiser's personal influence cannot be summarized in a sentence. It is due in great part to traditions of which we in America can with difficulty appreciate the strength. It is also due, Mr. von Schierbrand indicates, to the wholesomeness of the Emperor's family life and to the frankness, whole-heartedness, and passionate vigor with which he throws himself into the struggle to make his power absolute in Germany and feared throughout the world.

The chapter which follows gives a rapid survey of the present political life of Germany, bringing out with great clearness the growing power of the Upper House of Parliament appointed by the courts, the lessening power of the Reichstag, elected by universal suffrage, the extraordinary power of the clericals (a power largely given them by Bismarck's conflict against them), the divisions between Liberals and Radicals and Socialists, and the noteworthy ability of the radical parties to produce orators as contrasted with the inability of the conservative parties to produce them.

Having thus put the general situation in a nutshell, the author next turns to a critical examination of the parties which are bent upon a revolution, industrial or political, and presents two brilliant chapters upon the Socialist movement and the Polish problem. Though by no means a Socialist himself, he states forcibly the reasons why the Socialist party has come to command the suffrage of nearly one-third of the voters of the Empire, despite the efforts of the monarchy to repress their movement by prosecutions on the one hand, and by conciliating its supporters through compulsory insurance, old-age pensions, and the like, on the other. The criticism given of the insurance and pension bureaus is a remarkably clarifying one. The reader is not cumbered with a mass of details, and is permitted to see that the elaborateness of the machinery by which the insurance funds are collected and distributed has necessitated the employment of a force of officials whose expenses consume one-third of all that is paid in for the insurance. The great government building in which the administration of this bureau

centers is known among the Socialists as the "Pasting Palace."

The Socialist movement, according to Mr. von Schierbrand—and he is doubtless right upon this point—is no longer a revolutionary movement in the sense that it was twenty years or even ten years ago. The strength of the party now is based upon its democracy, and the industrial demands which it is pressing forward could all of them be secured without overthrowing the general framework upon which industry now rests. Monopolies, indeed, would be managed by the Government, but there would be a large field of industry remaining under individual control, and workers in every field would still be paid in proportion to the supposed value of their work. Socialism, Mr. von Schierbrand writes, has exercised a vast educational influence. "It has quickened," he says, warmly, "the intellect of the worker, and has first enabled him to think, however faultily, on political and economic topics. It has, by organizing thousands of social clubs, given these whilom dull and torpid masses a genuine taste for and appreciation of purely æsthetic pleasures, such as music, singing, theatrical performances, concerts, and, above all, books. The Socialists in Germany have done what the Government had left undone, viz., founded thousands of workingmen's libraries. The Socialist press has in this respect done wonders."

But this chapter upon Socialism is perhaps less interesting than that upon "The Polish Problem." Prussian Poland, it is pointed out, has prospered not only out of all proportion to Austrian Poland and Russian Poland, but relatively more than the western portions of Germany. But, in spite of these advances, or rather perhaps because of them, the Polish national spirit has developed an intensity in Prussian Poland unknown in the more oppressed provinces in other lands and unknown in Prussian Poland itself a generation ago. "Up to about twenty-five years ago, the small middle class to be met with in Polish towns and cities was composed almost wholly of Germans and Jews. To-day the young and well-educated generation of Poles have largely replaced them. Polish merchants, bankers, shopkeepers, mechanics, artisans, physicians, lawyers, and engineers are

now in the majority." Only three per cent. of the Poles are now illiterate, and at the German universities the percentage of Polish students has increased tenfold within the last twenty years; but along with these advances the whole people have become fanatically attached to the vision of a restored Polish nation.

In this movement the Polish priesthood has borne a conspicuous part. The fact that the Poles are Catholics, while Germany is a Protestant power, has made sectarian passions mingle with national passions to produce an almost rancorous intensity of anti-German feeling. It is, says Mr. von Schierbrand, due almost wholly to the Polish clergy that the knowledge and use of the German language are not general in the Polish districts. The Polish clergy correctly argue that with the adoption of German as the language of home and of the pulpit the battle would be practically won for the friends of Germanization. Hence their strenuous and consistent efforts have been directed against the use of German wherever they have had the power to prevent it. "And they have succeeded remarkably well, especially when it is considered that the Poles, as a class, had to forego all those material advantages which naturally would accrue to Poles able and willing to speak and write both languages. To carry out their programme logically, the Polish clergy have succeeded in persuading their countrymen that to abandon the constant use of Polish means to become a renegade,

an enemy to the race, and a 'hireling to the foreigner,' as the Polish press puts it. The Poles, in the service of this idea, have voluntarily shut themselves out of every career and calling which would force them to make habitual use of German as their vernacular. This includes, of course, every kind of government service."

Along with this intensified Polish spirit among the Poles has come a still more remarkable "process of Polonization to which the German element resident in the Polish districts is being subjected." Inter-marriage between Poles and Germans nearly always means the loss of nationality for the German part. German colonies in the Polish districts have been attempted on a great scale to counteract these influences, but these colonies all have languished, or where they have been securely established they have met in Poland the fate of the English colonies in the greater part of Ireland. The colonists who have taken part in the ordinary life of the people have come to sympathize with their neighbors and to feel as they do on the question of home rule.

These chapters are indicative of the manner in which Mr. von Schierbrand deals with vital things in his description of the German Empire. Few books on political science give a clearer ideal of the political fabric of the country, and no recent book of travels has given anything like so clear an account of the feelings and aspirations of the people.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**American Standard Bookkeeping (The).** High School Edition. By C. C. Curtiss, A.M. The American Book Co., New York. 6x9½ in. 192 pages.

**American Advance (The): A Study in Territorial Expansion.** By Edmund J. Carpenter. With Map. John Lane, New York. 5¼x9 in. 331 pages. \$2.50, net.

A clear, circumstantial account of the various annexations by which the original territory of the United States has received nearly a four-fold expansion. The author apparently believes in the wisdom of all of the successive annexations, but in dealing with the Mexican cession he brings out sharply the pro-slavery spirit animating the Polk administration.

"When," he writes, "during the progress of the peace negotiations, the Mexican commissioners moved for the insertion of an article which should provide that the territory to be ceded should remain forever free, Commissioner Trist steadily refused to entertain such a proposition. 'If the territory should be increased tenfold in value,' wrote Trist to James Buchanan, 'and, besides, covered all over a foot thick with pure gold, on the single condition that slavery should be excluded therefrom, the proposition would not be entertained, nor would I think for a moment of communicating it to the President.'" The

conservative position, however, which President Polk took when the extreme expansionists demanded the annexation of the whole of Mexico is not referred to. In his account of Oregon the author accepts in its entirety Nixon's story of "How Marcus Whitman Saved Oregon." In his account of the annexation of the Spanish East and West Indies the author does not enter at all into the debated questions thereby presented. This volume is a narrative of events, not a discussion of principles.

**Angelo, the Musician.** By Harriet Bartnett. Godfrey A. S. Wieners, New York. 5x7½ in. 340 pages.

**Athletics and Out-Door Sports for Women: Each Subject Being Separately Treated by a Special Writer.** With an Introduction by Lucille Eaton Hill. Illustrated. The Macmillan Co., New York. 5¼x8 in. 339 pages. \$1.50, net.

Physical training at home, gymnasium work, dancing, cross-country walking, swimming, skating, rowing, golf, running, lawn-tennis, field-hockey, basket-ball, equestrianism, fencing, bowling, track athletics, are divisions under which the general subject is treated, the chapter devoted to each being prepared by a specialist in the given line discussed. Full directions and illustrations are supplied. Not the least important paper in the book is the introduction by the editor, who insists upon physical training as a vital part of the scheme of education. Upon business and professional women and upon all women with overstrained nerves and overtaxed brains she urges physical training for its recreative effects and as the best aid to intellectual activity, the term not to be limited to gymnasium work or other set exercises. No woman, she says, can beg off from a splendid daily walk. While advocating athletics with due enthusiasm, she advises moderation and deprecates extremes that work physical injury or that bring athletics into disrepute by giving excuse for the application of such descriptive terms as "fad" and "sporting."

**At the Time Appointed.** By A. Maynard Barbour. The J. B. Lippincott Co., Philadelphia. 5x7¾ in. 371 pages. \$1.50.

A sudden loss of memory and with it identity forms the basis of this novel. Another rather unusual situation is employed. A father—an American—forces his daughter's consent to a marriage repulsive to her. In consenting, the girl forfeits the reader's respect. Regard for the author's discretion is sorely taxed, too; the girl's course in this one particular being entirely out of keeping with her character. Her lover's acquiescence in her "sacrifice" and her own pose as a martyr in the matter have a strong touch of pathos. The tale is too long drawn out; there are climaxes and anti-climaxes to spare.

**Belgium and the Belgians.** By Cyril Scudmore. Illustrated. E. P. Dutton & Co., New York. 5¼x8 in. 362 pages. \$2, net.

This is a work of information rather than of entertainment. Yet some chapters, that on "The Holiday Ground of Belgium," for instance, bring charming pictures of vacation possibilities before one. The pen-and-ink sketches are pleasing, too; and it may be

noted that the general typographical dress has distinction. In the main, the author tells plainly and clearly everything about Belgium not given in guide-books—matters of government, trade, finance, education, management of charities, agriculture, with some attention to modern art.

**Blind Children.** By Israel Zangwill. Funk & Wagnalls Co., New York. 5¼x8¼ in. 136 pages. \$1.20, net.

**Body Beautiful (The): Common-Sense Ideas on Health and Beauty Without Medicine.** By Nannette Magruder Pratt. Illustrated. The Baker & Taylor Co., New York. 5x8 in. 208 pages. \$1.25, net.

An illustrated volume well described by its sub-title, "Common-sense ideas on health and beauty without medicine," which discusses the proper kinds of food, various physical ailments, sleeping, bathing, out-of-door exercises, and other practical matters relating to health and therefore to beauty.

**Boys' Self-Governing Clubs.** By Winifred Buck. The Macmillan Company, New York. 4¼x7 in. 218 pages. \$1, net.

Miss Buck's little volume is the outcome of twelve years' experience with the kind of clubs she describes—a kind that has shown singular powers of taking root and growing on the East Side of New York. After stating her philosophy of education, the author describes compactly and suggestively the methods of starting boys' clubs, and the lessons to be learned from their many-sided activities.

**Brewster's Millions.** By Richard Greaves. Herbert S. Stone & Co., Chicago. 5x7¾ in. 325 pages.

In order to secure seven millions left him on such conditions, Montgomery Brewster, a young New Yorker of good family and principles, must spend legitimately one million in a year; he must not gamble it away or give inordinately to charity; he must apply it to living expenses; by the end of the year he must be penniless. His "mad race after poverty" is exciting; he is called a fool by the world, moaned over by his friends, and rejected by the woman he loves. But he manages to spend the million and more. Tables are given showing receipts and disbursements. The executor, handing over the seven millions, says: "As for your ability as a business man I have this to say: any man who can spend a million a year and have nothing to show for it don't need a recommendation from anybody."

**Brief Greek Syntax.** By Louis Bevier, Jr., Ph.D. The American Book Co., New York. 5x7½ in. 108 pages.

**Child Literature: For First and Second Grades.** By Mae Henion Simms. The American Book Co., New York. 5x7½ in. 144 pages.

**Common Sense on the Labor Question.** By Herbert N. Casson. Peter Eckler, 35 Fulton St., New York. 4¼x7½ in. 61 pages.

A clever sixty-page tract pleading for trade-unionism, and for the united action of trades-unionists to advance direct legislation, the public ownership of monopolies, and a few other kindred measures which trades-unions are able to support without disrupting themselves upon the rock of party politics. It is worthy of remark that an edition of one hun-

dred thousand copies of this tract has been printed for free distribution. It is evident that the cause of trade-unionism is in an unprecedented degree appealing to the pockets of well-to-do philanthropists.

**Concerning the Forefathers: Being a Memoir, with Personal Narrative and Letters, of Two Pioneers, Colonel Robert Patterson and Colonel John Johnston.** By Charlotte Reeve Conover. Illustrated. The Winthrop Press, New York. 7½×11 in. 452 pages.

**Daughter of Thespis (A).** By John D. Barry. L. C. Page & Co., Boston. 5×7½ in. 347 pages. \$1.50.

Life as it is lived by people of the stage is presented by one familiar with his theme. The story, as a story, does not amount to much; the heroine, as most readers will decide, marries the wrong man; and it will be suspected that the author makes her do this for the sake of a surprising dénouement—which is no good cause for matrimony. But the book has a distinct value, inasmuch as it shows what manner of folk they really are whom we see across the footlights; their toils, trials, diversions, virtues and vices (the last in not so dark colors as often painted), are so set forth as to contribute to a better understanding between the public and those who from the stage amuse or instruct them.

**Echoes from Erin.** By William W. Fink. G. P. Putnam's Sons, New York. 5×7½ in. 188 pages. \$1.25, net.

**Florida Fancies.** By F. R. Swift. Illustrated. G. P. Putnam's Sons, New York. 5¼×8 in. 120 pages. \$1.25.

**Grey Cloak (The).** By Harold MacGrath. Illustrated. The Bobbs-Merrill Co., Indianapolis. 5×7½ in. 463 pages.

A tale of France under Mazarin and of Canada, or New France, under De Lauson. It might perhaps be called a historical romance, but it has much more of the romance than the history. It is of course a tale of the "sword and cloak" order, with plenty of courtly love-making and an equal amount of villainous plotting. Mr. MacGrath's previous stories, and especially "The Puppet Crown," have pleased the popular taste exceedingly well, and it is safe to predict that very few books of the spring will have a wider reading than "The Grey Cloak." It has life and action and movement, and is not without some pretensions as a study of character. The tendency of the characters to declaim in season and out of season is the worst fault.

**Grimm's Best Stories.** (Standard Literature Series.) Edited and Adapted for Pupils of the Third Reader Grade. The University Publishing Co., New York. 5×7¼ in. 128 pages. 12½c.

**History of Marietta.** By Thomas J. Summers. B.A. The Leader Publishing Co., Marietta, Ohio. 6×9 in. 328 pages.

**Home Science Cook Book (The).** By Mary J. Lincoln and Anna Barrows. The Home Science Publishing Co., Boston. 5×8 in. 281 pages.

This book, says the preface, presents much in little space, and suggests many short cuts for those who believe in simplifying life and for the busy people who have not time for elaborate processes. It will be helpful to folks who are willing to use both hands and brains when cooking. A point to be recommended is the

elasticity of recipes; proportions instead of definite quantities are given, and thus soups, pies, puddings, etc., may be adapted to the size of the family. "Menus for Every-Day Life" is the subject of one chapter, and "How a Course Dinner may be Served Without a Maid" the text of another.

**Indian Summer and Other Poems.** By James Courtney Challis. Richard G. Badger, Boston. 5×8 in. 95 pages. \$1.50.

**Is It Shakespeare? The Great Question of Elizabethan Literature. Answered in the Light of New Revelations and Important Contemporary Evidence Hitherto Unnoticed.** By a Cambridge Graduate. With Facsimiles. E. P. Dutton & Co., New York. 5¼×9 in. 387 pages. \$4, net.

Reserved for later notice.

**King of the Golden River (The).** By John Ruskin. Illustrated. Edited by Katharine Lee Bates. Rand, McNally & Co., New York. 4½×7 in. 80 pages.

**Law of Likeness (The).** By David Bates. Longmans, Green & Co., New York. 5¼×9 in. 340 pages. \$3.50.

The formative thought of this work is not discoverable in the title, and does not disclose itself until curious pursuit has run through the larger part. It is this: the fact of human sonship and likeness of spirit to God lays down the law for the conduct of life. "What pride of race, or family, or caste—what tradition of honor inherited from a long line of distinguished ancestors—can compare, in urgency of appeal to men for righteousness, with the gracious appeal of an assured faith in our inheritance of a spirit in the likeness of God?" But, says the author, "men have gone to the dogs" because the Church has told them, and they have accepted it, that "they are base-born, degraded beings, inheriting evil dispositions, incapable of doing well." Mr. Bates was reared in stiff Calvinism, and revolted from it; instead of becoming a missionary, as intended, he went to Africa as a trader. His book opens with picturesque descriptions of life in West Africa, and of missionary work there. His great mistake is in his conception of Christianity as synonymous with Calvinism, and in his failing to see that anything else can be read out of the Apostolic writings, especially Paul's, than what Calvinistic interpreters have read into them. His conviction of the "natural piety of man," "the innate good will of man to God," sharply conflicts with Paul's saying, "The carnal heart is enmity to God;" yet Paul himself regards the enmity as rooted in ignorance. As Socrates held that knowledge is the foundation of virtue, so the Scripture holds that, if men knew God's disposition to them, they would reciprocate it. The half-truth of Calvinism, that it is natural to do wrong, needs supplementing by the other half, that it is also natural to do right: it certainly is not unnatural. Mr. Bates is proficient in science and philosophy, but has suffered from a theological diet both monotonous and meager. He has had no friend to put him into the pool of theological thought since its stirring by the angel of reconstruction. There is something tragic in the noble misapprehensions of such a mind. The Church owes a debt to tens of thousands of

such, which it is very slow to recognize and discharge.

**Lettres à Françoise.** By Marcel Prévost. Félix Juven, Paris, France.  $4\frac{1}{2} \times 7\frac{1}{4}$  in. 347 pages. 75c.

This volume may do something towards effacing the memory of the author's unfortunate novel, "Les Demi-Vierges;" at all events, it well supplements his "Frédérique" and "Léa." It does not, like those latter notable novels, portray present-day opportunities for good and for ill which lie in the path of the French girl who has to earn her own living, but it does portray what is perhaps equally interesting to most men and women in France—the new opportunities which lie in the path of the ordinary French school-girl who will not later be compelled to work for her daily bread. Françoise is such a girl; she is about eighteen years old; she is in her last school year. The "Lettres" are sent to her once a fortnight by a fond but worldly-wise and wide-awake uncle, who discourses vivaciously, affectionately, and helpfully on any subject that happens to come to hand—the Exposition of 1900, All Souls' Day, Fénelon, feminine coquetry, the toilet, Queen Wilhelmina, Christmas, girls' boarding-schools, athletics, feminine culture, the college ideal, Madame Récamier, cooking, proper courses of reading for girls, love and marriage, long betrothals, and many other topics jumbled together into an attractive mixture. On every page, however, one realizes that this book is a protest against the kind of young girl found in the pages of Augier and Feuillet. More liberty is needed by the French girl of to-day, M. Prévost asserts, and his Françoise enjoys it. She is the type of the transitional girl. She has submitted to certain traditions, but she has emancipated her spirit; she has been trained in an ancient and conservative school on conventual and conventional lines, but she has lost no opportunity of instructing herself in every proper way from outside; above all, destined by her mother to a marriage of convenience, she chooses the man she loves, who is hardly older than herself and without fortune. Nor in marriage does she seek money, position, or even liberty; she seeks only to be a wife and mother. After reading these cleverly written pages and comparing them with the works of other writers on the same subject—the books of Madame Blanc, for instance—we must believe that a new type of French girl is being developed; it is time it were so; too long has there been discord between a French girl's education and her functions in later life.

**Life Lessons.** By J. F. Thompson. Eugene F. Endicott, Boston.  $5 \times 7$  in. 126 pages.

**Mr. Claghorn's Daughter.** By Hilary Trent. The J. S. Ogilvie Publishing Co., New York.  $5 \times 7\frac{1}{4}$  in. 277 pages. \$1.

The principal character in this novel is a free-thinker, who marries a theologian, blindly accepting his form of belief. A book that falls into her hands shows infant damnation as one of its tenets. She asks her husband for a plain statement of his belief. He refers her to a pamphlet he has written, proclaiming

himself entirely "orthodox" upon the question. "How," she then asks, "could the same man write that book and be a father?" She resolves that she will not again be a mother. The author lacks restraint. Passages of the book are coarse. An unpleasant taste is left in the mouth. The book is supposed to be an attack on the Westminster Confession of Faith, which in point of fact does not in any reasonable construction hold to "infant damnation."

**More Baskets and How to Make Them.** By Mary White. Illustrated. Doubleday, Page & Co., New York.  $5 \times 7\frac{1}{4}$  in. 157 pages. \$1, net.

Since basketry has become a popular art in schools and among people who have outgrown schools, this little manual will be welcome. The success of the author's preceding work on the same subject created a demand for this. Instructions are given for weaving rattan, raffia, palm-leaf strips, rushes, and other materials into baskets, seats for chairs, letter-trays, fern-dishes, and various useful and ornamental odds and ends.

**Mystery of Murray Davenport (The).** By Robert Neilson Stephens. Illustrated. L. C. Page & Co., Boston.  $5 \times 7\frac{1}{4}$  in. 312 pages. \$1.50.

This is a sort of Jekyll and Hyde story, inasmuch as it presents a startling transformation of character and personal appearance. Davenport, the Hyde, is not very bad—only melancholy and "down on his luck." By deliberately planning and thinking to this purpose he becomes suddenly an entirely different man as to looks and to luck; his nearest friends and his sweetheart fail to recognize him. The vital question to him then is, Will he lose her by the change? There is something repulsive about his destruction of Murray Davenport; it suggests to the reader (though Mr. Stephens may not have so intended) the idea that a violent transformation of character might in a sense be suicide, even though the new self is an improvement on the old.

**Of Religion (The Arts of Life).** By Richard Rogers Bowler. Houghton, Mifflin & Co., Boston.  $4\frac{1}{2} \times 7$  in. 73 pages. 50c.

**Roman Road (The).** By Zack. Charles Scribner's Sons, New York.  $3\frac{1}{4} \times 7\frac{1}{4}$  in. 235 pages. \$1.50.

Three stories, of which the first, giving title to the book, is the least deserving of praise. "The Roman Road" is a study of upper-class English life, after the manner of Henry James—and (in our opinion) a long way after. The personages of the story, at one breath dull and inconsequential, at the next amazingly clever and profound, seem to us unconvincing and altogether too subtle for the comprehension of the average student of human nature. But "Thoughty," the last of the three stories, is a deliciously humorous recital of childish adventure; and the middle tale, "The Balance," if it may be characterized as somewhat fantastical and overdrawn, is certainly original.

**Sacrilege Farm.** By Mabel Hart. D. Appleton & Co., New York.  $4\frac{1}{4} \times 7\frac{1}{4}$  in. 333 pages. \$1.

This is the kind of story that puts the reader utterly out of patience with the hero and heroine. The mistake which keeps them apart and works tragic consequences is unreasonable, almost absurd. But if it were not

for lovers' foolish blunders there would be few love stories; without them Shakespeare himself could not have written some plays that please us mightily. Margaret, the old nurse, is good and wholesome, and really worth knowing; if it were not for her the book "Sacrilege Farm" would be as gloomy as its name.

**Shakespeare and the Rival Poet.** By Arthur Acheson. John Lane, New York. 5x8 in. 360 pages.

Reserved for later notice.

**Shakespeare's Portrayal of the Moral Life.** By Frank Chapman Sharp, Ph.D. Charles Scribner's Sons, New York. 5¼x8 in. 232 pages. \$1.25, net.

Agreed as the reading world is that the study of descriptive ethics, as presented in Shakespeare's characters, is morally profitable, it cannot fail to welcome such an aid to that study as Professor Sharp's book supplies. With such a manual in hand the ordinary reader of the great character-painter has an advantage like his who has an artist for companion as he walks through a gallery of noble pictures. Professor Sharp has skillfully distributed the immense material before him into chapters on the main problems of the moral life, and exhibits the treatment of these by Shakespeare's men and women. He takes occasion to correct some popular misconceptions of typical characters, and to criticise misinterpretations by psychologists, philosophers, and moralists. A good index makes it serviceable for reference. Those who are teaching or studying ethics, as well as the general reader, will find it a valuable book.

**Soil (The): An Introduction to the Scientific Study of the Growth of Crops.** By A. D. Hall, M.A. Illustrated. E. P. Dutton & Co., New York. 5¼x8 in. 286 pages.

**Temples of the Orient and Their Message (The).** By the Author of "Clear Round," etc. The Open Court Publishing Co., Chicago. 5½x8¾ in. 442 pages. \$4, net.

Students of comparative religion have become familiar with the fact that religious ideas whose first appearance was on the banks of the Euphrates or the Nile have passed on into the cathedrals of to-day, albeit variously transformed. This fact the work now before us illustrates very copiously from the religious literature of primitive peoples, especially those of the Far East. The author has had specially in mind the need and duty of the Christian missionary to appreciate the religious ideas of non-Christian peoples, that he may not offend by disparaging what stands in some affinity to his own, though cruder. The work may be criticised here and there for finding analogies, where there are none, by the process whose application to the Bible results in mere text-matching. But, on the whole, it is a cumulative and impressive presentation of the radical unity of religious ideas. One can hardly assent to the theory of a "primal revelation" in the sense here apparently intended, as if an original perfection, subsequently corrupted, lay in the past. If, as recent investigators are disposed to believe, the subconscious part of our nature is the part where the divine thought makes contact with the human, that contact cannot be dated too early in human history. On the

other hand, the interpretation, the rationalizing in clear intelligence of those "shy yearnings of the savage," so that the divine thought, with all that it involves, comes to clear recognition in consciousness as a revelation, is the work of ages, and even now incomplete.

**That Printer of Udell's.** By Harold Bell Wright. Illustrated. The Book Supply Co., Chicago. 5x7½ in. 468 pages.

The writer undertakes in this novel to arraign the Church for not doing its duty by the struggling poor and by the tramps. While doubtless there is much truth in his showing, his representation of the religious world's indifference to friendless men out of employment is exaggerated and passes all bounds of justice. The plans of relief, salvation, and reform which he outlines are not novel; they have been and are being tried.

**Tommy Wideawake.** By H. H. Bashford. John Lane, New York. 5¼x7 in. 188 pages.

A pleasing sketch of a typical English boy whose father, going to the wars and to death, leaves him in the care of his old friends the doctor, the philosopher, the parson, and the poet. Tommy leads his reluctant guardians into mischief and wakes them up to a knowledge of life, and in the case of the poet to a knowledge of love. He is a natural, manly, wholesome English lad. The whole thing is slight but prettily written.

**True Bird Stories from My Note-Books.** By Olive Thorne Miller. Illustrated. Houghton, Mifflin & Co., Boston. 5x7½ in. 156 pages. \$1, net.

The little "feathered folk" in this book are delightful, and the pictures of them are "dear," as the school-girls say. The stories are all strictly true, the author tells us; part of them being studies of captives in her own bird room, and the rest of birds in the field. Some have been related before in her "grown-up books" and in various publications, but most appear here for the first time. The author has something to say about caged birds that will be particularly interesting to people who want to make their little prisoners happier behind the bars.

**Trust Finance: A Study of the Genesis, Organization, and Management of Industrial Combinations.** By Elwood Sherwood Meade, Ph.D. D. Appleton & Co., New York. 5¼x8 in. 387 pages. \$1.25, net. (Postage, 12c.)

A masterly study of trusts from the investor's standpoint. Two of the chapters of this volume which appeared in a slightly different form in the "Quarterly Journal of Economics" we have already made the subject of an extended editorial upon the United States Steel Corporation, and we shall doubtless have further occasion to discuss editorially Professor Meade's generalizations upon other topics. Though his attitude toward trusts is sympathetic rather than critical, his judgments are discriminating, and he points out very sharply the injuries done to investors by the extravagant predictions of trust promoters. In a chapter on "The Decline in Industrial Shares" he shows that of twenty-one representative trusts only seven stood as well in the market last December as when they were organized. "On the face of the returns," he writes, "whatever service the trust movement may have

rendered in preventing competition and thus making profits more stable, so far as the twenty-one companies the prices of whose shares have been examined are concerned, it has inflicted upon the community a loss which may be estimated at either \$395,000,000 or \$641,000,000 according as present prices are compared with prices the first month of testing, or with the highest prices subsequently attained." The anticipated economies arising from the consolidation of scattered plants have proven especially illusive. The International Paper Company, for example, gave the public to understand that the net earnings of its constituent concerns were sufficient to pay interest on bonds, dividends, or preferred stock, and ten per cent. on common stock. Even larger earnings were anticipated under the combination, but have not materialized. The common stock of the company, first listed at 57, is now selling at 9. Professor Meade's final suggestion, that the hazardous element in trust investments could be largely eliminated by requiring the trusts to accumulate a large reserve before paying dividends, does not seem as weighty as most of his observations. So long as the men inside the management know so much more about the real earnings of the corporations than those outside, and so long as those earnings fluctuate violently between periods of practical monopoly and cut-throat competition to re-establish monopoly, the extra-hazardous character of trust investments seems likely to remain.

**Washington, Its Sights and Insights.** By Mrs. Harriet Earhart Monroe. Illustrated. Funk & Wagnalls Co., New York. 5x7½ in. 183 pages. \$1. net.

This is an entertaining and instructive little handbook about our National Capital. Besides descriptions of monuments and institutions, a brief account of the work done in the different Departments of Government is given. Anecdotes of prominent people are given in a way to make the story a lively and interesting one rather than a dry record of facts.

**What Shall I Do to be Saved: Words of Advice, Warning, and Encouragement to the Unsaved.** By E. E. Bynum. Illustrated. The Gospel Trumpet Publishing Company, Moundsville, W. Va. 5x7¼ in. 200 pages.

**Why the Mind Has a Body.** By C. A. Strong. The Macmillan Co., New York. 5¾x9 in. 355 pages. \$2.50.

By its title this acutely reasoned work evidently stands for the idealist conception of ultimate reality. It is a fresh and vigorous protest against the Kantian doctrine that both external facts and mental states are mere phenomena, behind which are the real things-in-themselves that are beyond the grasp of knowledge. On the contrary, says Professor Strong, our consciousness is an actual fragment and specimen of the reality of things. Our minds have been evolved from things-in-themselves; therefore these must be of mental nature, and ultimate reality is of the same nature as our consciousness. Physical facts, on the other hand, are mere phenomena, real only in the sense that they are symbols of the ultimate reality which they imperfectly repre-

sent. As an advocate of idealism Professor Strong distinguishes three types of it, and holds to "idealism of feeling" as more true to psychological facts than idealism of thought or of perception; that is, as we understand him, sentient mind, rather than merely thinking or cognitive mind, is the ultimate reality. Idealism of feeling "only bids us attribute to reality a nature like that which all forms of mental life have in common"—whether polyps or men. It is frankly admitted that "Berkeley's Divine Mind would satisfy the requirements of the case, but so also would Professor Clifford's Mind-stuff." These conclusions are built on an elaborate critique of the psychophysical facts and the metaphysical principles involved, as well as of the nature of matter and mind and causation. The theory thence elaborated is that to which the term "panpsychism" has been applied. Further discussion of the subject is not unlikely, in our opinion, to follow the pointing of that term—a derivative from the Greek word denoting life. Consciousness is in itself a function of life. The ultimate reality, or thing-in-itself, is therefore not the mere function of consciousness, but the life to which it belongs.

**Wisdom and Will in Education.** By Charles William Super, Ph.D., LL.D. Myers, Fishel & Co., Harrisburg, Pa. 5½x8 in. 283 pages. \$1.25.

The papers collected under this title are designed to fertilize the soil of thought from which ideals of education spring, in order to larger and better ideals. Their character is primarily sociological, and only secondarily educational. The author apparently thinks, with President Eliot, that symptoms of social deterioration indicate some defect in our educational system. He is even disposed to say, "We are, on the whole, more degenerate than other civilized nations." The book is evidently written for plain people, and may be read by them with profit.

**Workingman and Social Problems (The).** By Charles Stelzle. The Fleming H. Revell Co., New York. 5x7½ in. 166 pages. 75c. net.

No one else has written more authoritatively of the relations of the workingman to the Church than the author of this book. His knowledge of workingmen is not merely that of a social investigator, but of a man who himself became a sweat-shop wage-earner at the age of eight, and had become a master mechanic before he entered the ministry. His religious life has only deepened his sympathy with the aspirations of wage-earners, and by his sympathy he has been able to learn from labor men all over the country what they really think—a kind of learning which unsympathetic investigators can never attain. At the same time, Mr. Stelzle's sympathy with workingmen has not put him out of sympathy with the Church, though, of course, he believes that the Church to-day has to a dangerous degree lost the working-class sympathies of its first century and of all its revival epochs. By his sympathy with the Church he is able to interpret it to workingmen, and without doubt his talks about the Church to them have been as helpful as his present talks about them to churchmen.

## North Dakota Farm Mortgages

and Guarantee Interest and Principal

I am able to do this because I have a personal knowledge of every foot of land upon which my loans are made and its fair valuation.

I also have a personal knowledge of the habits of the party making the loan and his ability to meet his obligations.

I would be glad to have you make the most careful and scrutinizing search of my record—find out whether I will do just as I agree to or not. I will assist you in every way, or would be glad to have you inquire through any source not proposed by me. You will find me safe, honorable, reliable, and responsible. I will personally see to it that you do not regret making an investment in North Dakota, if you make it through me.

I refer, BY PERMISSION, to the following parties, all of whom are liberal purchasers of my mortgages:

FIRST NATIONAL BANK,	Lisbon, N. D.
FIRST NATIONAL BANK,	Fargo, N. D.
HARLAN W. PAGE,	Northfield, Minn.
Financial Secretary Carleton College.	
S. M. PEDRICK,	Treasurer Ripon College, Ripon, Wis.
GEORGE L. FIELD,	Pres. First Nat. Bank, Ripon, Wis.
WM. H. FIELD,	Port Chester, N. Y.

I own and offer the following gilt edge farm mortgages, to net purchaser 5% per annum.

\$2,500, 5 years	\$1,400, 5 years
2,000, 5 years	1,000, 5 years
2,500, 5 years	2,500, 10 years

Interest and principal collected without expense. Remittances in New York exchange. For further information address

**WALTER L. WILLIAMSON, Investment Banker, LISBON, NORTH DAKOTA**

# Household Catechism:

Q. Which is the purest Baking Powder?

*A. The chemists say the Royal is.*

Q. Which Baking Powder has greatest leavening strength?

*A. The Government Chemist's report shows the Royal has.*

Q. Which Baking Powder keeps the best?

*A. Shippers, dealers and users say the Royal.*

Q. Which Baking Powder is the most wholesome?

*A. Physicians and Boards of Health say that Royal is.*

Q. Which Baking Powder makes the finest, lightest, sweetest food?

*A. Housekeepers say the Royal does.*

Q. Why is Royal Baking Powder better than any other?

*A. Because no lime, alum or phosphate is used in its combination, and in the mammoth works of the Company a corps of expert chemists is constantly employed to test every ingredient and supervise every process of manufacture to insure a product absolutely pure and wholesome, and perfect in every respect.*

## Cuba's Independence Day

The American people will cordially join in the message of hearty congratulation sent in their name to the Cuban people by President Roosevelt. The 20th of May was the first anniversary of the establishing, under the auspices of the United States, of an independent Cuban republic. President Roosevelt had sound reason for praising the new republic and its Government for the progress Cuba has made and the well-being it has achieved during the last year. President Palma, in particular, should receive full recognition for his quiet, unostentatious, but eminently effective administration. He has abstained from everything which might have the slightest appearance of self-sufficiency and display, and has administered Cuban affairs with a single eye to economy, peace, and good government. Cuba to-day has a surplus in the treasury of two and a half million dollars, as against a little over half a million at the beginning of the year. The sanitary condition of the island has been maintained, the educational system has been extended, and there have been no serious disturbances and no dangerous political complications. There are still problems to be discussed and settled; among those most to the front are paying the Cuban patriotic army and simplifying the machinery for government within the provinces, since that provided by the Constitution has proved rather cumbersome. There is every indication that these and similar problems will be met through fair discussion and political action, such as every self-governing people should use. It is gratifying to note that during the festivities and celebrations which took place throughout Cuba on Wednesday of last week there was evident no feeling of hostility towards the United States; on the contrary, there was gen-

eral recognition of the services rendered by this country in improving conditions and in placing the new republic on its feet. Almost the first act of Cuba's second year of existence was the formal signing of the treaty between the United States and Cuba, in which the provisions of the Platt amendment are incorporated. The treaty, of course, must still be ratified by the Cuban Congress and by the United States Senate, but there is no probability of serious difficulties arising. The delay in signing the treaty is stated to be due to the desire of the Cuban Government to obtain some change in the statements of the conditions imposed upon Cuba. Negotiation towards this end was perfectly proper on the part of the Cuban Government, but it has failed, and the treaty formally adopts the provisions of the Platt amendment without change.

## The First Transvaal Parliament

Last week, at Pretoria, Sir Arthur Lawley, Lieutenant-Governor, opened the first Transvaal Parliament. The audience in the Chamber included not only the legislators, but the military officials, the judges, the clergy, and the civil authorities, all in uniform or robes. In welcoming the new legislative council Sir Arthur declared that the Government had done its best to secure a representative body, without having recourse to a popular election, which "in these times would only create political and racial strife." He foreshadowed important measures for local self-government and heavy expenditure in the extension of railroads and other public works, and promised, so far as possible, to meet local sentiment in regard to education, saying that the Government recognized the rising generation as an asset to be developed to the highest degree. Provision would be made to

were killed outright, several were fatally injured, and there were many minor accidents. The French Government very properly stopped the race midway. On the very same day at Bristol, England, two spectators were killed and many injured. The New York law fixes the maximum for speed at twenty miles—and that only in the open country and with an unimpeded road; ten, eight, and four miles respectively are made a limit; the first in suburbs and when passing schools or churches in which exercises are being held; the second when within a radius of half a mile from a post-office, when passing horses or pedestrians, crossing a highway, and in closely built portions of cities under any circumstances; the third when crossing a dam or causeway less than twenty feet in width. A motor must be stopped at the request of any rider or driver. Fines ranging from \$50 to \$250, and in case of a second or third offense imprisonment for not over thirty days, are the penalties. Whether these provisions are the best possible may be open to question; if they prove too severe, public sentiment will lead to their modification; but it is beyond dispute that there should be a cessation of the danger and discomfort (for travelers on the highroad have a right to comfort as well as life) caused by heavy-powered, noisy engines, some of them resembling locomotives almost as much as they do carriages, rushing at railroad speed over roads which belong to the whole public. The daily reports of accidents and every citizen's observations of narrow escapes from accident show that reasonable restriction is imperative.

#### The Rate of Interest Rising

New York City, which a few years ago sold many three per cent. bonds at par, and a few two and a half per cents, last week congratulated itself upon securing a small premium on an issue bearing three and a half per cent. Similarly, the English Government, whose two and a half per cent. consols commanded a premium of over ten per cent. four years ago, week before last congratulated itself upon the fact that its new three per cent. loan sold so readily at par. In England the zeal of investors to share in the new loan indicates that the bonds

might perhaps have been sold at a small premium, but the change in the rate of interest from that thought to be established in 1898 makes clear the universal rise that has again taken place. The change is particularly worth attention in this country, where the memories of most men go back to the high rates of interest following the Civil War, or the high rates prevailing in frontier communities, and where the opinion has been widely expressed that the rate of interest tends rapidly toward the point of extinction. The tendency is happily downward as wealth increases and the security of property is strengthened, but only slowly and irregularly does this tendency manifest itself. The new English loan has recalled the fact that as long ago as 1722 the English Government began to borrow at three per cent., and that by the middle of that century this rate seemed firmly established. In Holland Government loans at this period bore a still lower rate. During the Napoleonic wars the rate of interest more than doubled, and its subsequent decline has been interrupted each time a costly war has destroyed a large part of the nation's free capital. The burdens of war do not end in the higher rate of taxes. They are also felt in the higher rate of interest which all industrial enterprise must bear.

#### An Inspiring Example

The result of a recent temperance agitation in Charlottesville, Virginia, the home of the University of Virginia, is interesting as showing how such an agitation, seeking to promote temperance by one method, may succeed in accomplishing that result by a very different method. A vigorous campaign was carried on to secure local prohibition last March. The temperance forces were defeated by a small majority. The public opinion created by the agitation, however, was such that after the election, and as a result of it, an ordinance was passed by the City Council, with the sanction of the Mayor, the indorsement of the Chief of Police, the support of all the advocates of prohibition under local option, and of a large number of those who were opposed to abolishing the saloons altogether. This ordinance provides for closing the saloons from ten at night to five o'clock the next morning,

for the removal during all the hours, day and night, of all screens, curtains, stained-glass windows, and other obstacles, and for the burning, during the night hours, of a bright light visible from the nearest public streets. It further provides for the closing of all side and back doors, and forbids any form of gambling device, any billiard or pool table, or any musical or other entertainment in connection with bar-rooms, and raises the license from \$160 to \$400 for the city. This license, added to the State license and the Government Federal revenue license, brings the tax on each saloon to over \$800. The ordinance went into effect on the 1st of May, and the first result was the reduction of the number of saloons from twenty-one to sixteen. The battle is not over yet, however. On the 2d of May a saloon-keeper was put on trial before a police justice for violating the law with regard to side doors and screens, and the justice decided that side doors were permissible under the State law, and that the act prohibiting the use of screens was unconstitutional. The grounds for this decision we have not learned, but it has done nothing to check and something to increase the anti-saloon feeling in the city, so that there is a reasonable prospect that, if this decision should be supported by the higher courts, local prohibition would be carried by popular vote at the next election which shall take place.

**Mr. Conried's Plans  
for Opera**

Mr. Conried's statement of his plans for the coming season at the Metropolitan Opera-House in New York City will be of interest to music-lovers in all parts of the country. The season will open on the evening of November 28 with the production of "Rigoletto," and introduce to this country a young tenor, Caruso, who has made a great success in Europe during the past two months. Mr. Conried promises frequent opportunities of hearing the great music-dramas, most of which are already familiar to the audiences which have filled the Metropolitan Opera-House for many seasons past. New operas and new singers will have a hearing, and Mr. Conried expects the co-operation of artists who, although famous

abroad, are largely unknown to Americans. His aim will be to present an artistically satisfactory interpretation of all works given on the stage of the opera-house, with such all-round excellence that there will be no ground for unfavorable criticism. Special attention will be given to the orchestra and chorus, and orchestral conductors of the highest reputation will be put in charge. The designing and making of costumes and the modeling and execution of scenery will also be placed under expert supervision; the stage of the Metropolitan is to be remodeled under the direction of one of the eminent theatrical architects, and new lighting arrangements will be provided. It is proposed to open a school of opera for advanced singers to prepare themselves for small rôles in connection with the opera-house. Mr. Conried expects to secure Calvé, Plançon, and Jean de Reszke among other leading singers. The most important announcement, however, is the performance of "Parsifal," which will be first seen in Christmas week, with a cast including Burgstaller, Ternina, Van Rooy, and Blass. In view of the hostile criticism in Germany of the production of "Parsifal" here, Mr. Conried says that before the death of Anton Seidl he had arranged with him for an American production of "Parsifal;" that eight years ago he offered the heirs of Richard Wagner a considerable sum for formal permission to produce "Parsifal," although he was then aware that the opera was not protected here. He believes it is his duty and right, after this long lapse of time, to give Americans who cannot go to Bayreuth an opportunity of seeing in stage form the crowning work of Richard Wagner, and he promises to present the opera in a way which will put it on a level with the presentations at Bayreuth. "The time has passed," he says, "when a master like Wagner is regarded as the exclusive property of even his most intimate and most pious friends. True piety in this instance, I believe, lies in spreading abroad the knowledge and the enjoyment of the genius to which not only Bayreuth but the world is indebted for 'Parsifal.'" Public opinion will, we believe, concur in this expression of belief.

**Pneumonia  
Outranking Consumption**

The large and rapidly increasing mortality from pneumonia in Chicago, combined with an apparently similar though less marked tendency throughout the United States, is leading to the conclusion that that disease is now more fatal in its ravages than the "white plague"—consumption. Up to May 9 of the present year there were 2,487 deaths from pneumonia in Chicago, which was nearly one-fourth the total mortality in the city and more than double that from consumption. As many as four deaths have occurred in one family, and in one instance six friends who attended the funeral of a victim were fatally attacked. Figures from the volumes on vital statistics of the United States Census, compiled by Dr. Arthur R. Reynolds, Health Commissioner of Chicago, show that in 1900 the two diseases stood very near together all over the country, and that from 1880 to 1900 the mortality rate from pneumonia had increased 7.4 per cent., while that from pulmonary tuberculosis or consumption had decreased 20.7 per cent. For Chicago alone, figures from the same source, but for forty instead of twenty years, show a far greater increase for pneumonia, and about double the decrease for consumption. After making ample allowance for the well-known deficiencies in the early registration of vital statistics, the figures cited still give reason for great hope in case of consumption, and, at first thought, for despair over pneumonia. But with a better understanding of the causes which produce pneumonia and the means of prevention, a decrease in its extent and fatality will doubtless be effected similar to that which has accompanied the warfare against tuberculosis. Dr. Reynolds, in his brief but practical weekly bulletins on "The State of Chicago's Health," points out that while pneumonia is a highly communicable disease, its cause is known and its spread may be controlled. The latter is effected by (1) destroying the sputa of persons suffering from the disease; (2) protecting and cleansing or disinfecting articles and rooms liable to become soiled with such sputa; (3) thorough ventilation of houses, shops, offices, and cars, especially in winter; (4) dust prevention; (5) personal precautions against cold, privation, and

exposure to the weather, particularly in the case of the young, the aged, and the sickly. As apparent evidence of the highly communicable character of pneumonia, it is stated that in a single week eight of the 167 deaths in Chicago were among the 300 employees of the County Treasurer's office, and that during the same period fully thirty more of these employees were suffering from the disease.

**Josiah Willard Gibbs** The late Professor Gibbs, of Yale, though known to but few of his countrymen outside of academic circles, was one of those illustrious Americans who have enhanced the glory, not only of their university, but of their country. His name and those of older Yalensians—Silliman, Dana, Marsh, Whitney, and others—form a constellation of which any university, any nation, might be pardonably proud. His undergraduate course at Yale in the class of '58 was marked by distinguished honors both in Latin and in mathematics. After some ten years' further study at New Haven and in European schools, he took, in 1871, the chair of Mathematical Physics, which he held till his sudden death at the age of sixty-four. Considerably less than ten years more had passed when his achievements attracted attention and honor from the learned world. His principal paper on thermodynamics, says one of the foremost European authorities, Professor Ostwald, of Leipsic, "contained, partly explicitly, partly implicitly, a large part of the discoveries which have since been made. . . . Untouched treasures of the greatest variety and of the greatest importance still lie within its pages." Turning from this field to that of pure mathematics, he there again carried the advance beyond the line of any previous investigator in his treatment of vector analysis. In astronomy he introduced new and more efficient methods, which have been adopted in Germany. His publications between 1882 and 1889 on the electro-magnetic theory of light carried the day for it, and secured its general adoption. These successes were not only recognized by learned bodies in his own country, but were abundantly acknowledged by the honors conferred on him by the academicians of Great Britain, France,

Germany, Holland, and Norway. As a teacher Professor Gibbs added to an originality of thought deserving the name of genius a rare simplicity, clearness, and directness in the presentation of ideas with inspirational effect. In personal character pure and unselfish, modest, kindly, and helpful, he added the traits of the gentleman to those of the accomplished scholar. The death of such a man cannot fail to be deplored as a National loss. For, as President Hadley has written, he "was one of the very few Americans who had made discoveries of the first rank in scientific theory—discoveries which attract less attention at home than those of applied science, but which deservedly bring to him who makes them a higher rank among experts, and a better reputation abroad. In these last respects there was probably no living American who surpassed Professor Gibbs."

#### The National Baptist Anniversaries

The National Baptist anniversaries were held in Buffalo, May 18-26. The attendance was very large. It was estimated that there were fifteen hundred delegates and visitors. The meetings opened with the sessions of the Women's Baptist Home Mission Society. The reports were encouraging, and showed that all debts had been paid, with a small balance in the treasury. The most important session was held on Tuesday, when the long-expected report of the Committee of Fifteen was read. There has been much discussion for several years on the question of the consolidation of the great National societies. Last year at St. Paul there was an open parliament on this question and there was a very lively debate. There has also been a discussion on this subject in the denominational papers. It was anticipated that this year at Buffalo the discussion would become very animated. Some advocated an entire and radical change of representation in these meetings, and demanded consolidation, under one management, of the Home Mission Society, the Foreign Mission Society, and the Publication Society. But the Committee of Fifteen gave a very satisfactory report. It was comprehensive, exhaustive, conciliatory, and wise. When President Faunce, of Brown

University, had finished reading this masterly report, there was enthusiastic applause. There were a few addresses commending the report, and it was unanimously adopted. This action provides a permanent Tribunal of Arbitration. It is called a "Committee of Reference," composed of nine persons, "to which shall be submitted for consideration and final decision all questions of difference which exist or may arise among the several missionary societies hereinafter named, or between any two of them, concerning policies and methods of work." There has, it is said, been some friction between the Home Mission Society and the Publication Society over the chapel cars and other phases of the work where fields overlap. But all recognize that the permanent Committee of Fifteen, which will be elected every year, will be able to smooth out all misunderstandings. It is a great step in advance. Another important session was held on Thursday. Stirring addresses were delivered upon the New Evangelism. Dr. A. C. Dixon, of Boston, made a powerful appeal for evangelistic pastors and churches. Great enthusiasm was aroused, and a resolution was unanimously passed calling upon the Home Mission Society to inaugurate an evangelistic campaign at once throughout the country, and to attempt to raise \$25,000 to carry on this forward movement.

#### A Congregational Semi-Centennial

The semi-centennial of the American Congregational Association, which was celebrated May 25 at Boston, marks an achievement, and recalls a history, each of some significance. The achievement is, first, the establishment of the largest library of Congregationalist literature in the world, especially rich in the line of Pilgrim and Puritan history through successive generations in Church and State, rich also in literature bearing on controversies in the Church of England. Among recent accessions to its store of 50,000 books and 50,000 pamphlets is the library of the late Bishop Stubbs, of Oxford, over six thousand volumes. The other part of the achievement is the denominationalizing of the Congregational churches. It was debated among them, some thirty and forty years

ago, "whether we are a denomination." The principle of independency had been over-emphasized; anything that looked like centralization, even for common interests, was feared. The Association, organized in 1853, consequently had up-hill work. Professors Park and Edwards, of Andover, and the Old South Church in Boston strongly backed its projects, a denominational House and Library, though it was called a new thing for Congregationalists to do anything that could be called denominational. But a new era began with the birth of the Association. Its directors brought into being in 1865 the National Council, which since 1871 has met triennially in Maine, Oregon, and places between. In 1873 the first Congregational House was dedicated, and in 1899 its splendid successor. The growth of Congregationalism during the half-century has been through learning to pull together in some sort of harness. Recent events show that the Unitarian churches, derived from the same stock of independency, are learning the same lesson, and profiting thereby.

#### Congregationalism on the Pacific Coast

The Pacific Coast Congregational Congress, which was held at Seattle, Washington, May 8-17, was one of the notable religious assemblies of the year. The attendance could hardly have been larger in New York or Boston. The programme was skillfully constructed. The subjects to which whole days were given were the following: Education, Christian Nurture, The Church and Journalism, Preaching, Foreign Missions, Home Missions, Theology, Sociology, Congregationalism. Most of the subjects were discussed by persons resident on the Pacific coast. The treatment of the subjects was marked by a spirit altogether free from provincialism and mediævalism. Among those from a distance who had been especially invited to participate in the meetings were the Rev. G. Campbell Morgan, the Rev. C. H. Daniels, D.D., the Rev. H. A. Bridgman, of Boston, and Dr. A. H. Bradford, Moderator of the National Council. Dr. Morgan gave Bible readings and sermons twice every day. His spiritual vision, his eloquence of utterance, and his power over an

audience were very impressive. He is essentially an ethical and religious teacher, and not merely an evangelist as has sometimes been supposed. No better place for such a Congress could have been selected than Seattle—a wonderful city, with its panorama of mountains, lakes, and sound, its swiftly increasing population, its strong churches, its university, and its loyal people. In connection with this Congress it is appropriate to mention the extended tour of Dr. Bradford, the Moderator of the National Council of Congregational Churches, who visited the Pacific coast and held meetings in churches and groups of churches from San Diego, California, to North Everett, Washington. This journey served admirably as an occasion for emphasizing two points which Dr. Bradford has laid stress upon since his election as Moderator—the large service which the Moderator may render to the churches of the Congregational order aside from simply presiding at the sessions of the Council, and the importance of increasing the power of these churches by developing their spirit of co-operation. Congregationalism has thoroughly established within its own limits the principle of the freedom of the local church, and has done much to extend that principle to other religious bodies. Its greatest need now is the fostering of the spirit of union between these free churches in the exertion of spiritual energy for the service of men. The Congress at Seattle and the tour of the Moderator of the National Council are indications that this need is being recognized and is beginning to be met.

#### Trinitarians and Unitarians Confer

For some years past there have been signs of a better mutual understanding and a closer approach between the Trinitarian and Unitarian bodies into which Massachusetts Congregationalists divided nearly a century ago. Two years ago the "Congregationalist" editorially recognized this closer approach in cardinal points of theology. Various friendly private conferences on the subject of a closer fellowship have lately taken place. At the May anniversaries in Boston, just concluded, the same topic came to the front in expressions of strong interdenominational

sympathy. This may be made the mark of invidious comment in some parts of the country, as indicating an aberration of the Congregational churches of Massachusetts from evangelical standards. A juster estimate will reflect that, however sharp the past division there between the Trinitarian and Unitarian wings, they have never wholly separated. One bond has remained intact—the Massachusetts Convention of Congregational Ministers, organized in the Colonial period, and regularly meeting every year since to transact benevolent business and hear a sermon. Closer intercourse in recent years has tended to better mutual understanding and appreciation. Last week Professor George F. Moore, a Trinitarian Congregationalist, recently called from Andover Seminary to the Harvard Divinity School, addressed an audience of Unitarian ministers on "The Signs of the Times in the Congregational Churches." From a historical retrospect Dr. Moore went on to say, after alluding to the transformed conception of the universe, and consequently of God, that modern learning has wrought, that the Trinitarian and the Unitarian of to-day each differ more from the men who divided the Congregational body than either those men or their modern successors differ from each other. "In the pulpits of both branches the themes are God and the kingdom of his good will to be realized on earth by the sacrifices of his children," and "they are one in the struggle for a return to the Puritan conscience." Dr. Moore anticipated a reunion, but one that must come, as the disunion came, gradually, and through intercourse, better acquaintance, mutual consultation on common religious interests, and personal contact in common devotion to the indivisible kingdom of God on earth.

**Representative Utterances** Later in the week Tremont Temple was filled with an audience eager to hear representatives of the two branches of the old household speak upon "The Common Inheritances and Duties of Congregationalists." President Tucker, of Dartmouth, said: "We are separated to-night by a creed, but we are united by a principle, and the principle which unites us carries us back to that which is strong, vital, and

clear. It is the Puritan principle of personality." Dr. E. E. Hale said that the oldest Congregational church in the country was formed three hundred years ago by those who afterward came over to Plymouth. Their bond of union was not a creed, but a covenant to walk together in the ways of God. This Pilgrim covenant is still the common heritage of both branches of the Congregational family. Dr. Gordon, of the Old South Church, Boston, said: "We are here in the interests of the union of a divided Congregationalism. We must not be afraid to look at our differences, and must not be ashamed of our history of division. . . . We are weak because divided; to regain our strength we must work for union. The sigh and cry among our best people for a profounder religious life is the best sign of the times." Professor Peabody, of Harvard, concluded the discussion by pointing to the common interest and duty: "There lie," said he, "before the churches of New England to-day a challenge and a call greater than ever dawned upon the fathers in their dreams of a heathen world conquered. Here is a heathen world right at the doors of the churches. How to redeem domestic life, how to purify politics, raise the lives of the poor from poverty, save the rich from vulgarity, ostentatiousness, commercialism, is its problem, right here." These two meetings mark an advance upon the conference held a few summers since at the Isles of Shoals. No one who understands the situation believes, in view of the existing differences, that it betokens a speedy end of the division that began in 1805. But these differences, largely the product of past antagonisms and of the mutual recoil which they generated, are likely to diminish in the future, through closer intercourse and fellowship in the solid Christian interests that are common to both parties. To promote this Dr. Samuel A. Eliot, President of the American Unitarian Association, under whose auspices these discussions have taken place, has exerted his influence with good effect.

**The National Conference of Charities and Correction** Of the ten committees appointed to report at the annual meeting recently held in Atlanta, fully one-half laid special stress on pre-

ventive work, showing marked development in that direction since the Conference was organized thirty years ago. Wise care of the needy in their homes will prevent much pauperism; the establishment of juvenile courts and probation will prevent the making of hosts of criminals; the enactment and administration of suitable laws pertaining to child labor will prevent the physical, mental, and moral deterioration of childhood; conservative marriage laws must prevent to a great degree the dreaded increase of imbecility; good parole regulations will lessen recidivism in crime; mechanic arts and manual training schools will cut off thousands of recruits from the army of tramps; and houses of observation will hinder many acute cases of insanity from becoming chronic. These, at least, are the convictions of the people who have been studying facts to such an extent that they consider it no venture to make these prophecies. Their effort, therefore, is to create a public sentiment that shall secure legislation whenever necessary, and an enforcement of all wise laws looking to the prevention of these social evils. Every year sees advance in the conduct of this Conference in the greater length of time spent in the discussion of principles rather than details of plans or of administration of institutions. This is particularly noticeable in the branch which began as an "associated charity" movement, then became "charity organization," and is now classified as the committee on "Needy Families in their Homes." For many years the able students of this side of social life have laid down simple, understandable, and thoroughly well-tried principles of sound philanthropy, and at last they have permeated the Conference so that they make themselves felt at every turn. As a new city claims the Conference every year, those principles must be enunciated afresh each twelvemonth. Not seldom the result has been the organization of the charities in the city where the sessions have been held, and it is hoped that Atlanta will follow this good example and honor the charity workers by establishing this year a charity organization society which will do for that enterprising Southern city what similar bodies have done so effectively elsewhere.

#### The Prevention of Child Labor

The subject of child labor naturally received much attention during the week-long sessions of the Conference, not because the South is the chief sinner in this respect, since the State of New York alone is said to have more child wage-earners than the ten Southern States put together, but because the children's hour is chiming all over the land. Illinois and Alabama clasped hands in their behalf when Miss Jane Addams and the Rev. Edgar Murphy appeared before the immense congregation to plead for a longer childhood for the little ones. Miss Addams, always effective, is never more so than when her warm motherly instincts speak for the children. At all times self-forgetting, she is never less conscious of her own personality than when she speaks for those who cannot speak for themselves. Such a woman makes Madonna-worship seem a natural cult. Mr. Murphy's power as an orator, urging better conditions for the nearly two million child laborers of the United States, was well matched by the skill of the statistician Mr. F. L. Hoffman, whose paper was perhaps misunderstood to some extent. His subject was the "Medical and Social Aspect of the Child Labor Question," and he showed unmistakably the deleterious influences of factory employment, though he did not favor an age limit alone as the determining reason for excluding children from such work. He insisted upon the need for further investigations, that there may be established some more scientific method of deciding what children should be allowed in the various industries. Nothing, he said, could be more readily determined by statistical treatment than evidence of inferior development, of ill-nourishment, of mental growth, and even of dwarfed mentality. According to his figures, fifty per cent. of the seventeen million school-children of the country are injured by school life as things are, and his apparent contention was that, unless careful scientific examination could show physical fitness, children should be sent neither to the ordinary school nor to the factory. The mill-owners were represented in the discussion by Mr. D. A. Tompkins, of Charlotte, N. C., and by some of the Georgia ladies who warmly praised many of the owners of cotton-mills

for the schools and kindergartens they have established in connection with their factories. Mr. Tompkins did not hesitate to say that it would be better to keep all children under twelve out of the factories, but, with the school term so short, and the mother's work carrying her among the spindles, he thought the children safer within the factory walls than if left to themselves outside. Why the fathers should not support the families and let the mothers stay at home to look after the little ones he did not explain, though he maintained that industrially the "poor whites" of the South were never so well off as since the mills sprang up in the heart of the Southern cotton-fields. The next meeting of the Conference is to be in Portland, Maine, with Mr. J. R. Brackett, of Baltimore, as President.

**Home, Church, and Saloon  
in New York City**

Dr. Walter Laidlaw, Secretary of the Federation of

Christian Organizations in New York City, has issued a paper of uncommon interest on social and religious conditions in the metropolis. As to home ownership, he discovers only half as high a percentage in New York as in Chicago. In a list of cities of five hundred thousand population or over, the highest percentage of home ownership in this country is in Baltimore. Philadelphia has generally been held to be the second city on that list; but Dr. Laidlaw puts Chicago, and after it St. Louis, as following Baltimore, with Philadelphia, Boston, and New York next in order. Another striking fact is that the number of home proprietors in the Boroughs of Manhattan and the Bronx in New York City who are of German birth or parentage is much larger than the number of home proprietors of pure American birth; indeed, the citizens of New York who are of German birth or parentage also outnumber the whites of New York of pure American parentage. As to church distribution, we find, as might be expected, a correlation between it and the distribution of the foreign-born. Among the boroughs, that of Manhattan, having the largest foreign-born proportion (and also the smallest home-owning proportion), has the smallest number of churches in proportion to population. When we come to

the saloon question, Dr. Laidlaw corrects the notion that an increase of foreign-born citizens is followed by an increase of liquor saloons in any given locality; while there are some few facts which support the inference, it is generally a wrong impression. Furthermore, Manhattan liquor licenses prove that the Hebrews, who are largely located both on the upper and lower East Side, are not supporters of the saloon to the same extent as Roman Catholics and Protestants. The result of Dr. Laidlaw's paper should be to impress upon the New York settlement worker, and also upon the institutional church worker, a greater sense than ever of the necessity of those institutions, especially in that section of the East Side containing less than one-tenth of the total area, but nearly 29 per cent. of the population. There are already about twenty-five so-called settlements in the Borough of Manhattan, the most important of which are in this district. Dr. Laidlaw believes, and so does The Outlook, that the return of spending, say, \$100,000 south of Fourteenth Street to provide workers and equipment for neighborhood work in existing institutions would be much larger than the return of spending the same money on a new institution, unless, indeed, the latter expenditure be specifically directed to districts which are still comparatively neglected.

**A Bowery  
Employment Bureau**

In former days the work of the Young Men's Christian Association seemed to appeal only to one side of a man; it now appeals to all sides; once this work appeared to many as religious only—and pietistically religious at that—but a larger ideal was quickly manifest, the work broadened, and now it appeals to every side of human life and endeavor. It is not only religious (indeed, it is more religious than ever), but it is also educational, industrial, physical, philanthropic. It helps men to work as it helps them to life, and it helps them to get work. The employment bureau of the Bowery Branch of the New York City Association may be taken as an example of the Association as a social force. Last year, out of about four thousand applications for employment about twenty-five

hundred situations were filled through the good offices of this bureau. When once duly received, the applicant is called upon for references; if these are obtainable, communication is instituted in order that the man may be placed, if possible, in the kind of position for which he is best adapted. In addition to other privileges, clothing is also given to those whose appearance would otherwise be prejudicial to their getting employment; a repairing department puts existing garments in good order. By this means an applicant is often enabled to secure a situation worth much more financially than if he had not had such assistance. The bureau keeps in touch with those who have been its guests as far as possible; they are so many agents for the institution, supporting it as can no others in its endeavor to help men of all ages and creeds out of destitution and to place them in positions appealing to their self-respect as well as to their purse. Thus the Association's social work exchanges the indolence and discouragement of men, who otherwise would be stranded amid the temptations of our cities, for a condition of thrift and self-support.

**Buddhism in Japan** The founding of the Barrows Lectureship at the University of Chicago was due to the conviction that with closer commercial and political relations between Asia and America there should be closer intercourse concerning the great problems of religion and philosophy. This has already taken place; as this year's Lecturer in India and Japan, Dr. Charles Cuthbert Hall, says, "In the great guild of scholars there is no East and no West, all are one, and all contact with the truth is mutually instructive." Dr. Hall has been lecturing at Osaka, Kyoto, Kobe, Tokyo, Sendai, and other places in Japan. As in India, he announced at the start that he came to Japan in hearty sympathy with the missionaries, not to supplement their labors, but to follow upon them. He came to Japan from India, exchanging sadness for hopefulness, for, he added, as reported by a Japanese journal, there can be no greater contrast than in the attitudes of the two countries toward life. "The change in coming to Japan is like coming from the

gloom of a long winter's day into the brightness of spring." It is interesting to note that Dr. Hall indicates two principal difficulties hindering the acceptance of Christianity in Japan: (1) Bewilderment in reconciling the teachings of Christianity with the conclusions of modern thought, and (2) the desire to hold on to old ways and modes of thought. There is the eagerness of educated men in Japan to assimilate all new truth, and there is the conservatism and pessimism of ancestral faiths. The "august system of Christian thought instilling a deep sense of the worth of this present life" brings out more sharply the sustained sadness of Buddhism, seeking to root out all desire to live. The spiritual conflict in Japan is doubtless exactly as is here described. We believe that the conflict can have but one issue. As, in politics and education, the Japanese Empire represents to-day the fruit of foreign stimulus, largely American, so, religiously, the Japan of the future must represent the fruitage of that seed sown mostly by American missionaries and religious teachers.

**Christodora House** A little four-page paper, "The Christodora," published bi-monthly at 147 Avenue B, New York, gives a striking picture of the beneficent expansion attained by the avowedly evangelical work begun five years ago in a cellar room amid a foreign and non-Protestant population. The same picture was presented in another way by the assembly of two thousand—the clubs of Christodora and their friends—that recently filled the great hall of the Cooper Union with their annual meeting. The workers at Christodora House hold a Gospel meeting there on Sunday afternoons for all who care to come. Seventy per cent. of their neighbors are Jews and Roman Catholics. But in the intercourse of human kindness and neighborly helpfulness these differences do not protrude; if recognized, they are respected. In a recent Bible-class meeting one of the pupils proposed that they compare their different religions, and it was done with perfect good feeling. The Sunday evening Bible class is now tracing the course of Messianic prophecy, and studying the

leading characters of the Old Testament. The New Testament is, of course, a subject of study. A recent note of success in the various book and manual studies that are carried on is the passing of the Regents' Examination in elementary English by a class of four girls. The membership of the House in its various clubs, classes, and groups is now about a thousand, employing seven residents; the Head Worker is Miss C. I. MacColl. The loyalty of the membership is put beyond question by its forwardness to contribute what it can to the extinction of the debt, now reduced to \$3,000, that still rests upon the House. Those who desire to help in this may address the treasurer, Mr. W. L. Sexton, 305 West Seventieth Street.

## Home Rule of City Monopolies

Governor Yates, of Illinois, after a long delay not fully explained by the message accompanying his act, has signed the Mueller bill giving to all the cities of Illinois the right to deal with their street railway problems as they see fit. The provisions of this bill are of such importance as fully to explain the relentless bitterness with which the bill was antagonized at every stage by street railway interests and by newspapers and party machines controlled thereby. The bill, it will be recalled, passed the House of Representatives only when ninety-seven members revolted against the authority of the Speaker after that officer, in defiance of the Constitution of the State, had refused to allow roll-calls and attempted by brazen decisions to declare a substitute bill adopted—a substitute supported by the street railway lobby. Forced at last to submit to the "insurgent" majority, Speaker Miller weakly defended his usurpations by claiming that he had heard that money was being used to further the bill championed by the city government of Chicago and the municipal reform bodies. An investigation of this charge was forced upon the Speaker by the friends of the Mueller bill, and at this investigation his testimony in support of it proved flimsy to a degree almost incredible. The Chi-

cago "Record-Herald's" neat summary of it began as follows:

A man whom he did not know, and whose appearance he cannot describe, engaged him in conversation at the Leland Hotel and finally said: "If you are for the Mueller bill you will be taken care of."

Another man whom he had never seen also stopped him in the Leland Hotel and told him that if he would give a roll-call on the Mueller bill he would be taken care of.

Mr. Miller made no effort to identify either of these men, and according to his own testimony paid very little attention to them at the time. He is not sure that he could recognize them now.

The rest of his testimony was of like character, and his whole attempt to divert suspicion from himself by raising the cry of "Stop bribe-takers" against others only resulted in his further humiliation and the further discrediting of the opposition to the Mueller bill. In Chicago the Lorimer machine, for which the Speaker seemed to act, became so odious to citizens of all parties that this odium threatened to overwhelm the Governor if he vetoed the Mueller bill, no matter what his objections. Had the bill first been considered in this temper, a carefully framed measure would not have been the result. The bill, however, was framed when the friends of municipal freedom were ready to make all reasonable concessions to the fears of its opponents, and the law now on the statute-books—the first of its kind in this country—is a model for other States to consider.

The essential features of the law are briefly as follows:

1. Every city shall have power to own, construct, purchase, and operate street railways within its corporate limits.

2. The city shall have power to lease the roads for not longer than twenty years upon terms prescribed by its Council.

3. The city shall not operate the roads without a referendum at which three-fifths of the voters favor municipal operation.

4. The City Council shall not lease the roads for a longer time than five years without a referendum if ten per cent. of the voters demand it within sixty days after the passage of the ordinance to lease.

5. The city may buy or build roads by issuing interest-bearing "street railway certificates," payable out of the revenues of the system, or, with the approval of two-thirds of the voters, may issue ordinary city bonds.

6. Every city owning or owning and operating street railways must keep and publish the accounts thereof in such form as will show the public the exact income and expenses, making

reasonable allowance for interest, for depreciation, and for the loss of taxes which a privately owned road would pay.

7. The act shall not come in force in any city except with the approval of a majority of the voters.

The act, it will be seen, is not a radical one. Municipal operation of street railways cannot be put in force without the approval of the citizens by a three-fifths majority. City bonds cannot be issued without the approval of a two-thirds majority. In other words, there must be no experiment unless something more than a partisan majority of the people approve and the measure has the degree of support essential to its firm prosecution. City Councils may still lease roads to private companies, subject only to the limitation that the people may veto a long lease if dissatisfied with its terms or with the means by which its passage was secured. Under the bill the city of Chicago will probably grant different companies new leases for limited terms, all expiring at the same time, when the city may either introduce a comprehensive system of municipal operation or grant a new lease to a unified private company upon terms satisfactory to the public. In any event, however, the city is made free to act as the public welfare seems to require. It is no longer subject to the terms which private companies may persuade Councilmen to accept. The public is given the mastery, and the private company may continue to serve the public only by guaranteeing a better public service.

## The Kishenev Massacre Who Is Responsible?

Last week, in the British House of Commons, Lord Cranborne, Under Foreign Secretary, publicly stated that the number of Jews massacred and maltreated at Kishenev was twice as great as the number mentioned by the Russian Government's official despatches. It is quite possible that the Russian Government itself was misinformed at first; at all events, it has now apparently recognized the existence of universal censure and has removed General Raaben, Governor of the province of Bessarabia, presumably as a punishment for having failed to prevent,

or promptly suppress, the anti-Jewish riot. This action on the part of the Czar and his advisers seems to indicate that they are ashamed of—or at least regret—the outbreak of murderous violence from which the Jews of Kishenev suffered; but it does not relieve them of direct—and still less of indirect—responsibility therefor.

When a Government formally and deliberately discriminates against one class of its subjects; denies them rights granted to all others; permits its clergy to denounce them and excite religious feeling against them; and fails to check newspaper incitement to violence, though, by means of its press censorship, it has full power to do so, it cannot be allowed to throw on a provincial governor all the responsibility and all the blame for a catastrophe to which its own acts have contributed. The Russian Government has discriminated against the Jews, in a legislative way, ever since it acquired the territory in which most of them now live. The unrepealed laws relating to them, and to no other class in the Empire, fill nearly three hundred closely printed octavo pages in the statute-books, and touch almost every province of human life. If a Jew wishes to give his son an education that will fit him for a professional career, he finds himself stopped by a law restricting the admission of Jews to the universities. If he desires to become a farmer, or to bring his son up as a farmer, he runs against a law forbidding him to buy or rent land from either peasants or landed proprietors. If an estate happens to come to him by bequest, he is forced to sell it within six months. If he wishes to enter the Government service in any capacity whatever, he finds the door closed against him by legislative enactment. If he succeeds in getting a liberal education, in spite of all the obstacles thrown in his way by repressive legislation, he is stopped on the threshold of his professional career by a law restricting the number of Jews that shall be admitted to the bar or that shall be allowed to practice medicine. If he is drawn as a conscript and goes into the army, neither exceptional ability nor distinguished gallantry in action will entitle him to a higher position than that of non-commissioned officer. He has to pay taxes from which all other citizens are exempt; he is denied

the privilege which other citizens have of choosing his own place of residence; he is cramped and harassed by all sorts of exceptional decrees and regulations; and, finally, in ecclesiastical circulars as well as in official documents and speeches, he is contemptuously referred to as a "zheed" or "sheeny."

An illustration of the habitual tone taken by the Russian priesthood concerning the Jews is furnished by two recent ecclesiastical circulars issued by high officials in the Russian Church. The circular of the Bishop of Zhitomir and Volhynia denounces the "sheenies," declaring that all the economic distress of the orthodox peasantry is due to them, and calls upon all priests and all loyal people living in Volhynia to "co-operate with the Government in the work of Russifying the country." Another circular-letter from the highest ecclesiastical authorities in the province of Mohilef follows the same line, saying, "Who does not know that the original inhabitants of western Russia, including the province of Mohilef, have been reduced to poverty, in the fullest sense of the word, by the Jews? The latter have settled among them, have taken into their own hands all the markets, all the trade and industry of the province, and, in fact, almost the houses of the original Russian population, in town and country, and have crowded the orthodox peasantry into out-of-the-way places, starving and ruining them completely." These are only samples of the sort of doctrine continually preached to the orthodox peasants by their priests.

When a Government, both by its political and its ecclesiastical officials, takes such an attitude as this toward one class of its citizens; when it shows, in a hundred ways, its hostility to them; singles them out for exceptional and sternly repressive legislation; and treats them, generally, as if they were not only a dangerous but a despicable element of society, it cannot justly throw the blame for the resulting catastrophe either upon the peasants who follow its lead or upon the Governor of the particular province in which the disorder occurs.

But the responsibility of the Russian Government for the Kishenev massacre is even more direct than this. All of the liberal Russian newspapers agree that the

feeling of hostility to the Jews in Bessarabia was fostered and encouraged, if not wholly roused, by a Judæophobe named Krushevan, who edited and published in Kishenev a newspaper called "Bessarabets" (the Bessarabian). The Department of Press Censorship, which is under the direct control of the Minister of the Interior, and which sends to the Russian press almost daily circulars of instruction with regard to matters that may or may not be discussed, allowed the "Bessarabets" to publish, day after day, for months, editorial articles filled with the bitterest abuse of Jews and the Jewish faith, and to excite religious bigotry and class hatred by every means in its power. It is not at all surprising, therefore, that the orthodox Christian peasants of the town, who knew that the "Bessarabets" was censored by the vice-Governor of the province, should have believed that in beating and robbing the Jews they were carrying out in practice the governmental policy, and giving a salutary lesson to a lot of despicable "sheenies" who were enemies of the Czar and of his Holy Orthodox Church.

Nor can the Department of Press Censorship and the Minister of the Interior evade responsibility by saying that they did not desire nor anticipate this tragic result. Anti-Semitic riots are not a new thing in southwestern Russia, and experience has shown in many previous cases that where the peasants are ignorant and bigoted their passions are easily aroused by appeals to religious feeling and racial antipathy, and that tragedy is the inevitable result. If the Russian Government will set its people an example of justice and humanity by abolishing its class laws and dealing with Jews as it deals with its other citizens, there will be no more Kishenev massacres, and the Czar's proclamation of religious tolerance will perhaps be accepted by the civilized nations of the world as a sincere expression of an honest purpose.

The New York "Evening Post" has suggested that America must get rid of its own lynchings before it is in a position to remonstrate with Russia for its maltreatment of the Jews. But there is no ground for regarding the attitude of America and Russia in this matter as analogous. The Constitution of the United States

guarantees all its citizens, whatever their race or religion, equal civil rights. Their equal political rights may be questioned, but no State, no courts of justice, no official, questions the equal civil rights of all citizens. Violation of these rights by sporadic mobs has had no approval by magistrates, no sanction by law, no justification by churches. The same voice in America which condemns lynch law here rightly condemns organized and applauded lynch law in Russia. Public opinion is limited by no geographical boundaries; and the voice of the whole civilized world should unite in condemning, not merely the massacres at Kishenev, but the laws and ecclesiastical appeals to prejudice which have incited to those massacres.

## A Page of History

We publish in this issue of *The Outlook* a letter of Henry Ward Beecher on reconstruction in the Southern States, written in 1885. It has more than a merely personal interest, because it throws light on the question recently discussed in the public press respecting the views of such leaders of public opinion as Abraham Lincoln and Henry Ward Beecher concerning universal suffrage in the Southern States. Did they believe that giving the ballot to the negroes should have been imposed upon the Southern States as a condition precedent to their readmission to the Union? Would they believe now that the ballot should be given to all negroes in the South, regardless of competence or character, and that this policy should be forced upon the Southern States either by Congressional action or by public opinion? That single sentences may be found in the published utterances of both these men which, wrested from their connection, can be made to do service in supporting an affirmative answer to these questions, is true. But though partisan controversies are conducted in this manner, this is not the way to study history, and the impartial student of history can have no doubt that both men would have given a negative answer to these questions.

Abraham Lincoln's attitude was clearly defined by him officially in his Proclamation of Amnesty in 1863. In this Proclamation, issued before the war was over,

he authorized the people in certain of the seceded States to convene and re-establish a State government. The only requirement respecting the negroes was contained in the following sentence: "And I do further proclaim, declare, and make known that any provision which may be adopted by such State government in relation to the freed people of such State, which shall recognize and declare their permanent freedom, provide for their education, and which may yet be consistent, as a temporary arrangement, with their present condition as a laboring, landless, and homeless class, will not be objected to by the National Executive." It is difficult to conceive language by which Mr. Lincoln could more explicitly have declared his faith that the people of the Southern States could be trusted to deal fairly with their late slaves. Under this Proclamation, Louisiana was reorganized as a State, and adopted a constitution by which slavery was forever abolished. A little later a bill was passed by Congress for the reconstruction of the seceded States, which provided for an enrollment of the white male citizens, and for an election by "loyal white male citizens of the United States." For other reasons Mr. Lincoln declined to sign this bill, but he declared at the same time, "I am fully satisfied with the system for restoration contained in the bill as one very proper plan for the loyal people of any State choosing to adopt it." In his well-known letter to Governor Hahn, of Louisiana, suggesting the experiment of negro suffrage, beginning with those who had served in the Union army and could read and write, he indicated his approval of a limited negro suffrage; but it is clear that even such limited negro suffrage he would not have imposed by Federal force upon the seceded States.

Such was Mr. Lincoln's position; what was Mr. Beecher's? In 1865 the war had closed. Mr. Lincoln had been assassinated, Mr. Johnson had assumed the Presidency, the issue between the radical and conservative Republicans had begun, aggravated a little later into a hot political controversy. At this time Mr. Beecher preached his famous sermon on the "Conditions of the Restored Union." In this sermon he declared his belief that suffrage is a natural right. He would like to see admitted to the suffrage

all negroes, all foreigners, and all women, regardless of the question of their educational or other qualifications, in the faith that the suffrage itself would prove adequate education. But he explicitly declared that he would not force this opinion upon a reluctant or a resisting Southern State. "The best intentions of the Government," he said, "will be defeated if the laws that are made touching this matter [the general treatment of the negro] are such as are calculated to excite the animosity and hatred of the white people in the South toward the black people there. I except the single decree of emancipation. That must stand though men dislike it." And again: "I would be willing, not as a finality, but as a stepping-stone to what I hope to get by and by, to take the suffrage for those colored men who bore arms in our late war for the salvation of this Government." It is hardly necessary to remind our readers that the new Constitutions in the South, we believe without exception, give the suffrage to all such negroes, and to more.

The counsels of Mr. Lincoln and Mr. Beecher were not followed. Universal suffrage was imposed upon the South. The result was a solid negro vote opposing itself to a solid white vote in the South, and a solid South opposing itself to a solid North in the Nation; it was, in short, the initiation of a race war in the South and a continuance of a sectional war in the country. In addition, was a carnival of corruption in States where the negroes dominated, producing a condition which was unendurable. By 1876 this period of negro domination had been brought to an end, sometimes by the union of moderate white Republicans with Democrats, sometimes by paying the negroes not to go to the polls, sometimes by fraud and violence. Not till this was accomplished had the South peace or a hope of prosperity. Says Professor Bryce in the "American Commonwealth": "Not until the whites regained control, between 1870 and 1876, did the industrial regeneration of the country fairly begin." Attempts to bolster up negro domination by Federal troops and proposed Federal Force Bills and the like failed, and were abandoned. At length, in 1884, Mr. Cleveland was elected,

the first Democratic President after the Civil War. Mr. Beecher supported his election. In March, 1885, on a Western lecture tour, he wrote for the "Courier-Journal," of Louisville, the letter which we reprint on another page. One sentence in this letter, taken out of its connection, might be thought to indicate that he believed the experiment of universal negro suffrage was a success: "The result has shown that the colored people have not misused this power." But the context clearly shows that he means that they did not use it with evil intent; he does not mean that the results were beneficial; for he adds: "The colored people of the South, after becoming citizens, did not seek revenge or mischief. They intended well. It was not their fault that many of the results were evil." It is clear from the letter as a whole that Mr. Beecher recognized the enormous evils which universal suffrage imposed upon the South, evils so great that in his opinion they palliated, perhaps excused, though they did not justify, the revolutionary methods employed to bring them to an end. "In those States where legislatures were in the power of the late slaves, and where Northern men, not always the wisest, led them on to foolish and wasteful legislation, increasing taxation and squandering the result of it, plunging the State into debt by an unmerciful issue of bonds, it is not to be wondered that something like revolutionary methods were adopted, and that self-defense led men to violent resistance."

In view of these utterances, we may be very sure that neither Mr. Beecher nor Mr. Lincoln would, if they could, impose universal suffrage on the Southern States to-day. Mr. Lincoln would not, because he did not believe in universal suffrage. Mr. Beecher would not, because he did not believe in imposing his own beliefs on a community which did not accept them. In 1863, though the war was not ended, Mr. Lincoln would have trusted the people in the Southern States to deal justly with the race problem. In 1865, when the war was at an end, Mr. Beecher would have trusted the people of the Southern States to deal justly with the race problem. In 1885, when experiment had shown the evil results of placing Southern States under negro domination, Mr.,

Beecher would have trusted the Southern States to deal justly with the race problem. It is certain that in 1903, when the Southern States have shown their desire for the education and the welfare of the colored people by the money which they have paid in taxes for a public school system providing alike for negroes and for whites, by selling them thousands of acres of land, by encouraging them in industry, by maintaining with them friendly personal relations, in spite of political complications, both Mr. Lincoln and Mr. Beecher would be found with those who advocate a policy of mutual confidence and respect between South and North, and of mutual confidence and respect between black and white, as the only possible method of putting an end to race war in the South and sectional war in the Nation.

This is not to say that either of them would approve of the repeal of the Fifteenth Amendment; that either of them would approve the exclusion of a negro from the ballot simply because he is a negro; that either of them would have demanded less than equal and fair treatment to black and white alike; that either of them would have approved laws concerning the suffrage which say one thing and are so enforced as to mean another; that either of them would have accepted, as a finality, any other qualification for the suffrage than that of personal competence and character in both races; that either of them would have thought it safe or wise to put one race, without voice or representation, under the political control of another race, however humane and friendly it might be. These are different forms of the same essential question, and on this question we shall have something to say hereafter. It must suffice here to point out the fact that, according to Mr. Beecher, the only ground on which giving unqualified suffrage to the negro race in 1863 was, or indeed could be, justified was that it was necessary for their defense; that neither Mr. Lincoln nor Mr. Beecher believed that it was the best method of providing for their defense; and that now, after experience has proved that this was not a successful method for their defense, that, on the contrary, it only aggravated the evils of their condition, neither Mr. Lin-

coln nor Mr. Beecher would wish to see universal and unqualified suffrage forced upon the South either by Congressional action or by public opinion.

## Resurrection Now

In a very suggestive discussion of "Resurrection Now" which Dr. van Dyke has recently included in a small volume of sermons, "The Open Door," which bears the imprint of the Presbyterian Board of Publication, the principle of the present resurrection, the constant rising from the dead, is illustrated with characteristic clearness and effectiveness. "We are to turn away from that which drags us downward and makes us like the beasts, and follow after that which draws us upward toward the likeness of Christ: that is the law of resurrection now. Those who have risen must be ever rising. The resurrection of the life must be the upward life."

In this sense a man may die daily, or rise daily into a higher life. He may be diminishing his spiritual vitality, or he may increase it. He may weaken his character or strengthen it; one dies or renews his life in every choice. There are two sides to everything, as Dr. van Dyke points out. There are the two great aspects of the natural world: the sensuous side, which may be read "as a grocer's account book;" and the spiritual side, which may be read "as a divine poem." Dr. van Dyke recalls the remark of an Englishman looking down upon the motionless *mer de glace*, "All that ice would bring a lot of money in a hot season in Calcutta, don't you know," and he reminds us at the same moment that Coleridge in his sublime hymn hears "those silent cata-racts of frozen splendor singing the eternal praise of God." So the man who looks at nature sees one side or the other according to his character; for we see what we choose to see.

The same law holds in human relationships. Such relationships are founded either in honor, purity, and generosity, or in folly, selfishness, and lust. Love may be either a harbor light or it may be a false beacon. Everything depends on what we seek to find and to put into human relations. It is not always true

that a man is known by the company he keeps; "he is better known by the purpose with which he keeps it." The Pharisees were eminently respectable people, so far as their associations were concerned, but they were whited sepulchers; Christ, on the other hand, kept company with publicans and sinners and remained spotless. If we go to our fellow-men to gratify our ambition or avarice, or our senses, we die daily, and we bring death to others; but if we go to them to give and receive noble impulses, we live daily on an ascending scale. It is necessary to know the world, or, as people say, to know life; but that does not mean intimate familiarity with vice—an intimacy which passes with some persons as a knowledge of life, but is really a knowledge of death. One needs very little knowledge of vice in order to get all the good that can come from such knowledge, but one can never know enough of virtue.

In art and literature the same choice is constantly presented. There is music which cleanses and music which defiles. There are paintings which debilitate and paintings which stimulate. There are dramas which purify our hearts, as Aristotle said the drama ought to purify, "by pity, fear, and love," and there are dramas which corrupt us by the things they present, or by the spirit in which they interpret them. There are books which broaden the horizon, clarify the ideals, and give the whole nature energy and hope; there are books which confuse the moral issues, leave an evil deposit in the memory, and devitalize us. We may walk with Shakespeare, Wordsworth, and Browning, and have all the best that is in us reinforced by a clearer and cleaner knowledge of life; or we may live with the decadents and have our vision limited, our moral sense confused, and our natures poisoned. One may need to know these men, but no one ought to live with them. This broad line of division runs through every department of life. This decisive choice between life and death is made at every point; and the fundamental question is, whether in this present life we shall begin to die or begin to live; whether the processes of death or the processes of life shall be started in us; for there can be no resurrection hereafter unless there is a resurrection now.

## The Spectator

Should the Spectator make a list of certain things, abstract and concrete, which he has been wishing for a good part of his life, and which he has never possessed, the list would not be a long one, but it would show that adjustment to deprivation is oftener the outcome of inertia than of stern denial. Now, the Spectator has always been wishing for a large fine globe, completely equipped with every aid for geographical and astronomical study. That globe, and a stuffed owl, as superb a specimen as taxidermy can furnish, with a model traveling trunk, complete in every detail and always ready for a journey anywhere under the sun and at a moment's notice, would lead the list—and yet he knows, should he possess all this, he would miss the wishing he has wished so long. To have founded something worth while, to have been instrumental in giving a first impulse to some great enterprise or industry accelerating the world's progress, was another unsatisfied longing, until the other day, when he was prevailed upon to visit a chewing-gum factory. Then it was revealed to him how in his early boyhood he had helped to lay the foundation-stones of what is now a great commercial industry, one of the most prosperous of distinctively American enterprises—its product in constant demand from Cuba to Cape Nome, while Great Britain and Continental Europe at last, it is asserted, import the article in large quantities.

Under what difficulties had the Spectator once been a pioneer manufacturer of chewing-gum! What a contrast between the barefooted boy, his mouth filled with gritty spruce gum or flinty shoemakers' wax, his jaws doing their best to work the transformation desired, and the great factory with hundreds of employees supplemented by machinery impelled by electricity and steam! The combined product of all the factories in the country is not less than seventy-five miles a day of gum-stick. If gum-chewing is really an instinctive tendency of the human race, and irrepressible (man æons ago was a savage ruminant, some savants declare), what a boon to have the necessity served up so daintily and under the strict sani-

tary surveillance that characterizes every chewing-gum factory! If called upon (which he hopes he will not be) to answer the question, "What is the relation of chewing-gum to the progress of civilization?" the personal experience of the Spectator as a lad will inevitably influence his convictions.

"And that seventy-five miles of chewing-gum," said the superintendent of one of the lesser factories (like the employees, uniformed in white and thoroughly powdered with sugar dust—his factory uses one ton of pulverized daily), "does not include the spruce-gum industry. That's another matter, a lesser industry than the chicle, but a large industry all the same." Chicle, the basis of the popular chewing-gums, the Spectator was informed, is the product of a species of the india-rubber tree, indigenous from Mexico to Guiana; the amount of crude chicle exported annually from Mexico to New York is some four million pounds. Chicle was discovered to be chewable some twenty years ago, and has already "evolved" several chewing-gum millionaires. There is a Chewing-Gum Trust, of course, controlling absolutely the sale of chicle.

The sense of having a basic place in a great industry is so consolatory to the Spectator that he can but desire to make his many co-workers in that pioneer industry years and years ago aware of what they have been instrumental in bringing to pass. Think of the slot-machines, and the host of collectors of spruce in the woods of Maine and of chicle in the wild forests of Mexico, each getting a good income from chewing-gum! Then some there be who advocate gum-chewing as a mind cure—an antidote for cerebral irritation. The Spectator agrees, however, with the Editor's Study of "Harper's Monthly," who, in commenting upon this fresh justification of the habit a few years ago, aptly said: "I confess I have the same sort of hope in the gum cure that I have in the mind cure—and perhaps more in the cure of the mind by the action of the gums than I have for the cure of the gums by the action of the mind."

The gum the Spectator liked best when a boy, and in the making of which he

served thorough apprenticeship, was akin to chicle, in that it was a product of the rubber-tree. Those were the days of unmitigated india-rubber overshoes—"gums," they were commonly called—stretchy, sweaty things, but better for wading in deep puddles than shoes well plastered with mutton-tallow. From the tops of these gum shoes a strip could be cut, which, well roasted over a lamp flame, might be in time, if the manufacturer's patience and jaws held out, converted into what squeaked appetizingly when chewed, and was sure to call forth solicitations for a loan at least—for, be it remembered, disease germs, bacilli, and exchange of microbes were utterly unheard of by the gum manufacturers of—spare the Spectator's telling just how many years ago.

When the Spectator would learn what class of his countrymen are the greatest patrons of the chewing-gum industry, he was told that wheelmen, athletes, ball-players, and railroad employees of all grades, particularly engineers, are among the heavy consumers. The habit is about evenly divided between the sexes, and largely confined to wage-earners of both. The employees of most of the gum factories are forbidden to chew gum when upon duty—a rule which, if followed in similar establishments, would undoubtedly cut down the revenue of the industry considerably. For concentration of thought—as in chess—chewing-gum is largely recognized as helpful. Sailors, yachtsmen, and miners are seldom without it. The Spectator has heard rumors of a bishop or two and a judge who would miss it greatly when under mental stress or strain.

That the chewing-gum industry may be doing some good, after all, was impressed upon the Spectator with the fact that the consumption of chewing-tobacco is steadily decreasing, and with it expectoration in public places. Has not the Spectator good cause for self-congratulation now that he may count himself as a pioneer in an industry which may have helped to bring about such a blessed change in our hotels and railway coaches? Yet some day, let us hope, we may all rejoice in the passing of chewing-gum.

# The Strike in the Lowell Cotton-Mills

By George Kennan.

FEW persons, outside of New England, have an adequate conception of the magnitude of the industrial interests that center in the Massachusetts city of Lowell. We all have made use, or at least have heard, of Lowell drills and sheetings, and we all know, in a general way, that the cotton-mills in the valley of the Merrimac River have furnished, for many years, a large part of our annual product of cotton goods; but we do not realize, until we investigate the subject, the intensity of Lowell's industrial activity or the enormous aggregate of her daily output. Consider for a moment the quantity of cotton cloth, of various sorts, woven every hour in the Lowell mills. If it were all produced by a single gigantic loom, and if the end of the woven strip coming out of that loom were fastened to the Empire State Express as the latter left New York, the rate of manufacture would keep up with the average speed of the train. The engineer, as he rushed away northward, could hardly pull in the slack fast enough to keep the line of sheeting taut, and considerably more than a mile and a half of the woven fabric would accumulate during his brief two-minute stop at Albany. When he reached Buffalo with the end of the strip, after a nine-hour run, there would be 440 miles of cotton cloth lying along the New York Central track—all of it spun and woven in the time occupied by the train in making its daily trip.

The Lowell mills produce, every two months, a strip of textile fabric long enough to make a girdle for the earth at the equator; and their combined annual product would extend considerably more than half-way from the earth to the moon. There are single mills that consume 100,000 pounds of cotton and turn out more than 150 miles of cloth every day; and the daily product of all the mills, if sewn into a single continuous strip, would cover a distance of nearly 500 miles.

Hardly less impressive are the statistics of this giant industry on its human side. In the seven great mills whose walls overshadow the Merrimac within the corporate

limits of Lowell, there are 838,000 whirling spindles; and the twisted fiber that comes from them is made into cloth, at the rate of sixty or seventy yards a second, by an industrial army of more than 17,000 machine-tending operatives. These operatives, 10,000 of whom are women and girls, receive in wages for their labor more than half a million dollars per month, and their earnings support a population of 30,000 or 40,000 souls.

The importance of such an industry as this, not only to its organizers, managers, and employees, but to the public that consumes its product, can hardly be overestimated or overstated; and when, as the result of a conflict between the interests of labor and capital, the spindles cease to whirl, the roaring looms become silent, and the gates of the great mills are closed, the matter is serious enough to justify and demand the most careful investigation and study. It is my purpose in this article to review briefly the history of the strike for higher wages in the Lowell cotton-mills, to weigh impartially the conflicting statements and arguments of the mill agents and their operatives, and to forecast the probable outcome of the struggle.

Before taking up the history of the strike, I must say a few words with regard to the personnel and the work of the strikers. Among the first things that attract the attention of the visitor in Lowell are the variety of human types presented by the crowds of idle operatives in the streets, and the suggestions of alien nativity made by the signboards over the boarding-houses and shops. One can hardly walk a block, in the parts of the city where the strikers congregate, without overhearing a conversation in some language with which one is wholly unfamiliar; and in a stroll of an hour's duration a strike investigator may meet or jostle against Greeks, Poles, Swedes, Italians, and Portuguese from Europe, as well as Arabs, Armenians, Syrians, and Chinese from Asia. Over the doors of the shops, restaurants, and lodging-houses may be seen signboards bearing such inscriptions as "Wong Toy Company,"

"White Bean House," "Maison de Pension," "New Athens Café," "Mealers and Roomers," "Olympia Barber Shop," and "Café Constantinople," while in the quarter known as "Little Canada," and among the Greek shops and restaurants on Market Street, one will hardly see an English sign or hear a spoken word of the English language. In the evening classes of the Lowell Textile School there are no less than fifty young Greeks from the single town of Sparta, and the Greek population of Lowell as a whole exceeds that of Sparta by several hundreds. From an ethnological point of view, Lowell may almost be regarded as a foreign city, inasmuch as 74,000 of its 95,000 inhabitants were born outside the limits of the United States. The largest single body of foreigners in the cotton-mills is composed of French-Canadians; and next to them, in numerical strength, come the Greeks. These two nationalities make up nearly one-half of Lowell's foreign population, and include about one-third of all its citizens.

The work of the Lowell factory operatives is, mainly, the tending of complicated textile machinery; and while such labor does not call for great physical strength, it is extremely monotonous and fatiguing, and the incessant attention that it requires is quite as exhausting, perhaps, to nervous energy as the greater muscular effort involved in severer forms of toil. Nearly all of the operatives are engaged on "piece-work," and are paid according to their skill and the amount of their output. They labor ten hours a day and earn from five to fifteen dollars per week. Taking them as a body, and making no distinctions between men and women, or between skilled and unskilled, the 17,000 employees of the Lowell mills, if they all worked full time, would receive annually in wages the sum of \$6,500,000, or, in round numbers, about \$380 apiece. Inasmuch, however, as they do not all work full time, the average earnings per capita are considerably less than this. In 1900 the average number of employees in the Lowell cotton-mills was 13,730, and the amount paid them \$4,784,706. This would make the average annual wage \$348.48. Three hundred and forty-eight dollars a year would seem to be inadequate compensation for ten hours of hard work every day

in a cotton-mill; but it must not be forgotten that among the workers whose wages we thus average are a large number of unskilled hands and children. The pay of learners and children must necessarily be small, and this, as well as short time, pulls down the general average. Skilled and experienced operatives, such as mule-spinners and loom-fixers on "fancy" goods, earn from \$570 to \$780 per year. Even this, however, is low pay, if compared with the \$1,000 or \$1,200 per year now earned, with an eight-hour labor day, by skilled carpenters and bricklayers.

The first demand of the Lowell operatives for an increase of wages was made a little more than a year ago, and was suggested, apparently, by an advance of ten per cent. made about that time in the pay of the mill operatives at Fall River. The agents of the Lowell mills refused to accede to the demand, for the reason, as they said, that business conditions and prospects did not warrant it. The operatives—or at least the organized minority of them—thereupon threatened to strike, but they were finally dissuaded from so doing by a citizens' committee, which promised to exhaust all means in its power to bring about an advance in the scale of wages within the year. Upon this understanding the matter was allowed to rest until February, 1903, when the mule-spinners and loom-fixers, who were organized in fairly strong unions, renewed the agitation for more pay. Many of the weavers, beamers, carders, and nappers joined in the movement, and on the first day of March the Lowell Textile Council, acting as the representative of six local unions, made another formal demand for a ten per cent. increase in the wage scale. The agents replied that under existing conditions—with the high price of raw material and the low price of the finished product—they could not raise wages without sacrificing all their profits and passing their dividends. Some of them even declared that if they should make an increase of ten per cent. in the amount paid for labor they would have to run their mills at an actual loss. Several frank but perfectly amicable conferences failed to bring the opposing parties to an agreement, and on the 26th of March the Textile Council was authorized

by the local unions to declare a strike. Four days later 15,000 operatives either went out voluntarily or were forced out by the strikers, and all of the mills except the Lawrence Hosiery shut down.

There is some difference of opinion with regard to the alleged participation of the whole body of operatives in the movement. The agents say that not more than ten per cent. of their employees were members of the unions that ordered the strike, and that an overwhelming majority of the unorganized operatives were opposed to it. The members of the Textile Council, on the other hand, maintain that, although the unions took the lead in the matter, they acted in behalf of the unorganized majority, and had, from the beginning, its sympathy and moral support. In proof of this they point to the fact that since the beginning of the strike there have been large accessions to all of the labor organizations, while the number of textile unions has increased from six to fourteen. The best information I have been able to get leads me to believe that the strike was brought on by the 1,500 or 2,000 men who were organized in unions, and that a majority of the unorganized operatives—particularly the women—opposed the resort to force, doubted its expediency, or regarded it with half-hearted sympathy. If the whole body of employees had heard the statements made by the mill agents to the Textile Council, and if they had then been allowed to vote, by secret ballot, on the proposition to go out, I think they would have voted it down. Hundreds of the foreign operatives knew nothing whatever about the strike until they found the gates of the mills closed against them, and hundreds more would have continued work if they had not been afraid that the unions would blacklist them, or if the mule-spinners, loom-fixers, and beamers had not forced the mills to close. Be that, however, as it may, the strike is now on, and the issue is clearly and sharply defined. The operatives ask for a higher wage scale on the grounds, first, that the cost of living has greatly increased; second, that the market value of the textile output is now high enough to make a ten per cent. advance in wages not only possible but equitable; and, third, that the wage scale of Fall River and New Bedford is considerably higher than that of Lowell.

The mill agents and treasurers assent to the first and third of these propositions, but deny the truth of the second. The whole controversy, therefore, turns on the question whether the managers of the mills can pay ten per cent. more for labor, and at the same time earn what the laborers themselves admit would be a fair and reasonable dividend, viz., six per cent.

The first contention of the operatives is that the cost of living during the past three or four years has greatly increased, and that such increase ought, in justice, to be counterbalanced by a proportionate advance in the scale of wages. The mill-owners admit that the necessities of life cost more now than they did three years ago, but call attention to certain considerations which they say should modify the conclusion drawn from the bare fact. The rates of board for unmarried operatives in Lowell are still very low. In the corporation houses women pay only \$1.75 per week for room with board, and men only \$2.75. In private lodging-houses the rates are somewhat higher, but, as a rule, do not exceed \$2.50 for women and \$3.50 for men. The accommodations furnished at these rates are plain and perhaps cheerless; but they are quite as good as those to which most of the foreign operatives are accustomed, and a man who can earn, say, \$11 a week, and get board for \$3.50, has a margin of \$30 a month left for other expenses. A considerable part of this sum he may save, or may spend in bettering his home environment. Life in Lowell, for the unmarried operative, is by no means a hand-to-mouth struggle for existence. The Greek Consul, Mr. Iatros, is authority for the statement that among the 3,500 or 4,000 Greeks who work in the Lowell mills there is hardly one who has not saved at least \$25, and he knows men who have accumulated a small capital of \$2,000. The deposits of the Greeks in the Lowell savings banks amount, he says, to \$75,000. The Greek standard of living is doubtless far below that to which American laborers are accustomed, but the mill-owners contend that the savings of the Greek operatives show what economy and thrift may do with the wages that the mills now pay.

So far as the married operatives are concerned, the state of affairs is no worse, and in many respects is better, owing to

the fact that, as a rule, there are a number of breadwinners in the same family. Among the French-Canadians, who make up a very considerable part of the mill population, the families, or interrelated family groups, are generally large, and in every such family or group there are from two to five wage-earners. The Secretary of the Lowell Textile School told me that he knew one interrelated group of French-Canadians that had twenty-one representatives in the mills, and that received in wages nearly \$10,000 a year. In another similar group there were eleven able-bodied workers, who earned a proportionate amount. Of course, if such groups pool their wages and live together, they can enjoy more comfort or save more money than families with a single breadwinner can, even although the wages of the latter are twice as great as those earned by any single member of the group.

The mill agents contend, furthermore, that even if the assumption that wages should advance *pari passu* with the cost of living be granted, the operatives have no real ground for complaint, inasmuch as their pay has been increased more than ten per cent., and for some grades of skilled labor more than fifteen per cent., since the beginning of 1899. The wage scale was raised twice in that year—once in April and once in December—and there has since been a further unannounced advance in certain lines, due to the introduction of new machinery and the manufacture of finer kinds of goods for which the skilled piece-worker gets better pay.

That the operatives of Lowell are doing fairly well on the wages they now earn is indicated by the fact that the deposits in the savings banks of the city amount, in the aggregate, to \$24,000,000. All of this money may not belong to the laboring class; but inasmuch as Lowell is pre-eminently a manufacturing city, and has a population engaged almost wholly in factory work, it is a fair presumption that a large part of the \$24,000,000 stands to the credit of the factory operatives.

Upon an impartial review of this phase of the controversy, it seems fair to conclude that, in spite of the increased cost of the necessities of life, most of the employees of the Lowell cotton-mills have been able to save money out of the wages

they have received. This, however, does not prove that they have been getting a fair share of the profits of the business, nor does it prejudice their right to demand more if they think more can be had. The justice of their claim, and the expediency of asserting it at the present time, depend upon the weight and force of their other assertions: viz., (1) that business conditions warrant an increase in the wage scale, and (2) that the Fall River and New Bedford mills have already made such an increase. These two statements may fairly be considered together, inasmuch as the second seems to be offered as a proof, or in support, of the first.

The question whether the mill agents of Lowell can and should raise the wages of their employees depends upon a number of conditions or considerations, which may be expressed in interrogatory form as follows:

1. Is the cotton-manufacturing industry overcapitalized—that is, are the companies trying to earn dividends on watered stock?

2. Have the dividends recently paid been excessive, or out of proportion to the earnings of labor?

3. Has the margin of profit recently increased, as the result of cheaper processes of manufacture, lower price of raw material, or higher price of finished product?

4. Does the fact that the Fall River and New Bedford mills can afford to increase wages prove that the Lowell mills can do the same?

5. Have the Lowell mill agents shown a disposition in the past to raise wages when, in profitable seasons, they were able to do so?

To erect at the present time a mill equipped for the manufacture of cotton goods from such yarns as those used in Lowell would cost, it is said, about \$16 per spindle. The mills whose operatives are now on strike run 763,000 spindles, and their capital stock amounts, in the aggregate, to \$9,950,000. The plant is capitalized, therefore, at the rate of \$13.17 per spindle, or \$2.87 less per spindle than new mills of the same capacity would now cost. The companies, therefore, are not trying to earn dividends on watered stock, but are striving only to get a fair rate of

interest out of capital actually invested in machinery and mills.

The average annual dividends of the six mill companies, in the decade from 1893 to 1903 inclusive, were as follows: Appleton mill, 2.6 per cent; Boott, 3; Hamilton, 3.7; Massachusetts, 5.2; Merrimack, 5.2; Tremont and Suffolk, 6.7. These dividends certainly cannot be regarded as excessive. According to the report recently made by the Massachusetts State Board of Conciliation and Arbitration, each stockholder of the Lowell mill companies held last year, on an average, \$3,369 worth of stock, and received on that stock a 4.6 per cent. dividend, amounting to \$156. As compared with 1900, this was a decrease of 8.6 per cent. in the profit derived from the investment. In the same three years the wages of the average operative increased \$10.30, or at the rate of 2.9 per cent. upon earnings. These figures have been taken by expert accountants from the books of the companies, and if we accept them as trustworthy, we must answer the second of the above questions in the negative. The dividends recently paid to capital have not been excessive, nor out of proportion to the earnings of labor.

The third question may also be answered in the negative upon the authority of the same report. The State Board says that, "combining the value of stock used with wages paid—these being the largest items in the cost of production—we find that in 1902, as compared with 1900, it cost 8.6 per cent. more to produce goods, while the goods, in the same period, exhibited a decrease of 1.5 per cent. in selling value." If all the companies had set aside 4 per cent. per annum to make good depreciation of plant, they would have had a surplus of earnings over expenses in only one of the three years, viz., 1900. The mill agents, therefore, would seem to be fully justified in saying that business conditions, at the present time, do not warrant an increase of 10 per cent. in the wage scale, and that they cannot make such increase without sacrificing the interests of their stockholders and running their mills at a loss.

The principal argument used by the members of the Textile Council in their conferences with the mill agents was that if cotton manufacturers in Fall River could

afford to raise wages, employers in Lowell can do the same. As Mr. Hibbert said, "When persons who work sixty hours a week, and who draw for that work a certain compensation, know that some one else, who is not working any harder than they are—probably not so hard—and doesn't work any longer nor in any different circumstances, can show twenty-five per cent. more wages, they are apt to get restless, and they *are* restless." The mill agents admit that the wage scale is higher in Fall River than in Lowell, but call attention to the fact that the two cities are very differently situated as regards competition. The mills of Fall River make, for the most part, prints; and inasmuch as they virtually control the print market, they can raise wages, add a quarter of a cent per yard to the price of their product, and get the money back from the consumer. The Lowell mills, making a different sort of fabric, and having no control of their market, cannot do this. If they attempt to put up prices to cover an increase in the cost of labor, they are promptly underbid by their competitors and lose their sales. Lowell manufacturers have to meet not only Southern competition on coarser goods, but that of the best-equipped modern mills, like those of New Bedford, in finer fabrics, and must practice rigid economy in order to get along at all. They declare, however, that they have raised the wages of their employees in times of prosperity, when it was possible to do so, and as evidence of this point to the two advances voluntarily made in the wage scale in 1899. "Every mill manager," they said to the Textile Council, "likes to pay as high wages as he can. He knows the advantage of having a well-paid and contented body of workers, and raising a wage scale is the pleasantest task he ever has."

In asserting that they have raised wages when possible, the agents have the support of the State Board of Conciliation and Arbitration, which finds that the advances in the wage scale since 1898 have ranged from 14 to 23.3 per cent., while the cost of living, as shown by the statistics of the Massachusetts Labor Bureau, has increased, in the same time, only 13.8 to 15.3 per cent.

A review of the history of the Massachu-

setts cotton-mills for the past twenty years seems to show that the operatives have been getting, year after year, a larger and larger share of the fruits of their industry. When a mill buys \$56,000 worth of cotton and turns it into \$100,000 worth of woven cloth, the value added to the raw material by the process of manufacture may be called the industry product. As the operatives have helped to give the raw material this enhanced value, they are entitled to a fair share of the money that the industry product represents; but they are not entitled to the whole of it. A part belongs to the men who establish the plant, manage the business, pay the running expenses, and sell the cloth. The industry product, therefore, must be divided into two shares, one of which belongs equitably to the operatives and the other to the managers and owners. In 1880 the money represented by the industry product—that is, the enhanced value given to the raw cotton by manufacture—was divided as follows:

Operatives' share..... 44 per cent.  
Managers' and owners' share.... 56 per cent.

Twenty years later, in 1900, the ratio of the labor share to the capital share was almost exactly reversed, the operatives receiving 57.2 per cent., while the managers and owners had only 42.8 per cent. The figures for the Lowell mills that year corresponded very closely with the figures for the State as a whole; but at times in the course of the preceding decade the industry product of Lowell was even more unequally divided, the larger share going

in every case to labor. In 1896, for example, the operatives took 79.07 per cent., while their employers had only 20.93 per cent.; and yet the latter, out of their diminished share, had to pay all the incidental expenses of the business, including office rent, bookkeeping, advertising, taxes, insurance, and expenses of sale. If the operatives were partners, instead of employees, of the stockholders, they could hardly expect the latter to establish and maintain the plant, take all the risks, pay all incidental expenses, and then give them—the operatives—nearly four-fifths of the industry product; and yet that is what the agents of the stockholders did in 1896.

The wages of labor in the Lowell mills may be low—and they certainly are low as compared with the earnings of carpenters, bricklayers, plasterers, and plumbers in the building trades; but, in the judgment of the Massachusetts Board of Conciliation and Arbitration, they cannot be raised, under existing conditions of manufacture and sale. It is very unfortunate, therefore, that a comparatively small minority of union operatives should have forced a strike which is almost sure to fail, and which had no real justification in the facts and conditions of the case. The strikers have already lost, in six weeks of idleness, a sum of money that is equivalent to a reduction of 11.5 per cent. in their wages for a period of one full year; and the end is not yet. Such a result is deeply to be regretted by all who have the best interests of labor at heart.

## Singers of To-Day

By William Ordway Partridge

Oh! Singer of to-day, this glorious hour  
Is all for you and me—what shall it give  
To us, and ask of fate—what splendid power  
In brain and hand, what glorious right to live  
Among our fellows, and to war with sin?  
What quickening of the pulse as we aspire  
To claim our right, and risk earth's joys to win,  
To conquer self, and force it through the fire!  
Give us this force, dear God, and evermore  
Give us a deepening love of all our fellow-men;  
Give us new insight—courage to explore  
With all the tenderness of human ken  
The lowliest heart that beats in human kind,  
Its glory and its soul to seek and find!

# Do Unions Restrict Earnings?

## What Employers Think

In our issue of March 28 last we published the replies of seven prominent trades-union officials to the question whether their organizations fixed either a maximum wage or a maximum output for their members. All replied that every member of their unions was free to get as high wages as he could individually bargain for with his employer, and all but one replied that their unions put no limit upon the amount of work their members could perform during the prescribed working day. The limits upon output, it was claimed, were imposed only where necessary to prevent botched work or excessive strain upon the mass of the workers. In commenting upon the replies, we invited further testimony from readers who knew at first hand of union rules restricting individual effort and reward. We print below the noteworthy answers that have been received.—THE EDITORS.

### I.—IRON-MOLDERS' LIMIT OUTPUT

*To the Editors of The Outlook:*

The published by-laws of Iron-Molders' Union No. 8, of Albany, N. Y., provide as follows:

Article X. Section 1. No member of this Association working *by the piece* shall be allowed to mold more than four dollars' worth in any one day or cast, and no member working by the day shall be allowed to work for less than three dollars. . . . Section 3. Any member convicted of violating any of the provisions of this Article shall be fined two dollars for the first offense, and *not less* than five dollars for each violation thereafter.

Since this rule was put in operation, advances have been made on piece prices, so that they are now twenty per cent. higher, and with this addition the limit of the earnings of a molder is \$4.80.

But few molders are able to earn in excess of this amount per day, but there are expert, quick-working men who are able to earn in excess of this amount, but are prevented from doing so by this rule.

Another rule of this association is that the ratio of apprentices to journeymen shall be one to eight. It has been demonstrated that this ratio does not supply the average reduction of the number of journeymen employed, by reason of deaths and journeymen going out of the trade, nor does it provide for the growth of business and population in this country. Consequently, there is a continued scarcity of good molders, and the young men who desire to learn the trade are prevented from doing so, and a monopoly created.

Albany, N. Y.

MANUFACTURER.

### II.—PRINTERS FETTER MACHINE WORK

*To the Editors of The Outlook:*

I can cite an example where one of the great labor organizations has put limits on the earning capacity of its members. The machine scale for International Typographical Union 190 for the year 1896 contains this clause:

Sec. 7. No operator of a machine shall be permitted to work more than five days or nights in any one week. Provided, however, that this section shall not be in force during the six weeks of their apprenticeship.

While it is fair to add that this restriction is no longer enforced, its practical effect was to bring about indirectly what a maximum wage would have accomplished more directly. To say that a member shall work only five days in the week clearly limits his wages, for he cannot possibly, at so much per day, earn as much in five days as he could in six. The object of the rule, imposed as it was during the days of depression, was to make the work go round further, or, in other words, to give more members of the union a share in the limited employment to be had. But is that not the real object of most of the rules of the trades-unions? Do they not aim to control the labor market for their own members (1) by curtailing the infusion of new members through apprenticeship regulations, (2) by maintaining wages, and (3) by increasing the amount of work?

It may be said truthfully that the unions accept mechanical improvements and improved processes, but hardly that they welcome them; they seek always to secure additional concessions for them-

selves as the condition to their consent to the introduction of the new machinery. This, from their point of view, may be perfectly legitimate, as affording the only way for them to share in the material gains of inventive progress, yet where no such gain to them is possible they often throw their weight for the retention of antiquated methods that require more labor but distribute more wages. The International Typographical Union, for example, still prohibits everywhere the exchange of matter or matrices between printing-offices. It thus forces unnecessary duplication of composition that is unquestionably a social waste. Although such a rule increases the amount of employment for union card-holders, does it not restrict maximum output? Again, in many cities it fixes a different minimum wage for men performing the same work for different employers; *i. e.*, more for work on a newspaper than for work in a job office, although the job printer is subject to longer hours. In this case it is not gauging the minimum wage to the product of the average workman, but simply exacting what the traffic will bear, since a mere change of employers cannot make a difference in the output of the same workman.

The trades-unionists have good grounds for arguing that in the long run their organizations produce more efficient workmen and thus stimulate greater output with corresponding reduction in real cost. That the achievement, however, demands the sacrifice of a certain measure of individuality and independence is not to be denied.

R. U. S.

#### UNIONS ALWAYS LEVEL WAGES

*To the Editors of The Outlook :*

What happens when a union is formed in a city? Before the union appears there is a gradation of wages, dependent, for the most part, upon ability. Roughly speaking, there are perhaps three grades of workmen: (a) the most competent, (b) those of about average ability, and (c) the incompetent or less skillful. Each man is paid approximately according to his efficiency. Marked differences in skill are recognized by the workmen themselves, and they see the justice of the difference in wages. When the union is formed, a minimum wage is established which raises the pay of the unskilled man

to that of the man of average ability, but the men in the two higher classes get no raise. As soon as a favorable opportunity is discovered, the minimum wage is forced up again, perhaps to the wage of the most competent, but the skillful man gets no benefit from the raise. Even if wages go higher, the skilled man is classed with the unskilled. A carpenter is a carpenter and must receive a carpenter's pay. The action of the union is, therefore, a leveling process that discourages the acquirement of skill. To be sure, the employer may raise the pay of the skilled man, but when the employer is forced beyond what seems to him to be reasonable limits, he is not likely to raise salaries if he can avoid it. Several of the most skillful men I have ever known have refused to join a labor organization just because of this failure on the part of the union to recognize the superior value of a skilled man. I have known other skilled men who have joined only when forced to do so or seek for work in another city. Moreover, I have known unskilled men who have joined a union and had their pay increased to that of efficient workmen. Of course they are the first to lose their positions, but the union helps them to get others.

An organization that does not deal more discriminately with individuals should reform its methods. A few unions have done something in this direction; more should be encouraged to do so. An organization that reduces humanity to a dead level, or ignores the premium that civilization places upon individual skill, is not in accord with the spirit of our American democratic institutions. If this one weakness in the organization of trades-unions were remedied, they would become more stable and powerful, and the employers of skilled labor would think much better of them.

Peoria, Illinois.

Yours truly,

C. A. B.

#### THE MINIMUM WAGE BECOMES A MAXIMUM

*To the Editors of The Outlook :*

We may grant that the unions do not fix a "maximum wage," but is not the so-called minimum wage often, or, we may say, usually, placed so high as to be virtually a maximum? The President of the International Typographical Union

states that the "*minimum* wage is believed to be in accordance with the earning powers of the *average* printer."<sup>1</sup> Suppose that the rate is no higher than that which is due the average man, if the employer thus has to pay the inferior men for work they do not perform, he cannot afford to pay the best men according to their ability. Consequently, the result, except in very busy times, when a premium is paid to obtain men, is substantially a uniform rate—a condition which tends to bring all to the same level, without regard to relative skill, energy, or efficiency. The best workmen are obliged to help support the inferior.

This, you may say, is theory. Is it true in practice? I have in my files letters from employers representing seventy trades, and scattered through the cities of New York, Philadelphia, Chicago, St. Louis, Pittsburg, Boston, and many smaller places. In the building trades, which include carpenters, bricklayers, stone-masons, plasterers, etc., I find from actual figures taken from pay-rolls that, on an average, slightly over one per cent. of the workmen employed, exclusive of foremen, receive higher than the union rates of wages. Averaging the approximate figures given me upon work before the unions came into power, it appears that about sixteen per cent. of the workmen then received a higher pay than the "going" rate of wages. Among other classes of workers it is more difficult to state definite

averages. In printing-houses, from the comparatively few figures, mostly from New York City, which I have been able to obtain, averages from some six trades show that about six per cent. of the workmen receive more than union rates. The only printer who seems to remember back to non-union days states that then about twenty-five per cent. received more than the standard wages.

There seems to be an almost universal feeling among employers that union rates are maximum in effect. It is noticeable—and this, too, is a matter of record, not theory—that, as the wage is raised by the union, fewer and fewer employees receive more than the minimum.

I am presenting this conclusion, drawn from actual facts, because I feel that while the unions may not directly fix a maximum rate of compensation, they do fix one indirectly, thus producing the state of affairs which you so ably deprecate in your editorial of March 28.

The more advanced unions are gradually overcoming their antipathy to the introduction of machinery. They have yet to learn that a large per capita production by hand labor does not, in the end, throw neighboring workmen out of employment, but decreases the actual cost of the articles produced so as to react with beneficial effect upon the workers themselves.

SANFORD E. THOMPSON.

## Soldier Schools in the Philippines

By David Gibbs

**I**T does not appear to be generally known that our army in the Philippines, soon after a captured town or district had become sufficiently quiet, established public schools for the Filipino children, purchased and distributed school supplies, gave financial aid to poor towns, and detailed soldiers and others as teachers, who instructed the native teachers and the children in English. These facts have been set forth in the official reports of the Military Governor and the General Superintendent of Public Instruction of the islands, but have not received the

public attention they deserve, partly, no doubt, because the public mind has constantly been directed to exceptional cases of cruelty. Those actions showing a more general humanitarian spirit, such as every true American would wish to see in the army of his Nation, appear to have been overlooked. It should be remembered that many of our soldiers were wounded, and some killed, while doing acts of mercy for Filipinos; that the kindness of our soldiers during the war was in marked contrast to the previous experiences of the Filipinos in warfare; that this feeling has recently been more generally shown

<sup>1</sup> Italics are ours.

by the voluntary and often life-sacrificing work of army officers and men in trying to save the Filipino from the dread cholera, and that throughout the islands schools were established and taught or supervised by soldiers. President Roosevelt, in his Memphis speech, said: "Cruelties were committed here and there. . . . But these misdeeds were exceptional, and their occurrence in no wise alters the fact that the American army in the Philippines showed, as a whole, not only splendid soldierly qualities, but a high order of humanity in dealing with their foes." It is the purpose of this article to emphasize the establishment of the soldier schools as one of the ways in which this spirit of humanity of which the President speaks was expressed. The establishment of these schools showed the real spirit which dominated our army in dealing with the peaceful Filipino.

The idea of the soldier as a school-master is new in the history of warfare and of education. The honor of setting this precedent rightly belongs to the army of a people who give the highest place among its institutions to the public schools. How different is this picture of the soldier in the tropical school-room, toiling patiently with hundreds of little brown boys and girls, and instructing the native teachers that they may learn his own tongue, greeted along the street with smiles and "Hello, Maestro!" from happy little boys and girls—how different is this picture from that of the soldier in the Philippines which has so long been held before the public eye—the cruel, bloodthirsty, murdering man of war! Yet there were soldier teachers in nearly every army post in the islands, for public schools were established in the larger garrisoned towns by the voluntary efforts of sub-commanding officers, and taught, voluntarily and without extra pay, by soldiers detailed as teachers, in nearly every case very soon after these towns had been captured from the insurrecto army. The report of the Military Governor shows that there were more than one thousand such schools, attended by more than one hundred thousand children. This report also shows that nearly every important commanding officer was interested in this humanistic movement. This action, therefore, was not exceptional, and indicates strongly the

moral tone of the army as a whole, and shows in many hundred army posts and throughout the islands a kindly spirit toward the Filipino.

The story of the establishment of these schools is briefly told in the following letter from General Otis: "The primary schools established in the Philippines while the army exercised supervision of the affairs of the islands had their start in Manila shortly after the commencement of our occupation of the city. The natives expressed a desire to have schools for their children, and I directed a provost-marshal, General Hughes, to consider the subject, and to report what, in his opinion, might be accomplished with facilities on hand and attainable. As a result of his investigation and our subsequent conference, we detailed a soldier, Mr. G. P. Anderson, who had experience in the common schools in the United States, to take immediate charge of the elementary education in Manila. We reopened all the old school buildings and some others. We employed as teachers those formerly holding such positions, of whom the greater number were females, also Americans and others supposed to be competent to teach, and detailed soldiers when available to assist them. We exhausted all text-books in Manila received from the Spanish Government and purchased many others. The schools were very successful. Subsequently similar schools were organized in cities and towns very soon after Aguinaldo's soldiers had been driven out. The work was carried out through correspondence and report, and not through any prescribed general regulations. The orders issued from Manila headquarters were merely those detailing a superintendent, directing the detailing of soldiers as teachers, or for the purchase of books."

The official records of these schools are very incomplete, so that the number of soldiers serving as teachers is not known, but the number of schools organized and the attendance was large, as already indicated. The Military Governor states that \$104,251.87 was expended from the public civil funds for the purchase of school books and supplies, and that a greater part of these, together with those received from the Spanish Government, was distributed throughout the islands. Although some of these supplies were

inferior in quality, they were much better than those formerly in use under Spanish rule, and were of valuable assistance in securing later, under civil rule, more efficiently organized work.

In northern Luzon there were 479 schools, in southern Luzon 89 schools; in Panay 210 schools; and in Negros 59, Cebu 23, and Mindanao 45 schools. Dr. Atkinson, in his last report as General Superintendent of Public Instruction to the Commissioner of Education of the United States, commends the success of the schools of northern Luzon, of Cebu, and of Mindanao. Major J. A. Watrous, a paymaster of southern Luzon, Panay, and other Visayan islands, states that the soldier schools of this section of the archipelago were numerous, well attended, and important. In the section of central Luzon, including the old fighting provinces of Pampanga, Bulacan, and Bataan, of which the writer personally had charge, these schools had long been in operation, and were very important in securing the good will of the people and in forming a basis for the present system of instruction. In Pampanga General Grant reported fourteen schools, but did not include all the schools, nor those of Bulacan and Bataan, which were also under his charge. In Bataan there were schools in every important town, and the work in charge of Lieutenant Love was very effective. The attendance was larger than at the present time, although it was not compulsory. This was true of many schools in other provinces. These schools were very poorly supplied, and the work done in them was not often of excellent quality. Yet, however poorly equipped and taught, the establishment of these one thousand schools, with an attendance of about one hundred thousand children for a year or more before the present Department of Public Instruction was established, must have been of very great assistance in securing the present very successful status of this Department, with its 1,838 schools and 200,000 children.

Although these schools were not always well supervised, for the army officers were

not skilled schoolmen, yet here and there an officer gave them great attention and secured marked progress, and also occasionally some soldier developed into an excellent schoolmaster. The native teachers learned a great deal of English, so that when the American teachers came they were often able to assist in the elementary instruction in English. In one of the towns of my district, not reported by the commanding officer, besides the public soldier schools a private class was taught by an officer. That town furnished to the educational department last year eight efficient young teachers who could read, speak, and write English with considerable fluency and accuracy, all of whom had learned their English from the soldiers. The American teachers who went to these towns took up the work where the soldiers left it, and have continued it to its present very successful standing. The work of the soldiers, however, broke the ground. Their schools served to interest the people in the study of English, and to turn their minds from warfare to education. The commanding officers everywhere emphasized the necessity of having instruction in English, recommended the securing of American teachers from the States, indicated from their experience where these teachers were most needed, and gave much other information and advice which was of the greatest possible assistance in establishing a permanent system of public instruction under civil rule. Further, since the arrival of the American teachers, the army has in every way given its assistance, and shown kindness and courtesy to those who have come to carry out this great work begun by the humble efforts of the unskilled soldier. The fact, however, that the soldier made this effort, that he could thus be generous, sympathetic, and thoughtful for the future welfare of the race of his treacherous foe, that he was willing to teach and patiently toil with the children of his enemy, shows a spirit of which any nation might well be proud, and should give the name "soldier schoolmaster" a high place in the history of warfare.

# Mr. Beecher on Reconstruction

The following letter from Henry Ward Beecher to the Louisville "Courier-Journal" is printed by us from the original manuscript. We do not know that the letter was ever published in the "Courier-Journal," though we presume it was, for the manuscript bears signs of having passed through a printer's hands, and is marked "save copy." It has come into our hands through the kindness of Major J. B. Pond, Mr. Beecher's lecture agent, to whom it belongs; and it is of historical interest as showing Mr. Beecher's views on the Reconstruction period after the Reconstruction period had passed and its fruits were known. We comment on this letter in our editorial pages.—THE EDITORS.

Louisville, Kentucky, March 30, 1885.

*Courier-Journal:*

The "Interview" published this morning in your paper, while in the main correct, has mistaken my views on one or two points which I beg permission to correct. The statement that I said that South Carolina might almost have been justified in rising against the voting colored population and massacring them is far from my feelings or opinions. The question before me and the interviewer was on the *counting* of votes. I said that in a case like Carolina I could well understand why the white people refused to count the votes fairly. I did not think that they were to be justified in a false count, or a suppression of the vote, or an intimidation of the voter. But I said that, considering the evils suffered under legislation of colored men, just emancipated, ignorant of government, late the slaves of white men, but now put over their masters by their numbers, taxing without wisdom, issuing bonds without skill or prudence, I did not wonder that the white population resorted to unfair means to suppress their foolish legislation. Even that was wrong in morals, and the savage idea that they were justified in massacre is a revolting sentiment.

Allow me to state explicitly my views of the past and present relations of the colored people.

I. The state of slavery in the South, before the war, with all its softening, was evil and only evil, both in its effects upon the blacks and the whites alike, and was, on the whole, both in morals and in political economy, exceedingly bad. A terrible price was paid for the destruction of the slave system; but it was worth to posterity a hundred times what it cost.

II. The putting the vote into the hands of an ignorant race was an astounding

event in political history. It came not from a belief of their fitness for suffrage, but from a conviction that it was *necessary for their defense*.<sup>1</sup> The tentative legislation of some of the Southwestern States, which under the form of vagrancy laws seemed intended to subject the colored people to essential slavery again, alarmed the North and led to defensory legislation.

But, audacious as was that faith in liberty and suffrage which led the West and the North to give full citizenship and political power to the emancipated, the result has shown that the colored people have not misused this power. I must say that colored voting since the war has been fully as wise as white voting was before the war. The colored people of the South, after becoming citizens, did not seek revenge nor mischief. They intended well. It was not their fault that many of the results were evil. It was bad enough for white citizens to see their late slaves led by foreign influence. It might be a political necessity—it was not any the less a thing grievous to be borne by their white fellow-citizens.

But where the emancipated were largely in excess of the white voters, it amounted in fact to the subjection of the white people to the legislation of the colored. And in those States where legislatures were in the power of the late slaves, and where Northern men, not always, the wisest, led them on to foolish and wasteful legislation, increasing taxation and squandering the results of it, plunging the State deeply into debt by an unmerciful issue of bonds, it is not to be wondered that something like revolutionary methods were adopted, and that self-defense led men to violent resistance.

<sup>1</sup> The italics are Mr. Beecher's. The manuscript also contains the following paragraph, crossed out by pen, and therefore, we presume, crossed out by himself: "No man would have dreamed of putting the vote into the hands of emancipated Southern slaves except for their defense."

III. When, at a little later period, history, no longer under the influence of violent and heated passions, shall sit in impartial judgment upon this whole movement of the past quarter of a century, two results will stand out prominently.

(1) The admirable conduct of the slave population during the war, industrious, orderly, humane, and peaceful; their great bravery when the North made them a part of the army; their general good conduct after peace was established, and their thirst for education as the indispensable condition of good citizenship. Their future may not be what theorists predict, but it will be auspicious.

(2) The remarkable conduct of the white population of the South. Hurling from political power, defeated in war, wasted in all resources, wounded in every household, in the loss of husband, son, or father; all industries subverted and to be refounded on a new basis—and, worse than all, to see their late slaves changing place with their masters and holding the reins of legislation under foreign leadership—is it wonderful that at such a revolution, convulsion rather, Southern citizens often mistook the way of duty, that some rude remedies of violence were practiced, that some counter methods of violence were attempted?

These things are not to be justified. But is it not now a matter of transcendent wonder that the evils were so few, and that the patience and self-control of Southern people so soon readjusted the whole industrial and civil economy? I glory in a history which, with all its infirmities and blemishes, yet presents to the world the most notable instance of the force of self-government which has ever occurred in history!

IV. Passing from city to city, and the prey of reporters, who report from memory, I am grateful to them that so few misconceptions of my language creep into their statements. On one or two points allow me to be explicit.

(1) I do not think it wise that the whites and blacks should mix blood. Yet it is their right and liberty to do so, if they choose. But it is to be discouraged, on grounds of humanity. But if it must

(2) The slaves are free. They must come under a universal law as to their social position. No legislation can put ignorance and knowledge on a level; indolence and industry, virtue and vice, rudeness and refinement. The household is to be free to choose or refuse its company. No obstruction should be put in the path of education. All opportunities for development should be sacredly kept open to every class; every encouragement given to industry, wealth, refinement, and good citizenship. After that society must be free, so far as legislation is concerned, to choose its own partnerships.

(3) The Atlanta "Constitution" makes me point out Mississippi as the great central State; I said Missouri, not Mississippi.

V. I was born in New England, but from my childhood I breathed the air of the whole continent. I was from my cradle a friend of the oppressed, of the poor and of the struggling. An anti-slavery man by the force of my lineage and of my inherited nature, I spared no energy in fighting against slavery and against that whole malarious political influence which exhaled from this Dismal Swamp.

When, by the supreme folly of Southern leaders, the war broke out, I gave my children to the army and myself to every influence at home and abroad which should give victory to the Federal army.

When peace came, with vigor I plead for mild settlements and against all bloody sacrifices. There had been blood enough shed. There must be no victims for the gallows, the sword, or the prison.

And now that a new era and a readjustment of all National questions has been reached, I am for the welfare of the undivided Nation, and I belong, in detail, to that party which shall best serve the interests of the whole land; I am not a slave of either. The party is my servant, I am not its slave. The Administration, with that strong and just man, Cleveland, at its head, has my hearty support and my full confidence, not because it is Democratic but because it is National, patriotic, and adapted to the exigencies of the hour. Should it fail in its National duty, I shall still seek the honor and welfare of this great Nation, but by another road.

HENRY WARD BEECHER.

# Modern Bible Study—Its Aim, Methods, and Results

By Teunis S. Hamlin, D.D.

**I**S there such a thing as "modern Bible study"? or is this only a pretentious name for a nonentity? The word "modern" suggests to many minds both pretense and unreality. They distrust whatever calls itself modern, and especially if it pertains to religion. But this is as irrational as to trust what is ancient simply because it is ancient. No doubt the presumption is always in favor of the existing; the new is rightly challenged to justify itself. But all progress is made by the new justifying itself, if it is able to do so, and thenceforward taking its place as established, until it in turn is replaced by another new, and it by another; and thus man moves on in knowledge, attainment, power—in whatever makes up that great total that we call civilization.

No one doubts that there is such a thing as modern life—industrial life, for example, whose salient feature is machinery as distinguished from the bare hand. Machines sow and reap the grain, thresh it, grind it, transport it to the consumers. We may differ about the benefit of this. Some may think it would be better to return to broadcast sowing, reaping with the sickle, threshing with the flail, hauling with horses. Every labor-saving machine has been met with opposition, with gloomy predictions of loss of work, lowering of wages, ultimate starvation. But all such prophecies have been discredited by the event. Modern industrial inventions have proved beneficial alike to producer and consumer, to capitalist and laborer. They have made food, clothing, all the necessities of life, better, cheaper, more abundant.

No one doubts the modernness of the typewriter, the telephone, wireless telegraphy, the application of power in the form of steam, and more recently of electricity; and scores, yes, hundreds, of other devices that are daily modifying all the methods of industrial and social life. There is unquestionably some discomfort and some loss in adjusting one's self to

these novelties. Here and there a man may be found who refuses to meet that discomfort and that loss; who goes on writing his business letters with the pen, and sending his messages by errand-boys who must walk instead of riding bicycles. But he is soon left behind in the strenuous and incessant competition of the day; and while he avoids the temporary loss of readjustment, he meets ultimate loss that is inevitable and disastrous.

But back of all these modern inventions lies modern knowledge, whose characteristic is that it is scientific rather than philosophical. And it is inductive. It has been reached, not by speculating about what nature must be or should be, but by interrogating nature itself as to what it is. Simply close observation of phenomena has led to all important modern discoveries, from gravitation, with its corollary of the Copernican astronomy, to the circulation of the blood with its corollaries of the germinal origin of diseases, antitoxins, anæsthetics, and aseptic surgery. The heavens are what they have always been, but the superstitions of astrology have given way to the calm and accurate facts of astronomy. The earth is substantially unchanged, but geology has established its immense antiquity, and has at least begun to write an authentic history of the human race. Creation has been removed from the region of unaccountable and fantastic miracle, and the Creator shown to have worked, and to be still working, in accordance with definite, ascertainable laws. These laws have been so studied, learned, and classified as to establish the great truth that evolution is the divine method throughout all nature; and that what to ignorance seemed freak and accident and cataclysm is only the outworking of great forces uniformly and inviolably controlled. Inductive science has thus quieted human fears in the presence of natural phenomena, however portentous; has substituted definite knowledge of causes and effects for vague surmises and conjectures; has

given man priceless information about his own origin, powers, and possibilities; and especially has brought back the Creator into his creation, whence ignorance, fear, and superstition had banished him, and has enthroned him, not over a chaos of endless and hopeless conflicts, but over a cosmos of the most beautiful order under infallible and beneficent laws.

Now, modern Bible study is simply the application of the modern scientific, *i. e.*, the inductive, method to this book, or group of books, for such it really is. But before we can intelligently think and speak of the method, we must clearly understand the aim, of modern Bible study. This is identical with the aim of inductive science, *viz.*, to ascertain the truth. But has not that always been the aim of science? Theoretically, Yes; practically, No. It is not always the sole aim even to-day. Mingled with it is the desire to establish a theory; hence an intense longing that the truth discovered shall do this; an equally intense dread lest it shall not; and a resulting temptation of vast power to compel the discovered truth to fit into the preconceived theory. The genuinely scientific temper is by no means easily acquired, for it combines fine poise of mind, humility of intellect, indomitable courage, and exhaustless self-abnegation. The inductive student of nature must be honestly willing to learn and to accept anything that nature may reveal. Such willingness is more fundamental and essential to his task than even expert skill in observation. Lack of such willingness is the chief factor in the weakness and temporariness of so much scientific work. It always means haste in labor and prematurity in conclusions. A few facts are observed and verified. They establish a working hypothesis, but nothing more. The over-zealous student, however, announces a discovery—a conclusion—a law. From that hour he is committed to that law. He goes on observing; but his poise of mind is impaired or even destroyed. He is timid of finding exceptions to his law, eager to find confirmations of it. Only by the firmest resolution can he patiently and impartially find the facts, whether they establish his "law" or overthrow it. All the discoveries in nature that have stood the test of time and of full disclosure of all pertinent

facts have been made by men of the genuinely scientific temper, whose sole aim has been, neither to accredit nor discredit a hypothesis, but to learn the truth.

Precisely such is the aim of modern Bible study—to learn the truth. But has not such always been the aim? Have men ever studied the Bible for any other purpose than to learn the truth? Undoubtedly they have. Some for the purpose of finding contradictions and absurdities that would discredit it and release them from all obligation to heed its teachings. Some to confirm themselves in the belief that their personal opinions, or the doctrine and polity of their Church, have exclusive Scriptural authority. Others, and very many, for controversy, that they may demolish views or systems that they abhor. All such lack the scientific spirit; are warped by partisanship; and hence disqualified to study the Bible with the sole purpose of learning its truth, and with an unalterable determination to accept that truth whatever it may prove to be. Only one who is, in some good degree, of this brave, strong, self-denying disposition can reach the aim of modern Bible study.

Now, the aim largely determines the method, which, in general, may be defined as comprehensive in distinction from fragmentary. The Bible is a fact, a phenomenon, as is the earth, the firmament. The inductive student of the Bible does not come to it with a ready-made theory of what it must or should be; but he interrogates it as to what it is, as the astronomer does the heavens or the geologist the earth. He recognizes that he must know what this book is, and how it came to be what it is, before he can understand its teachings. Accordingly he studies it as a whole: the Gospels as a biography, or rather a picture, of Jesus, instead of here and there detached incidents of his life; the interpretation of him in Acts and Epistles, instead of here and there a striking sentence from St. Peter, St. John, St. Paul. He tries earnestly to get the historic point of view and the historic spirit, and to view in historic perspective the gradual disclosure of God in the life of the world, and in an especial way in the life of the Hebrew nation. He discerns in this national literature that we call the Old Testament

the priceless record of a racial development through the childhood of primitive and crude conceptions, the youth of increasing mental grasp and moral sobriety, to the manhood of an established government with coherent national life, producing great historians, poets, and the supreme ethical and religious teachers who bear the name prophets. And his method is literary as well as historic. He finds here historic narrative and there biography; here fiction, as in the parables, there poetry, as in the Psalms; here the most prosaic genealogical tables and the minutest sanitary rules, there the most interesting myths and legends. But throughout this wide diversity he finds an unfailing unity that discriminates this Hebrew literature from all other contemporaneous national literatures, which, superficially, it so closely resembles. That unity lies in the single purpose to disclose to the nation, and through it to mankind, the one only living and true God, the Jehovah of the Hebrews. This Jehovah is revealed first as the tribal God of Israel, with limited jurisdiction, like the ethnic deities of surrounding clans. Then as superior to them, as shown principally in his people defeating theirs in battle. Then as supreme over them—"worship him, all ye gods." Then as the universal and only God, while "all the gods of the nations are idols." All this time as Creator, Ruler, King; with now and then a glimpse of Fatherhood. But at length as Jesus, the saviour of men, in whom dwelt "all the fullness of the Godhead bodily;" who taught us to call Jehovah "our Father," and who said, "He that hath seen me hath seen the Father." And as the historic disclosure of Jehovah has moved steadily and majestically on from his first appearing in dim outline before the minds of the earliest patriarchs until he lived familiarly in Galilee and Judea as Jesus of Nazareth, so it has still proceeded through the Christian centuries as men have constantly learned more and more of the character, spirit, and purpose of Jesus, and as his disciples have made vital and effective his example and his teachings among mankind.

Such a book, viewed as a whole, modern inductive study, with open mind and eager heart, finds the Bible to be. Genuinely human in its variety of literature,

its historic movement, the individual impress of the men who wrote it; genuinely divine in its profound unity, its revelation of the supernatural element in human history, and, above all, its disclosure of Jehovah, the sole, sovereign, loving, redeeming God.

What, now, are some of the results of such a method of study pursued with the single aim of learning the truth?

First of all, a deepened reverence for the Bible. Only as it is thus inductively and historically studied, without bias, prejudice, or partisanship, does its genuine divinity appear. Only thus does it enable us to discern God moving amid all the discords and perplexities of human life, bringing order out of confusion, holiness out of sin, life out of death. If we find in the Bible only a collection of more or less interesting incidents about more or less worthy men; a storehouse of beautiful aphorisms and fine moral maxims; an armory of offensive and defensive weapons, to be used against the mass of men who differ from us and on behalf of the few who are our allies—then we shall find it so full of contradictions, discrepancies, what seem to our jaundiced minds absurdities, that it will be increasingly difficult for us to believe that it contains a revelation of God. But when we see Jehovah revealing himself in this book, alike in its prose and its poetry, its statutes and its romance, its sober history and its fascinating, spiritualized legend—everywhere striving to disclose himself to men in such beauty and glory, such mercy, gentleness, and love, as to win their confidence, allure them from sin, bind them to himself in loyalty and holiness—then, whenever we open the book, we shall feel ourselves in the very presence of God, and shall reverently and gratefully say, in devout hearts, "Speak, Jehovah: for thy servant heareth."

Such reverence will impel us to handle the Bible honestly. Not simply without prejudice and partisanship, but for the sole purpose for which it has been given, and in its obvious sense. In using it both for the nurture of our own religious life and for teaching and training others, we will always be careful to regard its historic perspective; not to import into the Hexateuch truth that belongs only in the Gospels or Epistles; not to try to

believe that the Levitical ritual is as valuable and as binding upon us to-day as the Sermon on the Mount. And we will treat reverently not only Biblical truth but Biblical language. Puns and quips and jokes about it we will carefully discountenance; and as well the current use of its phrases in senses that they were never intended to convey. When Habakkuk puts Jehovah's warning of penalty into writing, so that whoever reads it may run and escape, we will not make it mean that the letters are so large and distinct that one may read them while running. We will pause at the so-called "Mizpah benediction," so widely used by our young people at present, and which falls so sweetly upon the ear, "Jehovah, watch between me and thee when we are absent one from another," for we will know that, so far from being a benediction, it is a malediction, uttered with good reason against the crafty Jacob, whom Laban had learned to his cost that he could not trust out of sight. Ministers will not preach upon the rapidity of modern communication from a fragment rudely broken from its solemn and majestic context, "In a moment, in the twinkling of an eye." Sunday-school teachers and parents will not try to enforce even so indispensable a virtue as self-control by the maxim, "Handle not, nor taste, nor touch," when they know that St. Paul sternly reproved exactly this in the Christians at Colossæ. No doubt the temptation is strong thus to make a convenience of the Holy Scriptures. No doubt the argument of a good intention in such perverted use is very plausible. Still, no one can go on in such use who has once gained from the inductive and historical study of the Bible the deep and abiding conviction that in the fullest sense God is in it, and that we must reverence it as the temple and shrine of Jehovah.

Moreover, such intelligent reverence for the Bible, arising from such study, and which can arise from nothing else, will save us from that deadly peril of literalism against which St. Paul warns us—"The letter killeth." His immediate meaning is that the new covenant, while lacking the letter of the old, has its fulfilled, completed spirit; so that to cling to the outer form of one is to miss the real value of both. It is a truth of universal

application. The literalist is always overlooking the heart of things. He is always trying to eat and digest the shell of truth while throwing away its kernel. But the inductive student, whether of nature or of Scripture, moves on through form to substance, knowing that only as he reaches the latter will he reach vital, indestructible truth. Augustine gave us the precious maxim, so often forgotten in the intervening centuries, "Scripture is the sense of Scripture." To realize this will save us from all fantastic methods of Bible study and teaching. Analysis of a lesson into three or four or five alliterated topics may aid memory; on this ground it is usually advocated and defended; but there are very few teachers wise and strong enough not to sacrifice exactness of truth to this captivating jingle; and to remember other than the exact truth is worse than to forget. Any scheme of study or teaching that exalts the letter above the spirit; that warps, however little, ascertained truth, in order to make it fit some favorite mold, is to be totally reprehended. No plea that it is interesting, holds attention, will not be forgotten, can justify it. Nor will any one urge such pleas who realizes that God is disclosed in the Bible, and who approaches and handles the Bible with the solemn, grateful, joyful reverence that the apprehension of this fact cannot fail to produce.

"But," it may be asked, "are the aim, method, and results of Bible study, as thus set forth, for the plain disciple and the average Sunday-school teacher, and not rather for the scholar and the clergyman? If they are scientific, are they not too difficult to be applicable and practical?" By no means. Just because such study is scientific is it plain; and, if not quite easy, certainly attainable by any purposeful and devoted Christian. Do you desire it? Then begin by emptying your mind of prejudice and prepossession, and your heart of passion. Approach the Bible with the sole aim of learning what it is and what it teaches. Courageously and gratefully accept all that it discloses to you. Soon the mists and clouds that have enveloped it will silently drift away. Its discrepancies will either vanish or cease to trouble you in the light of its divine unity. Its spirit will shine unmistakably through its letter. Down the

centuries that it covers you will trace the majestic footsteps of Jehovah, merging in due time in the human footprints, in the soil of Palestine, of Jesus of Nazareth. And everywhere along this great march of God through human history will drop the sweet odors of divine love and the flowers and fruits of human salvation. Having thus seen God, you can in turn reveal him. Having thus learned rever-

ence for the Bible, you can teach reverence for it. Having refreshed your spirit at the exhaustless fountain, you can carry its waters unsoiled and uncontaminated to others. Be brave, persistent, self-denying; be devout and prayerful; and you shall have the most blessed vision possible to mortals—the vision of God, your Father, of Jesus, your Saviour; while you study, love, reverence, and adore.

## Dubious Wealth and Academic Ideals

By Arthur Reed Kimball

**I**N discussing, some two years ago, the dismissal of Professor Ross from the Leland Stanford University, the London "Spectator" said: "There seems to be little room for doubt that some donations have involved loss of freedom, and that a certain commercial atmosphere now envelops some American universities quite out of harmony with the essential academic idea. . . . We have regretted the pinched financial condition of Oxford and Cambridge, but we do not hesitate to say that we would rather see those institutions poor than shackled, free than rich."

This English comment fairly states a popular impression which has given rise to much recent discussion. In such discussion it has been largely overlooked that the restraint on academic freedom of teaching is not a new issue, but, as it is brought conspicuously before us to-day, is simply a new phase of an old issue. It is invested with an air of freshness because it is associated through immense benefactions with the startling possibilities of modern fortune-making, often by dubious methods. When one gets at the facts, however, one finds that what they disclose is not so frequently a loss of freedom as the presence of "a commercial atmosphere;" that the latter rather than the former should be emphasized. Indeed, it is open to question whether freedom of academic teaching is not immeasurably greater to-day than it has ever been, when we consider the weakening of the restraints once so rigidly imposed by the requirements of orthodoxy in theology and politics, especially theology. It is less than twenty years ago that a Republican stump orator of standing declared

in a speech in New Haven that it would be a good thing for the country to "have Yale College burned up" because of its free-trade teachings, and was but mildly rebuked by the stronger party organs. Yet Professor Sumner suffered far less immediate personal criticism for his extreme views on the tariff, which supposedly alienated wealthy protection friends of Yale, than for his use of Herbert Spencer as a class-room text-book, to which there was strenuous objection on the ground that it committed Yale to recognition of an arch-agnostic. Another still earlier incident is worth recalling because it brings out the distinction to which President Hadley called attention in his Lowell Institute lectures, between the right to independent thinking and the right to radical utterance. When the late Roswell D. Hitchcock first entered on his professorship at Union Theological Seminary, some years before the Civil War, he took advanced "higher criticism" ground, at least as regards Genesis, in his lectures to the students and even in the pulpit. The result was a storm of protest and criticism. Believing the time not ripe to press the issue popularly, Dr. Hitchcock abandoned his aggressive attitude, so restating his position as to put the emphasis where his faith was conventionally strong rather than weak. Thus, the storm having been quieted, there were left to him long years of fruitful influence in which almost without observation he gave Union a distinct set toward untraditional criticism, and ultimately leadership in the realization of full academic freedom of investigation and instruction in theology.

The judicious way in which Dr. Hitch-

cock met the issue nearly fifty years ago illustrates a rule which, with occasional exceptions, is doubtless true to-day under different conditions: That it is the man, not the instructor, who is restrained of academic freedom in his teaching. In other words, it is the method and manner of a deliverance, not the deliverance itself, which usually causes the trouble. For illustration, one may choose the most widely advertised case of all, that of Professor Ross, of the Leland Stanford University. A member of the investigating committee freely admitted in private conversation that the verdict condemning the university authorities was not, strictly speaking, a verdict on the issue of academic freedom, although it took that form, for the things which most provoked criticism were said, not in the class-room, but on the stump. Professor Ross was, through the bitterness stirred up, the victim of insinuations concerning matters unrelated to the ostensible issue, which made intervention by his confrères absolutely necessary for his vindication.

It is indeed encouraging to find that those informed at first hand, who know the unwritten history of the various recent attacks on academic freedom, entertain no serious fear of university invasion by dubious patronage, so far as it affects that freedom. Unfortunately, this is but one phase of the question, its least important phase. The real test comes when we consider the effect on academic ideals of accepting the gifts of dubious wealth, the risk of creating an atmosphere of commercialism distinctly antipathetic to those ideals. There was a time, and that scarcely a quarter of a century ago, when such a risk was negligible. That was a time when the college, not then a university, measured its needs in endowments by the thousands instead of by the millions; the time when the need was not pressing felt for the great instruments of scientific research, laboratories, observatories, museums, galleries, engineering and electrical appliances, and all that these involve, required in plant and equipment to-day by the modern university simply to "hold its own." It was back in the campaign of 1876 that President Woolsey, speaking for the candidacy of Mr. Hayes, referred to Mr. Tilden's "uncommon anxiety" to secure the Presidency

as a reason why it should be denied to him. Yale tradition has it that that phrase, owing to the changes rung upon it during the campaign, cost Yale \$7,000,000. Had Dr. Woolsey spoken with such a possibility in view, it is probable that he might still have used the phrase; might have regarded the silencing of Yale's President in a National crisis as a more serious handicap to its true career than the loss of a great endowment. In such a decision he would doubtless have had the sympathetic indorsement of the great body of alumni. At the very opening of his career President Hadley, with the huge bicentennial fund to be raised, declared that the final remedy for the trusts lies in holding the trust managers to a literal trusteeship, through public opinion, enforced, if necessary, by a social boycott. At once many alumni, whatever their view of Dr. Hadley's theory, deprecated his courage as injudicious, although it is to be noted, so far as the public is informed, that the fund did not, in point of fact, suffer in consequence, not a few trust managers being liberal givers to it. The difference in attitude was due to a subtle form of the new commercialism, not ignoble; an appreciation of the dominating need of great endowments, in Woolsey's day regarded as desirable but not indispensable. From the same sense of exigency, the hesitating president of another great university finally accepted from a representative of very dubious wealth a million, perhaps, for a special equipment, to which is thus attached forever the name of one who served a term in prison, though pardoned out and technically rehabilitated by a judicial declaration of the illegality of the sentence.

The college, says President Woodrow Wilson, of Princeton, should be a school of duty if "the business of the world is not individual success, but its own betterment." "Have I, a trustee for all the students who are ever to come here," said a college president to the writer, "a right for a scruple, merely my scruple, perhaps, to shut this door of opportunity, though, as you and others may say, it is to be opened by dubious wealth?" "No, I would not send my boy there without thorough investigation," said a father to the writer, referring to a university con-

spicuously favored by trust magnate gifts; "the atmosphere seems too unmistakably commercial." Here we have, pictured graphically, the many-sided conflict of duties and ideals due to a loss of ethical bearings in the overwhelming and revolutionary expansion of modern business. But one thing stands out clear in the confusion—that the university, like the college before it, must be more than a phrontistery, a different institution from a mere school of technique or research, if it is to prove "a savour of life unto life" for the education of the future. That is, the university must conserve the finest ethical traditions of the past and represent the highest ethical obligations of the present, or it will lose its place of leadership and forfeit the right to it. The university president, then, who sees in his trusteeship merely the obligation to improve the equipment for the individual success of the students, forgetting "the world's betterment," sacrifices the less to the greater. He overlooks an equal obligation of his trusteeship, that the university shall not, by the conditions on which it accepts a gift, be committed to approval or condonation of dubious means of acquiring wealth, nor, as President Pritchett puts it, to "recognition of a false measure of success."

We learn to appreciate how widely the conventional academic view, which puts first in importance the possession of adequate equipment, may go amiss of the popular view, as we come into touch with Lincoln's "plain people." Not many months ago the writer had for seat-mate in a crowded train a thoughtful man, who turned out later to be a railroad engineer. The talk fell, apropos of an item in the paper, on trusts and their methods. The manner, more than the matter, of what the engineer said in reprobation was impressive. He spoke without heat, but with strength of feeling. Then, turning back to the item—the record of some benefaction by a trust magnate—he simply added: "Those fellows think that they fool us. But they don't." The words came back often and again to the writer when, soon following, he went through the strenuous weeks of the Waterbury trolley strike. Back of the general sympathy with the strikers in union circles was a feeling among the more represent-

ative union men, not against wealth in itself, but against wealth acquired in dubious ways which society condoned. A protest to these men, good citizens and Americans, that their influence was being prostituted to the encouragement of every form of lawlessness and disorder, even murder, was invariably met with the question, "What are the other fellows doing?" Seizure of public franchises without remuneration, stock-watering, legislative corruption, cut-throat competition, monopoly charges, all the familiar phrases of indictment of high-handed trust methods, with a closing sneer at a generosity that "adds a cent to oil and gives a million to a university," were found to have a local application of extenuation and excuse. Not that the United Gas Improvement Company, which controls the Waterbury trolley system, and its gas and electric light plants as well, stood popularly convicted, so far as its Connecticut enterprises are concerned, on a single one of these counts. But it represented the dubious trust system of which such things are the natural fruit, and to which unionism alone, it was claimed, gives effective pause. Riots, terrorism, boycott, anything short of murder, were described as "unfortunate incidents" in a social war on the tyranny of dubious wealth, to be deprecated, indeed, but not, after all, to be over-magnified compared with other acts not so brutal but just as deadly to Americanism—acts which give those who commit them control in the world of business, high place among the socially elect, and even recognition in the inner circle of philanthropy, if they choose to pay the price.

Does this seem to be merely an insincere, overdrawn apology for a cause under abnormal conditions of strain and stress, exaggerating and distorting the ordinary attitude of these same persons under normal conditions, and hence of no value in determining the popular view, ethically, of a university which thrives on the bounty of dubious wealth? Those familiar with discussions of "unionism" will testify that they meet a like argument constantly in one guise or another. For example, in a recent contribution to "Collier's Weekly," Mr. Clark, of the Coal Strike Commission, the head of the Order of Railway Conductors, protests that unions should not be compelled to

incorporate until "healthy, reasonable, and fair" laws are enacted in place of laws "especially constructed and intended for corporations of capital," "for the purpose of evading or limiting responsibility." Mr. Clark's colleague on the Commission, Bishop Spalding, put the same charge, reversed, more tersely and strongly when he said in an address at Peoria: "Laws are not made for the great corporations." A still more significant recent witness, since he studied conditions in the large, is W. C. Steadman, of the Parliamentary Committee of the Trades-Union Congress, one of Alfred Moseley's visiting commission of British workman. Mr. Steadman reports that "unless something is done to conciliate labor in America, the trust system will bring on such an uprising as has not been witnessed for forty years."

This common attitude of unionism towards trusts, which it counts a form of most dubious wealth, may seem to bear but remotely on the gifts of such wealth for university endowment. Such a direct bearing, however, is shown in the "American Federationist," the official organ of the American Federation of Labor, in discussing the recent affiliation of the Chicago Teachers' Federation with the Chicago Federation of Labor. The article quotes Miss Margaret Haley as responding for the delegates of the teachers on their admission to seats in the Chicago central body: "The step we take to-day is going to save the public schools and the democracy of the schools." The article explains the menace to the democracy of the schools as due to the successful attempt of the universities "to compel the school course to conform to the university requirements, thus making public high schools mere feeders for the universities." The article charges that the public schools of the Middle West, "through the domination of the university," make use of text-books on political economy and civil government which teach a system inimical to trades-unions, and that "private universities attempt to steal a whole public school system." The article then quotes at length from the report of the Illinois Bureau of Labor Statistics, concluding with this significant passage: "From San Francisco to Chicago, and extending to New York, comes the warning cry that privately endowed educational institutions must

teach in accord with private interests or cease to teach. Not only that, but the larger of these institutions, where thought must bend to private bias, seek to force upon the public schools text-books originating under the influence of that bias, and to compel the acceptance of their graduates as teachers without examination required from other teachers. . . . When liberty of thought is gone, other kinds of liberty must soon die."

This deliverance, all the more that it comes from a representative body of teachers, significantly marks the extent to which the association in the popular mind, however exaggerated or mistaken, of dubious wealth with university patronage may discredit the sincerity of university standards and aims. The great captains of education can be trusted, in the main, to protect freedom of teaching, so vital to them, however dubious the obligations they may seem to assume in accepting some of their endowments; and personally to represent to their students high ideals, though in instances they may seem to recognize "vulgar success," as Dr. Noah Porter used scornfully to call it. But a subtle, pervasive suspicion once in the air, the indefinite, insidious fear of the Greeks bearing gifts, largely escapes their notice. Such a popular suspicion, evidently, is the most serious possible impairment of the authority of university influence, attaching to the university itself and to the men whom it sends forth into the world to represent its ideals—and this at a time of flux, when the steadying influence of the university was never more imperatively needed. As Dr. Edward Everett Hale declared recently in a noteworthy sermon preached from a university pulpit, the great present need is that a new emphasis be placed on education in the sense of duty as central or fundamental. "We may say what we choose," Dr. Hale continued, "in ridicule or contempt of the mechanical side of Puritan training, as it shows itself in the traditions. What you and I know is that enough of them lived to God's glory to give a moral element to the whole legislation of the infant State, and that the hopeful element which we now call public spirit was the dominant element."

In attempting to restore education in the sense of duty to its place of honor,

the one central place in university life, so far as that place has been lost, there is a general principle that must apply to the acceptance of gifts. High ideals cannot coexist with dubious patronage. This is, of course, a principle of easier individual application, though requiring courage. That college professor pointed the way who quietly refused to be the guest of a well-known capitalist—not Mr. Rockefeller, it ought perhaps in justice to be added—because he regarded the capitalist's business methods as most open to question. Had the professor's college received the offer of a substantial gift from that capitalist, its disposition might have proved a far more difficult and delicate question. The clue to the answer would lie in the word "patronage." Would acceptance of the gift imply recognition of the giver as one of the "patrons" of the college? "I once accepted a very large sum from one of the 'shadiest' of modern speculators," said a college president to the writer. "But it was offered voluntarily for a general fund, and no one outside knew the name of the donor. Acceptance involved no recognition of his methods." "How about Jay Gould?" was asked. "Well," said the college president, "there you raise a very hard question to answer. A man's early business methods may have been most unscrupulous, while his later methods are most honorable. He may have decided, having once gotten a start, 'to clean up and live like a gentleman,' as a character in one of Howells's stories expressed it. Are you to stigmatize a worthy present because of an unworthy past? Had I been a college president between 1870 and 1880, and had Jay Gould then offered a gift to the college to which his name must attach, I should have felt bound to refuse it. After 1880 his methods were different—and the answer to such an offer then made might have been different too." The president's own answer was but half serious, although it did state a serious difficulty. He was really splitting hairs with himself. The world would never, he knew, draw so fine a distinction. It is

the penalty of the unscrupulous beginning of a notable business career that the past is seldom if ever "lived down;" that the beginning itself stigmatizes the career to the end, however different its later character. But the mention of Jay Gould's name suggested a concrete case illuminative of the whole question. Perhaps fifteen years ago, through the invitation of Miss Gould, who was actively interested, a conference of prominent Presbyterians, with the late Dr. John Hall presiding, was held in Jay Gould's New York home to further the work of foreign missions, a large sum being raised. The incongruity was so evident that wherever the wires carried the story the unskillful laughed and the judicious grieved. To-day Miss Gould is by a universal verdict acclaimed perhaps the foremost woman of America for her self-sacrificing devotion and wise and generous benefactions in answer to every appeal "to lend a hand." The Gould money is the same, at least in its original source. But in passing rightfully to the new ownership, responsibility for its origin has ceased to attach to it.

The whole question must, then, turn, not on the kind of money given to a university, its "dubiousness," as some would say, but on the way in which it is given; on whether, thus given, it will advance or frustrate the purpose for which the university exists. "We are not training diletanti," recently said a great educator in addressing a gathering of his fellow university alumni; "we are not training specialists; we are not even training 'professional' men pure and simple. We are training citizens of a free commonwealth, of a Christian commonwealth; and every influence, outside of the class-room as well as in it, which makes for public spirit and for training in this citizenship must be cherished and conserved." Is the gift of dubious wealth so offered as to make for or against these ideals? as to ignore or recognize "the false measure of success," in President's Pritchett's pregnant phrase? as to raise or "debase the moral currency," his quotation from George Eliot? That is the test.

## The Life of a Publisher<sup>1</sup>

THE story of a worse than orphaned boy; of a boy deserted by his father, and found sobbing alone at night in the market-place of Bremen by a great-hearted man; the story of how this poor boy, thus rescued and adopted by Herr Rulffs, became in time the famous publisher, the close friend of Wieland and Schiller—this is the story of Goschen's life; and this surely is worthy reading for us in this republican land. Goschen never forgot this episode in his boyhood, and many a poor boy was helped on his way afterward by the renowned publisher, while his infinite gratitude to Rulffs conquered every obstacle and saved his foster-father from poverty and prison.

Leipsic, the center of the book trade in Germany, had drawn to itself many men of distinction. As bees to flowers, un-failingly came men of genius to Leipsic. Here Goschen lived ten years, winning by his vivacity and charm many warm friends, who later on helped him in his career. But not to his friends alone; not to the 3,000 thalers lent him by Körner to start him as a publisher on his own account; but to his indomitable perseverance, to his immense industry, to his unflagging enthusiasm, and to his charming personality, Goschen's remarkable success was due. How great that success was we may judge from the fact that within two years of his start he had secured the names of Goethe, Schiller, Wieland, Lessing, and Klopstock to appear on his Publisher's Catalogue for the great Easter Book Fair of Leipsic!

With all his fame, Goschen never became rich. On the warmest possible terms of friendship with most of his authors, he voluntarily increased the promised honorarium if the book sold well, and advanced the money agreed on, in many cases where he could ill afford it. He was always thrifty, always anxious to invest his savings in his business. Once he countermanded the order for a lamp because he feared it an extravagance.

His gift for work almost amounted to genius. Sixteen hours a day he reckoned no hardship. With his own hand he personally examined every sheet of Goethe's collected works.

But, alas! the devastating wars of Napoleon swept away the result of all these years of unremitting toil. "Who can buy a book," said Goschen, "when no one has money for bread!" With patriarchal benevolence he kept his printing works open; for he could not turn away his faithful printers bound to him by forty years of friendship. How his men loved him an incident will tell. The great Fair was coming on, the promised book could not be finished. For three consecutive nights those devoted servants worked. And when the book was handed to him completed, "all had tears in their eyes when they saw his happy emotion."

At thirty-five he plunged madly into love, and five years after his marriage we find him addressing a letter to his wife as "My heavenly Jette." Their home life, with their ten children, his dependents, and their frequent distinguished guests, was well-nigh ideal.

As a character, Goschen was extremely interesting and lovable; as a publisher he was quixotically high-minded and generous, while his efforts to attain typographical perfection gave him world fame; but, after all, his connection with men of genius, and with the Weimar group in particular, is the point of deepest interest to us.

With Wieland, the "Nestor of German Literature," he was almost on terms of blood brotherhood. Their first meeting was noteworthy. Wieland showed marked impatience at the entrance of Jean Wieland, who merely smiled and withdrew. "What a noble wife you have!" cried Goschen, enthusiastically. "Young man," said Wieland, his face transfigured with joy, "your keen discernment of the value of this woman makes you my friend forever." At a time when "nature seemed a compound of volcanoes and moonlight" even Wieland, the apostle of the Aufklärung or Renaissance of Reason, even Wieland is sentimental. His supreme merit,

<sup>1</sup>*Life and Times of George Joachim Goschen, Publisher and Printer of Leipsig, 1752-1828.* By his Grandson, Viscount Goschen. In 2 vols. Illustrated. G. P. Putnam's Sons, New York.

however, consists in his forcing upon the German people, beginning with the aristocrats, the use of the German language. To these French-speaking, French-reading Germans he gave politics, social science, folk-lore, epic poems, the masterpieces of antiquity, all in their native tongue. For years the tutor, then the counselor, of Karl August, Duke of Weimar, his generous soul showed no envy at the appearance in Weimar of the great Goethe, so surely to eclipse him. "My soul is as full of Goethe as a dewdrop of the morning sun." "To-day I have seen him for the first time in his complete splendor, in his complete beautiful humanity. In a moment of ecstasy I knelt down beside him, pressed my soul to his heart, and worshiped God!" So writes Wieland of Goethe. "A cross between Socrates and Horace," he calls himself.

Another warm friend of Goschen's was Friedrich Schiller, the poet of freedom and revolt. His youth "dreary and joyless," an incessant revolt against tyranny; his manhood harassed by illness and debt, what wonder that nearly every one of his dramas was a protest against tyrannical oppression! Into his anxious life came a ray of light impossible in this prosaic twentieth century. An unsigned letter of appreciation from four unknown but loving admirers—and gifts! feminine gifts as well as masculine! A pocketbook worked by her own needle from one, portraits of the four from another, and music written for one of Schiller's poems! Then followed the exchange of rhapsodical letters. "It is the sweetest refreshment of my joyless existence that my soul can float around yours." They induce him to move to Leipsic, and he is sunned and stimulated in their love. One of the four, Goschen's friend and partner, Körner, soon to marry one of the maidens, Minna Stock, became his friend for life, and gave him for years a charming home in his own house. The wise criticism of the generous, high-minded Körner was as grateful as his financial aid to the storm-tossed poet.

From a twentieth-century American point of view, Germany of the eighteenth century seems undeniably queer—Germany, "where sewers were undreamed of, and a post-office was merely a vision," where "letters were written to be read in

circles, and were shown about like the last new novel." Their explosive declamation, their rhetorical outbursts for liberty, seem to us theatric. The difference in literary earnings is marked. Schiller had hopes of a comfortable home if his brains could bring him in a few hundred dollars a year. With us a "sweet girl graduate" gets as many thousands from her literary efforts.

With every work of his genius, Schiller's fame increased; always the idol of the people, it is pleasant to see honors heaped upon him; a professorship at Jena, a marriage with the lovely and most devoted Charlotte von Lengefeld, a pension from Karl August, a title of nobility from the Emperor! Can this indeed be Friedrich Schiller whom we see driving in his own carriage?

His meeting with Goethe at Weimar, Grimm calls the one real event in Schiller's life. Henceforth these two were inseparable. Together they published "Die Hören" and "Die Xenien"—the latter a series of wild invectives against those who did not appreciate the former. Schiller visits Goethe with a stipulation that he may go to bed if his pains become unbearable. Goethe, visiting Schiller, discovers in his absence a heavy, displeasing odor. This proves to be a drawer full of decaying apples, without which Schiller cannot find inspiration.

Could greater contrast be than between Schiller and Goethe? Schiller, the apostle of revolt, the visionary; Goethe passively accepting everything offered by Fate. "Instead of making himself unhappy with the politics of Europe, he made himself happy studying the poetry and history of the East. Compare Schiller's red hair, hollow chest, and knock-knees with Goethe's godlike form! Even in death the perfection of Goethe's body moved his faithful Eckermann to tears. His person harmonized with his devotion to beauty. "No reformer" he, "but a poet whose religion was beauty." True it is that those "immoral jades" Clärchen and Kättchen were harder by far to create than Schiller's idealized heroes. Yet "Goethe's poems do not, like Schiller's, beget deeds. Deeds are the offspring of words; and Goethe's pretty words are childless."

The Prince who gathered together at

Weimar these great ones was Karl August, Grand Duke of Weimar. In simplicity of taste he was like Goethe. His generosity can be seen in his readiness to part with an ancestral snuff-box or a diamond ring to help a needy poet. While it was comparatively easy to bring great men to Weimar, only a rare nature could so have

fascinated these men of genius as to compel their stay. In this haven of rest, "talking of lovely things that conquer death," ended Schiller's stormy youth. From here Goethe tried "the Great Beyond."

So was this tiny court of Weimar raised to a fame second only to that of Berlin.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Ancient Coffers and Cupboards: Their History and Description from the Earliest Times to the Middle of the Sixteenth Century.** By Fred Roe. Illustrated. E. P. Dutton & Co., New York. 10x13 in. 128 pages. \$12, net.

In this magnificent volume the attention of the reader is first of all attracted to the wealth of fine illustrations picturing coffer, credences, almeries, armoires, cupboards, and cabinets, from the Dark Ages to the end of the sixteenth century. As here shown, the distinctions among these articles become clearer than before. We see that a coffer was a box of great strength intended for the preservation and transportation of weighty articles; its front was generally formed of but a single panel. A credence was a combined table and cupboard; it might or might not be used for ecclesiastical purposes, though the name is now exclusively applied to articles for religious use. Almeries were food-lockers of various kinds. Armoires were great presses or wardrobes. A cupboard was a modification of an armoire, having a recessed superstructure. Finally comes the cabinet, much smaller than the foregoing—a nest of drawers inclosed by folding doors. The text treats all these with great detail and with commendable clearness. A particularly interesting feature is the author's account of that divergence which took place between the architectural styles of France and England due to the rise in the latter country of Perpendicular Gothic.

**Archbishop Temple: Being the People's Life of the Right Hon. and Most Reverend Frederick Temple, P.C., D.D., LL.D.** By Charles H. Dant. Illustrated. Charles Scribner's Sons, New York. 5x7½ in. 243 pages. \$1.50, net.

Reserved for later notice.

**Bookbinders and Their Craft.** By S. T. Prideaux. Illustrated. Charles Scribner's Sons, New York. 6½x9½ in. 299 pages. \$12.

In a limited edition of five hundred copies are reprinted eight papers on various aspects, historical and practical, of the bookbinder's craft. Some of the papers are, "Some English and Scottish Bindings of the Last Century," "Les Relieurs Français," "Design in Bookbinding," "Early Italian Bindings." Miss Prideaux was a pupil of the late Mr. Cobden-Sanderson at his famous Dover bindery, and has become one of the best known and most successful of English binders. Her

ability as a maker of fine bindings, her wide knowledge of the history and traditions of the art, and her fine perception of its artistic requirements and possibilities, make whatever she writes of interest and value to book-lovers. The book is illustrated with fine reproductions of old bindings, and is admirable in typography, printing, and binding.

**David the Hero.** By Sarah Dickson Lowrie. The Westminster Press, Philadelphia. 5x7½ in. 257 pages. \$1, net.

Primarily intended for a child, the ten pictures here presented, drawn from the life of David, son of Jesse, may well find favor in older eyes. Instead of a continuous narrative, the author has discriminatively chosen the principal events in David's career, around each one of which she has woven a charming story.

**History of Modern Europe (A).** By Merrick Whitcomb. Illustrated. (Twentieth Century Text-Books.) D. Appleton & Co., New York. 5x8 in. 361 pages. \$1.10.

A clear compendium of the events which have shaped the Europe of to-day—the author following the true rule of historical perspective by devoting as much space to our own century as to the three that preceded. Dr. Arnold's protest against the usual tendency of histories to magnify the events of the remote past and minimize those influencing undetermined policies is gradually bearing fruit. No student who uses this excellent text-book will have to make the confession of a brilliant graduate of a New England college that "my knowledge of history ends with the Reformation."

**Leonardo da Vinci.** By Dr. Georg Gronau. Illustrated. (The Popular Library of Art.) E. P. Dutton & Co., New York. 4x6 in. 190 pages. 75c., net.

Reserved for later notice.

**Life and Letters of Brooke Foss Westcott, D.D., D.C.L.** By his Son, Arthur Westcott. Illustrated. In 2 vols. The Macmillan Co., New York. 5½x8½ in. \$5.

Reserved for later notice.

**Michael Angelo Buonarroti.** By Charles Holroyd, Keeper of the National Gallery of British Art. With Translations of the Life of the Master by his Scholar, Ascanio Condivi, and Three Dialogues from the Portuguese by Francisco d'Ollanda. Charles Scribner's Sons, New York. 5½x8 in. 347 pages. \$2, net.

Reserved for later notice.

**Modern Obstacle (The).** By Alice Duer Miller. Charles Scribner's Sons, New York. 5x7 $\frac{1}{2}$  in. 273 pages. \$1.50.

A clever novel of New York life. Brilliant in point of humorous portrayal of distinctly real and enjoyable characters, yet sympathetic and serious in its very original manner of dealing with one of the gravest problems in modern American society.

**New International Encyclopedia (The).** Edited by Daniel Coit Gilman, L.L.D., Harry Thurston Peck, Ph.D., L.H.D., and Frank Moore Colby, M.A. Illustrated. Vol. IX. Dodd, Mead & Co., New York. 7x10 in. 953 pages.

**On the "Polar Star" in the Arctic Sea.** By His Royal Highness Luigi Amedeo of Savoy, Duke of the Abruzzi. Translated by William Le Queux. In 2 vols. Illustrated. Dodd, Mead & Co., New York. 7 $\frac{1}{2}$ x10 in. \$12.50, net. (Postage 72c.)

It will be remembered that Captain Cagni, of this expedition, surpassed Nansen's "farthest north" by a short distance. Lovers of narratives of Arctic travel cannot fail to feel the strongest interest in these two finely printed and illustrated volumes. We reserve a full review for a later issue.

**People of the Whirlpool.** From the Experience Book of a Commuter's Wife. Illustrated. The Macmillan Co., New York. 5x7 $\frac{1}{2}$  in. 365 pages. \$1.50.

Reserved for later notice.

**Picciola.** By X. B. Saintine. Edited by O. B. Super. D. C. Heath & Co., Boston. 4 $\frac{1}{2}$ x6 $\frac{1}{2}$  in. 222 pages.

**Philippine Islands, 1493-1803 (The).** Translated from the Originals. Edited and Annotated by Emma Helen Blair and James Alexander Robertson. Vol. III. The Arthur H. Clarke Co., Cleveland, O. 6x9 $\frac{1}{2}$  in. 317 pages. \$4, net.

**Philosophy 4: A Story of Harvard University.** By Owen Wister. The Macmillan Co., New York. 4x6 $\frac{1}{2}$  in. 95 pages. 50c.

Mr. Wister's jolly and immensely human story of college life is here published as one of a series of little books of fiction, admirably suitable for slipping in the pocket when one starts on an outing.

**Pioneers of the West: A True Narrative.** By John Turner. Jennings & Pye, Cincinnati. 5 $\frac{1}{2}$ x8 in. 404 pages. \$1.50.

This is an intimate and not too vivaciously written account of pioneering experiences. However, it gives valuable descriptions of life among the Indians, the blizzards, the forest fires, and other disasters, and also in the harvest fields, homes, schools, and churches of the West.

**Puerto Rican and Other Impressions.** By William James. Illustrated. G. P. Putnam's Sons, New York. 5 $\frac{1}{2}$ x8 in. 100 pages. \$1.50, net.

In one of the earlier verses in this volume the author pertinently and persistently, if somewhat unmelodiously, records this query: "Why should I speak?" Candor compels us to state that, in our opinion, neither here nor in any previous or subsequent selection does he answer his own question, or give good and sufficient reason for the publication of a hundred pages of very mediocre verse.

**Psychology and Common Life.** By Frank Sargent Hoffman, Ph.D. G. P. Putnam's Sons, New York. 5x8 in. 286 pages. \$1.30, net.

Professor Hoffman has here popularized with remarkable clearness a recondite subject, con-

cerning some particulars of which there is an increasing and unsatisfied curiosity as well as no small amount of misconception and delusion. He is familiar with the "Proceedings" of the Society for Psychical Research, and with other literature dealing with the subject, both scientific and charlatan. His book will not only interest the curious, but will be found to illuminate the educational, ethical, and hygienic bearings of a sound psychology. While critical, it is fair, and holds, in general, a just balance of appreciation for both sides of a mooted question. While exposing the extravagance of "Christian Science," Professor Hoffman judges that "in the future one of the chief methods of treating disease will be a mental one." His estimate of hallucinations, in close accord with the dictionary, is that they are based on facts external to the imagination, but are simply misinterpretations of such facts. This is not fully reconcilable with the results of the famous census of hallucinations made some ten years since by the Society for Psychical Research. This clearly established (see the "Proceedings" for August, 1894) that there are such facts as "veridical," truth-telling, apparitions of deceased persons at or near their death hour. Some hallucinations are certainly not misinterpretations of external signs. The classical discrimination made at the end of the sixth book of the *Æneid* is exactly in line with the results of that scientific census.

**Representative Art of Our Time, with Original Etchings and Lithographs and Reproductions of Oil and Water-Colour Paintings, Pastels, etc.** Edited by Charles Holme. Parts IV and V. Published by the International Studio, 67 Fifth Avenue, New York. Complete in 8 Parts. Each \$1, net.

The fourth part of this interesting series contains an article by Walter Shaw Sparrow on the Development and Practice of English Water-color, with reproductions in color of a characteristic oil painting by Claude Monet, an etching by D. Y. Cameron, an oil painting by Sir George Reid, water-colors by Francis E. James and H. Cassiers, and a striking auto-lithograph by Frank Brangwyn. Part Five contains an essay by Dr. Hans W. Singer entitled "The Value of Line in Etching and Dry-Point." The most important of the six pictures in this installment is an etching by Joseph Pennell of the Bridge of St. Martin at Toledo.

**Representative English Comedies: With Introductory Essays and Notes. An Historical View of Our Earlier Comedy and Other Monographs by Various Writers.** Under the General Editorship of Charles Miles Gayley, Litt.D., LL.D. The Macmillan Co., New York. 5 $\frac{1}{2}$ x8 in. 686 pages. \$1.50.

The initial volume in a series which aims to collect and present representative specimens of English comedies, chosen for their importance in the history of comedy, for their literary quality, and for their dramatic value. These comedies are to be accompanied in each volume with monographs dealing with the authors and plays, with outlines of the dramatist's life, an account of his contributions to comedy, and an estimate of the value of his production. The present volume, which opens the series, presents a historical view of the beginnings

of English comedy, and includes work by Heywood, Udall, Stevenson, Lyly, Peele, Greene, Porter, and a chapter on Shakespeare as a comic dramatist, by Professor Dowden. In the case of each dramatist an account of his life is given, with a report of the play, the conditions under which it was written, and its significance. The volume is prefaced by an elaborate essay on the beginnings of English comedy by Professor Charles M. Gayley. The series will be treated at length at a later stage.

**Seamanoud.** By H. Talbot Kummer. Richard G. Badger, Boston.  $5\frac{1}{4} \times 8$  in. 45 pages. \$1.

**Sir A. Henry Layard, G.C.B., D.C.L.** *Autobiography and Letters from his Childhood until his Appointment as H. M. Ambassador at Madrid.* Edited by the Hon. William N. Bruce, with a Chapter on his Parliamentary Career by the Rt. Hon. Sir Arthur Otway. In 2 vols. Illustrated. Charles Scribner's Sons, New York.  $5\frac{1}{2} \times 9$  in. \$7.50, net.

Sir Henry Layard died in 1894. A sufficient time has elapsed, one would think, for the preparation of a complete biography. Hence the present publication will disappoint many, since it deals with Layard's life only as far as his appointment as Ambassador to Spain. The work comprises an autobiography and letters; but the autobiography stops between 1852 and 1869, the period of Layard's Parliamentary career and of his exhaustive study of Italian art. While he left a full account of his embassies in Madrid and Constantinople, he desired that the account should be published only "when those who might be injured or offended by it had passed away." That time not yet having arrived, the present work terminates in 1869; but we are glad to note that a sketch of Sir Henry's career as a parliamentarian forms a separate chapter, written by his friend and colleague Sir Arthur Otway. Though Layard was eminent as politician and diplomatist, his fame rests chiefly on his great distinction as traveler and archaeologist. An account of his work as archaeologist has already been given to the world by himself. His well-known books on Assyrian discoveries are also fragments of his autobiography. Hence in the present work the first part of the autobiography is of special interest, whether Sir Henry writes of his family history and childhood, of his legal studies, or of his early journeys—before he was twenty-three he had, with scanty means, traveled widely on the Continent, while before he was twenty-five he had taken part in the tribesmen's armed resistance to Persian tyranny. Sir Henry's picture of Bagdad deserves particular mention, and so does his description of manners and customs in Bosnia, Servia, Salonika, and Constantinople. It is not such a far cry from the period of his service in the Balkans to the unrest there of to-day. Incidentally we find this tribute from him to the work of American missionaries in Albania half a century ago: "They . . . were a most zealous, devoted, and learned body of men. They had spread themselves over the greater part of the Ottoman Empire in Europe and Asia and in parts of Persia . . . and had everywhere opened schools. . . . I was intimately acquainted with many of them in Constantinople and elsewhere

in Turkey, and received much kindness from them. After long struggling against opposition . . . the labors of the American missionaries were rewarded by no inconsiderable success. To them may be attributed in great measure the movements which have since taken place in European Turkey and Armenia in favor of national independence and against the rule of the Turks."

**Spiritual Power at Work: A Study of Spiritual Forces and their Application.** By George Henry Hubbard. E. P. Dutton & Co., New York.  $5 \times 7\frac{1}{4}$  in. 343 pages. \$1.25, net.

Mr. Hubbard is convinced that something is wrong in the Church, else virile minds would be attracted to it, as they are not. Enough is not demanded in the way of manly service and heroic endeavor. The yoke is made too easy, the burden too light, and so the Church is feminized in type, the liberal as well as the conservative Church. Conditions of membership must be made more exacting, preaching more virile. These things have been said before, notably in Professor Coe's books. Mr. Hubbard, however, deals in generalities, except in emphasizing temperance work and missions abroad. What heroic tasks the Church should undertake to attract the co-operation of manly souls in abating the burdens, waste, and evil of social life he does not undertake to say. But he very justly insists that "the cultivation of the corporate [and this includes the civic and political] conscience is one of the most vitally urgent tasks of the coming age." The "new evangelism" which he calls for lays greater emphasis on the individualistic than on the social aspects and interests of religion. A baptism of the Spirit, no doubt, is the great desideratum, but such as impels the receivers of it to the work of social righteousness pointed out in Jesus' preaching at Nazareth. This will furnish enough in the way of heroism and self-denial to meet the conditions which Mr. Hubbard requires to draw strong men into Church fellowship.

**Spoils of Empire (The): A Romance of the Old World and the New.** By Francis Newton Thorpe. Illustrated. Little, Brown & Co., Boston.  $5 \times 8$  in. 421 pages. \$1.50.

To those who find attractive reading in the blending of historic fact and romantic fiction, this spirited tale of love and adventure during the Conquest of Mexico will make effective appeal. And the reader who commonly avoids books of this order because of their proneness to anachronisms and other inaccuracies, finding his prejudice disarmed by the knowledge that the author is himself a historian of repute, will yield also to the charm of this rare union of imaginative writing and authentic utterance.

**State Experiments in Australia and New Zealand.** By William Pember Reeves. In 2 vols. E. P. Dutton & Co., New York.  $5\frac{1}{2} \times 9$  in. Per set, \$7.50, net.

Reserved for later notice.

**Temple Bible (The): Ecclesiasticus.** Edited by N. Schmidt, D.D., I.I.D. Maccabees I. and II. Edited by W. Fairweather. The J. B. Lippincott Co., Philadelphia.  $4 \times 5\frac{1}{4}$  in. Per vol., 60c, net.

This edition, having been carried through the canonical books of the Bible, is going through

the Apocrypha. Little as one may care for the Apocrypha as a whole, the present volumes are specially attractive, Ecclesiasticus as an elaborate treatise on practical morality, Mac-cabees for its history of the great struggle of the Jews for religious liberty in the second century B.C.

**Trent's Trust and Other Stories.** By Bret Harte. Houghton, Mifflin & Co., Boston. 4½×7¼ in. 264 pages. \$1.25.

Again one wonders and admires the evenness of interest which Bret Harte maintained almost to the day of his death in writing stories of the Californian life he knew a generation ago. In this posthumous collection, for instance, the very best of the tales (and none are of inferior quality) are the two dealing with our old friends Jack Hamlin the gambler and Colonel Starbottle the gallant attorney and duelist. The most ambitious story in point of length and plot is that which gives the book its title. Bret Harte's genius deserves even higher recognition that it has received; his reluctance to attempt new themes or to essay elaborated novels in a way put him to disadvantage in competing with newer fiction-writers, but his work both in substance and style has the appreciation of a wide circle of judicious admirers; it was never hurried or feverish; it always had, and in these tales continues to have, literary poise and force.

**Where Town and Country Meet.** By James Buckham. Jennings & Pye, Cincinnati. 4½×7½ in. 241 pages. \$1, net.

This delightful nature-book, which should add to Mr. Buckham's already established reputation, is in the form of a series of thirty charming essays, through each one of which he carries the reader, with the advancing year, in "a devout processional or peripatetic worship of nature."

**Where, When, and How to Catch Fish on the East Coast of Florida.** By William H. Gregg. Assisted by Capt. John Gardner. Illustrated. The Matthews-Northrup Works, Buffalo. 6×9¼ in. 267 pages. \$4, net.

A sort of fisherman's gazetteer and natural history combined, alike interesting to the disciple of Izaak Walton and the student of zoölogy, and no doubt a valuable addition to the literature of its class, both in point of matter and illustration. The colored plates are particularly fine, and there is a map at the back of the volume in addition to the geographical information incorporated in the text.

**Wood Folk at School.** By William J. Long. (Wood Folk Series.) Illustrated. Ginn & Co., Boston. 5¼×7½ in. 188 pages.

This volume is the fourth in a series of books for children's home and school reading—books which have positive fascination for younger readers. In the book before us Mr. Long has put together some of the animal studies contained in his "School of the Woods," omitting all theoretical discussions or essays because, as he says, these have no place in a school reader. For the same reason, this is not the time to discuss the differences in theory between Mr. Long and (to some extent at least) others of the more recent writers about

animal life, on the one hand, and on the other the school of nature writers represented by Mr. John Burroughs. For an extremely interesting presentation of Mr. Long's views we may refer our readers to his article in the "North American Review" for May. Here we will only note that Mr. Long in his preface states that the incidents have all passed under his own eyes and are recorded just as he saw them from tent or canoe. One of these little stories, "When You Meet a Bear," appeared in The Outlook's Recreation Number of last year—and this leads us to specially commend to our readers' attention another article from Mr. Long's pen which will be found in this year's Recreation Number—next week's issue of The Outlook. Theories aside, no one can possibly fail to recognize in these talks about fawns, bears, deer, fish-hawks, porcupines, and other "beasts of the field and birds of the air," a quite unusual skill in narrative and a delightful sense of the life of all outdoors. The book is carefully and well illustrated.

**World and the Logos (The).** By Hugh Miller Thompson, S.T.D., I.L.D. (Third Edition.) Thomas Whittaker, New York. 5×7¼ in. 78 pages. 75c.

It was hardly worth while to put in print this fresh edition of addresses dated in 1885 without reckoning with the advance of thought—scientific, religious, and philosophic—that has since been made. The thesis here maintained, that the universe is both reasonable and moral, is true enough, but the charges brought against science are overdrawn and need revision. The Kantian rigorism which maintains that an action to be in the highest degree commendable "should *not* be useful, nor pleasurable, nor in any way of benefit to the doer," is a still more singular survival of a mode of thought that was antiquated when these lectures were first uttered.

**Works of Lord Byron (The): A New Revised and Enlarged Edition.** Illustrated. Edited by Ernest Hartley Coleridge, M.A. Vol. VI. Poetry. Charles Scribner's Sons, New York. 5¼×8¼ in. 612 pages. \$2.

This volume Mr. Coleridge devotes to "Don Juan," collating the text from the original MSS., which are in possession of Lady Dorchester and Mr. John Murray, fourteen stanzas of the Seventeenth Canto being now published for the first time. When the preliminary announcement of this important edition was made, it was proposed to include all Lord Byron's poetical works in six volumes, corresponding to the six volumes of Letters already published; but the great mass of new material incorporated in the introductions, notes, and in various other forms has extended several of the published volumes to a disproportionate size, and a seventh volume, completing the work, will be issued, and will contain occasional poems, epigrams, and other writings, a bibliography, and an extensive index. The first canto of "Don Juan," it will be remembered, was begun in 1818, while some of the stanzas beginning the Seventeenth Canto, which are now given to the public for the first time, were not written until 1823, which would seem to bear out Byron's statement to Murray, "I *have* no plan—I *had* no plan; but I *had* or have materials."

## A Word About the Wanamaker Organ Business

### THE WANAMAKER PIANO STORE

to-day stands at the top of piano retailing in the United States. Our Organ business, while not so widely exploited, is just as broadly representative of the world's best organs, and commands the services of the most able experts in planning and building pipe organs for the home, church, or chapel.

We sell the entire line of the famous Mason & Hamlin Reed Organs and Pipe Organs.

We give estimates on building church organs of any size or style; and command the best skill in the craft for the planning and execution of the work.

We also sell the *Flute-voiced Vocalion Organs*—the wonderful reed organs that most nearly approach the tone and power of a pipe organ.

The *Symphony Self-Playing Organs* are a feature of our organ business—the marvelous instruments that enable anyone, even with no musical knowledge at all, to play the most elaborate organ music.

If you have an organ to buy—whether it be a small one for the home, or whether you are on an organ committee for your church—come to the store, or write to us before placing your order. It will be decidedly to your advantage to do so.

## PURINA FOODS

Introducing the **Ralston Purina Miller**—a good, wholesome fellow, who makes all the good things in checkerboard packages, at the Big Mill, "where purity is paramount." Says the Miller:

"When you grow older, you will probably hear about 'proteids' and 'starches' and other funny things—but all you've got to remember is this: Food is like clothes; there's food for warm days and food for cold days, and you need *both kinds*, same as clothes. Oats is an overcoat food and Ralston Health Oats is mighty good on cool mornings. Wheat is the all-year-round food—that's why you don't get tired of Ralston Breakfast Food. Whenever I see a field of wheat wavin' in the breeze and think of the millions of folk eating Ralston Breakfast Food and whole wheat bread made out of Purina Health Flour, it makes me feel I haven't lived for nothing.

"Just be sure that what you eat is pure and that it tastes good, and be cheerful. The folks who go to their meals as if they were goin' to the doctor—will go to the doctor."

Send for the "MENU MAKER," it's Free.

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

**W**HISPERS as soft as the breath of the rose  
Fall on the ear of this dreamy-eyed maiden;  
What is he telling her? Dare one suppose  
He offers his heart in the heart of the rose—  
Murmurs a message with tenderness laden?

**S**WEET this Colonial Maid of the Rose,  
Dainty her gown, and her blushing demureness;  
Aye—but the Maid of Today if she knows  
**IVORY SOAP**, and the charm it bestows,  
Rivals all others in sweetness and pureness.

## A Possible British Tariff?

Last week the British House of Commons heard one of the most important discussions in recent years. It was a foregone conclusion that, sooner or later, Mr. Chamberlain would be questioned as to his desire, recently expressed, for a new taxation scheme which should bind the mother country and the colonies closer together. It was felt by all Liberals and by very many Conservatives that Mr. Chamberlain's plan meant ultimately a turning away from the free trade which has been Great Britain's fiscal policy since 1846. Sir Charles Dilke declared that Mr. Chamberlain had suggested a revolutionary change in the Government's policy, and one which was opposed to tradition and to the opinions of an overwhelming majority in Parliament. He added that, while the Government's policy as outlined at the recent Colonial Conference was dangerous, it fell far short of the policy now suggested. He especially condemned the taxation of raw material and food products, and closed with a home thrust in the declaration that Mr. Chamberlain had proposed a policy not yet thoroughly thought out by the Cabinet. Mr. Balfour, the Premier, prefaced his reply with the remark that Sir Charles had attempted to make mischief between the Colonial Secretary and himself, but that any such attempt would fail, and went on to say that, after the resolution of the Colonial Conference, Mr. Chamberlain was bound to raise the subject of preferential trade for public discussion. The Prime Minister deprecated "waving the ragged, moth-eaten flags of either the protectionist or the free-trade side in controversy, now as far removed as the poles from the controversy of half a century ago," and argued that, as the tendency had been to raise a general tariff wall against British goods, the result had been

to compel Great Britain to dispose of her exports on onerous terms and at great loss. Meanwhile the country was becoming more and more dependent on foreign lands for food. If the prevailing tendency continued, the time must come when the only neutral markets to which Great Britain could dispose of her exports would be her own protectorates, her crown colonies, and India. Again, if foreign countries were to be allowed to treat the British colonies as foreign nations (Mr. Balfour was evidently thinking of the recent retaliation by Germany on Canada). Great Britain would be forced by regard for her colonies to retaliate. Canada, Australia, India, and New Zealand were parts of the Empire; it was absurd that they should be treated as separate aggregations simply because they had self-government. Mr. Balfour's most important statement, however, was his disapproval of a tax on raw material, and he declared that he did not know whether a tax on food could be acceptable.

**The Liberal Opportunity** At this point there was an apparent divergence between Mr. Balfour's speech and that of Mr. Chamberlain, who followed him. While the Colonial Secretary asserted that raw materials ought not to be taxed, he declared that consequently duties would have to be levied on imported food. This divergence may indicate that Sir Charles Dilke is right in his contention that the Ministers have not thoroughly digested Mr. Chamberlain's proposal. The Colonial Secretary further elucidated his proposed change, without which "the country would have to give up all hope of closer fiscal relations with the colonies, and must abandon all idea of securing at any time closer political relations with them;" it was inevitable, added Mr. Chamberlain,

if preferential duties were levied, that a tax should be placed on food and that the working classes would pay three-quarters of such a tax; it was only fair that this money and the one-quarter paid by the richer classes should be applied to social reform, like old-age pensions. Such a tax, he declared, was not protective in intention, but incidentally it would be protective. It is possible that the Liberals may thank the Imperialist Secretary for giving to them a strong platform on which to go before the country at the ensuing general election. Mr. Chamberlain's plan looks very like a retrogression to that seventeenth-century legislation which bore fruit in the Navigation Act. If the Liberals had a leader who commanded the full confidence of the party, the opportunity of destructive criticism might lead on to an overthrow of the Ministry; but it is doubtful if the leadership will be found.

**The Kishenev Massacre** Last week, at St. Petersburg, M. de Plehve, Minister of the Interior, received a deputation of Jews who journeyed from Kishenev in order to place their case before the central authorities and to urge on the Minister the necessity of showing in some further way his disapproval of the recent horrible outrages. Although the "Official Messenger" had denied the authenticity of a rumored oppressive order from M. de Plehve, and although the Minister had dismissed the Governor of Bessarabia and the Chief of Police of Kishenev, the delegates objected that there were among the local officials men whose guilt was even greater than that of those who had been punished, and urged a complete change in the Government's personnel in the district immediately affected. No announcement of what M. de Plehve promises has been made, but the announcement that the sale of the "Znamya," the most violent of the St. Petersburg anti-Semitic papers, is prohibited, except to regular subscribers, would indicate that the deputation's visit was not without effect. This and other papers, according to the correspondent of the London "Times," were permitted to continue their attacks on the Jews, even after the Kishenev atrocities, and to

declare that the massacre was "a well-earned lesson," that "it served the Jews right," etc. The correspondent of the "Times" has now himself been expelled from Russia, possibly because some of his recent despatches contained comment as distinct from news. For example:

When the outbreak took place, the rioters were permitted to go about their work of murder, outrage, and devastation without any interference on the part of the authorities, except in a few instances where the police officers acted without waiting for instructions from their chiefs. In other cases where Jews appealed for protection they were told that nothing could be done for them. In these circumstances, for the Government not to dismiss from his post an official so grossly negligent of his most obvious duty would have created an impression which no number of Ministerial circulars could dissipate. . . . As it is, there is much in the action of the Central Government which needs explanation. The massacre at Kishenev has shown that the local authorities cannot always be trusted to protect the Jews, yet in a recent circular M. de Plehve has laid it down that Jewish clubs of self-defense are not to be tolerated. That may be defended on general political grounds, but it is hard to find any excuse for the indulgence extended to the anti-Semitic press.

**Mr. Cleveland's and  
Count Tolstoi's Opinions**

Last week in New York City, at a mass-meeting which was held to protest against the outrages upon the Jews at Kishenev, the principal speakers were President Cleveland, Mayor Low, President Schurman, of Cornell, Mr. Edward M. Shepard, and the Rev. Dr. MacArthur. Mr. Cleveland's address was impressive and notable. After declaring his hearty sympathy with the purposes of the meeting and approving the demonstration as a reassuring evidence that American sympathy for the oppressed anywhere is still unimpaired, he said, as reported: "Every humane American sentiment has been shocked by this attack on the Jews in Russia—an attack murderous, atrocious, and in every way revolting. . . . There is something intensely horrible in the wholesale murder of unoffending, defenseless men, women, and children who have been tacitly or expressly assured of safety under the protection of a professedly civilized government. . . . I know how easily our indignation prompts us to the use of strong language; and I know how naturally we are tempted to indulge in over-

drawn statements and extravagant demands on such an occasion as this; but I am sure that in our characterization of the crimes we here contemplate, and in expressing our detestation of the criminals, we cannot go too far. . . . I do not say that the Russian Government may not, by sins of commission or omission, be justly deserving of our condemnation, but we should not be swift to assume this. . . . I hope that we will be content to forego perplexing and extreme demands upon our Government for violent action." This characteristic letter from Count Tolstoi on the Kishenev massacre has been published in the New York "Sun":

As regards my views on the Jews and on the horrible doings at Kishenev, they ought to be clear to all who interest themselves in my conception of life. My attitude toward the Jews cannot be other than as toward brothers whom I love, not because they are Jews, but because, like ourselves and everybody else, they are sons of one God, the Father. Such love needs no effort on my part, for I have met and known excellent people among the Jews. What I felt most deeply was horror at the criminals who are really responsible for all that occurred in Kishenev, and horror at our Government, with their clergy, who keep the people in a state of ignorance and fanaticism with their bandit horde of officials. The outrages at Kishenev are but the direct result of that propaganda of falsehood and violence which our Government conduct with such tireless persistence. The attitude of our Government toward these events is only one more proof of their brutal egoism, which does not flinch at any measures, however cruel, when it is a question of suppressing a movement deemed dangerous to themselves, and their complete indifference is similar to the indifference of the Turkish Government toward the Armenian atrocities and toward the most terrible outrages which do not affect their interests.

#### Events in the Turkish Empire

Last week tardy news came of the occurrence on April 29 of a terrible earthquake at Melazgherd, in the vilayat or district of Van, in Asiatic Turkey, a town about a hundred miles distant from Mount Ararat and not far from the source of the Euphrates River. It will be remembered that an earthquake in this region, on the Russian side of the mountain, a few months ago, destroyed the town of Shemaka and caused the loss of several thousand lives. According to last week's information, the five hundred houses of Melazgherd were totally destroyed, to-

gether with most of the entire population, numbering two thousand souls, including seven hundred Armenians, as well as the troops forming the garrison. In addition, over four hundred houses in the neighboring villages collapsed. The earthquake was felt through the entire district between the Russian frontier on the east and Harput on the west. In comparison with this disaster those in Macedonia and Albania seem light, and yet, last week, in an encounter near Smerdesh, no less than one hundred and fifty insurgents were killed, and the fight lasted thirty hours. Another encounter resulted in the destruction of the entire town of Bamitzi. The number of Christian victims at Monastir, week before last, is now officially reported as seventy-two. It must be admitted that the troops have had great incitement to retaliation. According to Mr. Leishman, United States Minister at Constantinople, the Government appears to be thoroughly alive to the situation, and extra precautions are being taken everywhere to prevent surprises and quell any outbreak. Mr. Leishman says that the authorities have behaved admirably, holding the Mussulman population in check and preventing them from retaliating for the many outrages committed by the Christian population. If the indiscriminate shooting and dynamite explosions continue, however, he adds, it may be difficult to prevent reprisals which might lead to wholesale massacres. The resignation of the Bulgarian Cabinet has raised another serious difficulty in the Balkan situation. This Cabinet apparently acted virtually under Russian orders. Meanwhile the Powers, despite their plans of Turkish reform and their warnings to the Porte, are practically held at bay so far as ending Muslim misrule in Macedonia is concerned.

#### The Post-Office Department Investigation

The investigation of alleged corruption in the Post-Office Department has taken a more serious form and has led to more important results than any one seemed at first to anticipate. When the Washington "Evening Times," four or five months ago, called attention to the existence of irregularities and abuses in the office of the First Assistant Postmaster-General, little

attention was paid to its statements. They did not escape the notice, however, of Mr. Robert J. Wynne, the newly appointed chief of that office, and he began, in a quiet way, to investigate them. He soon became satisfied, from information that came to him with regard to attempts that had been made to silence the "Times," as well as from the attitude of hostility soon taken toward him by some of his subordinates, that there was some foundation for the charges. He therefore wrote a formal letter to Postmaster-General Payne, asking that a thorough investigation of his own office be made. The Postmaster-General granted the request and directed his Fourth Assistant, Mr. Bristow, to look into the matter and report. At first the investigation was limited to the particular charges that the "Times" had made; but this limitation was finally removed, and Mr. Bristow was authorized to extend the scope of his investigation so as to include all the operations of Mr. Wynne's office. This led almost immediately to the resignation of George W. Beavers, chief of the Division of Salaries and Allowances, and shortly afterward to the dismissal of James N. Tyner, Assistant Attorney-General for the Department, and the suspension of Assistant Attorney George A. C. Christiancy. The investigation was then pushed with even greater persistence and energy, and resulted this week in the arrest of Assistant Attorney Daniel V. Miller and August V. Machen, on the charge of receiving bribes from manufacturers who sold the Department certain articles. The evidence in the hands of Mr. Bristow is said not only to prove the guilt of the officials arrested, but to indicate that corrupt practices in this branch of the Post-Office Department are very general and of long standing. Mr. Payne did not seem at first to regard the charges of fraud as at all serious, and gave the investigation only half-hearted support, but after the arrest of Miller and Machen he said, "We shall continue our search until we not only get the men who have done wrong but unearth the defects in the system which enabled them to act as they did." In their attempt to put a stop to bribe-taking and corruption in the office of the First Assistant Postmaster-General, Mr. Wynne and Mr. Bristow have had the full support of the

President, who insisted from the beginning that the investigation should be pushed without regard to persons or politics.

#### The Political Situation

A fortnight ago it looked as if there might be a sharp contest in the approaching Ohio Republican Convention over a resolution to indorse President Roosevelt as the party candidate in 1904. Senator Foraker was outspoken in favor of such action, but Senator Hanna not only privately but publicly antagonized it. Senator Hanna's declaration forced the issue upon the attention of the Nation, and there were not wanting those who assumed that he would not thus commit himself unless confident that the Convention would follow his guidance. President Roosevelt, however, accepted the issue thus raised, and in a statement given out through his private secretary at Walla Walla, Washington, said that while he had not asked any man for his support, "of course those who favor my administration and nomination will indorse them, and those who do not will oppose them." This declaration settled the contest in Ohio, and Senator Hanna promptly and publicly accepted the settlement. Simultaneously the Republican State Convention in Pennsylvania emphatically demanded the President's renomination. So far as actions taken a year in advance can determine anything, President Roosevelt's nomination seems assured. Counting Ohio, sixteen States have already demanded it, and these sixteen control a majority of the National Convention. In the Democratic ranks the current discussion of Presidential nominees is, for the most part, confessedly idle, or at least premature. A serious conflict is going on within the party between the radical faction led by Mr. Bryan and the conservative faction led by Mr. Cleveland, but it is a conflict of tendencies rather than personalities—for probably the leader of neither faction desires the nomination, and certainly the leader of neither could receive it without precipitating a revolt from the followers of the other. To all appearances the Cleveland faction greatly prefers Mr. Roosevelt to Mr. Bryan, and the Bryan faction greatly prefers Mr. Roosevelt to Mr. Cleveland. The party

managers, so far as they are considering nominations at all, are looking for some candidate who can unite the followings of both leaders. The strength which Mr. Roosevelt has developed in the West, as shown by the last Congressional elections, is now leading them to look to the East for a candidate, but their confidence in this direction is weakened by the fact that the solid South, with New York, New Jersey, and Connecticut, is no longer sufficient to elect a President. Delaware and Maryland have become doubtful, and West Virginia, under the influence of the enormous development of its manufacturing, mining, and railroad interests, has become pretty reliably Republican. But even if all these States give Democratic majorities, the increased representation of the West in the electoral college makes the vote of Indiana also essential to Democratic victory. The old combination of the East and the South is no longer sufficient.

**Direct Primaries Triumph  
in Wisconsin**

Governor La Follette, of Wisconsin, after a campaign of education begun by him several years before his first election as Governor in 1900, has at last the satisfaction of signing a direct primary law acceptable to believers in popular control of party machinery. From the beginning of the present legislative session a majority of the House of Representatives has been in favor of accepting the Governor's programme, so specifically indorsed by the Republican State Convention, but in the Senate the faction which has resisted the Governor both on the question of direct primaries and the equal taxation of corporations remained in control, and another aggravating deadlock for a time ensued. It was clear, however, that the Governor had a majority of the Republican party with him, and his opponents, rather than risk another conflict on this issue, finally accepted the Governor's bill, coupled only with the provision that it should not go into effect unless approved by the voters at the general election in 1904. At this election the opponents of the bill hope to kill it by arraying against it the party opposition of the Democrats as well as the factional opposition of the

conservative Republicans. Fortunately, however, the Democrats are as much divided upon the issue as the Republicans, and while direct primaries are opposed by the "conservative" or "corporation" faction which obtained control of the Democratic Convention a year ago, they are warmly indorsed by Mr. Bryan and his supporters. The bill to be submitted to the voters not only provides for the nomination of State, Congressional, county, city, and town officers by direct primaries, at which all the voters of the party have an equal voice, but also for the nomination of United States Senators by the same method. In Wisconsin, as in South Carolina, if the bill is ratified, United States Senators will be really elected by the people—the action of the Legislature becoming as purely formal as the action of electors in choosing the President.

**Illegal Forced Labor  
in Alabama**

Last week United States Secret Service officers arrested Robert N.

Franklin, of Goodwater, Alabama, upon the charge of being a party to a revolting system of enslaving helpless negro laborers. This system consists in securing the arrest of the victims upon trivial charges and their sentence to convict camps, where their labor is desired by contractors. The Washington correspondent of the New York "Evening Post" in describing the system gives the details of a typical instance, which are briefly as follows:

In 1901 a young negro was working for a cotton buyer at Goodwater, Alabama, and had agreed to work for a certain length of time. One day he went into the country about two miles, and while returning to town was arrested for breaking his contract, carried to Goodwater, arraigned before a justice of the peace, and fined, with costs, five dollars and fifty cents. As he was unable to pay or to give security, he was transported to an adjoining county and sold to a contractor for convict labor. He was required to sign an instrument in writing, which proved to have been a contract to work for a year, but as the negro can neither read nor write, and the instrument was not read to him, he had no idea of the plight into which he was putting himself. He is a good farm-hand, and, having served his year and a month or two over, he discovered that his employer had no right to hold him, and attempted to escape. He left the farm, seized a skiff moored on the banks of the Coosa River, made his way across, and took

to the woods. The hounds put on his track, after a chase of two and a half days, caught the runaway. The negro heard the dogs a good many times, knew the voice of each, and felt sure that they would catch him in the end, but he kept on moving till he could stagger no further, and when the pursuing party reached him they took him back to the convict farm. There he received a severe whipping. The form of a trial was next given him at the house of the contractor, and he was sentenced to one year's labor for breaking the contract and six months more for stealing the skiff. He was then compelled to sign a new contract with his employer, agreeing to work till August, 1904. This last contract and the person of the negro are now in the possession of the United States Marshal.

"This case," says the "Post's" correspondent, "is only typical of hundreds of others," and Franklin is only one of many conspirators against whom indictments have been secured. The growing abuse, he writes, was brought to the attention of the Department of Justice by United States District Attorney Reese, at Montgomery, Alabama. In the prosecution of offenders the Attorney-General has been vigorously supported by the Treasury Department, which controls the Secret Service. We are inclined to question whether the revolting system exposed has acquired the dimensions asserted in the despatches, and we are glad to recall that in some of the Southern States the whole system of convict camps has been overthrown by popular indignation with its inhumanity. However, the exposures, if used in no partisan or sectional spirit, will certainly intensify the Southern demand that the care of convicts shall not be turned over to contractors interested only in their exploitation, and lacking even the slave-owner's interest in preserving the health and vigor of the laborers.

**The Presbyterian Assembly** Los Angeles, California, was the General Assembly's meeting-place this year, selected as such with the purpose of promoting the interests of the Church in the Pacific States, particularly in the home missionary field. Distance proved no hindrance; over a hundred car-loads arrived at Los Angeles in a single day. A large number tarried on the way for a Sunday at Salt Lake City, and gained information for use hereafter on the Mormon problem raised in Senator Smoot's

case. Dr. Robert F. Coyle, of Denver, a popular and brilliant minister and a man of large sympathy with movements for the bettering of industrial conditions, was chosen Moderator. The annual sermon by Dr. van Dyke, the retiring Moderator, urged a revival in simplicity, sincerity, and Christian activity. When the report of the Committee on Creed Revision came up, a thronged house showed the unabated interest in the subject which all knew had been finally settled. Before hearing the report the Assembly voted to throw out overtures from two Presbyteries that tended to obstruct proceeding with the revision. The report showed that the opposition to its adoption by last year's Assembly was at the most represented by a negative to any item of it from only five per cent. of the Presbyteries. The action of last May having been ratified by so nearly a solid vote of the Presbyteries, the Assembly finally adopted the report without further opposition. Dr. van Dyke spoke for this with impressive effect amid frequent applause. The Church, he said, had not changed her base, but had broadened it. The next twenty minutes were given to song and prayer. As *The Outlook* said last May, a century of strife, often bitter and lamentable, between two schools of thought in the Church is thus happily ended.

**Creed Revision  
Concluded**

The work thus completed guards the Confession of 1648 against misinterpretation of its doctrine of the divine decrees and of the salvation of infants, omits its hard sayings against the Pope, the good works of unregenerate men, and the sinfulness of refusing lawful oaths, and adds chapters on the Holy Spirit, the love of God, and missions—thus making the Confession more evangelical and devotional. Practically still more important is the new "Brief Statement of the Reformed Faith." While the old Confession still remains technically the standard of doctrine, the new "Statement," professedly merely an exposition of its voluminous articles, inevitably becomes the working creed. As such it virtually supplants the old Calvinism, which has fought against it for a century, by what is unmistakably the new. Among other matters of general interest the race question emerged in overtures from sev-

eral Southern Presbyteries on "Separate Presbyteries for Colored Ministers." This was referred to a committee of seven, including both races in its number, to report to the next Assembly. The movement recently initiated by the Episcopal Church for joint action of the Churches on the subject of Divorce and Remarriage was reported as having brought into conference with them the Northern Presbyterians and Methodists, and as still inviting the co-operation of others. Missionary work received large attention. More missionaries have been sent to foreign fields than in any preceding year, yet not as many as are called for, and debt has been avoided only by restricting operations. The Twentieth Century Fund amounts to over twelve million dollars—the largest ever raised. The leading contributors to it are Pennsylvania, New York, and Ohio, in the order named. A great banquet was spread for the Assembly and guests in a pavilion, where fourteen hundred plates were laid. The next Assembly will meet in Buffalo.

**The Emerson Celebrations** The hundredth anniversary of the birth of Ralph Waldo Emerson was observed in many parts of the country, on Monday of last week, by appropriate exercises; and one noticeable feature, which would have given special pleasure to the Concord poet, was the interest shown in the occasion by school-children. The commemoration at Concord began with a meeting of the school-children in the town hall in the morning, and the exercises consisted of the singing of appropriate hymns and brief addresses interpreting the services of Emerson to young people. There were also recitations from Emerson's poems, and Dean Briggs, of Harvard, made a characteristically clear and suggestive address, the exercises closing with the singing of the Concord Hymn. In the afternoon the First Parish Church was crowded with residents of Concord and with visitors, many of whom had come from a long distance. Addresses were delivered by Samuel Hoar, Professor Charles Eliot Norton, Colonel Thomas Wentworth Higginson, Professor William James, and Senator Hoar. Many aspects of the character

and life of Emerson, as a resident of Concord, as a reformer, as an interpreter of the spiritual laws, and as an exponent of individuality, were presented by the different speakers. In Boston a great audience gathered in Symphony Hall and listened to an address by Senator Hoar and to an ode by Professor George E. Woodberry. Choruses from "Elijah" and a hymn written for the occasion by Mr. Frederick L. Hosmer were sung by members of the Handel and Hadyn Societies. In this city the guests at a dinner given by the Society of American Authors was addressed by President Schurman, Colonel Watterson, Dr. W. T. Harris, and others. On Sunday Emerson was made the subject of sermons in churches of all denominations in many parts of the country, while magazines, literary journals, and newspapers generally have given generous space to personal recollections, to biographic sketches, and to estimates of the genius and influence of the man.

**New York City's  
Two Hundred  
and Fifty Years**

The fact that New York has completed a quarter of a thousand years since it became a municipal entity was celebrated with varied exercises last week. While many people regretted that there was not more of a distinctively popular character in the celebration—a historical pageant or series of tableaux, for instance, could have presented in a graphic way an immensely interesting survey of thrilling or significant episodes—yet there was a reasonable degree of enthusiasm among the people (it is a general rule that the larger the city the less is the enthusiasm about such celebrations), and certainly the official side of the enterprise was well planned and executed. In the two hundred and fifty years of its municipal life New York has grown from a population of less than 1,500 to over 3,500,000, has reached a real estate valuation of \$3,500,000,000, and in every way has attained a commercial expansion of gigantic proportions. More inspiring is the fact, as Mayor Low put it, that "here great events have happened; here great deeds have been done; here great men have lived and labored; and here the fascinating story of the

country's material growth and development can be read in epitome." For the future of the metropolis may well be borne in mind its Mayor's injunction that "the life of a great city does not consist in the multitude of the things that it possesseth; its true life, its higher life, depends upon the capacity of its people for self-sacrifice, and upon their willingness to serve one another and mankind." General James Grant Wilson's brilliant historical oration, and the addresses of Secretary Root, Governor Odell, Bishop Potter, and Dr. Mendes, all tended to a similar recognition of the fact that in peace, order, wisdom, and purity rather than in mere power or riches lies the true value of a great city. It is interesting to note that the official exercises opened with prayer by the pastor of the one city church which was in existence two hundred and fifty years ago—Dr. Wells, of the Flatbush Dutch Reformed Church. Among the celebrations designed for the people at large nothing was more novel and attractive than the stereopticon shows at several points—carried out under the supervision of Dr. Leipziger, Superintendent of the Board of Education lectures. The illumination of the "sky-scrapers" was a feature which could not be duplicated elsewhere, and the decoration and illumination of the city were extensive.

#### Columbia University Needs

The two hundred and fiftieth anniversary of the founding of New York is an appropriate time to bring before the community the needs of Columbia University, which President Butler has presented in detail and with commendable frankness. New York has so far failed to do its duty by an institution which has graduated some of its most eminent statesmen and many of its foremost citizens, including Jay, Clinton, Hamilton, and Hewitt. Columbia is by no means a poor institution, so far as resources are concerned, for its property of all kinds aggregates twenty-one millions of dollars; but a college with great property holdings and apparatus of all kinds but insufficient income is as genuinely in need as if it were largely without endowments. Columbia has great possessions but a very small income, and there is pressing need of a very large addition to that income. It

not only needs more money to spend, but it needs more money to invest. Of the ten millions for which Dr. Butler has called, two millions are needed to secure the South Field, a fine property adjacent to the University, which it is absolutely essential to secure at the present moment; five hundred thousand dollars is essential for a college hall; one million must be spent to complete University Hall, which is to contain the great Assembly Room, a dining-room, and the administrative offices of the University; four hundred thousand dollars are necessary for the Law School, which has five hundred students and has taken its place as one of the first schools of jurisprudence in the country, but which is now very inadequately housed in the library building; four hundred thousand are needed in order adequately to lodge the schools of applied science, which have grown astonishingly since the removal of the college to Morningside Heights; one million is necessary in order adequately to endow the Medical School, which at present is running up an annual deficit of about forty thousand dollars; a million dollars is necessary to provide proper income and equipment for the schools of applied science; and the balance of the ten million dollars, seven hundred thousand dollars, must be devoted to buttressing and strengthening the departments of Greek, Latin, English, and mathematics. Even when this great sum is secured, Columbia University will still be without a chapel, and the department of fine arts will still lack a building. Ten millions of dollars is a very large sum of money, but not too large for an institution of the opportunities of Columbia, and of its importance in a great metropolis which is generously giving money to institutions of learning in all parts of the country. This stream of beneficence which flows to the ends of the continent ought not to be checked; but the money for Columbia ought to be given. The city owes it to the institution and to itself as well.

#### Co-operation Among Fruit-Growers

Apparently it is the farmers in America—and not the city wage-earners as in England—who are to take the lead in the development of co-operation. In addition to co-operative insur-

ance, co-operative creameries, and occasionally co-operative elevators, the farmers are now carrying on successfully, in the East as well as on the Pacific slope, co-operative fruit exchanges. In California these exchanges have been successful for years, and have frequently been described. In the East the experiment is newer, but local associations have been successful in many districts, and a National organization appears now to have established itself. The name of the National organization is the American Fruit-Growers' Union, and the scope of its work, as described for us by Mr. Theodore Dreiser, is briefly as follows:

Before the organization of the Union fruit was sold at haphazard, and is still in some measure sold so. One day in May, 1900, Pittsburgh received twenty-six cars of strawberries when it could only handle five or six. Prices went to nothing, and the growers lost everything. Buffalo at the same time was practically without strawberries. Another day New York received seventy-two cars of strawberries, mostly from North Carolina, and they were sold for less than railway freight—largely to cold-storage houses, which kept them until the North Carolina growers heard of their loss and stopped shipping. . . . The Fruit-Growers' Union was organized to direct the fruit to the best markets. By telegraphic communications its officers learn how many car-loads of fruit are *en route* for the different markets, and they direct the shipments of members to points in which there is no apparent danger of a glut. This danger, however, often develops after shipment, and in such cases cars controlled by the Union are diverted to other points by telegrams to the railroads. When the Pittsburgh strawberry glut occurred, Union shipments were deflected to Buffalo. Such action on the part of the Union, of course, aids and sometimes saves the non-union shippers who have sent their fruit to the overstocked market. The non-union shippers realize this, and are glad to have the Union informed regarding their shipments. Railroads also have been willing to co-operate, and most of them have entered into arrangements by which the central office of the Union at Cincinnati is kept posted regarding the number of cars billed over their lines and the respective destinations.

The Union has agents in each of the principal commercial centers to look after the sale of the fruit, and the organization also endeavors to secure low freight rates and other advantages for its members. But this part of its work had previously been performed and is still performed with a good deal of efficiency by local fruit-growers' associations. The new and important part of the work of the National organization is so to distribute the supply of

fruit coming from all sections that no markets shall be either glutted or bare.

## Back to Nature

During the last two decades Americans in rapidly increasing numbers have been heeding the cry, "Back to nature;" and at this moment, when the country is thinking of its obligations to Ralph Waldo Emerson, it is impossible to overlook the indebtedness of the busy people of this working continent to the little group of men, among whom Emerson and Thoreau were the most conspicuous, who early gave direction and impulse to a movement which has contributed immensely to the health, vigor, and joy in life of the American people. For rest, stimulus, solitude, recreation, men and women are turning more and more to the fields and woods every year; and books about nature and natural life are multiplying with unexampled rapidity. No sign of the times is more significant of the change in American habit than the number of volumes on flowers, trees, shrubs, birds, which are constantly coming from the press. No one, however untrained in out-of-door observation, need remain ignorant of the world of nature. Charts and maps of this great living world are to be found on every hand; manuals of knowledge, based on accurate observation and intelligently and simply arranged, are within every one's reach; all the doors are open, and they who will may enter.

This literature of observation is by no means the only and perhaps not the most important of the many forms of access to nature which are being thrown open to the public in increasing numbers. The trained naturalist may object to any treatment of nature that is not distinctly scientific in its method and spirit; but nature is more than birds and flowers, animals and trees. Nature is a middle ground between God and man; it is the playground of the soul; it is full of marvelous analogies with the life of man; its very breath invigorates the body, its beauty feeds the imagination. The work of the scientific observers cannot be overvalued; but it would be very incomplete without the work of the poets, and very imperfect without the records of those who go to nature, not simply to see, but to feel, to

enter into sympathy with, and to be restored by the life of the world without. One of the most recent of these records, "Walks in New England," by Charles Goodrich Whiting, which bears the imprint of Mr. John Lane (New York), belongs to what may be called the literature of rest and of delight. Mr. Whiting has been an indefatigable student of books, and a tireless editor, whose work on the Springfield "Republican" for many years past has been notable for veracity, candor, and fidelity to the truth as he saw it. But editorial work has represented only half of Mr. Whiting's life; the other half has been spent out of doors. He has lived in the fields and woods as much as, and in a sense more deeply than, he has lived in his library and writing-room; and this latest volume, with its charming illustrations, which bring before the eye the characteristic aspects of New England scenery, is full of the sincerity of a man who writes out of intimacy of relationship as well as out of the fullness of knowledge. Those who think that a book about nature should be a bare record of fact without the atmosphere of sentiment will not follow Mr. Whiting; those who believe that, while science gives the face of the world, poetry gives its countenance—its soul revealed in its face—will turn to books of the quality of "Walks in New England" with a feeling that they are dealing with nature fundamentally if not scientifically, and that they are getting from her something which in a way is more important than exact knowledge.

There is no better approach to truth than going into the fields with the open mind and the quick imagination; no better way of throwing off the cares of life and renewing that spirit of freshness which is the most precious possession of men who deal with problems and questions of all sorts. It is this refreshment, this contact of the spirit with nature, which Mr. Whiting receives and imparts. The gospel of nature that Emerson preached was the gospel of the personal relation of every man to the world about him, and through that world to God. It was the gospel of education by the study of natural processes and the following of the ways of nature. If this was unscientific, then Emerson must be counted

among the greatest of the offenders against science. But Emerson was not unscientific; the view of the true poet is always scientific; for by science one means the recognition of all the facts of nature and not of a single order of facts. No intelligent man undervalues science; but no intelligent man ought to permit an inaccurate and limited interpretation of the word science to stand in the way of proper recognition of the whole range of the facts of life. These facts are facts of the spirit as truly as of the body; they relate to the invisible and intangible things as truly as to visible and tangible ones. Mr. Whiting's volume is a record of contact with nature, not only through the eye, but through the imagination and the emotions. He relates himself to nature as only the man of poetic imagination can. The scientist who lacks this great quality may understand what he sees about him, but a man must have something of the poet in him to make himself a part of nature, to get the joy of its boundless life, to take to himself its deep repose.

Mr. Whiting's book is an example of a kind of writing about nature which is not only accurate but atmospheric; which gives not only the fact but the sentiment of the world of out-of-doors and its healing power on the human spirit. A single quotation discloses this quality: "In the seasonable pause before the storm, though the mists drift over the glens and the sunshine but fitfully gleams on the hills and lights for a moment a forest, all is as the lover of Nature would have it. Was it said that Paradise was lost? But is it not Paradise?—this valley in which, among the bright flames of maples and the ruddy back-log glow of oaks, and in the viburnum thickets with their purple-grays and the spice-bushes with their garnered sunlight—amid these and so much more, the birds of June are flocking—bluebirds and robins, flickers and jays, juncos, chickadees and phœbes, mountain sparrows, and now and then a chipmunk—are flocking and sometimes warbling. Surely this is a valley of Paradise, where none has yet entered to molest or make afraid. Into the valley flows a flood of heaven; out of it flow the streams of healing for the discomforts of civilization. Nay, why are not the four rivers that watered Eden here? or streams as good—since from

such a spot must diverge influences that keep earth alive."

## Should Unions Incorporate?

The first issue of the "National Civic Federation Monthly Review" contains an extremely important symposium upon the question whether trades-unions should incorporate. The opinions printed are the well-considered views of men who have a right to speak upon the subject—leaders of thought and action, representing, first, employers; second, employees; third, the general public; and, fourth, the members of the bar. Summing up the discussion in its broadest lines, it may be said that the employers, with several exceptions, favor the incorporation of the unions; the wage-earners, with fewer exceptions, oppose it; the representatives of the general public are more evenly divided, but, as a rule, think incorporation unwise for the unions under present laws; while the members of the bar, dividing somewhat similarly as to the wisdom of incorporation, are practically a unit in declaring that even without incorporation unions may be held legally responsible for any wrongs they inflict.

The argument of employers for the incorporation of trades-unions is substantially the same in all the opinions. The incorporation of trade-unions, it is argued, and the consequent liability of the orders to damage suits, would make them more responsible and more conservative. "If," says Mr. Eidlitz, the head of the new building trades employers' federation in New York, "a union felt that its treasury and standing might be jeopardized, it would tend to make it see that its actions were strictly within the law." "Conservatism," says General Manager Kruttschmitt, of the Southern Pacific Company, "must necessarily follow responsibility, and, however this can be brought about, whether by incorporation of the unions or by decisions of the courts against members, I am firmly of the belief that establishing the principle that a party inflicting an injury must pay the resulting damages will confine the efforts of labor leaders to their legitimate functions and will discourage the present practice of declaring

actual war on persons and property as soon as any contention arises on any industrial question."

Of the employers who do not advocate the incorporation of trades-unions, Senator Hanna takes the position that incorporation is unnecessary to make unions keep their agreements, and President Callaway, of the American Locomotive Company, takes the position that incorporation promises few benefits and that the thing needed is fair-minded men to represent both unions and employers in their conferences. One employer, however, E. F. Du Brul, Commissioner of the National Metal Trades Association, declares that incorporation would not increase the responsibility of the unions and would probably relieve their members of their present personal liability.

The objections offered by trades-unionists to incorporation are many and varied, but usually center about two points: (1) fear of litigation; (2) distrust of the sympathies of the judiciary. President James M. Lynch, of the International Typographical Union, puts both of these points succinctly in the following sentences: "It would take a trade-union antagonist with money at his command but a short time to wreck a labor organization through judicial procedure. . . . Where the toiler is able to contribute one cent, the corporation can without strain put up a dollar. We must continue to depend upon public sympathy and public support, and not on courts, the course of which in the past displays corporation and capitalistic sympathy, if not dictation." Secretary Henry White, of the United Garment Workers, in urging the same points, cites the experience of his own organization when it has appealed to the courts. "Our own National union," he writes, "has hundreds of agreements with manufacturers in which bonds were given to insure their faithful performance, and in every case where the union sued for the forfeiture of the bonds it failed, although the violation of the contract was not questioned. It was held by the courts that the agreement was not valid because obtained under duress, that the employer was not free to refuse to sign the contract presented, as it would be impossible for him to continue in business otherwise." President Daniel J. Keefe, of the Inter-

national Longshoremen's Union, concludes his opinion with the declaration that "more ample redress is obtainable to-day for damages where liability of labor organizations can be proved than can be hoped to be obtained by labor organizations where corporations have violated the law."

The fear of litigation expressed is not merely the fear of suits directly instituted by employers, but of those instituted by dissatisfied members of the union. This point in a most striking fashion is urged not only by unionists, but by representatives of the general public and of the bar. Mr. J. W. Sullivan, of the New York Typographical Union, writes that the union is now a "big, self-governing family," which settles all its internal disputes according to the will of the majority. Incorporation would "admit non-kinsfolk at the head of the family table." Mr. George Fred Williams, of the Boston bar, writes: "As it is now, trades-unions are domestic bodies depending upon the immediate and ready willingness of their members to act in union. . . . Incorporation of trades-unions would be fatal because it would take away the democratic character of the organization." Mr. Frankenheimer, of the New York bar, says that he would no more advise a trades-union to incorporate than he would advise the New York Stock Exchange to incorporate. The courts have repeatedly held "that their power over voluntary associations was not as great as it is over corporations. Were a trades-union to be incorporated, every member who may have been disciplined, suspended, or expelled would appeal to the courts for redress, and the organization would be constantly embroiled in litigation of this kind. Moreover, sinister influences might be brought to bear upon a sufficiently strong minority to justify interference by the courts in the internal affairs of the association, if incorporated, which would not be justified, however strong the minority, if the association were a voluntary one."

Dr. Adaona Weber, of the New York Labor Bureau, who writes of the subject with perhaps the largest knowledge of any individual contributor, fears the same result, unless the law for the incorporation of the union distinctly relieves it of responsibility for the unauthorized acts of individual members. "The field," he

writes, "for intrigues between designing employers and avaricious members would be very large. The unions might find it impossible to maintain any funds whatever, and that would of course spell the death of unionism and of collective bargaining." Indeed, Dr. Weber's opinion upon this point and that of the lawyers in warmest sympathy with trades-unionism practically sustains the position taken by President Perkins, of the International Cigar-Makers' Union, who sums up the attitude of one of the best-managed unions in the country as follows:

We object to being placed in a position where we cannot do business that is strictly lawful without the consent of the judiciary. We will never incorporate until our legal status is well established and laws enacted that fully protect the rights we have secured as the result of years of trade-union activity. If we were incorporated, a board of directors would have a legal right to transact all of our business between conventions. We are too jealous of our liberties, our rights, and the initiative and referendum to surrender them to a board of directors, even if it was composed of angels.

This brings us to what may be called the constructive part of the symposium. Under the present laws, the unions are practically a unit against incorporation—though the Knights of Labor and a few minor unions have incorporated. The representatives of the general public are practically a unit in declaring that incorporation should not be forced upon the unions. As President Eliot, of Harvard, expresses it, "I am not in favor of compulsory incorporation for unions, or for anybody else, because incorporation is to my mind a privilege, and not a duty to which the people should be forced." Nevertheless, among the representatives of the general public, as well as among employers, there is a strong sentiment that unions to-day exercise too vast a power to remain irresponsible, and that incorporation would increase their responsibility, and enable the public to prevent acts hostile to the public welfare. What is needed, therefore, is, on the one hand, the holding of unincorporated unions liable for the damages they inflict, and, on the other hand, the offering of terms of incorporation as favorable to labor unions as are the present laws to unions of capitalists. Along the first line of action, Mr. F. J. Stimson, of Boston—the highest

authority on American statute law and American labor laws—writes that no new statute is needed in this country to prosecute unions for damages inflicted by their illegal acts. So far as damages for such acts are concerned, he writes, "the dangers of incorporation are certainly no greater than at present." The unions, says President Eliot, are likely to desire incorporation if under present laws they are held strictly accountable for their acts. But it is agreed that unions should not be forced to incorporate under the same laws as business corporations. New statutes should be framed. Mr. Henry D. Lloyd, speaking from his Australian observation, writes: "The trade-unions of New Zealand and Australia have incorporated almost universally, because by doing so they have been given valuable privileges, such as the power to hold real estate, sue members for dues, punish officers—most of all, to secure arbitration in case of dispute with employers. If the leaders of the American world desire our trade-unions to incorporate, let them offer them inducements which will make it worth their while to do so." Mr. James A. Miller, the Chairman of the Legal Committee of the Building Contractors' Councils, makes a suggestion along a similar line. He writes: "A law might pass the scrutiny of the courts that would make criminal certain acts done by a combination (unincorporated) that would not be so if done by a corporation having capital stock, or, perhaps, having bonds on file with the Secretary of State that could be reached for damages. In this way the unions might decide it to be to their advantage to incorporate." Apparently in a hundred ways an incorporated union, financially responsible for its acts, might be relieved from processes now directed against its officers and members, upon the ground that suits at law could afford no relief to those injured by their action. All laws on this subject must be drafted with extreme conservatism, and the final statute must be a growth rather than a creation. But the time for considering new legislation is certainly at hand. Great organizations, whether of labor or capital, cannot safely be allowed the unregulated power which is safely allowed to individuals or even to petty partnerships and associations. For the supremacy of our democracy, trades-unions

and trusts must be brought under the oversight and control of law.

## For a Moral Revival

The founders of Massachusetts were wont to require a sermon to be preached on the day of the annual election by some minister appointed by the Governor in Council. This was their way of expressing the conviction on which they based their republican Commonwealth, that a free State must be grounded in a religious concern for civic and political righteousness. But in the necessary substitution of our representative democracy for the pure democracy of the colonial town-meeting—legislation by chosen trustees for the people instead of the original legislation by the people for themselves—that early conviction has decayed, and the moral foundation of the State has decayed with it; citizens in devoting themselves to private interests have forgotten or abused their public trust.

Commercialism in politics, with its characteristic venality, and the decadent civic spirit which at once satirizes it and tolerates it both in municipal and State administration, have long been a matter of notorious infamy, in the eyes of civilized nations our National shame and reproach. The details of this political profligacy that have been published during the last six months have at length burned into the conscience of the churches a conviction of the moral danger threatening the National life, and of their own duty to sound the alarm and urge the remedy. Encouraging notes of the awakening conscience demanding a moral revival and reformation have been sounded recently in various branches of the Church, and it is none too soon.

The Wilmington Methodist Conference has the honor of leading off in this return to better conditions. At its meeting in Easton, Maryland, three weeks after the conclusion of Mr. Kennan's exposure of the carnival of bribery in Delaware, it adopted resolutions of censure concluding with this strong note of abhorrence: "We therefore admonish all our people that any one guilty of this shameless crime stands discredited before the Church, contemptible in the eyes of his brethren, and condemned in the sight of God."

The Congregational Association of New

Jersey, meeting a month later, spoke next. Its resolutions at Asbury Park set forth "the danger which confronts the Nation through the lowering of the standard of civic righteousness, as recently revealed in confessed bribery, vote-buying, and other forms of corruption." Censuring these as disloyalty to the Nation, it urges the churches and pastors to throw their influence against it, and to earnestness in "striving to raise the ideals of political thought and life."

Two weeks ago the moral degradation of Rhode Island politics, and the responsibility of Christian citizens for its moral regeneration, were the main theme of Bishop McVickar's annual address to the Episcopal Convention of that State. He commented freely on recent revelations of political conditions in many small towns of the State and on the corrupt character of the political machinery of the State. He declared that, in his belief, the very foundations of the American heritage of popular government were at stake, and that it is the bounden duty of the Church to sound the alarm. He affirmed that the political machinery by which Rhode Island was governed was not only rotten, but flagrant and defiant, and its effects on the community were everywhere evident. "It is bad enough," he declared, "to be badly governed; it is worse to know that the laws which are to be made and the offices for their administration are spoils and loot to be acquired at a price in the interest of any party or any scheme, no matter how selfish or evil may be its aim; and that all chance for the expression of the popular conscience or popular right through the ballot—the one practical method apart from revolution—is either prevented or choked. The very worst feature of the whole business is that the great mass of the people are so accustomed to it, or else so hopeless of anything better, that they do not rise to their duty." This is the worst feature of the situation. In all parts of the United States we have become so familiar with corruption in our political methods that it no longer excites indignation. We have grown callous in regard to it; and when Bishop McVickar went on to declare that the prevailing sin of the land is its exorbitant estimate of the value of money, he went to the root of all evil. All politi-

cal evils are largely due to the dominance of the commercial instinct in public affairs.

That same week equally significant voices were heard in two other States.

The Congregational Association of Massachusetts, in its annual meeting at Great Barrington, declared that the moral sense of the Nation was surprised and shocked by the "recent revelations of political venality and corruption, even in the historic commonwealths of New England." It frankly attributed this decadence "in part to the cowardice and lack of fidelity of the public teachers of morals, whose duty it is to rebuke sin and warn of its consequences." Insisting on the supreme importance of a pure ballot and honest administration, it enjoined on pastors and churches "the faithful use of all proper means to exalt the highest ideals of civic responsibility and public fidelity."

The Congregational Association of New York, meeting in Brooklyn, in view of "the shameless enormities" of political corruption, considered the situation in some detail. Existing laws were not enforced, and better laws must wait till dormant public opinion is fully roused. Even church members were acquiescing in low standards of political morality, deplorable in the form of blind partisanship, or in that of unquestioning contributions of money for party purposes, or that of neglecting elemental civic duties. The country, said the Association, has a right to look to the churches and their ministers for the awakening of the public conscience. Churches of Puritan heritage are confronted with ominous facts of political degradation, and must speak out in rebuke, in warning, and in encouragement. They must take a closer interest in the public men and measures within their spheres of influence, must fraternally co-operate with all organizations striving for the public good, and labor fearlessly and constantly for higher ideals of civic and political righteousness.

These closely consecutive and simultaneous utterances The Outlook welcomes as a sign of the turning tide. Nothing like it has been heard from American churches since the time, nearly fifty years ago, when Missourians swarmed into Kansas to carry the Territorial elections by force and fraud for the extension of

negro slavery. The churches that have thus spoken on the present moral crisis have raised a standard for all other churches to rally to. Last September The Outlook took occasion, from Professor Ladd's criticism of the moral condition of the churches as "relatively low and nerveless," to urge God-fearing men to get together to confer about the common salvation, and initiate the moral revival needed by a torpid public conscience. It is most encouraging to find this already begun. To follow up this beginning seems especially urgent in view of the multitude of young men coming into citizenship in a time of lax public virtue and amidst depraved political ideals, and requiring instruction in civic morality no less than in the personal morality of the Ten Commandments. The unanimity with which the Congregational churches insist on raising the ideals of citizenship is significant. Ideals inspire motives. Ideals determine conduct. To present to young men a high and pure ideal of the citizenship required for the permanent freedom of the free State is work which the Christian pulpit cannot safely neglect, if it would develop Christian manhood.

## Was Jesus Christ a Jew?

Reference was lately made in The Outlook to a recent address by Rabbi Hirsch, of Chicago, in which he declared that "if Jesus Christ should return to the earth to-morrow, he would be welcomed in every Jewish synagogue in the land," and claimed that those things which we are accustomed to associate peculiarly with Christ's teaching were taken from Jewish writings. A correspondent writes to ask us how far and in what sense this is, in our opinion, true; and if true, why should the Jews have put Jesus to death?

Answering this question in a single sentence, we reply that the relation of Judaism to Christianity is like that of the blossom to the fruit for which it prepares, and to which, in the fullness of time, it gives place. Judaism is Christianity in blossom; Christianity is Judaism become fruit.

Judaism was a well-defined theological, ethical, and sociological system. Without attempting in a paragraph to define it

fully and accurately, it may be said to have included the following elements. Theologically it was the doctrine that there is one God, a righteous Person, who demands righteousness of his children, and who demands nothing else. He has made man in his own image; therefore we are to look for the reflection of God in human experience. Ethically it was the doctrine that every man should reverence God, honor his parents, respect his neighbor's rights of person, property, the family, and reputation, and should do this spontaneously, not merely from fear of penalty or hope of reward. Sociologically it was that the State is a divine organism, that law is divine, that justice consists in conformity to this divine law, that God is no respecter of persons and therefore a just State will be no respecter of persons, that all, rich and poor, wise and learned, priest and laymen, are, or ought to be, equal before the law. There was a priestly class, but it enjoyed no special privileges. There was a sacrificial system, but it was simply a method for the expression of spiritual experience, and was optional, not obligatory. While there was high church and low church in Jewish as in all other history, and while there are passages in the Old Testament which may seem inconsistent with this confessedly brief and imperfect definition of Judaism, we think it covers the essential principles of the system, as it is found in its most primitive form in the Ten Commandments, and in its more developed form in the books of the Prophets. Coupled with this system—theological, ethical, and sacrificial—was the teaching, running all through Israel's history, from the earliest traditions contained in Genesis to the last verse of the last chapter of the last prophet—that One was coming who would deliver Israel from her bondage and would bring in an epoch in which these principles would be victorious. This Deliverer, differently described by different prophets, was known by the Hebrew term Messiah, and the golden age to which Israel was constantly told by her prophets to look forward was known as the Kingdom of God. To understand in fullness the teaching of Jesus Christ these facts should be borne in mind.

For Jesus Christ was a Jew. He

accepted the Jewish system. He was charged in his lifetime with undertaking to subvert Judaism, and he explicitly denied the charge. I have not come, he said, to destroy the law or the prophets, but to fulfill them. He assumed the truth of the Jewish theology, of its ethics, of its sociology, and he applied and developed them. The Psalmist had said, "Like as a father pitieth his children, so the Lord pitieth them that fear him." Christ plucked this text from the ancient Psalter and in his hand it blossomed into the parable of the Prodigal Son. The ancient code had said, "Thou shalt love thy neighbor as thyself." Christ interpreted it to mean that the heretical Samaritan who at some personal sacrifice rendered service to a suffering stranger was more loyal to God than the orthodox priest and Levite who passed by. The ancient prophet had said, "Thus saith Jehovah, To this man will I look, even to him that is poor and of a contrite spirit, and trembleth at my word." Christ translated this saying into the parable of the Pharisee and the Publican. The law of the ancient commonwealth had forbidden all class and caste distinctions under the law and before the courts. Christ developed this doctrine of civil equality into the spirit of fraternalism, in the saying, "All ye are brethren." Theologically, ethically, sociologically, Christ assumed the truth of Judaism, and gave to it a clearer interpretation and a new life. All the theological teaching of Christ is implicit in the one hundred and third Psalm: "Bless the Lord, O my soul, and forget not all his benefits: who forgiveth all thine iniquities; who healeth all thy diseases; who redeemeth thy life from destruction; who covereth thee with loving-kindness and tender mercies; who satisfieth thy mouth with good things; so that thy youth is renewed like the eagle's." All the ethical teaching of Christ is implicit in the declaration of Micah: "What doth the Lord require of thee, but to do justly, to love mercy, and to walk humbly with thy God?" All the sociological teaching of Christ is implicit in the Deuteronomic code: "Ye shall not respect persons in judgment; but ye shall hear the small as well as the great."

Why, then, if Jesus Christ taught a pure Judaism, was he put to death by the Jews?

We answer our correspondent's question by asking him another. Why has there ever been religious persecution? Why was Gideon threatened by the mob, and Jeremiah conspired against by the courtiers? Why were Savonarola and Huss and Tyndale put to death by professing Christians? Because in all ages of the world men have clothed themselves in the garments of religion and taken the offices of religion to destroy religion. Because in Christ's time the Jewish Church was corrupt, as in Savonarola's time the Christian Church was corrupt, and the corrupt church hates the reformer and the purifier. Because judgment must always begin in the Church of God, and when the prophet bears witness within the precincts of the temple against the falsehoods of a corrupt priesthood, the corrupt priesthood destroy him if they can. The chief priest's answer to our correspondent's question has been recorded by the Evangelist: "If we let him thus alone, all men will believe on him: and the Romans shall come and take away both our place and nation."

What, then, did Christ add to Judaism? Anything? Yes. Much.

Christ added breadth. Theologically, ethically, sociologically, Judaism was racial; Jehovah was Israel's God; the Golden Rule was operative between Jew and Jew; and it was in the Jewish State that there was to be no respect of persons. Christ's theology, ethics, sociology, was human, not Jewish. Jehovah was the Father of mankind; love was due to and given by the Samaritan, member of an alien race; brotherhood included Gentile as well as Jew. Christ added life. Partly by the form of his teaching; partly by the breadth of his teaching; partly by his clearer vision and his more vivifying faith; partly by the fact that he lived that faith as it never had been lived before; partly by the fact that he died for it; partly by the fact that the power of the life, interpreted by this teaching, was manifested by his resurrection from the dead; but most of all by his own personality. What he was far exceeded all that he taught. Christianity is Judaism plus Jesus Christ. He added fulfillment. Judaism had promised a Kingdom of God yet to come and a Messiah yet to bring it upon the earth. The message of Christ's first preaching was that this very anticipated Kingdom of God was at hand.

The burden of his first teaching was an interpretation of this Kingdom of God—its nature and the method of its development, its conquests, and its victory. In his first sermon at Nazareth he read from the Old Testament a prophecy of this kingdom and declared that he had come to fulfill it. In almost his last utterance, when on trial for his life, he repeated under oath that he was the Promised Deliverer. "The High Priest said unto him, I adjure thee by the living God that thou tell us, Art thou the Christ, the Son of the Blessed? and Jesus said, I am." What gives to Christianity its power is this faith of the Christian Church that the Deliverer has come; that his Personality is attested by his character; his Power, by his resurrection; his Presence, by the history of Christendom. In its theological, ethical, and sociological teaching Christianity differs from Judaism chiefly in being broader, clearer, and more vital. But the great difference between the two faiths is that what Judaism promises Christianity is fulfilling.

## The Spectator

While the Spectator was listening to a sermon in a leading city church—one with whose congregation he is, through frequent visits to the city, almost as well acquainted as with that of his own church—his ear was caught by a once familiar phrase, as by an unexpected reminder of a long-departed friend. "Who of us," asked the preacher, "has not known some young man whose downward career began when he accepted his first glass of sparkling wine from the jeweled hand of beauty?" The challenge of the question was the more peremptory as it was thrown in as an aside by way of illustration, temperance not being the topic of the sermon. So the Spectator made a hasty inventory of the wrecked careers among his own friends and acquaintance, without recalling one that answered to the description. The "social glass" could indeed be held responsible for two or three of these ruined lives, but with each it was a case of good fellowship at the club or elsewhere, with its demoralizing "treating habit." Running his eye over the principal pews on the main aisle—luckily for the

purpose, the Spectator was seated in the gallery—he could count but five families whose custom it was to serve wine at dinner. In the case of two of the five he was sure that the wine was always mild claret when the guests were young men.

The point that most interested the Spectator was not, however, that the preacher chanced to accept and pass on a bit of conventional rhetoric at its face value, for that is something to which we all must at times plead guilty. Rather, he became interested to discover the origin of the rhetoric, the original of Eve the Temptress of temperance literature and tradition, once so familiar a figure of tract and exhortation. Probably his older friends will readily recall that original, but the Spectator did not identify her until late on Sunday afternoon. As she then came to him, she was none other than the young woman at whose home, thirty years or more ago, wine was served to New Year's Day callers. Of course she was attired in her bravest, not forgetting all of her rings, and the champagne she offered was literally "the glass of sparkling wine from the jeweled hand of beauty." The Spectator well remembers the strong protests then made against this insidious custom, confined by no means to total abstinences, and grounded on obvious dictates of ordinary good morals. Very probably the preacher had in mind as he spoke the sad career of some ruined young man whose first case of excess dated from progressive drinking at the homes of his friends as he made his round of New Year's calls. The preacher forgot how completely the custom has died out, and how little the phrase, once apt, fits the habits and special temptations of modern city life.

This unnatural vitality, if that it can be called, of a rhetorical image is a commonplace of experience in the case of phrases, but more especially words. One of the Spectator's presents last Christmas was a "Slang Dictionary," and he was surprised, on looking it over, to see the numerous words it contained whose original meaning and even derivation had been wholly lost. Almost every one has noted how adjectives—"awful" is a good example—

degenerate when adopted into the vernacular for every-day use; this to the great impoverishment of the language, since it is thus robbed of the right word to express the feeling the word properly expresses. It is this which justifies the stylists in what many would call overnicety in picking and choosing their words, as if style were a classical cult and not the art of giving distinction to the expression of a thought, often by the choice of the simplest words. The Spectator chanced on an illustration of what he means in an aside of one of Thomas Bailey Aldrich's "Atlantic Monthly" papers. Mr. Aldrich, in discussing Mr. Howells's blank verse sketch, "The Mother," said of it: "I should call the effect 'weird' if the word had not lately been worked to death." The form of this apology reminded the Spectator of one of the first compositions he read as a college freshman. The subject was "Procrastination," and the writer began: "I will not repeat the old adage, 'Procrastination is the thief of time,'" and then paused. Even the solemn professor joined in the general laugh at the writer's ingenuity in getting the adage in while leaving it out.

The care of the conscientious stylist does not, however, stop when he finds that a word is becoming hackneyed. He guards as closely against his own individual overuse of a word as against choosing a word of general overuse. There is a story told of Emerson by the late Edwin Percy Whipple which has always seemed to the Spectator to put the point perfectly. Mr. Whipple had attended a lecture by Emerson in a town a few miles out of Boston, and they drove back together. "As soon as we got into the chaise," writes Mr. Whipple, "I began to speak of the lecture, and, referring to what Emerson had said of the Puritans, I incidentally alluded to the peculiar felicity of the use of the word 'grim,' and added that I noticed it was a favorite word with him in his published essays. 'Do you say,' he eagerly responded, 'that I use the word often?' 'Yes,' I replied, 'but never without its being applicable to the class of persons you are characterizing.' He reflected a minute or two, and then said, as if experiencing a pang of intellectual

remorse, 'The word is probably passing with me into a mannerism, and I must hereafter guard against it—must banish it from my dictionary.'"

Paradoxical as it may seem to some of his friends who have not thought of the matter, one of the services the newspapers render the language is, the Spectator believes, the material aid they give in banishing overworked words and phrases from the general dictionary. Indeed, the descriptive press writer who resorts to the commonplaces of rhetoric is known in the slang of the profession, so the Spectator is informed by a journalist friend, as "the 'dull-thud' reporter." Often the laudable but misdirected effort of the reporter to say a thing in a way in which it has never been said before leads to remarkable results. One such result, clipped, not from some over-ambitious, far-Western paper, but from a carefully edited journal of a leading New England city, has had for some time the place of honor in the Spectator's pocketbook for exhibit on occasion as a curiosity of anticlimax: "With the cyclopean eye of a murderous-looking 32-caliber revolver staring at her within a few inches of her forehead, while behind the weapon gleamed the optics of a man, it is claimed, whose every word is said to have been a threat to bore her skull with bullets, Catherine Goff gave voice to scream after scream."

So much has been made, with more or less truth, of the demoralizing influence of "newspaper English," that it is only common justice to give the newspaper any modicum of credit to which it may be entitled. But how far is "newspaper English" demoralizing? This is certainly an open question, with so eminent an authority as Professor Lounsbury among the doubters. Only the other day, during a chat about the matter, he said to the Spectator: "The constant talk about the supposed corruption of the language is pretty nearly a case of perpetual twaddle. At different periods different persons have been held responsible for it. Just now it is the newspaper, which, as a matter of fact, absorbs a large share of the best writing talent of the country."

CORNER OF THE GROUP OF "THE SUBSTITUTE"

## A Sketcher's Vacation in Shottery

By Jane B. Reid

Illustrated from Water-Color Drawings by the Author

**O**n a corner near Anne Hathaway's cottage there stands a large red farm-house which ought to be a landmark of beauty in Shottery, but is not. Its outlines, to be sure, are clumsy

and lack variety, but they have one essential—repose; and underneath that uniform red wash, divided into artificial bricks by white lines, lies, no doubt, all the variety of surface necessary to redeem it from its present commonplace—namely, the uneven patches of "wattle and daub," braced by sagging timbers and mended here and there with pinkish bricks, such as are found in other houses of the village, and form the chief beauty of The Cottage itself. Strangers who pass this house will never give it a second glance. Yet it belongs to Shakespeare's time, without doubt. There is a fascinating flagged and raftered kitchen in the rear, and upstairs the most beautiful

and spacious chamber to be found in the whole of Shottery. It is a square room with an "ell;" its ceiling is the high corner gable of the house, rising dim above a network of age-blackened rafters, with a churchlike effect, enhanced by the mellow light falling through diamond-paned lattices across the deep-red drugget on the floor. It holds, besides the usual furnishings of a bedchamber, a huge desk and three extra clothes-presses, and still there is room for an unobstructed promenade across the entire space in two directions. Through the windows you may see the trees and gable-ends which mark the three scattered clusters of cottages forming all that is left of old Shottery.

Early in June the owner of the Red House offered me this room for a fortnight, and a few hours later I took possession of it, with only one regret—that I had left Stratford without having heard the nightingales in Trinity churchyard. They were there—others had heard them—and they

were not everywhere. My landlady, dismissing me to the churchyard wall at night, had said, "They begin with three distinct notes, something like this: 'jug—jug—jug;' you cannot possibly mistake them, they are like nothing else." But their voices had been silent for the stranger. So I took possession, as I supposed, of the room in the Red House. In less than an hour it was apparent that this was a mistake. My presence had made no impression upon it. Its individuality was infinitely stronger. I be-

the past, it is true, in very shameful modern fashion. It is shocking to see a well-dressed little English girl running by the side of the visitor's carriage, her hand on the door, ready to open it for a penny. And at Anne Hathaway's gate stands a little maid just sent by her mother from a neighboring cottage, with a fresh rose in her hand, waiting to offer it and a curtsy to the newcomer—for a penny. Americans encourage this beggary. From a false sense of shame, sometimes—an anxiety not to be thought mean. Perhaps

"THE COTTAGE" FROM THE GARDEN

longed to the room. It was like sinking back into the arms of the nursery after the bufftings of years. I, and all the people of the farm, were nothing but children under the protection of the Red House.

As the days went by, it amused me to fancy the whole life of Shottery as dominated in a way by its Red House of the past. The people may be poor or ignorant, but their faces show health and a contentment which is not mere stolidity and absence of ambition. They are guided by a philosophy which did not originate with them nor with their immediate forefathers. They are living upon

more often from sentiment—the rose came from Anne's garden, they imagine, and the little maid and the curtsy seem a pretty survival of the past. One visit, all that the generality of people make, is not enough to dispel the illusion. It is the person who stays for weeks in the place, and sketches for hours at a time in front of The Cottage, who begins to shrink from the sound of soft, musical voices calling, "Here's another carriage!"—the r's prettily trilled, the last syllable lifted five notes above the first; who tires of being offered, for a penny, the heads of flowers hastily nipped by school-child-

"THE SUBSTITUTE"

WHERE SPIKES OF LARKSPUR STRUGGLED BETWEEN  
BROKEN FLAGS

dren from the roadside, or to "s'y you a piece of poitry 'baout Shoikspeare, lydy." And yet there are times when the Shottery children will pass you as if they had never heard of a penny. And this not because of any particular business on hand, though you will sometimes see two or three of a group of little girls knitting as they walk linked arm in arm in a long line across the road. They are merely enjoying themselves in other, older ways at present. It is the influence of the Red House. Even the little tot of the rose and curtesy finds time to drop a flower, gratis, on the easel of the artist-lady.

As I have said, my windows looked out only upon old Shot-

tery. But there is a newer part. Roughly speaking, the village consists of three estates of some importance, all but completely hidden behind high walls and shrubbery; perhaps the same number of considerable farms; a small, new church; a few rows of modern brick tenements; and the three groups I have mentioned of timbered and thatched—or tiled—cottages. There are two schools, a post-office, a tavern, and a blacksmith-shop—that is all of a public or business character. The modern, beautifully kept roads have done their best to deprive the old cottages of picturesquequeness, but without success. There is still an unpremeditated look about their setting—here a cottage below the road, from which one must descend by steps to a steep, winding path bordered with roses and larkspur; there a group with its shoulder turned, as it were, to the road, hiding from view the old foot-path still leading to it, along the brook, on the other side. The sketcher, of course, cares only for this region, and naturally he begins with The Cottage. He usually takes it first from the road, next from the copse above the road, and last from the garden. The copse stage is the most interesting, from several points of view. In the first

POPPY GARDEN IN THE GROUP OF "THE SUBSTITUTE"

A CORNER OF "THE BARRACKS"

place, you may rest your eyes, in the intervals of work, upon a gently rising meadow which comes to an end opposite the Red House, and may please your fancy by the thought that the tiny stream winding round it is in all probability following much the same path it followed centuries ago—that possibly even the osier-beds along the banks are survivals of those which lent the “wattle” for the formation of the ancient village. Then there are the sights and sounds from the road below you, from which you are only partly screened. Sometimes it is the voice of infant Shottery, singing “Swe-e-e-t Rowsy O’Gri-i-dy” in accompaniment of the blind man before The Cottage gate. But chiefly it is the visitors that attract you. There are all sorts, some whom it is not easy to account for even when you remember the cheap excursion rates that tempt all elements from the neighboring towns. The poet and the scholar are expected, as a

matter of course, and the wealthy or serious-minded tourist. Hilarity you can account for. But misery and ignorance and discord come here too, and even tragedy. It all comes up to you, in broken snatches of talk, from the road. On the whole, you slip away from the copse some morning, glad that your work on *The Cottage* is done.

The largest and most compact of the three groups of old Shottery lies beyond *The Cottage* and aside from the usual lines of travel. The natives call this group the Barracks. No doubt the long rows of cottages suggested the name, but they are set at such picturesque angles, so redeemed from monotony by irregular and sagging roof-lines, so smothered in blossoming vines and tangled garden-patches, that it is no wonder the spot has become the haunt of artists. The poorest people in Shottery live there—it is even said to hold a rough element. I never found them less than kindly, and their

A GARDEN IN "THE GROUP BELOW THE ROAD"

"THE COTTAGE" FROM THE COPSE

pride in their bits of garden, where spikes of larkspur struggled between broken flags, was as great as that of the more prosperous proprietors of the gardens in the Group below the Road—or even of old Mrs. Knight, who occupied the prettiest end of a cottage in the third group, which I nicknamed the Substitute.

"Many people think my cottage as pretty as Anne Hathaway's," the old lady said to me proudly one day. She did not know, as I did, from having observed the signs from my distant lattice, that many people never get beyond the Substitute at all. They come over hurriedly, between trains, with no time to see anything but the exterior of The Cottage, and they cannot all be met at the end of the field-path, as I was, by a little girl picking buttercups, who looked up—under the spell of her Red House—to sing at me:

"This is the w'y to Anne Hathaway's cottage! Gow str'ight daown the lyne and turn to the roight!"

Old Mrs. Knight, when I came to sketch

the Substitute, was hospitality itself. I might go anywhere, do anything. She took me in to show me a sketch, given her by an artist who considered it a failure, but of which she herself was very proud. And she begged me (at intervals, as I worked) not to tear up any failures I might make, as she would be only too pleased to have them. She came out so often that I began to lose confidence. It was a relief that she was out on an errand when the thing was finally done, so that I could get away without showing it to her. A few days later I took Mrs. Knight a copy of the sketch. The original had not seemed to me a great success, and I presented the copy with some diffidence. "It is not very good," I said, "but I wanted you to have it because it takes in your end of the cottage, which your other sketch does not." To my surprise the old lady looked nonplused, and I left her finally, with a painful impression that something was wrong. She presently followed me out to the road, where

OSIER WANDS AND ELDER

I had set up my easel, to offer me, in some agitation, the freedom of her garden—of all the neighbors' gardens—as often as I chose to come. She went back, and then her husband came out to say that I might have fresh water at any time from their well. What did it mean? Had I been lacking in delicacy in not presenting the sketch as a failure? Was it taken as payment for hospitality freely offered? I shall never know. Possibly I was altogether too self-confident, and Mrs. Knight's agitation may have risen from the fact that she had failed to recognize her end of the cottage. I know that she did no more work that day. She presently came out with her bonnet on very much awry, and something square tucked under her shawl, and did not return for many hours. Whether she went in to Stratford to show the picture to friends, or to try to exchange it somewhere for a pound of tea, still remains a mystery.

That night was my last at the Red House. I sat long at the lattice overlooking the meadow, listening to the familiar interchange of question and answer in the road below: "I beg pardon, but can you?"—"At the end of the road, sir." "Oh, can you show me?"—"Yes, at the end of the road." "Please tell me?"—"Yes, ma'am, gow str'ight on till ye can't go any farther," etc., etc. And after the night was quite dark came this last choice bit of Shottery dialect: "'E got a penny, an' 'er got a penny, an' we 'ad quoite a scramble for it, didn't us!"

Was that to be Shottery's last note for

me in the Red House? I thought so. But at half-past eleven the stillness was broken again. I got up quickly and went to the window. Could it be? Yes, there could be no mistaking it—it was the "jug—jug—jug" of the nightingale! It came from a spot I knew well, where the elders slope to meet the osier wands in the gardens of the Group below the Road.

That fortnight marked the end of my holiday in Warwickshire. Next morning, while my trunk went round by the road to the station in Stratford, I started across the field-path for the last time. When all is described, that field-path still remains the one really poetic spot in the region left to the memory of Shakespeare. The arms of Stratford are already half-way round it. It has grown to be a wide, trodden footway, instead of the grass-grown path of one's fancy. But as long as there is a path there at all, or the semblance of a field, anticipation and memory will walk there undisturbed.

This morning a luminous haze hung over the landscape. Nothing could be seen beyond the dim borders of the field. Suddenly a lark's note cut the silence—then another—and another—till the whole sky was vocal. The sun was on the other side of that thin veil of mist. Was that what they were after?

"As from the dark upsprings the lark  
The rising sun to see—"

The veil was thin, but the sun was still clouded as I left the spot; the lark's song was still rising—a beautiful good-by to the fields of Shottery.

MEADOW OPPOSITE "THE RED HOUSE"

**"SOME FISHING SCHOONER . . . DRIES HER WHITE SAILS"**

"WE MAY LINGER FOR A WHILE ON THE LONG BRIDGE"

## The Lure of the Sea

By Isaac Ogden Rankin

Illustrated with Photographs by the Author

**W**ITH early summer days a hunger for the sea returns. At first we may strive to satisfy it with noontide visits to the wharves, where the vessels come and go and the still waters reflect the buildings of the shore, or some fishing schooner just in from the sea dries her white sails in the sun. Or we may linger for a while on the long bridge to watch the swaying of the water weeds as they bend upward with the flood and taste the salt breath of the ocean which follows the incoming tide. Or a further walk brings us to the great willow avenue, beyond which one may catch a distant glimpse of the sea.

In mid-June, however, there comes a day when none of these things satisfy, and we turn our faces toward the marshes and the dunes. The long bridge echoes to our early morning tread. Under the shadow of the hill the cool road leads us past the head of an inlet, with its clustered buildings and lofty elms shading a white church at the parting of the ways. Ours is the quiet road that turns aside and begins at once to afford hospitable room for the creeping in of grass and clover, making a soft turf for our feet.

The steps of summer seem to loiter as

she nears the shore. Along these unfrequented lanes, where salt winds blow and sea fogs linger, the air of mid-June is still fragrant with the delicious odor of the fox-grape blossoms. On both sides of the way the vines have made an arbor and regale the poorest wanderer with perfume of delight such as no queen in her palace may command. How is it that of such penetrating sweetness the puckery acid of the grapes can grow? One is the most exquisite wild fragrance of the spring; to venture with the other requires a certain hardihood, so instant is its denial that it grew to please the palate of a man. Both are akin in this, however, that they belong to unpampered appetites, to the world of sun and wind, of breathless noonday heat and the shadow of the cloud. It would be difficult to imagine the perfume of the grape blossoms in a crowded ball-room, or the wild fox-grapes on a banquet table. Both are traveler's joys, as unspoiled and untamable as the butterfly or the hermit thrush.

The birds care nothing for the perfume, though they approve of the ripened grapes; but how they delight in the close shelter of these vine-grown thickets! This morning hour is full of song. Sparrows

by the roadside, warblers and vireos in the tree-tops, tell of the joys of living, interrupted only by the blundering hurry of a flicker retreating up the road at our approach. Hints of housekeeping are all about us. The wise catbird watches us safely by his hiding-place of love and care, while other anxious fathers flit from tree to tree with an amusingly open pretense of leading us in the direction of their nests. Some of the rarer warblers are of the company, as well as the dear, common summer warblers whose flight

One of them sits atilt on the top of a bush as we pass, and calls to his mate in a sweet, high note that carries far across the waving grasses to some hidden nest.

Along our upland way we had the dry odor of the daisies and the honey-sweet of clover, but now there comes another waft upon the air. It is the salt breath of the marshes and the tang of the neighboring sea. The widespread levels which stretch out before us are meadows of the ocean's nourishing, as upland meadows live upon the bounty of the cloud. They

"A MARSH ISLAND, PART MEADOW . . . PART OAK WOODS"

appears like gleams of sunlight softened through a misty air.

These happy singers are all lovers of the shade; but where the low hills melt into level meadowland the air is more loudly musical with the song of bobolinks. Their notes have lost nothing yet of rollicking joy, though their buff shoulder-knots have begun to fade. The meadows, in their turn, give place to salt marshes, where the redwings congregate, building their nests on dry tussocks out of the reach of tides and of all prying, wingless folks.

have another look and their colors run through an altogether different scale, with purples of blossom, greens of stalk and blade, and a deep undertint of brown. The daisies and clover are replaced by scattered spires of sea-plantain and islands of dull brown, the wreck of last year's reeds. Along the sides of the raised way, still damp from the overflowing tide, are weaker growths—white sandwort and yellow oxalis, and, at the marsh edge, rounded mats of beach-pea, with its purple blossoms.

"SUBMERGING THE GRASSES AT ITS EDGE"

"ANOTHER CAUSEWAY EDGED WITH WILLOWS"

"THE LINGERING LIGHT ACROSS THE SILENT STREAM"

"THE SEA ITSELF IS HIDDEN BEHIND SAND DUNES"

The sea itself is hidden behind sand dunes which shut in the view. Trackless spaces of salt marsh, threaded with crooked tidal creeks, forbid approach. The only possible way is the way around. To the causeway succeeds a marsh island, part meadow starred with an innumerable company of daisies, part oak woods, where the trees stand wide apart, as if they wished to yield one another ample room to grow. Here, too, the birds are much at home, and in the glades May seems to be lingering with her sister June, tending her rue anemones and wild geraniums in the sunny spaces.

In the crow's flight to the shore this

new bud in compliment of June. Yet already, on the warm eastern slope, the first large hawkbits are shining in the sun.

The island narrows to another causeway edged with willows that leads us over to the broad base of a rounded hill. Under the bridge the tide is singing as it falls over a little dam. It broadens out and curves, brim full, submerging the grasses at its edge and reflecting the trees upon the point beyond. A barred gate lets us in to old neglected orchards and hill-side pastures thick with bramble clumps and netted dewberry vines that catch unwary feet. Every resting-place gives wider views. Half way up the gravelly slope are

"THE STILL WATERS REFLECT THE BUILDINGS OF THE SHORE"

island is the last true outpost of the continent. Twice a day its edges are wet with the incoming tide, and it is surrounded also by a wonderful sea of green and waving grasses, the children of the sea. There is, indeed, no water visible, except a narrow streak of blue river on which a single white sail moves. The hull is soon lost to sight, but the sail goes on as if it were afloat upon the wide grassy sea of the green marsh. In the dry pasture-land beyond the oaks the cattle are alert and inquisitive at the unaccustomed sight of man. Here, too, the detaining hand of the ocean wind shows in a wilderness of wax-myrtle and sweet-fern just out of blossom, and roses bright with scarlet hips showing not even one

tempting patches of ripe wild strawberries—not the long-stemmed meadow berries with their tapering necks deep hidden in the grass, but short-stemmed, thick-set berries with no necks at all, dark crimson in the sunlight, and clinging close as if afraid of violence from the ocean winds.

From the hilltop, across the marshes and the wild confusion of the snowy dunes, we look to the illimitable levels of the ocean floor, wind flawed and streaked, gray under the cloud shadows and azure in the sun. On the other side is a great circle of the fruitful hills, with dark forests and the homes and fields of men, where one white spire rises among its village trees. It is a place to linger and to dream, lulled by the ocean breeze; but the

"THE GREAT WILLOW AVENUE BEYOND WHICH ONE MAY CATCH A DISTANT GLIMPSE OF THE SEA "

shore still lures us, and on the other side another causeway leads across the marshes to the dunes.

Was there ever such a desert world as this?—so white, so desolate, so glaring in the sun, so responsive to the moisture (when the rain does not run through as swiftly as it falls), so driven of the winds and tossed? On the landward side cranberry bogs fill the wet hollows, and the higher ridges are covered with wax-myrtle and blossoming sheep-laurel. Everywhere in the dry open spaces is wealth of beach-gold (*Hudsonia Tomentosa*) that laughs like sunlight against the snowy sand. Its crowded blossoms, the olive green of its threadlike leaves, the recumbent stems, sometimes showing only golden tips where the wind has buried the branches, form a strange picture of unlooked-for beauty.

These flowers are but for a day. Carried from their native sands, they wither and leave nothing to show except their broomlike stems. Theirs is no service for the houses of the rich, nor need they fear to be exposed for sale among the heedless crowds of city streets. They are treasure trove for those who will go out into the wilderness to see, and for them alone.

The way leads on, over white crests, down into wind-swept hollows marked with ripples by the wind that rounds their

curves. A shell, a bit of driftwood, the skeleton of a bird exposed and lonely on the smooth white floor, shows that the winds may disinter as well as bury. The beach-grass lengthens its roots in vain, striving to hold the slopes in place. So high are the ridges, so deep are the valleys, that it is not until the furthest crest is under foot that we catch more than a glimpse of the ocean. But at last, with sudden and unbroken vision, here is the wonder of the deep. Beneath us curves the long beach strewn with broken reeds and driftwood, not in heaps, as the wind scatters them, but in far-stretching curves and lines that mark the limits of the incoming and receding waves.

The tide laps gently on the wave-marked slope. A schooner bound for the river's mouth works past with frequent tacks, while every noise on deck is clear to our ears across the water. She passes by around the point, and, suddenly, the sea is as empty of all tokens of man's presence as the cloudless sky. This is the meeting-place where God has set his bounds. Here is enough, at last, for eye and thought, restful and satisfying and illimitable. Here rest is sweet, and the picture of it goes with us on our homeward way, more lasting in memory than the sunset on the meadows or the lingering light across the silent stream.

"THE HEAD OF THE INLET"

## Footprints of St. Francis

By Vida D. Scudder

Illustrated with Photographs by the Author

GHOSTLY sadness envelops a sensitive spirit in the presence of "the grandeur that was Rome." Might in decay is all around one; the soft Roman air is thick with phantoms. Great things have been—but they have vanished, and their ruins mock our dreams of the worth of human endeavor. Traveling from the city northward, past the broken

aqueducts on the Campagna, for a while the creeping oppression endures. But presently the burden is lifted; the spirit of a sudden finds itself buoyant, free, and glad. And why? we wonder. Close to us, on the lower slopes of the Apennines, the ancient oaks are gleaming, it may be with the evanescent freshness of spring; in the plain below, myriad baby vine-leaves glow like wee translucent flames of green. Ah! we understand our mood, for this is Umbria. In a few hours we have shaken off the weight of centuries, and left antiquity behind. We have reached a Christian country, where horizons have opened even to far spiritual regions before the gaze of saintly eyes.

We are moving through a landscape of Perugino; his wide pure spaces filled with azure light surround us, his white oxen, absurdly devout of countenance, plod their gentle way through the fields; surely a rapt upward-gazing saint stands hidden by yonder chapel wall. Do you question, missing somewhat from Perugino's world? Wait, and you shall find it. Leaving the train—intrusive but convenient unreality!—one of his little hill towns rises in bodily form before us, and slowly, in a mediæval dream, we wind our way up to Assisi, the palace of the Cæsars forgotten.

From the high balcony of the pleasant

inn we see the country better—a wide, sweet country, a great sweep of plain, fading from glimmering green and silver to softest violets, dotted by town-capped hills, and engirdled with Apennines on which the snows still linger. The ruins of Rome are a series of vast epic fragments; this Umbrian land affects one like a lyric, breathing in all its exquisite beauty one intimate emotion:

Thou art a holy poem, sweet Umbrian plain,  
Forever sung to the angelic ear:  
Thy tender vines beneath thy hills austere,  
Thy shining poppies and thy springing grain,  
All murmur softly one melodious strain,  
While Brother Wind breathes low that he  
may hear,  
And bending o'er thy far horizons clear  
Our Sister Clouds hearken the glad refrain.

A poem of love remembered; day by day,  
Here with some chosen brother of his band,  
God's Little Poor One wandered, lorn and  
gay,—  
Weeping, yet singing on his homeless way  
Lauds of the Creatures; and the lovely land  
Still holds his voice for those who understand.

We are looking over the country consecrated by the feet of St. Francis; through all its happy years it sings to the overarching heavens his Cantic of the Sun.

Why is it that different landscapes seem to possess distinctive spiritual qualities? There could be no better witness to the indubitable fact than Umbria. The region doubtless existed in pre-Christian times, but it came to its own only when Christian souls made it their abiding place. As early as the fourth century, were not four holy men from Palestine, desirous of a tranquil retreat wherein to pray, directed by Pope Liberius to the Spoletan valley? There, led by some inner light, they settled as hermits in the plain immediately below Assisi. The aspect of the country must have been very different then from what we see to-day; forests and marshes met the eye instead of pleasant cultivated fields; but then, as later, it was evidently a land recognized as in some peculiar sense fit for devotion.

Twice since the days of the old Orient-

THE PROCESSION ENTERING THE LOWER CHURCH

BEARING THE HOST

als has the country blossomed into spiritual expressiveness; once in the lovely life of St. Francis and his first companions, and again, three hundred years later, in the no less lovely art of the Umbrian school. In vain do we read grim stories of bitter mediæval feuds among the little towns—Perugia, Assisi, Spello, Spoleto, Montefalco—that sit on their respective hills peaceful as saints in a Santa Conversazione. These things were, but they were shadows. In the souls of Francis and Bernard and Leo and Egidio, in the pictures of Nicolo da Foligno, of Francesco Melanzio, of Tiberio d'Assisi and their comrades, the landscape of Umbria, with its peculiar purity and luminous peace, found true and abiding reflection.

The paintings are dear to us, and he who has privileged who, lingering in Umbria through joyful weeks, may explore in the neglected chapels and remote convents scattered through the land hidden treasures of paling frescoes, kindred in grace of form and charm of color to the smiling landscape without. But dearer still to the memories of the first

Franciscans. Thanks to the work of modern scholars—among whom the most sympathetic of all, often to be found at Assisi, is unsparingly generous in help to the modern pilgrim—we may identify a surprising number of landmarks, and enjoy the country with intelligence as well as with sentiment.

Leaning from the balcony of the Hotel Subasio, all but the whole scene of the Franciscan drama is before us. The Church of St. Mary of the Angels, most striking object in the plain below, rears its haughty dome over the rough chapel of the Portiuncula, founded by the hermits from Palestine if legend speak true, rebuilt by St. Benedict in the sixth century, and sanctified forever by the labors of the hands of Francis. Following the lines of poplars to the left, we find the site of Rivo Torto, for here, where two small chapels in the fields, an ancient holy well, and a few farm buildings emphasize rather than interrupt the country hush, was in the thirteenth century the abode of concentrated anguish—the leper settlement toward which the Assisan youth of

fastidious instincts betook him with his first companions, here to live in bitter want, tending the outcasts in whom they saw their Lord. Where in Europe is holier ground? If, musing, you allow your eyes to be drawn upward to the noble slopes of the Apennines, you may find, high above the plain, the site of the ancestral castle of the Schifi family, where must have been passed many of the youthful days of the radiant, vigorous girl whom the world knows as Santa Chiara. Do not turn your glance at once again to the immediate surroundings of Assisi; search out rather the shadow that marks; still on the mountain-side, a heavily wooded ravine. Here is the Carceri, the high uplifted hermitage whither Francis betook him when the need for that fellowship with God in nature which we call solitude possessed him.

Would you visit the Carceri? Nothing is more easy. On the back of Brother Ass or on foot we climb upward, first over a traveled road that leads through a pleasant country of farms and oak woods, later over a track on the bare mountain-side. Monte Subasio, gray and stern, rises above us; all Umbria, amethystine-fair, is spread out below. At last a lonely cross of stone, a wall, a gate, and we enter a green wilderness of ilex-trees, carpeted with ivy, violet, and rosy cyclamen. So deep-cut is the ravine that

THE CARCERI

only a narrow vista of distant blue can be seen between the descending woods. Peering over the gulf, like a nest in the tree-tops, hang the little gray buildings of St. Francis's hermitage, enlarged, with slight loss to their simplicity, by San Bernardino. The ancient live-oaks across the bridge are the successors of those in which the Saint held joyous converse with his little sisters whose nests were near his own.

It was once our good fortune to climb to the Carceri in company with three Spanish Franciscans. Spanish friars are not in good odor with us to-day, but these were honest men and pilgrims true. Speaking no Italian, they showed by gesture all along the way their religious fervor and their reverence for the sacred ground of their order; the wordless greeting between them and the Italian friars living in the little Retreat recalled pleasant passages in the Fioretti. The Brothers at the Carceri appear to be of a more spiritual type than those whom one meets in the monasteries of the fat plain below; and, indeed, though the draughty caves

A STREET AT ASSISI

where once the Brethren lived are abandoned to the ivy, life in these bleak and unwarmed buildings has plenty of hardships still. A true Franciscan surely is Fra Benedetto—the peaceful giant of pure and candid countenance, who showed us the memorials of the place with loving eagerness to turn the occasion to our religious profit. "Poverino," we murmured, seeing the stone bed, short and narrow, on which the Saint was wont to rest—"povero San Francesco!" "Non, non," responded Fra Benedetto, rebuking with rapt look our shallow speech, "beatissimo San Francesco; poveri noi!" "Happy St. Francis! Poor are we!"

But we have wandered far from our balcony, where there is much to see. Down that near hill beyond the town we divine San Damiano, where Clara lived her years in company with her nuns; yonder, where the olives lie in a mist on the way to l' Perugia, is the site of the convent whither Francis led the ardent girl after the great night in which, fleeing secretly from home, she had vowed herself at the Portiuncula to the service of Lady Poverty. Further on upon the hillside, near the lofty towers of Perugia, was the hermitage of Brother Egidio—finest intellect his among the companions, light, swift, and subtle, rising easily into the rarest atmosphere of contemplative ecstasy. He was visited in this hermitage by a cardinal and his sumptuous train. To compliments on his holiness Egidio replied that all his guests were far more saintly than himself. Somewhat surprised—the Brother having a reputation for truthfulness—the Cardinal entered a polite disclaimer; but the Franciscan continued to this effect: "Ay, of a surety; for I, living in this rough hermitage, and constantly mortifying the body, hardly dare to hope that I shall win heaven at the last; but you, on the other hand, who do

not fear to dress so magnificently and live so softly—you must be conscious of great inward holiness to venture such things."

To gaze over this country is much, and is all that most travelers pause for; but better far to wander through it at will in the long spring days. Assisi itself, with the great churches erected in honor of Francis and Clara, bears an aspect that would be strange to these simple holy ones, yet even here many features remain unchanged. One may stand in the square where the Saint threw his garments in his father's face, may feel his presence at one's side as one kneels in the old Cathedral of San Rufino, may wonder

with what eyes he viewed the hoary columns of the Roman Temple of Minerva. His own wonderful church—shadow-haunted, glorified by the great art of Giotto, one of the noblest, surely, among the shrines of Christendom—might, indeed, be not only strange but repellent to the lover of rudest wayside shrines; but the processions, white robed and gray, that issue from its doors to bear the Blessed Sacrament over the hill-sides, are even as in

A PROCESSION LEAVING THE UPPER CHURCH OF SAN FRANCESCO, ASSISI

his day. One can get nearer to Francis, however, than beside the church dedicated to his honor; the wide country under the open heavens was the home of the Little Poor Men, and this abides. Through the old city gate that Francis knew we may tread in his very footsteps, following the ancient road to the Portiuncula, worn by his feet and sanctified by his last journey:

O happy road and holy, trod by the blessed feet

Of God's own Poverello, between thy hedge-rows sweet!

Here angels walked beside him, in converse loving-wise,

And deemed in that fair fellowship they moved in Paradise.

The traffic and the travelers no longer by thee pass—

**SAN FRANCESCO, ASSISI**

A little lane thou art, and hid, half overgrown  
 by grass:  
 But Nature still is faithful; thy banks, by men  
 forgot,  
 Are gay with star-of-Bethlehem, and wee forget-me-not:  
 Our sister birds still carol, still blossoms sweet  
 the May,  
 The tender sky of Umbria embraces thee  
 away.  
 Dear Brother Road, God bless thee, and keep  
 thee fragrant still!  
 May none who journey by thee ere harbor  
 thought of ill!  
 May spiritual visions fair, and loving thoughts  
 of praise,  
 Arise within the soul of a'l who chance to  
 tread thy ways!

From our balcony, or, better yet, from the splendid heights around the old castle of Assisi, one sees to northward among billowy mountains a little triangular blue point. This is La Verna—not long distant by modern conveniences, but far as Francis traveled, on foot or with slow help of Brother Ass. The noble Ser Orlando presented this mountain to the Brotherhood, describing it as a "monte divotissimo"—how did he know?—and here the Saint betook himself when desire for seclusion was keenest, and sorrowing fears for the future of his Order were pressing upon his later years. We may follow, if we will, in his footsteps; but it is more easy to approach La Verna from Florence, exploring first the Casentino, a narrow valley at the base of the mountain, hidden away in the heart of the hills, and uninvaded, one is tempted to think, since the fourteenth century, except for a flight of blue and white Della Robbias,

which in the early Renaissance alighted on its castle and convent walls. One drives up to La Verna through hilly pasture-land not unlike New England, till a gray cross marks the entrance to the tract of ancient forest where the monastery nestles like a cliff quickened to human expressiveness.

Here came, it is believed, the Vision of the Crucified Seraph, here the Stigmata were received. Still in these later times the hundred Brothers of the mountain retreat seek daily the chapel on the traditional spot of the Vision, and, after prostrating themselves to kiss the stone while litanies are chanted, suddenly with uniform gesture stretch their arms upward, as they kneel, with palms open, toward a great crucifix of the Della Robbias. Thus they remain for some moments in utter silence, holding the attitude of their spiritual father, as imaged in the first pictures of the Stigmata. Not without emotion does one see this visible memorial of the most intense mystical experience of the Middle Ages—

"Ah, Father Francis, Francis the saint,  
 Lend us thy faith, lest our hearts grow faint."

After a long day spent in musings among the mighty forest trees that sweep above the monastery to the crest of the mountain of La Verna, one drives homeward, toward the comforts of modern civilization, very silently in the twilight. The words of Brother Benedetto ring through one's mind: "Beatissimo San Francesco, poveri noi."

"THE KIND THE FISHERS OF LITTLE STREAMS DREAM OF"

# THE FOREST<sup>1</sup>

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

WITH PICTURES BY THOMAS FOGARTY

## Chapter XII.—The River

**A**T a certain spot on the North Shore—I am not going to tell you where—you board one of the two or three fishing steamers that collect from the different stations the big ice-boxes of Lake Superior whitefish. After a certain number of hours—I am not going to tell you how many—your craft will turn in toward a semicircle of bold, beautiful hills, that seem at first to be many less miles distant than the reality, and at the last to be many more miles remote than is the fact. From the prow you will make out first a uniform velvet green; then the differentiation of many shades; then the dull neutrals of rocks and crags; finally the narrow white of a pebble beach against which the waves utter continually a rattling undertone. The steamer pushes boldly in. The cool green of the water underneath changes to gray. Suddenly you make out the bottom, as through a thick green glass, and the big suckers and catfish idling over its riffled sands, inconceivably far down through the unbelievably clear liquid. So absorbed are you in this marvelous clarity that a slight grinding jar alone brings you to yourself. The steamer's nose is actually touching the white strip of pebbles!

Now you can do one of a number of things. The forest slants down to your

feet in dwindling scrub, which half conceals an abandoned log structure. This latter is the old Hudson's Bay post. Behind it is the Fur Trail, and the Fur Trail will take you three miles to Burned Rock Pool, where are spring water and mighty trout. But again, half a mile to the left, is the mouth of the River. And the River meanders charmingly through the woods of the flat country over numberless riffles and rapids, beneath various steep gravel banks, until it sweeps boldly under the cliff of the first high hill. There a rugged precipice rises sheer and jagged and damp-dark to overhanging trees clinging to the shoulder of the mountain. And precisely at that spot is a bend where the water hits square, to divide right and left in whiteness, to swirl into convolutions of foam, to lurk darkly for a moment on the edge of tumult before racing away. And there you can stand hip-deep, and just reach the eddy foam with a cast tied craftily of Royal Coachman, Parmachenee, Belle, and Montreal.

From that point you are with the hills. They draw back to leave wide forest, but always they return to the River—as you would return season after season were I to tell you how—throwing across your woods-progress a sheer cliff forty or fifty feet high, shouldering you incontinently into the necessity of fording to the other

<sup>1</sup> Copyright, 1903, by the Outlook Company.

side. More and more jealous they become as you penetrate, until at the Big Falls they close in entirely, warning you that here they take the wilderness to themselves. At the Big Falls anglers make their last camp. About the fire they may discuss idly various academic questions—as to whether the great inaccessible pool below the Falls really contains the legendary Biggest Trout; what direction the River takes above; whether it really becomes nothing but a series of stagnant pools connected by sluggish water-reaches; whether there are any trout above the Falls; and so on.

These questions, as I have said, are merely academic. Your true angler is a philosopher. Enough is to him worth fifteen courses, and if the finite mind of man could imagine anything to be desired as an addition to his present possessions on the River, he at least knows nothing of it. Already he commands ten miles of water—swift, clear water—running over stone, through a freshet bed so many hundreds of feet wide that he has forgotten what it means to guard his back cast. It is to be waded in the riffles, so that he can cross from one shore to the other as the mood suits him. One bank is apt to be precipitous, the other to stretch away in a mile or so of the coolest, greenest, stillest primeval forest to be imagined. Thus he can cut across the wide bends of the River, should he so desire, and should haste be necessary to make camp before dark. And, last, but not least by any manner of means, there are trout.

I mean real trout—big fellows, the kind the fishers of little streams dream of but awake to call Morpheus a liar, just as they are too polite to call you a liar when you are so indiscreet as to tell them a few plain facts. I have one solemnly attested and witnessed record of twenty-nine inches, caught in running water. I saw a friend land on one cast three whose aggregate weight was four and one-half pounds. I witnessed, and partly shared, an exciting struggle in which three fish on three rods were played in the same pool at the same time. They weighed just fourteen pounds. One pool, a backset, was known as the Idiot's Delight, because any one could catch fish there. I have lain on my stomach at the Burned Rock pool and seen the great fish

lying so close together as nearly to cover the bottom, rank after rank of them, and the smallest not under a half pound. As to the largest—well, every true fisherman knows him!

So it came about for many years that the natural barrier interposed by the Big Falls successfully turned the idle tide of angler's exploration. Beyond them lay an unknown country, but you had to climb cruelly to see it, and you couldn't gain above what you already had in any case. The nearest settlement was nearly sixty miles away, so even added isolation had not its usual quickening effect on camper's effort. The River is visited by few, anyway. An occasional adventurous steam yacht pauses at the mouth, fishes a few little ones from the shallow pools there, or a few big ones from the reefs, and pushes on. It never dreams of sending an expedition to the interior. Our own people, and two other parties, are all I know of who visit the River regularly. Our camp-sites alone break the forest; our blazes alone continue the initial short cut of the Fur Trail; our names alone distinguish the various pools. We had always been satisfied to compromise with the frowning Hills. In return for the delicious necks and points and forest areas through which our clipped trails ran, we had tacitly respected the mystery of the upper reaches.

This year, however, a number of unusual conditions changed our spirit. I have perhaps neglected to state that our trip up to now had been a rather singularly damp one. Of the first fourteen days twelve had been rainy. This was only a slightly exaggerated sample for the rest of the time. As a consequence we found the River filled even to the limit of its freshet banks. The broad borders of stone beach between the stream's edge and the bushes had quite disappeared; the riffles had become rapids, and the rapids roaring torrents; the bends boiled angrily with a smashing eddy that sucked air into pirouetting cavities inches in depth. Plainly, fly-fishing was out of the question. No self-respecting trout would rise to the surface of such a maelstrom, or abandon for syllabubs of tinsel the magnificent solidities of ground bait such a freshet would bring down from the hills. Also the River was unfordable.

MAKING A PORTAGE

We made camp at the mouth and consulted together. Billy, the half-breed who had joined us for the labor of a permanent camp, shook his head.

"I t'ink one week, ten day," he vouchsafed. "P'rhaps she go down den. We mus' wait."

We did not want to wait; the idleness of a permanent camp is the most deadly in the world.

"Billy," said I, "have you ever been above the Big Falls?"

The half-breed's eyes flashed.

"Non," he replied, simply. "Bâ, I lak' mak' heem fir'st rate."

"All right, Billy; we'll do it."

The next day it rained, and the river went up two inches. The morning following was fair enough, but so cold you could see your breath. We began to experiment.

Now, this expedition had become a fishing vacation, so we had all the comforts of home with us. When said comforts of home were laden into the canoe, there remained forward and aft just about one square foot of space for Billy and me, and not over two inches of freeboard for the River. We could not stand up and pole; tracking with a towline was out of the question, because there existed no banks on which to walk; the current was too swift for paddling. So we knelt and poled. We knew it before, but we had to be convinced by trial that two inches of freeboard will dip under the most gingerly effort. It did so. We groaned, stepped out into ice-water up to our waists, and so began the day's journey with fleeting reference to Dante's nethermost hell.

Next the shore the water was most of the time a little above our knees, but the swirl of a rushing current brought an apron of foam to our hips. Billy took the bow and pulled; I took the stern and pushed. In places our combined efforts could but just counterbalance the strength of the current. Then Billy had to hang on until I could get my shoulder against the stern for a mighty heave, the few inches gain of which he would guard as

BILLY

jealously as possible, until I could get into position for another shove. At other places we were in nearly to our armpits, but close under the banks where we could help ourselves by seizing bushes. Sometimes I lost my footing entirely and trailed out behind like a streamer; sometimes Billy would be swept away, the canoe's bow would swing down stream, and I would have to dig my heels and hang on until he had floundered upright. Fortunately for our provisions, this never happened to both at the same time. The difficulties were still further complicated by the fact that our feet speedily became so numb from the cold that we could not feel the bottom, and so were much inclined to aimless stumblings. By and by we got out and kicked trees to start the circulation. In the meantime the sun had retired behind thick leaden clouds.

At the First Bend we were forced to carry some fifty feet. There the River rushed down in a smooth apron straight against the cliff, where its force actually raised the mass of water a good three feet higher than the level of the surrounding pool. I tied on a bait-hook, and two cartridges for sinkers, and in fifteen minutes had caught three trout, one of which weighed three pounds, and the others two pounds and a pound and a half respectively. At this point Dick and

Deuce, who had been paralleling through the woods, joined us. We broiled the trout, and boiled tea, and shivered as near the fire as we could. That afternoon, by dint of labor and labor, and yet more labor, we made Burned Rock, and there we camped for the night, utterly beaten out by about as hard a day's travel as a man would want to undertake.

The following day was even worse, for as the natural bed of the River narrowed, we found less and less footing and swifter and swifter water. The journey to Burned Rock had been a matter of dogged hard work; this was an affair of alertness, of taking advantage of every little eddy, of breathless suspense during long seconds while the question of supremacy between our strength and the stream's was being debated. And the thermometer must have registered well towards freezing. Three times we were forced to cross the River in order to get even precarious footing. Those were the really doubtful moments. We had to get in carefully, to sit craftily, and to paddle gingerly and firmly, without attempting to counteract the downward sweep of the current. All our energies and care were given to preventing those miserable curling little waves from overtopping our precious two inches, and that miserable little canoe from departing even by a hair's breadth from the exactly level keel. Where we were going did not matter. After an interminable interval the tail of our eyes would catch the sway of bushes near at hand.

"Now!" Billy would mutter abstractedly.

With one accord we would arise from six inches of wet and step swiftly into the River. The lightened canoe would strain back; we would brace our legs. The traverse was accomplished.

Being thus under the other bank, I would hold the canoe while Billy, astraddle the other end for the purpose of depressing the water to within reach of his hand, would bail away the consequences of our crossing. Then we would make up the quarter of a mile we had lost.

We quit at the Organ Pool about three o'clock of the afternoon. Not much was said that evening.

The day following we tied into it again. This time we put Dick and Deuce on an old Indian trail that promised a short cut, with instructions to wait at the end of it. In the joyous anticipation of another wet day we forgot they had never before followed an Indian trail. Let us now turn aside to the adventures of Dick and Deuce.

Be it premised here that Dick is a regular Indian of taciturnity when it becomes a question of his own experience, so that for a long time we knew of what follows but the single explanatory monosyllable which you shall read in due time. But Dick has a beloved uncle. In moments of expansion to this relative after his return he held forth as to the happenings of that morning.

Dick and the setter managed the Indian trail for about twenty rods. They thought they managed it for perhaps twice that distance. Then it became borne in on

DEUCE

THOMAS FORBES

"SOMETIMES I LOST MY FOOTING ENTIRELY AND TRAILED OUT BEHIND LIKE A STREAMER"

them that the bushes bent back, the faint knife-clippings, and the half weather-browned brush-cuttings that alone constitute an Indian trail had taken another direction, and that they had now their own way to make through the forest. Dick knew the direction well enough, so he broke ahead confidently. After a half-hour's walk he crossed a tiny streamlet. After another half-hour's walk he came to another. It was flowing the wrong way.

Dick did not understand this. He had never known of little streams flowing away from rivers and towards eight-hundred-foot hills. This might be a loop, of course. He resolved to follow it upstream far enough to settle the point. The following brought him in time to a soggy little thicket with three areas of moss-covered mud and two round, pellucid pools of water about a foot in diameter. As the little stream had wound and twisted, Dick had by now lost entirely his sense of direction. He fished out his compass and set it on a rock. The River flows nearly northeast to the Big Falls, and Dick knew himself to be somewhere east of the River. The compass appeared to be wrong. Dick was a youth of sense, so he did not quarrel with the compass; he merely became doubtful as to which was the north end of the needle—the white or the black. After a few moments' puzzling he was quite at sea, and could no more remember how he had been taught as to this than you can clinch the spelling of a doubtful word after you have tried on paper a dozen variations. But, being a youth of sense, he did not desert the streamlet.

After a short half-mile of stumbling the apparent wrong direction in the brook's bed, he came to the River. The River was also flowing the wrong way, and up hill. Dick sat down and covered his eyes with his hands, as I had told him to do in like instance, and so managed to swing the country around where it belonged.

Now here was the River—and Dick resolved to desert it for no more short cuts—but where was the canoe?

This point remained unsettled in Dick's mind, or rather it was alternately settled in two ways. Sometimes the boy concluded we must be still below him, so he would sit on a rock to wait. Then, after a few moments, inactivity would bring him

panic. The canoe must have passed this point long since, and every second he wasted stupidly sitting on that stone separated him farther from his friends and from food. Then he would tear madly through the forest. Deuce enjoyed this game, but Dick did not.

In time Dick found his further progress along the banks cut off by a hill. The hill ended abruptly at the water's edge in a sheer rock cliff thirty feet high. This was in reality the end of the Indian trail short-cut—the point where Dick was to meet us—but he did not know it. He happened for the moment to be obsessed by one of his canoe-up-stream panics, so he turned inland to a spot where the hill appeared climbable, and started in to surmount the obstruction.

This was comparatively easy at first. Then the shoulder of the cliff intervened. Dick mounted still a little higher up the hill, then higher, then still higher. Far down to his left, through the trees, broiled the River. The slope of the hill to it had become steeper than a roof, and at the edge of the eaves came a cliff drop of thirty feet. Dick picked his way gingerly over curving moss-beds, assisting his balance by a number of little cedar-trees. Then something happened.

Dick says the side of the hill slid out from under him. The fact of the matter is, probably, the skin-moss over loose rounded stones gave way. Dick sat down and began slowly to bump down the slant of the roof. He never really lost his equilibrium, nor until the last ten feet did he abandon the hope of checking his descent. Sometimes he did actually succeed in stopping himself for a moment; but on his attempting to follow up the advantage, the moss always slipped or the sapling let go a tenuous hold and he continued on down. At last the River flashed out below him. He saw the sheer drop. He saw the boiling eddies of the Half-way Pool, capable of sucking down a saw-log. Then, with a final rush of loose round stones, he shot the chutes feet first into space.

In the meantime Billy and I repeated our experience of the two previous days, with a few variations caused by the necessity of passing two exceptionally ugly rapids whose banks left little footing. We did this precariously, with a rope. The cold water was beginning to tell on our

vitality, so that twice we went ashore and made hot tea. Just below the Half-way Pool we began to do a little figuring ahead, which is a bad thing. The Half-way Pool meant much inevitable labor, with its two swift rapids and its swirling eddies, as sedulously to be avoided as so many steel bear-traps. Then there were a dozen others, and the three miles of riffles, and all the rest of it. At our present rate it would take us a week to make the Falls.

Below the Half-way Pool we looked for Dick. He was not to be seen. This made us cross. At the Half-way Pool we intended to unload for portage, and also to ferry over Dick and the setter in the lightened canoe. The tardiness of Dick delayed the game.

However, we drew ashore to the little clearing of the Half-way Camp, made the year before, and wearily discharged our cargo. Suddenly, upstream, and apparently up in the air, we heard distinctly the excited yap of a dog. Billy and I looked at each other. Then we looked upstream.

Close under the perpendicular wall of rock and fifty feet from the end of it, waist deep in water that swirled angrily about him, stood Dick.

I knew well enough what he was standing on—a little ledge of shale not over five or six feet in length and two feet wide—for in lower water I had often from its advantage cast a fly down below the big

boulder. But I knew it to be surrounded by water fifteen feet deep. It was impossible to wade to the spot; impossible to swim to it. And why in the name of all the woods gods should a man want to wade or swim to it if he could? The affair, to our cold-benumbed intellects, was simply incomprehensible.

Billy and I spoke no word. We silently, perhaps a little fearfully, launched the empty canoe. Then we went into a space of water whose treading proved us no angels. From the slack water under the cliff we took another look. It was indeed Dick. He carried a rod-case in one hand. His fish-creel lay against his hip. His broad hat sat accurately level on his head. His face was imperturbable. Above, Deuce agonized, afraid to leap into the stream, but convinced that his duty required him to do so.

We steadied the canoe while Dick climbed in. You would have thought he was embarking at the regularly appointed rendezvous. In silence we shot the rapids, and collected Deuce from the end of the trail, whither he followed us. In silence we worked our way across to where our duffel lay scattered. In silence we disembarked.

"In Heaven's name, Dick," I demanded at last, "how did you get *there*?"

"Fell," said he, succinctly. And that was all.

[TO BE CONTINUED]

## After Rain

By Annie Catharine Muirhead

The sky is heavy with cloud, and brown with gloom;

The sultry air is still, as if in dread

To watch the hot world smolder to its doom;

And lurid falls the light from overhead.

When, sudden, something stirs the murky air:

Then comes the welcome sound of rushing rain,

And very soon the sky grows blue and fair—

The world is cool and fresh and sweet again!

So when despair upon the heart grips tight

And clogs the brain—there seems no help at all!—

The pathos of a word, or thought, or sight,

Sets free the tears that clear the stagnant soul:

Hope colors the horizon as of yore,

And it is good to live and love once more!

## COROT'S MORNING AND EVENING

**W**HAT lover of art goes to that exquisite Paris suburb, Ville d'Avray, without in fancy seeing the boy Corot at his parents' modest summer home, the beautiful place where he first learned to love nature and where, later, he immortalized for us well-nigh every pool and lane and tree? Who goes to Barbizon without remembering that there, deep in Fontainebleau forest, Corot found food for the full flower of his genius, just as did Millet, Rousseau, and Troyon? And as we see the present scenes at Ville d'Avray and Barbizon, corresponding so exactly to the poetic power of the Corot canvases, it seems to us as if the man and the artist must be still alive. If so to us, how much more to Corot's hosts of friends who had to mourn his loss a quarter of a century ago! They tell us how kind, frank, generous, open-handed was his nature; it is no wonder that such a personality as well as such art influenced the painters of France. If, strangely enough, his works made their way to fame but slowly, Corot had the satisfaction before his death of knowing that he was not only one of the most popular of men but one of the most popular of painters. We fancy that a chief reason for this was because he put into his pictures a personality as rare and as enchanting as ever found expression in art.

Corot was also typical of the best Frenchmen. Whether in society or art, the classicalism and conventions upon which he and they turned their backs were largely importations. Wooden traditions

in politics, religion, art, and letters had become incrusting upon the Gallic nature—a nature which, as every one should know, is in its essence spontaneous, buoyant, vivacious, keen-sighted, normal. The life as well as the art of Corot represented to his friends and to the world at large immortal youth, a large outlook on life, a return to truth and nature, an intolerance of restraint and injustice, and even a greediness and hunger to display his poetic emotion and insight to other men. Corot's technique shows that his inspiration was native, was truly French, and that his knowledge of reality was as deep and genuine as his exposition of it was rich and notable.

Other painters have exceeded Corot both in variety of subjects and in extended range of vision and effect, but no painter, save perhaps Turner, ever exceeded him in a union of breadth and delicacy as rare as it is delightful. In the storm and stress period of the last century many other artists besides Corot were gladly giving their attention no longer to outworn creeds and formulas, but were endeavoring to interpret nature anew and spontaneously. For instance, Daubigny sought to give expression to his interpretation by means of almost harsh naturalism; Diaz, by a startling profusion of color. With another kind of penetration than that possessed by these distinguished painters, Corot discarded classicalism and conventions to plunge into a romanticism which never approached the unrestful, lurid, or eccentric. He entered upon his career at the very juncture when French land-

scape-painting was mined with decay. To-day French landscape art is aglow with freshness, novelty, completeness, introduced first of all by a man who, in the interpretation of nature, had a well-nigh feminine faculty of instinctive and apparently unerring intuition. His seems the truest poetic interpretation, his the real unity of effect, his the reproduction of actual atmosphere, for he painted, as Jules

Dupré said of him, with wings in his back. Thus, beyond any painter in any age, Corot succeeded in the delineation of those aspects of nature which we now often call "Corot effects," with vaporous pools and shimmering tree-tops, with misty morning and tender evening. The descriptions that accompany the Morning and Evening pictures here reproduced are from a letter written by Corot to a fellow-artist.

## I.—MORNING

NE rises early, at three in the morning, before the sun; one goes and seats one's self at the foot of a tree. One watches and waits. There is not much to be seen at first. Nature resembles a whitish canvas upon which the profiles of certain masses are vaguely sketched; all is fragrant, all thrills under the freshening breath of the dawn.

Bing! the sun is becoming clear—the sun has not yet rent the gauze behind which hide the meadow, the valley, the hills of the horizon. The vapors of night still creep like silvery tufts over the cold green grass. Bing! bing! a first ray of the sun! a second ray of the sun! The

tiny flowers seem to awake, joyous; each one has its drop of trembling dew; the leaves, sensitive to the cold, move to and fro in the morning air. Under the foliage the birds sing unseen. It seems as if it were the flowers saying their prayers. The loves, on wings of butterflies, descend upon the meadow and make the tall grasses sway to and fro. One sees nothing—everything is there—the landscape is all there behind the transparent gauze of the mist, which rises, rises, rises, inhaled by the sun, and discloses in rising the river scaled with silver, the meadows, the trees, the cottages, the vanishing distance. One distinguishes at last that which one divined at first.

MORNING

FROM A CARBON PRINT BY BRAUN, CLEMENT & CO.

## EVENING

### II.—EVENING

**T**HE sun has disappeared. There remains in the softened sky only a vaporous tint of pale lemon, the last reflection of that charlatan of a sun which melts into the deep blue of night in passing through the greenest shades of pale turquoise, of a fineness unheard of, a delicacy fluid and intangible. The fields lose their color, the trees form only brown or gray masses, the darkened waters reflect the soft tones of the sky. One begins to see nothing more—one feels that everything is there. All is vague, confused. Nature is falling asleep. Yet the fresh air of the evening sighs among the leaves; the birds, those voices of the flowers, repeat the evening prayer. The dew strews with

pearls the velvet of the lawn. The nymphs flee, hide themselves, and desire to be seen.

Bing! a star of heaven plunges head foremost into the pond. Charming star, whose scintillation the trembling of the water increases; you are looking at me—you are smiling at me and winking too. Bing! a second star appears in the water, a second eye opens. Welcome, fresh and smiling stars. Bing! bing! bing! three, six, twenty stars, all the stars of heaven, have given each other a tryst in that blessed pond. All grows still darker. Only the pond scintillates. It is a swarming of stars. The illusion is produced. The sun having hidden itself, the inner sun of the soul, the sun of art, arises. *Bon!* There is my picture finished!

WATER FALL

THE OLD MILL

# *The Old Mill*

*By Laura Winnington*

*Stream that hastens from the hill,  
Tarry here to turn the mill.*

*Rainbow drops the seedlings knew  
In the shower and the dew,*

*Once again your magic lend,  
Life into the mill-wheel send.*

*Nature, the all-bounteous mother,  
Beast and bird, and man their brother,*

*Through the spring and summer weather  
Steadily have worked together.*

*E'en the earthworms in the soil  
Gave their share of patient toil.*

*Sturdy oxen drew the plow  
Where the stubble standeth now.*

*Horse and farmer reaped the grain  
From the sunned and watered plain.*

*Now upon the old mill's floor  
Lies the yellow harvest store,*

*Till the all-transforming wheel  
Turn the kernels into meal.*

*All have helped to give the bread  
Over which the grace is said.*

DRAWN BY JOSEPH W. GLEESON

"TWO LITTLE SPOTTED FAWNS WERE ALREADY CIRCLING ABOUT HER PLAYFULLY"

# Wild Animals at Home

By William J. Long

With Pictures by Joseph W. Gleeson and E. W. Deming

THE man who hunts with gun or camera has his reward. He has also his labors, vexations, and failures; and these are the price he pays for his success. The man who hunts without either gun or camera has, it seems to me, a much greater reward, and has it without price. Of him, more than any other Nimrod, may be said what a returned missionary from Africa said of his first congregation: "They are a contented folk, clothed with the sunlight and fed by gravitation." Hunting without a gun is, therefore, the sport of a peaceful man, a man who goes to the woods for rest and for letting his soul grow, and who, after a year of worry and work, is glad to get along without either for a little season. As he glides over the waterways in his canoe, or loafs leisurely along the trail, he carries no weight of gun or tripod or extra plates. Glad to be alive himself, he has no pleasure in the death of the wild things. Content just to see and hear and understand, he has no fret or sweat to get the sun just right and calculate his exact thirty-foot distance, and then to fume and swear, as I have heard good men do, because the game fidgets, or the clouds obscure the sun, or the plates are not quick enough, or—beginning of sorrows!—because he finds after the game has fled that the film he has just used on a bull moose had all its good qualities already pre-empted by a landscape and a passing canoe.

I have no desire to decry any kind of legitimate hunting, for I have tried them all, and the rewards are good. I simply like hunting without a gun or camera better than all other forms of hunting, for three good reasons: first, because it is lazy and satisfying, perfect for summer weather; second, because it has no troubles, no vexations, no disappointments, and so is good for a man who has wrestled long enough with these things; and, third, because it lets you into the life and individuality of the wild animals as no other hunting can possibly do, since

you approach them with a mind at ease, and, having no excitement about you, they dare to show themselves natural and unconcerned, and even a bit curious about you to know who you are and what you are doing. It has its thrills and excitements, too, as much or as little as you like. To creep up through the brush to where the bear and her cubs are gathering blueberries in their greedy, funny ways; to paddle silently upon a big moose while his head is under water and only his broad antlers show; to lie at ease beside the trail flecked with sunlight and shadow and have the squirrels scamper across your legs, or the wild bird perch inquisitively upon your toe, or—rarest sight in the woods in the early morning—to have a fisher twist by you in intense, weasel-like excitement, puzzling out the trail of the hare or grouse that passed you an hour ago; to steal along the waterways alone on a still, dark night, and open your jack silently upon ducks or moose or mother deer and her fawns—there is joy and tingle enough in all these things to satisfy any lover of the woods. There is also wisdom to be found, especially when you remember that these are individual animals that no human eyes have ever before looked upon, that they are different every one, and that at any moment they may reveal some queer trick or trait of animal life that no naturalist has ever before seen.

Last summer, just below my camp on Matagammon was a little beach between two points, surrounded by dense woods, that the deer seemed to love better than any other spot on the whole lake. When we first arrived, the deer were close about our camp. From the door we could sometimes see them on the lake shore, and every evening at twilight they would steal up shyly to eat the potato and apple parings. Gradually the noises of camp drove them far back on the ridges, though on stormy nights they would come back when the camp was still and all lights out. From my tent I would hear cautious

rustlings, or the crack of a twig above the drip and pour of raindrops on my tent-fly, and, stealing out in the darkness, would find two or three deer, generally a doe and her fawns, standing under the split-roof of our woodshed to escape the pelt-ing rain.

The little beach was farther away, across an arm of the lake and out of sight and sound of our camp, so the deer never deserted it, though we watched them there every day. Just why they liked it I could never discover. A score of beaches on the lake were larger and smoother, and a dozen at least offered better feeding; but the deer came here in greater numbers than anywhere else. Near by was a great wild meadow, with dense hiding-places on the slopes beyond, where deer were numerous. Before the evening feeding began in the wild meadow they would come out to this little beach and play for an hour or so; and I have no doubt the place was a regular playground, such as rabbits and foxes and crows, and indeed most wild animals, choose for their hours of fun.

Once, at early twilight, I lay in hiding among some old roots at the end of this little beach watching a curious game. Eight or ten deer, does and fawns and young spike bucks, had come out into the open and were now running rapidly in three circles, arranged in a line, so ○○○. In the middle was a big circle, some fifteen feet in diameter, and at opposite sides were two smaller circles, less than half the diameter of the first, as I found afterwards by measuring from the tracks. Around one of these small circles the deer ran from right to left invariably, around the other they ran from left to right, and around the big middle circle they ran either way, though when two or three were running this circle together, while the others bounded about the ends, they all ran the same way. As they played, all the rings were in use at once, the two small end rings being much more used than the big one. The individual deer passed rapidly from one ring to the others, but—and here is the queerest part of it all—I did not see a single deer, not even one of the fawns, cut across the big circle from one end ring to the other. After they were gone the rings showed clearly in the sand, but not a single track led across any of the circles.

The object of the play was simple enough. Aside from the fun, the young deer were being taught to twist and double quickly; but what the rules of the game were, and whether they ran in opposite circles to avoid getting dizzy, was more than I could discover, though the deer were never more than thirty yards away from me, and I could watch every move clearly without my field-glasses. That the game (and some definite way of playing it) was well understood by the deer, no one could doubt who watched this wonderful play for five minutes. Though they ran swiftly, with astonishing lightness and grace, there was no confusion. Every now and then one of the does would leap forward and head off one of her fawns as he headed into the big ring, when, like a flash, he would whirl in his tracks, and away with a *bl-r-r-t!* of triumph or dissatisfaction. Once a spike buck, and again a doe with two well-grown fawns, trotted out of the woods, and, after watching the dizzy play for a moment, leaped into it as if they understood perfectly what was expected. They played this game for only a few minutes at a time; then they would scatter, and move up and down the shore leisurely, and nose the water. Soon one or two would come back, and in a moment the game would be in full swing again, the others joining it swiftly as the little creatures whirled about the rings, exercising every muscle, and learning how to control their graceful bodies perfectly, though they had no idea that older heads had planned the game for them with a purpose.

Watching them thus at their play, the meaning of a curious bit of deer anatomy became clear. A deer's shoulder is not attached to the skeleton at all; it lies loosely inside the skin, with only a bit of delicate, elastic tissue joining it to the muscles of the body. When a deer was headed suddenly, and braced himself in his tracks, the body would lunge forward till the fore legs seemed hung almost in the middle of his belly. Again, when he kicked up his heels they would seem to be supporting his neck, far forward of where they properly belonged. This free action of the shoulder is what gives the wonderful flexibility and grace to a deer's movements, just as it takes and softens

"NOW THEY WERE ALL GATHERED ON A DRY MUD FLAT"

all the shock of falling in his high-jumping run among the rocks and over the endless windfalls of the wilderness.

In the midst of the play, and after I had watched it for a full half-hour, there was a swift rustle in the woods on my right, and I caught my breath sharply at sight of a magnificent buck standing half hid in the underbrush. There were two or three big bucks, with splendid antlers, that lived lazily on the slopes above this part of the lake, and that I had been watching and following for several weeks. Unlike the does and fawns and young bucks, they were wild as hawks and selfish as cats. They rarely showed themselves in the open, and if surprised there with other deer they bounded away at the first sight or sniff of danger. Does or little fawns, when they saw you, would instantly stamp and whistle to warn the other deer before they had taken the first step to save themselves or investigate the danger; but the big bucks would bound or glide away, according to the method of your approach, and, in saving their own skins, as they thought, would have absolutely no concern for the safety of the herd feeding near by. And that is the reason why, in a natural state, deer rarely allow the bucks and bulls to lead them.

The summer laziness was still upon those big bucks; the wild fall-running had not seized them. Once I saw a curious and canny bit of their laziness. I had gone off with a guide to try the trout at a distant lake. While I watched a porcupine and tried to win his confidence with sweet chocolate—a bad shot, by the way—the guide went on far ahead. As he climbed a ridge, busy with thoughts of the dim blazed trail he was following, I noticed a faint stir in some bushes on one side, and through my glass I made out the head of a big buck that was watching the guide keenly from his hiding. It was in the late forenoon, when deer are mostly resting, and the lazy buck was debating, probably, whether it were necessary to run or not. The guide passed rapidly; then, to my astonishment, the head disappeared as the buck lay down where he was. Keeping my eyes on the spot, I followed on the guide's trail. There was no sign of life in the thicket as I passed, though beyond a doubt the wary old buck was

watching my every motion keenly. When I had gone well past and still the thicket remained all quiet, I turned gradually and walked towards it. There was a slight rustle as the buck rose to his feet again. He had evidently planned for me to follow the steps of the other man, and had not thought it worth while to stand up. Another slow step or two on my part, then another rustle and a faint motion of underbrush—so faint that had there been a wind blowing my eye would scarcely have noticed it—told me where the buck had glided away silently to another covert, where he turned and stood to find out whether I had discovered him, or whether my change of direction had any other motive than the natural wandering of a man lost in the woods.

That was back on the ridges, where most of the big bucks loaf and hide, each one by himself, during the summer. Down at the lake, however, there were two or three that for some reason occasionally showed themselves with the other deer, but were so shy and wild that hunting them without a gun was almost impossible. It was one of these big fellows that now stood half hid in the underbrush within twenty yards of me, watching the deer's game impatiently.

A stamp of his foot and a low snort stopped the play instantly, and the big buck moved out on the shore in full view. He looked out over the lake, where he had so often seen the canoes of men moving; his nose tried the wind up shore; eyes and ears searched below, where I was lying; then he scanned the lake again keenly. Perhaps he had seen my canoe upturned among the water grasses far away; more probably it was the unknown sense or *feel* of an enemy, which they who hunt with or without a gun find so often among the larger wild animals, that made him restless and suspicious. While he watched and searched the lake and the shores, not a deer stirred from his tracks. Some command was in the air which I myself seemed to feel in my hiding. Suddenly the big buck turned and glided away into the woods, and every deer on the shore followed instantly, without question or hesitation. Even the little fawns, never so heedless as to miss a signal, felt something in the buck's attitude deeper than their play, something perhaps

DRAWN BY JOSEPH W. GLEEDON

#### A BEAR AND HER CUBS GATHERING BLUEBERRIES

in the air that was not noticed before, and trotted after their mothers, fading away at last like shadows into the darkening woods.

On another lake, years before, when hunting in the same way without a gun, I saw another curious bit of deer wisdom. It must be remembered that deer are born apparently without any fear of man. The

fawns when found very young in the woods are generally full of playfulness and curiosity. When they see you for the first time, no matter how old or young they are, they approach cautiously, if you do not terrify them by sudden motions, and in twenty pretty ways try to find out what you are. Like most wild animals that have a keen sense of smell, and

especially like the bear and caribou, they trust only their noses at first. When they scent man for the first time, they generally run away, not because they know what it means, but for precisely the opposite reason—namely, because there is in the air a strong scent that they do not know and that they have not been taught by their mothers how to meet. When in doubt, run away—that is the rule of nose which seems to be impressed by their mothers upon all timid wild things; though they act in almost the opposite way when sight or hearing is in question.

All this is well known to hunters; but now comes the curious exception. After I had been watching the deer for some weeks at one of their playgrounds, a guide came into camp with his wife and little child. They were on their way in to their own camp for the hunting season. To please the little one, who was fond of all animals, I took her with me to show her the deer playing. As they were running about on the shore, I sent her out of our hiding, in a sudden spirit of curiosity, to see what they would do. True to her instructions, the little one walked out very slowly into the midst of them. They started at first; two of the old deer circled down instantly to wind her; but even after getting her scent, the suspicious man-scent that most of them had been taught to fear, they approached fearlessly, their ears set forward and their expressive tails down without any of the nervous wiggling that is so manifest whenever their owners catch the first suspicious smell in the air. The child meanwhile sat on the shore, watching the pretty creatures with wide-eyed curiosity, but obeying my first whispered instructions like a little hero and keeping still as a hunted rabbit. Two little spotted fawns were already circling about her playfully, but the third went straight up to her, stretching his nose and ears forward to show his friendliness, and then drawing back to stamp his little fore foot prettily to make the silent child move or speak, and perhaps also to show her in deer-fashion that, though friendly, he was not at all afraid.

There was one buck in the group, a three-year-old with promising antlers. At first he was the only deer that showed any fear of the little visitor; and his fear seemed to me to be largely a matter of

suspicion, or of irritation that anything should take away the herd's attention from himself. The fall wildness was coming upon him, and he showed it by restless fidgeting, by frequent proddings of the does with his antlers, and by driving them about roughly and unreasonably. Now he approached the child with a shake of his antlers, not to threaten her, it seemed to me, but rather to show the other deer that he was still master, the Great Mogul who must be consulted upon all occasions. For the first time the little girl started nervously at the threatening motion. I called softly to her to keep still and not be afraid, at the same time rising up quietly from my hiding-place. Instantly the little comedy changed, as the deer whirled in my direction. They had seen men before, and knew what it meant. The white flags flew up over the startled backs, and the air fairly bristled with whistling *h-e-e-e-yu, h-e-u's*, as deer and fawns rose over the nearest windfalls like a flock of frightened partridges and plunged away into the shelter of the friendly woods.

There are those who claim that the life of an animal is a mere matter of blind instinct and habit. Here on the shore before my eyes was a scene that requires a somewhat different explanation.

Though deer are the most numerous and the most interesting animals to be hunted without a gun, they are by no means the only game to fill the hunter's heart full and make him glad that his game-bag is empty. Moose are to be found on the same waters; and in the summer season, if approached very slowly and quietly, especially in a canoe, they show little fear of man. Last summer, as I stole down the thoroughfare into Matagammon, a cow moose and her calf loomed up before me in the narrow stream. I watched her a while silently, noting her curious way of feeding—now pulling up a bite of lush water-grass, now stretching her neck and her great muffle to sweep off a hatful of water-maple leaves, first one, then the other, like a boy with two apples, while the calf nosed along the shore and paid no attention to the canoe, which he saw perfectly but which his mother did not see. After watching them a few minutes, I edged across to the opposite bank and

drifted down, to see if it were possible to pass without disturbing them. The calf was busy with something on the bank, the mother deep in the water-grass as I drifted by, sitting low in the canoe. She saw me when abreast of her, and, after watching me a moment in astonishment, turned again to her feeding. Then I turned the canoe slowly and lay to leeward of them, within ten yards, watching every significant motion. The calf was nearer to me now, and the mother by a silent command brought him back and put him on the side away from me; but the little fellow's curiosity was aroused by the prohibition, and he kept peeking under his mother's belly, or twisting his head around over her hocks, to see who I was and what I was doing. But there was no fear manifest, and I backed away slowly at last and left them feeding just where I had found them.

In curious contrast was the next meeting. It was on the little beaver stream below Hay Lake, a spot as wild as any dream of Doré, and a famous feeding-ground for moose and deer. I was fishing for trout, when a mother moose came up stream among the bilberry bushes. I had stopped casting and sat low in my canoe, and she did not see me until abreast of me within twenty feet. Then she swung her huge head in my direction carelessly, and went on as if I were of no more account than one of the beaver-houses on the shore. Ten steps behind her came a calf. The bushes had closed on her flanks when he put his head out of the leaves and came plump upon me. With a squeal and a jump like a startled deer, he plunged away through the bushes, and I heard the mother swing round in a crashing circle to find him and to know what had frightened him. Ten minutes later, as I sat very still in the same spot, a huge head was thrust out of the bushes where the calf had disappeared. Below it, pressing close against his mother's side, was the head of the little one, looking out again at the thing that had frightened him, and asking plainly, *What is it, mother? What is it?* though there was no sound uttered. Had he been close beside her at first, he would have done as she did and paid no attention to me; but having been alone and startled, he had run away promptly and was now bringing his mother back to

show her the thing-and find out all about it. And there they stayed for a full minute, while none of us moved a muscle, before they drew back silently and disappeared, leaving only a double line of waving, wiggling bush-tops, like the trail of a huge snake, to tell me where they had gone.

On the same stream I got the famous bull of the expedition. I was paddling along silently when I turned a bend, and a huge dark bulk loomed out of the water dead ahead of the canoe. In front of the dark bulk two great antlers, the biggest I ever saw in Maine, reached up and out. The rest of his head was under water groping for lily-roots, and my first exultant thought was that one might drive the canoe between the tips of those great antlers without touching them, so big and wide were they. Instead, I sent the canoe swiftly forward till his head began to come up, when I crouched low and watched him, so near that every changing expression of his huge face and keen little eyes was seen perfectly without my glasses. He saw me instantly and dropped the root he had pulled up, and his lower jaw remained hanging in his intense wonder. Not so much who I was, but how on earth I got there so silently, seemed to be the cause of his wonder. He took a slow step or two in my direction, his ears set forward stiffly and his eyes shining as he watched me keenly for the slightest motion. Then he waded out leisurely, climbed the bank, which was here steep, and disappeared in the woods. As he vanished, I followed him close behind and watched his way of carrying his huge antlers and lifting his legs with a high step, like a Shanghai rooster, over the windfalls. Of all the moose that I have ever followed, this was the only one whose head seemed too heavy for comfort. He carried it low, and nursed his wide antlers tenderly among the tree-trunks and alder-stems. They were still in the velvet, and no doubt the rude scraping of the rough branches made him wince unless he went softly. At last, finding that I was close at his heels, he turned for another look at me; but I slipped behind a friendly tree until I heard him move on, when I followed him again. Some suspicion of the thing that was on his trail, or it may be some faint eddy of air with the danger smell in it, reached him then; he laid his

"THE GRAY OUTLINES OF A GREAT BEAST STRETCHED OUT ON A LOG"

DRAWN BY E. W. UEBLING

great antlers back on his shoulders, moose fashion, and lunged away at a terrific pace through the woods. I could fancy his teeth gritting and his eyes at squint as some snapping branch whacked his sensitive antlers and made him grunt.

It was that same night, I think, that I had another bit of this hunting, which fills one's soul with peace and gives him a curious sense of understanding the thoughts and motives of the Wood Folk. I was gliding along in my canoe in the late twilight over still water, in the shadow of the wild, high meadow-grass, when a low quacking and talking of wild ducks came to my ears. I pushed the canoe silently into the first open bogan in the direction of the sounds, till I was so near that I dared not go another foot, when I rose up cautiously and peered over the grass tops. There were perhaps thirty or forty of the splendid birds—four or five broods at least, and each brood led by its mother. For two or three days I had noticed them flying about, exercising their wings in preparation for the long autumn flights. Now they were all gathered on a dry mud flat surrounded by tall grass, playing together and evidently getting acquainted. In the middle of the flat were two or three tussocks, on which the grass had been trampled and torn down. There was always a duck on each of these tussocks, and below him were four or five more that were plainly trying to get up; but the top was small and had room for but one, and there was a deal of quacking and good-natured scrambling for the place of vantage. Other birds scampered in pairs from one side of the flat to the other, and there was one curious procession, or race—five or six birds that started abreast, and very slowly, and ended with a rush and a headlong dive into the grasses of the opposite shore. Here and there about the edges of the playground an old mother bird sat on a tussock, and looked down on the wild, unconscious play, wiggling her tail in satisfaction and anon stretching her neck to look and listen watchfully. The voices of the playing birds were curiously low and subdued, reminding me strongly of some Indian children that I had once seen playing. At times the quacking had a faint, ventriloquous effect, seeming to come from far away; and again it ceased absolutely at a sign from

some watchful mother, though the play went steadily on, as if even in their play they must be mindful of the enemies that were watching and listening everywhere to catch them.

As I rose a bit higher to see some birds that were very near me but screened by the meadow-grass, my foot touched a paddle and rattled it slightly. A single quack, different from all others, followed instantly, and every bird stopped just where he was and stretched his neck high to listen. One mother bird saw me, though I could not tell which one it was until she slipped down from her bog and waddled bravely across in my direction. Then a curious thing happened, which I have often seen and wondered at among gregarious birds and animals. A signal was given, but without any sound that my ears could detect in the intense twilight stillness. It was as if a sudden impulse had been sent out like an electric shock to every bird in the large flock. At the same instant every duck crouched and sprang; the wings struck down sharply; the flock rose together as if flung up from a pigeon-trap, and disappeared with a rush of wings and a hoarse tumult of quacking that told every other bird on the great marsh that danger was afoot. Wings flapped loudly here and there; bitterns squawked; herons croaked; a spike buck whistled and jumped close at hand; a passing musquash went down with a slap of his tail and a plunge like a falling rock. Then silence settled over the marsh again, and there was not a sound to tell what Wood Folk were abroad in the still night, nor what business or pleasure occupied them.

Formerly caribou might be found on these same waterways, and they are the most curious and interesting game that can be hunted without a gun; but years ago a grub destroyed all the larches; on which the wandering woodland caribou depend largely for food. The deer, which are already as many as the country can support in winter, take care of the rest of the good browse, so that there was nothing left for the caribou but to cross over the line into New Brunswick, where larches are plenty and where there is an abundance of the barren-moss that can be dug up out of the snow. Better still, if one is after caribou, is the great wilderness of

northern Newfoundland, where the caribou spend the summer and where from a mountain top one may count hundreds of the splendid animals scattered over the country below in every direction. And hunting them so, with the object of finding out the secrets of their curious lives—why, for instance, each herd often chooses its own burying-ground, or why a bull caribou loves to pound a hollow stump for hours at a time—this is, to my mind, infinitely better sport than the hunt for a head.

Once in a lifetime, perhaps, if you haunt the wildest spots in the northern forests, you may regret that you have no firearms with you, for a cold chill of fear in your back makes the cold chill of a rifle-barrel in your hand a very welcome sensation. There are those who say that the panther is extinct in the East, and who laugh at the idea of your meeting him; but once, in the Little Southwest in New Brunswick, I found where something had recently killed a caribou and dragged it away. Following the trail, I came upon a den and a mother panther with her kitten. Once also, when fishing on another very wild stream, I noticed a nervous movement among some logs on the shore just beyond where my fly had fallen. It was a tail, the tip end that cannot long be quiet, and from this nervous flipping and curling I made out suddenly the gray outlines of a great beast stretched out on a log watching me steadily with fierce eyes that seemed to look through and through me at my fishing. There was a swift moment when I longed for the rifle that was far away in camp; but the instant the creature knew he was discovered he vanished like a shadow of the woods. For the panther, if you ever do stumble upon one of the rare survivors in the deepest wilderness, has learned long ago that man is a creature to be let severely alone; and your rifle, like most of the medicines you carry, is not necessary at all except for the mental comfort of having it along.

To the hunter without a gun there is no close season on any game, and a doe and her fawns are better hunting than a ten-point buck. By land or water he is always ready; there are no labors for effects, except what he chooses to impose upon himself; no disappointments are possible, for whether his game be still or on the

jump, shy as a wilderness raven or full of curiosity as a blue jay, he always finds something to stow away on his heart in the place where he keeps things that he loves to remember. Now it is the water-spiders—skaters the boys call them—that play a curious game among the grass stems. Now it is an otter and her cubs playing on the surface, that sink when they see you and suddenly come up near your canoe, like a log shot up on end, and, with half their bodies out of water to see better, say *w-h-e-e-e-yew* / like a baby seal, to express their wonder at such a queer thing in the water. Now it is a mother loon taking her young on her back as they leave the eggs, and carrying them around the lake awhile to dry them thoroughly in the sun before she dives from under them and wets them for the first time; and you must follow a long while before you find out why. Now it is a bear and her cubs—I watched three of them for an hour or more, one afternoon, as they gathered blueberries. At first they champed them from the bushes, stems, leaves, and all, just as they grew. Again, when they found a good bush, a little one with lots of berries, they would bite it off close to the ground, or tear it up by the roots, and then, taking it by the stem with both paws, would pull it through their mouths from one side to the other, stripping off every berry and throwing the useless bush away. Again they would strike the bushes with their paws, knocking off a shower of the ripest berries, and then scrape them all together into a pile very carefully and gobble them down at a single mouthful. And whenever, in wandering about after a good bush, one of the cubs spied the other busy at an unusually good find, it gave one a curious remembrance of his own boyhood to see the little fellow rush up whimpering to get his share before all the bushes should be stripped clean by the other.

That was good hunting. It made one glad to let even this rare prowler of the woods go in peace. And that suggests the very best thing that can be said for the hunter without a gun—"The wilderness and the solitary place shall be glad for him," for something of the gentle spirit of Saint Francis comes with him, and when he goes he leaves no pain nor death nor fear of man behind him.

"Climb the mountains and get their good tidings. Nature's peace will flow into you as sunshine flows into trees. The winds will blow their own freshness into you, and the storms their energy, while cares will drop off like autumn leaves."—JOHN MUIR.

**A** DICTIONARY of biography, in giving us John Muir, "geologist, botanist, and lover of Nature," illustrated the futility of attempting to define a man of genius with mere names. For when his various eminences have been set down one after another, fairly and exactly, we discover that the man, after all, is not there. Geologist John Muir certainly is, for no man is more eminently an authority than he on the work performed by glaciers in sculpturing the mountain landscape. One of the greatest of Alaskan glaciers, first explored by him, bears the name Muir Glacier; and no scientist is better informed than he on the geological wonders of the great valleys and mountains of Western North America—the "grand side of the continent," he calls it. Botanist he is, too, the recognized authority on the flora of the Sierras, especially the pines, to which he has devoted years of study. Two universities have attested with honorary degrees the value of his work in these branches of science. And, truly, John Muir is a lover of Nature. Emerson said of him, "He is more wonderful than Thoreau." Few men, indeed, have ever

given themselves to Nature so freely as John Muir.

Still other names might be added to those of the dictionary of biography. John Muir is also an author, who has written with rare literary and poetic charm of his mountains and glaciers and trees; he is a traveler, a "wanderer," he would call it, for he has explored the jungles of Cuba and Central America, the glaciers of Alaska, Siberia, Norway, and Switzerland, the deserts of Utah, the forests of Canada, and, best of all, he knows the valleys and peaks of his own Sierras; he is an inventor, having won his earliest successes in devising curious and ingenious mechanical devices; and, finally, he is a rancher, the master of a fruitful valley in central California, with wide-spreading vineyards and orchards and a house set on a hill.

But even these added names, though they indicate some of the diverse activities of a remarkable man, fail in giving us John Muir. We are interested, not so much in what John Muir has done, though he has done much, as in what he is—the man of rare personal charm, of ripe philosophy, of gentle humor, of deep, even mystical, appreciation of natural beauty, the friend of the wild things of the woods, the poet of trees and waterfalls.

John Muir's life appeals to us because

DRAWN BY RICHMOND IVANOWSKI AFTER A COPYRIGHTED PHOTOGRAPH BY E. H. HARRIMAN

**THE MUIR GLACIER. DISCOVERED BY JOHN MUIR**

it is a complete expression of a deep human instinct which we have often felt, and throttled—the instinct which urges us to throw off our besieging restraints and complexities, to climb the hills and lie down under the trees, to be simple and natural. John Muir not only felt that impulse, but he really escaped. "Going to the mountains," he believed, "is going home." And the fact that he dared to follow his impulse, and that now, after a long life devoted with singular fidelity of purpose to winning the loving confidences of mountain and glacier, forest and flower, the ardor of the impulse is in no wise dimmed, gives us a sense of completeness, shows us in projection, worked out with joy, an instinct of our own. And we want to know more of John Muir, and to hear some of the new and strange things he must have to tell us.

John Muir's career may be said to have had its beginning on the day that he set forth, a raw country boy, to conquer the world, hope in his heart and an odd bundle of whittled wooden machinery on his shoulder. He had made a thermometer out of the end rod of his father's wagon, so fastening it to the side of the house that the expansion of the iron in varying degrees of heat was indicated on a large dial. He had invented and built an automatic sawmill, and several wooden clocks, one of them in the form of a scythe hung on a burr-oak sapling, representing the scythe of old Father Time—a good timekeeper, indicating the days of the week and month, and having attachments for other inventions—for lighting fires and lamps, a bedstead that set the sleeper on his feet at any desired time, and so on. He had also invented an automatic arrangement for feeding horses, a bathing-machine, barometer, pyrometer, hydrometer, safety locks, etc., all original, even the clocks, he never at that time having seen the works of any sort of timekeeper. For he had grown up on a backwoods farm in what was then the wilderness of Wisconsin, near Fox River, twelve miles from Fort Winnebago. His father was a sturdy, hard-working Scotchman of the old school, deeply and sincerely religious, with stern notions concerning the training of his boys and girls. Daniel Muir had been a grain merchant in Dunbar, on the Frith of Forth, Scotland,

where John was born (April 21, 1838) and spent the first eleven years of his life, and he had come to America that he might own land and make a place for himself in the world. It was pioneer work of the hardest kind—chopping trees, clearing land, and building barns—and the hours were long, so that when supper was eaten and the Bible read it was time for bed. But one of the boys of the Muir family was ambitious, often taking his mathematical problems with him to the fields and working them out on chips from the trees that he felled; and though he knew that his father's rules were like those of the Medes and Persians, never changeable, and that he could not hope for more time to read in the evening, he was finally told that he might get up as early as he liked in the morning. Though accustomed to sleep ten hours every night, he now broke off sharply to five hours by sheer force of will.

"It was winter," he said; "a boy sleeps soundly after chopping and fence-building all day in frosty air and snow; therefore I feared I would not be able to take any advantage of the granted permission. For I was always asleep at six o'clock when father called, the early-rising machine was not then made, and there was no one to awake me. Going to bed wondering whether I could compel myself to awake before the regular hour and determined to try, I was delighted next morning to find myself early called by will, the power of which over sleep I then for the first time discovered. Throwing myself out of bed and lighting a candle, eager to learn how much time had been gained, I found it was only one o'clock, leaving five hours all my own before the work of the farm began. At this same hour all winter long my will, like a good angel, awoke me, and never did time seem more gloriously precious and rich. Fire was not allowed, so to escape the frost I went down cellar, and there read some favorite book or marked out some invention that haunted me."

And in those long, quiet hours, robbed of sleep, he not only invented machines but he read many books—all he could buy or borrow from neighbors, the best of them, after the Bible and Shakespeare, being "Pilgrim's Progress," "Plutarch's Lives," Josephus, Milton, Burns's poems,

Hugh Miller's works, and Scott's novels. The novels were forbidden and most of the others frowned on as leading away from the Bible. Daniel Muir believed that the Bible and the Latin grammar should be the chief if not the only books in the library, and before he was eleven years old John had learned in the hard yet effectual school of the birch switch to recite from memory the entire New Testament and the greater part of the Old; and at that age he knew the Latin and French grammars almost as well. All this seemed hard training to a boy fond of the fields, but in later years it was a precious possession, for there is no school in literary style to equal King James's Bible. John Muir tells with delightful humor how his father frowned on these early risings, but that, having once given his word, Scotch-like, he would not go back on it, even though he felt that his permission had been interpreted quite too faithfully according to the letter. How he trembled lest his father should discover his inventions and deem it his duty to burn them up! After the spare hours and minutes of a year or more had been spent in secret on the construction of one of his curious clocks, his sister came to him whispering, "Feyther kens what yer doin', John." But, fortunately, Daniel Muir had not the heart to destroy the invention, satisfying his conscience by solemnly condemning the wicked waste of time on nonsense which should be given to study of God's Word. Nevertheless, when the great machine for getting up in the morning was finally completed and set to ticking in the parlor, Daniel Muir stepped in quietly, watch in hand, when he thought he was alone, to see if the wooden clock struck exactly on the second.

In 1860 John Muir's neighbors, who regarded him as a great genius, advised him to take some of the most portable of his inventions to a State fair about to be held in Madison, assuring him that they would enable him to enter any sort of machine-shop he liked. But surely, he objected, among such grand machinery as will be there nobody will look at my poor wooden things. Yes, they will, said his encouraging friends, because they are original; there's nothing like them. Go ahead and don't be afraid; a Marquette County farm is no place for you; you're

dead sure to get on in the world and be whatever you like.

Since coming to Wisconsin he seldom had been more than a dozen miles from his father's farm, and yet he started out with barely six dollars in his pocket, full of vague hope and innocent ignorance, never expecting that anything wonderful would be seen in any of his whittled machines, and he was greatly surprised to find that they opened all doors to him. When the train that was to carry him to Madison came in, the conductor showed so much interest in his curious bundle that he was emboldened to ask permission to ride on the engine, although he had not been on a railroad train since coming from Scotland. He did not know that it was against the rules; he was completely fascinated in the locomotive as a marvelous mechanism; and, astonishing as it may seem, a momentary glance at his strange bundle so interested the conductor and the engineer that he was actually allowed to ride on the tender, except when nearing stations, all the way to Madison. Next to a trip on a mountain avalanche, which he took quite involuntarily years later, he says it was the most exciting ride he ever had. When he reached the Fair grounds, he found the superintendent only too pleased at the prospect of exhibiting such marvels, and they soon occupied a prominent place in the fine arts hall, where young Muir, too shy to pose as the inventor, mingled with the crowd and heard the admiring comments of the spectators. Though suddenly finding himself a celebrity, he refused, quaintly enough, to read the accounts of his inventions which appeared in the newspapers, because his father had always warned him of the deadly poison of praise. After various adventures in Madison and Prairie du Chien, studying mathematics, drawing, pattern-making, etc., he learned from a student he chanced to meet that he could attend the State University at a cost of a dollar a week or even less; and for four years he was a student, supporting himself largely by working in the harvest-fields, by teaching school, and doing all manner of odd jobs. He was especially interested in mathematics, geology, chemistry, and botany, taking the same course in chemistry year after year, and spending much time besides in exper-

PHOTOGRAPH BY HOLLINGER

JOHN MUIR

iments, caring comparatively little for the languages, or for the usual rewards of a college career. At the end of his irregular four years' course he departed, without a diploma, though years later his Alma Mater felt honored in making him a doctor of laws and Harvard University conferred on him the degree of Master of Science.

Though he found himself becoming more and more interested in the natural sciences, he did not lose his enthusiasm as an inventor. His room at the University must have been a place of wonders.

Besides the getting-up machine, young Muir built a desk so operated by clock-work that it brought his books before him, each in its turn, and exactly at the time when he should begin its study. After the time-arangements had been made at the beginning of the term for each study, the machine continued to operate whether he was on hand or not. Another invention registered the growth of plant stems during each of the twenty-four hours. It is related that where he once taught school he fitted up a machine which lighted the fire for him every morning, so

JOHN MUIR'S CABIN IN THE YOSEMITE

that he did not have to reach the school-house so early.

It was during his college course that his deep love for wandering afield and studying out-of-door life first began to manifest itself in botanical rambles around the Madison lakes. After leaving the University he vanished in the northern wilderness about the Great Lakes to study the plants and rocks. When his bread-money was spent, he worked on a farm, and again in a mill on the Georgian Bay, where hand-rakes, broom and pitchfork handles were manufactured, and where he invented an entirely new set of automatic machinery, which saved about half the labor formerly involved; he spent all his spare hours in the adjacent woods. But he was not ready yet to give himself fully to outdoor scientific work, which, in those days especially, would not have yielded him bread, to say nothing of butter. Next he went to Indianapolis, where he found employment for a time in a carriage-material factory, and where an unfortunate, or perhaps fortunate, accident deprived him for a time of the sight of one eye, and probably changed the course of his whole career. Writing of this accident to his friend Mrs. Carr, the wife of one of his professors at Madison, he said:

"I felt neither pain nor faintness, the thought was so tremendous that my right eye was gone, that I should never look at a flower again." Escaping from his dark room, he set out on yet longer walks, determined to lay in as great a store as possible while light lasted.

In 1867 he started from Louisville, with a plant-press on his back, a small bag, and three books—the New Testament, Burns's poems, and Milton's "Paradise Lost." Thus free and glad, he made his way, afoot and alone, over a thousand miles to Florida, where he reveled for a time in the deep flowery swamps and jungles, crossing then to Cuba. During most of this journey he slept on the ground out-of-doors, both by preference and because he had no money to pay for other lodgings. He did not avoid human habitation, nor did he seek it, finding his deepest pleasure in winning the secrets of the woods. Even at this early day he revealed the rare sensitiveness toward what may be called the personality of trees and flowers, which finds such delicate and

poetic expression everywhere in his later writings. He writes to Mrs. Carr:

"The dear little conservative green mosses have elevated their smooth shining shafts and stand side by side, every cowl properly plaited and drawn down just far enough, every hood with its dainty slant, their fashions unchanging because perfect."

Though originally intending to explore the Amazon River from its highest source to the sea, Muir found himself so racked with fever contracted in the Florida swamps that he departed for California by way of the Isthmus of Panama. It is significant of his great love for the mountains that he should have remained just one day in San Francisco, though it must have been at that time, April, 1863, a most fascinating city, brilliant with the color of the new Western life. He set his face eastward, where the white Sierra, which he was soon to know so well, rose in the distance. In his accounts of this trip on foot through the wonderful San Joaquin valley, then in its virgin glory of plant and flower, mostly untouched as yet by plows and "hoofed locusts," one is conscious in every line of a fine note of exultation. He was free in a pure wilderness; he had escaped.

"Sauntering in any direction," he writes, "hundreds of these happy sun-plants brushed against my feet at every step, and closed over them as if I were wading in liquid gold. The air was sweet with fragrance, the larks sang their blessed songs, rising on the wing as I advanced, then sinking out of sight in the polleny sod, while myriads of wild bees stirred the lower air with their monotonous hum—monotonous, yet forever fresh and sweet as every-day sunshine. Hares and spermophiles showed themselves in considerable numbers in shallow places, and small bands of antelopes were almost constantly in sight, gazing curiously from some slight elevation and then bounding swiftly away with unrivaled grace of motion.

"The great yellow days circled by uncounted, while I drifted toward the north, observing the countless forms of life thronging about me, lying down almost anywhere at the approach of night. And what glorious botanical beds I had! Oftentimes on awakening I would find several new species leaning over me and

looking me full in the face, so that my studies would begin before rising."

A few months after leaving San Francisco Muir reached the Yosemite Valley, and there, in the midst of all that was glorious in nature, he decided to renounce all his inventions and devote his life to the study of the inventions of God. Though he could live on little enough—he has said fifty cents a week—that little was necessary, and one season he herded sheep, and then he made his mechanical knowledge serviceable in building a small sawmill in Yosemite, to be used for cutting fallen trees. The hotel-keeper who employed him was somewhat doubtful of his ability, for Muir had earned the title of "one of them botany fellers," but, business having called the owner away for a few months, he was glad on his return to find the mill running. Out over the water-wheel Muir built himself a little cubby of a den, hanging like a swallow's nest to the gable of the building, with one window opening to the grandeur of the valley. It was approached by a steep, narrow plank ladder, making it rather difficult of access to careless visitors. Here he kept his treasures, his collections of cones and plants, here he filled some of his voluminous note-books with sketches and closely written memoranda, and here he entertained Emerson, though he must have trembled when he saw the tall, angular, awkward form of the poet climbing his perilous ladder. Undoubtedly he showed Emerson his treasures with the same unconscious enthusiasm with which he exhibits them to-day. "Man," he says, with a quaint bit of Scotch in his voice, "but that's a grand tree," or, "Isn't that an awful queer muggins of a cone!" Anyway, we know that Emerson enjoyed Muir, and insisted on seeing much of him, and that when he returned he told Asa Gray about him, and when Gray visited the Sierras he searched Muir out and made a friend of him. Muir paid his highest compliment to Emerson by comparing him with the grandest of trees. "He is the Sequoia of the human race." Afterwards other botanists besides Asa Gray came to the Yosemite—the famous Torrey, Sir Joseph Hooker, and others—and they all sought out Muir, not only for his extraordinary knowledge of the plant-forms of his valley, but for himself,

his quaint philosophy, and his abundant humor. More than once Muir was tempted by his friends to quit his life in the mountains, which they looked upon as a hardship, but he with joy, and take up a professorship somewhere in the East; but he replied that there were plenty of professors in the colleges and few observers in the wilderness. Nothing, indeed, has ever tempted him far from the mountains.

In order to see something of the deserts and mountain ranges of the Great Basin, Muir joined the United States Coast and Geodetic Survey in 1876 and worked for three years, mostly in Nevada and Utah. He tells with humor of his experiences with the Mormon pioneers of what was then an almost undiscovered country; for Muir, though most deeply interested in mountains, glaciers, and trees, was never a recluse, never unsociable; his sympathies were broad enough to include the human species, and his vision seems all the clearer for his having come to men fresh from the hills. His writings abound in nice bits of characterization of miners, pioneers, Indians, bee-hunters, and others of the wandering sort whom he met on his travels. Having completed his work with the Geodetic Survey, Muir set out for Alaska in 1879 to study the work of glaciers; and there he discovered Glacier Bay and the magnificent river of ice which has since borne his name—Muir Glacier. Indeed, he traversed vast stretches of the ice-country between the coast and the head-waters of the Yukon and McKenzie Rivers, nearly always alone or with a few Indians as his sole companions, braving dangers and difficulties and enduring hardships which to an ordinary man must seem wholly insuperable. In 1881, as a member of the Arctic relief expedition which sailed in the *Corwin* to search for De Long and the lost Jeannette, he was able to extend his study of glaciers far up in the Behring Sea and along the coast of Siberia. No scientist, indeed, was ever better informed on the world's glaciers than John Muir. After exploring the most notable ice-rivers of North America and the action of ancient glaciers about the coast of Behring Sea and the adjacent Arctic regions, Muir was able in 1893 to gratify a long-cherished scheme of visiting Norway and Switzerland and seeing for himself the

fiords and mountains already famous to science, so that he could compare them with those of western America that he knew most intimately, and draw with more certainty the great conclusions which his studies now suggested.

To Muir, a glacier, indeed, is almost a living and toiling presence, a mighty world-force which in the hand of God has fashioned the mountains, carved out the valleys and lake basins, and given us most of that which is beautiful in new mountain landscapes. He tells of going forth to "see God making landscapes," and explains how the "features of the mountains" were developed and polished into beauty by the patient action of the ice-river. Indeed, one who talks long with John Muir cannot help feeling the very personal presence of the mountains. He speaks of the "landscape countenance" and the "expressive outspokenness of the cañon rocks" as he might speak of the countenance or the voice of a friend. Before Muir's time science declared that the great valley of the Yosemite and other similar gorges were formed by terrific cataclysms of nature during which a portion of the earth sank in, leaving behind awful chasms and gulches; but Muir discovered that these glorious mountain temples and palaces were the result of the slow, orderly, grinding action of glaciers working through thousands of years on rocks of peculiar physical structure. He traced out the courses of scores of these ancient glaciers, and, what was more, he discovered no fewer than sixty-five small residual glaciers in the high Sierras, where some of the best-informed scientists asserted with confidence that no glaciers existed. So enthusiastic was he in his studies that he once braved the sublime and awful spectacle of an earthquake in Yosemite Valley, which shook down, with solemn thunder, from cliff and precipice, uncounted thousands of tons of rock, in order to assure himself that the talus or rocky refuse at the sides of that great valley was the result of earthquakes. It is significant of Muir's absorption of interest in these great natural wonders that when he first heard the rumblings of the earthquake, waking him from sleep, his scientific enthusiasm should instantly have risen uppermost, and that, instead of flying in terror for safety, he ran out

exclaiming, "A noble earthquake!" and sought the spot where he could best behold the awful spectacle of the falling rocks. Muir has himself written a graphic account of this extraordinary experience.

While John Muir's greatest interest has always been centered in glaciers, and it is on this subject that he has added most to the world's knowledge, he has lost no opportunity to study the trees, flowers, squirrels, and birds of his mountains, nor to take account of the varying rock formations, so that he has contributed to many departments of scientific knowledge. Without Muir the splendid Sierras would still be comparatively little known to the world.

John Muir's methods of exploration are characteristic of his peculiar genius. Had his interest in the mountains been merely the dry curiosity of the scientist in quest of facts, many of his most notable expeditions would never have been made. While he possessed a voracious appetite for everything of scientific significance, he was forever drawn and thrilled by the beauties and splendors of forest and chasm. He would climb as far for the magnificent spectacle of a wind-storm in the tops of a noble forest, or to behold a rare sunset, or a snow-storm, as he would to discover a new glacier. Indeed, it was always the poet who led and the scientist who followed. "A perfectly poetic appreciation of nature," says Walter Bagehot, "contains two elements—a knowledge of facts and a sensibility to charms. Everybody who may have to speak to some naturalists may be well aware how widely the two may be separated. He will have seen that a man may study butterflies and forget that they are beautiful, or be perfect in the 'lunar theory' without knowing what people mean by the moon." Both of these elements of poetic appreciation are united in John Muir, and he shows us nature "tinged by the prismatic rays of the human spirit."

So Muir has always gone forth seeking beauty as well as knowledge, and ordinarily he has gone alone, not only because this method best suited his purposes, but because few men could endure the hardship and fatigue which were his daily portion. A wiry man, of slight build, all muscle and sinew, he was able to traverse great distances on foot, climb precipices

and the walls of glaciers with steady nerves, subsist on the smallest possible allowances of food, and sleep where they found him, with no covering but the light clothing which he had worn during the heat of the day. His needs were of the smallest—a bag of bread, a little sack of tea, and a cup in which to steep it. That was the only outfit he carried, besides a note-book and his four scientific instruments—a thermometer, a barometer, a clinometer, and a watch. Since then, when he had nearly reached the top of a mountain and expected to return, he knew that he would leave his bag at base and trust to finding it on his return. No matter how wild and rough the weather, no matter how far he had gone, and how stormy the weather, he never lost a day, nor failed to find the route, or gauge among a thousand where the food-bag was hidden. Sometimes he went three or four days without a single morsel of meals without any inconvenience. And it was always something of a shame to him to be compelled when the bag was empty, to return down his heights to what he called the "land of live." He has himself described

comfort and danger. All his writings are singularly and charmingly free from any evidence of self-consciousness in the matter of hardships, though here and there a remark, dropped as if by accident, gives one a glimpse of the tremendous difficulties which he was constantly surmounting. It is a source of humorous mystery to him how one of his friends, a well-known Western explorer, could write so voluminously on his experiences.

"Why," he said, "he had one chapter on how he went up a mountain and another on how he came down again."

And yet it has fallen to the lot of few men to have had more thrilling, and often terrible, experiences than John Muir. At one time, owing to his desire to complete some important observations for the Government, he was caught in a tremendous wind and snow storm on the summit of Mount Shasta, where he lay for seventeen hours in his shirt-sleeves over the jets of sulphur steam from fissures beneath the ice and snow, with the thermometer below zero. Dry, mealy snow, driven by a fierce wind, hissed over him, sifting under his clothing, and yet he escaped from what must have been death to one less hardy than he with nothing more than a few frost-bites. At another time his endurance and will-power saved a surveying party which was traversing the great desert in Utah from perishing by thirst on the sand. Once he became exhausted in attempting to scale a fearful precipice, once he was carried down a mountain-side on an avalanche, and once—and it was one of the few times when he varied his rule of making solitary expeditions—a companion fell on a crumbling spire of a mountain summit, dislocating both arms, and it was only with the most fearful exertion that Muir was able to effect his rescue. But he has himself told the story of what was perhaps the most remarkable of all his experiences. With his little dog Stikeen he was caught one stormy evening on one of the great unexplored glaciers of Alaska, and in returning to camp he found it necessary to cross a crevasse on a narrow and dangerous bridge of ice. The account not only thrills with adventure, but it is one of the most charming of dog stories, showing Muir's rare insight into dog character.

To his own danger in those expeditions

The hardships, indeed the adventures, of his work seem to have left comparatively little impression upon him. Adventure, he says, is usually misadventure, and a skilled mountaineer is too careful to have many misadventures. Seemingly he becomes so absorbed in the wonders which he opens before his vision that he is unconscious of his own dis-

he never seemed to give a thought. Death he looked upon with calmness. "I never have had contempt of death," he writes, "though in the course of my explorations I oftentimes felt that to meet one's fate on a mountain, in a grand cañon, or in the heart of a crystal glacier, would be blessed as compared with death from disease, a mean accident in a street, or from a sniff of sewer gas."

Though his expeditions carried him constantly among the haunts of wild creatures, Muir was never a hunter, not even killing for food, nor does he believe in fishing.

"Hunting," he once said, "is a healthy natural instinct, but one should outgrow it."

He would almost as soon think of killing a friend as he would of killing the wild things of the woods. A visitor once asked him why he did not kill the butcher-birds around his home.

"Why should I kill them?" he asked. "They are not my birds."

Of snakes he says, "Poor creatures, loved only by their Maker." To him all the woods are full of friends. "How many hearts with warm red blood in them," he writes, "are beating under cover of the woods, and how many teeth and eyes are shining! A multitude of animal people, intimately related to us, but of whose lives we know almost nothing, are as busy about their own affairs as we are about ours. Beavers are building and mending dams and huts for winter, and storing them with food; bears are studying winter quarters as they stand thoughtful in open spaces, while the gentle breezes ruffle the long hair on their backs; elk and deer, assembling on the heights, are considering cold pastures where they will be farthest away from the wolves; squirrels and marmots are busily laying up provisions and lining their nests against coming frost and snow foreseen; and countless thousands of birds are forming parties and gathering their young about them for flight to the southlands; while butterflies and bees, apparently with no thought of hard times to come, are hovering above the late-blooming goldenrods, and, with countless other insect folk, are dancing and humming right merrily in the sunbeams and shaking all the air into music."

No more beautiful tribute was ever paid to a bird than his chapter on the "Water Ouzel," in the closing lines of which he suggests how clearly these birds of cataract and storm interpret, "throughout the whole of their beautiful lives," "all that we, in our unbelief, call terrible, in the utterances of torrents and storms, as only varied expressions of God's eternal love." Out of sheer joy of friendship we find him singing and whistling merrily to his friend the Douglas squirrel, which he calls "a bright chip of nature:"

"I sang or whistled 'Bonnie Doon,' 'Lass o' Gowrie,' 'O'er the Water to Charlie,' 'Bonnie Woods o' Craigie Lea,' etc., all of which seemed to be listened to with bright interest, my first Douglas sitting patiently through it all, with his telling eyes fixed upon me, until I ventured to give the 'Old Hundredth,' when he screamed his Indian name, Pillilloveet, turned tail, and darted with ludicrous haste up the tree out of sight, his voice and actions in the case leaving a somewhat profane impression, as if he had said, 'I'll be hanged if you get me to hear anything so solemn and unpiny.'"

Though never a moralizer, John Muir is thus constantly teaching gentleness and sympathy. Indeed, he is by nature too sensitive to the personality of all living things to be less than friendly. He is a very poet for personifying. Coming once on a somewhat rare and bright-colored insect-devouring plant in the woods, he started back, exclaiming: "Hello, who are you? snake, I guess." Similarly, the familiar pepper-tree of California, with its green-yellow foliage, is to him a threatening and unpleasant personality, as the pines are noble or beautiful personalities.

Muir's attitude toward Nature is that of one who stands with bared head. Speaking of him who goes to Nature, Muir once said: "He must be humble and patient, and give his life for light; he must not try to force Nature to reveal her secrets, saying proudly, 'I'm a great man. Trot out your wonders; I'm in a hurry.' " Muir is not one of the scientists who first forms a theory, and then, falling in love with it, reads all nature as its proof, but, recording every detail of fact, storing it up, and "letting the blood circulate around it," he awaits the slow coming of

his conclusions. Scores of note-books filled with careful drawings and notes put down in the most painstaking manner indicate the thoroughness of his method. And yet he is no idolater of minute details, believing that science has a much wider sphere than the discovery and tabulation of isolated facts. "Dry words and dry facts," he says, "will not fire hearts. . . . In drying plants, botanists often dry themselves."

To him the details are the A B C's from which the great words and sentences of science are to be formed. Thus he is no believer in the painfully fine distinctions with which science sometimes dallies, much less in those controversies which have their rise in scientific jealousy over priority of discovery, nomenclature, and so on. Having so much beauty to see and so many sweet sounds to hear, the poet in him says we have not time here for controversies and jealousies. "While we are disagreeing over the final letter in a name," he said, "we are possibly forgetting that the tree is beautiful, and that it is here for us to enjoy."

At one time our conversation turned to the subject of evolution, particularly with reference to the views of Professor Haeckel, with whom I had recently been talking. His comment was, firmly: "Some scientists think that because they know how a thing is made, that therefore the Lord had nothing to do with making it. They have proved the chain of development, but the Lord made the chain and is making it." Speaking at another time, he said: "We sometimes hear the Lord spoken of as if He were a little, cranky, old-fashioned being, fastened and sealed in by well-established rules, and that the parsons are on confidential terms with him and know just what he intends." And yet, though brought up in the strict Scotch faith, he said: "I would go down on my knees and barefoot to learn something more about how the Lord works." All through Muir's writings, indeed, one feels the mood of reverence toward the great things of nature, the pervading presence of a powerful and loving Creator.

In the course of his long life John Muir has written much, mostly for the best American periodicals, and he has published two books, "The Mountains of" and "Our National Parks."

Authorship was not among the ambitions of his earlier years, his first published article being a letter which he wrote to a friend. Later, he conceived the idea of earning a little money to pay the small expenses of his expeditions, and he wrote a long series of letters for the San Francisco "Bulletin," including twenty-one articles during his trip to the Arctic in the ship *Corwin*. He also wrote for the "Overland Monthly," and for a time he edited and wrote extensively for "Picturesque California." He was always deeply interested in the preservation of the wild beauty of the West in parks and forest reservations, and through the influence of Mr. Robert Underwood Johnson, of the "Century," who made an expedition with him in the Yosemite country, he began writing for the "Century," and some years later for the "Atlantic," on the need of governmental protection for our forests—a work of love which has borne rich fruit. "Wildness," he wrote, "is a necessity," and "soon we may have to go further than Nansen to find a good sound solitude;" and that this "wildness" is being preserved to the country by a wise Government is due in no small degree to Muir's efforts.

Muir writes with rare charm and simplicity, his descriptions of natural beauty abounding in delicate sentiment and poetic feeling. He will tell you that writing is the most difficult of his tasks. He composes slowly, often recasting his sentences, rewriting and polishing, seeking always to reach the height of his taste and yet never quite doing it to his own satisfaction. Indeed, he has always more than half begrudged the time spent in writing, feeling that while he was tied to his desk fine things were being done outdoors.

John Muir was married in 1879, the year of his first Alaskan trip, to the daughter of Dr. John Strentzel, of California, and for a time he devoted much of his energy to the management of an extensive vineyard and fruit ranch inherited by his wife. He has two daughters, who are his constant companions and friends. His home, a large, comfortable wooden house, set on a knoll, is in a beautiful valley among the Contra Costa hills, some thirty miles east of San Francisco. A station on the railroad a few hundred yards from

his house is named after him. Here, surrounded by his extensive vineyards and, nearer at hand, by some of the wild trees and flowers that he cherishes, he lives and works; and yet he will tell you, "This is a good place to be housed in during stormy weather, to write in, and to raise children in, but it is not my home. Up there is my home"—pointing toward the Sierras. He works in a little upper front room, surrounded by a busy litter of books, pictures, and botanical specimens, cones each of which has a history, twigs of pine yet fragrant of the forest, though dry and brown. Now past sixty-four years old, he is still full of vigor and enthusiasm, a fascinating talker and story-teller, interested in the great outside world of men and yet having no desire to touch it more closely. It is very rarely indeed that he is persuaded to leave his home, and he has an especial dread of attending any sort of "function" where he may be called upon to speak. He has been President since its organization of the Sierra Club, and in the summer of 1901

he went for a trip to the Yosemite with a party of its members. Of late years he has not done so much mountain-climbing, though he is still a great traveler; as a companion of the Forest Commission of the American Academy of Sciences, with Professor Sargent, of Harvard, and others, he traversed much of the mountain country of the coast and visited Yellowstone Park, and later, as a member of the Harriman exploring expedition of 1899, he returned once more to the scene of his discoveries in Alaska. And it was only a few years ago that he had the pleasure of visiting his old home in Scotland. It is now his purpose to give the world as much as possible of the results of his long years of exploration, drawing upon the riches of his note-books, and to that end he is confining himself much to his desk.

A rare man, poet and scientist, we have to be thankful that John Muir stands out, though almost alone in a world of money-makers, a quiet exemplar of the simpler life.

## The Age of Abel

By Alice Ward Bailey

"**K**I-YI-YI, wow-wow!" The yelp of anguish became a bark of defiance. Aunt Phebe hurriedly opened the front door. "If you touch my cat, Sandy Griswold—" she began indignantly, adding, "I should thought you'd known better than to ha' brought him, Lois."

"I didn't bring him," protested the small, bent old lady, in a mourning veil, who followed the dog and did her gentle best to restrain him. "He would come in spite of me."

"Well, if I couldn't manage a *dog*—" cried her sister, scornfully. "Come, Tom, he sha'n't touch ye." The large tiger cat, blown up to twice his natural size by fear and anger, stiffly allowed himself to be lifted to his mistress's shoulder, where he clung and glared at his enemy from a position of safety. "You'll have to shut him up in the woodshed chamber," persisted Phebe; "I won't have Tom tormented."

Lois agreed, but there was a tenseness

about her meek little mouth, as she stooped to pat her companion before locking him in, which did not relax while she removed her bonnet and shawl.

"I hear Silas an' his wife are goin' to spend the summer on the old place," suggested Phebe, dropping Tom and his quarrel, but Lois made no reply. "They say he's made consid'able money out West and is goin' to fix up the homestead for Eliza to be comfortable in the rest of her days," pursued Phebe.

"He's goin' to do more 'n that," exclaimed Lois, beguiled in spite of herself by this opening for the display of superior knowledge. "I was over to Eliza's yesterday."

"Did you see Silas?"

"That's what I went for. They come for me; they wanted to see me about something partic'ler."

It was Phebe's turn to be silent now, but her attitude was one of close attention.

"Silas is goin' to make over the meetin'-

house and put in an organ, and he is goin' to have a brass plate set into the wall in memory of his father an' mother"—here Lois hurried a little. "He knew I had the Family Bible, and he wanted to ask me how old Abel was when he died."

She did not lift her eyes from her knitting, but she knew that Phebe's dark orbs, bright still and piercing in spite of her seventy years, flashed a glance like the gleam of a sword in her direction.

"Do you mean to say," demanded the deep, determined voice which she feared more than anything else in the world yet always dared and defied, "do you mean to tell me that you would let a lie be nailed up in the house of God?"

"Tain't a lie," returned Lois, doggedly.

"It is, and you know it. Don't that Family Record say you're sixty and I know you're sixty-one? Wa'n't I there with old Mis' Drew till the doctor come? And she said I was handy as a woman, if I wa'n't but nine years old," finished Phebe, proudly.

"I didn't tell him nothin' about you nor me," returned Lois. "All he wanted to know was how old Abel was when he died."

"You've said enough," exclaimed Phebe, with the air of a judge dismissing a criminal. "If we hadn't had this thing over and over, and up and down, there'd be some excuse; but you know as well as I do that there ain't one word of truth in that old Family Record from beginning to end."

"Why, Phebe Allen," protested her sister in awestruck tones. "Your own mother's Bible!"

"I don't care if it was my grandmother's!" exclaimed Phebe. "I know how we come; me an' Nathan an' Abel a year an' a half apart—"

"Two years," corrected Lois.

"I said a year an' a half, an' I stand to it," cried Phebe, raising herself in her chair. Her long, bony fingers trembled as they grasped the wooden arms, her ample bosom rose and fell stormily under her black gown.

The little woman in the rocking-chair before her turned pale, and her downcast eyelids fluttered; but she did not falter in the defense of Authority against Tradition. Silence fell between them like a veil, and through it pierced and rang a cry like that of the fatal Banshee.

"I'll have to go," murmured Lois, moving towards her bonnet and shawl. "Sandy'll keep that up till I do."

"Ain't you goin' to stop to dinner?" queried her sister, feeling stirrings of hospitality.

"Not to-day," replied Lois, spearing her back hair with the pin which was to hold her bonnet on. "Shall you be over next week?" she inquired, politely.

"I dunno. I've been havin' rheumatism along back, I can't walk fur," returned Phebe, finding it as difficult as any prevaricator to apply her theories to the social problem.

"Well, come when you can," sighed Lois. "Good-day."

"Good-day," responded Phebe, and watched the bent little black figure unfasten the woodshed door and follow the obstreperous Sandy to the gate. "Lois grows old," she mused, and something twitched at her heartstrings. "I've half a mind to call her back—if it warn't for that great, gallopin' hound—no, I won't, neither!" She resolutely laid the table for one, and ate with an assumed relish the spice-cake and custards she had prepared for Lois.

It was some days before Silas and his wife called. Silas had been out of town, he said, but Phebe felt the lack of sympathy in his manner and hardened her heart anew against her younger sister. Silas's wife did her amicable best to smooth the situation, but it bristled with difficulties. "Why do you treat Aunt Phebe so?" she asked her husband as they drove homeward.

"I can't bear her domineering ways," he answered, impatiently flicking with his whip the grass by the roadside. "She fairly abuses Aunt Lois because Aunt Lois happens to have the Family Bible and some other treasures."

"I don't think it's that!" exclaimed his wife. "Excuse me, dear, but—Aunt Phebe seems so sure—and you haven't proved yet that those old records are correct."

He turned and looked at her. "Do you think for a moment that my pious ancestors would put anything between the leaves of that Book which they could not swear to?"

"They might."

"O you Western heretic! It is evident that you were brought up on the Stock

Exchange. You are in New England now. We may have cheated the Indians and burned the witches, but we are a God-fearing, truth telling—"

"I know you are, none of you more so than Aunt Phebe," interrupted his wife. "I wish you'd drive over to Hardwick and look up those town records."

"Perhaps I will," said Silas, carelessly. But he did not go.

Meanwhile the meeting-house went on accumulating stained-glass windows and a new pulpit, electric lights and pew-cushions, lifted a wing here to let in an organ and there to make room for a choir, until one would hardly recognize the place.

After all, Silas did not see it completed. He was called home by business complications and his wife went with him.

Every one else attended the memorial service. The small edifice was packed. When Aunt Phebe appeared, leaning heavily upon her cane, her own pew was filled and she was ushered to a seat far up in front, face to face with the tablet.

It was so near that she did not at first espy it. All at once it flashed upon her, full in the midday light. A mischief-making sunbeam waltzed roguishly across it and picked out, letter by letter, figure by figure, the line which stated Abel Allen's age at the time of his demise to have been sixty-seven years.

Her dark skin grew mahogany-color. She glanced about for Lois, the minister, some one, any one whom she could hold responsible for the affront. But Lois was hidden away among the Griswolds; the minister was thinking over the impressive words he meant to say. She stood up deliberately, and stretched out her long right arm, pointing a tremulous finger at the shining plate. "It's a *lie*," she said distinctly; then, gathering up her cane, her hymn-book, and her sprig of fennel, she hobbled out.

Deacon Tupper, who was helping the sexton seat the people that day, hurried after her. "What's the matter with ye, Miss Allen?" he whispered. "Be ye faint?"

"No, I ain't faint," she answered aloud. "But I've had all the *memorial* I want. I'm goin' home." And go she did, hearing behind her as she climbed the hill,

"I love thy kingdom, Lord,  
The house of thine abode,"

sung by choir and congregation, all standing.

Early the next morning the minister made his way to Phebe Allen's house. He was a young man and this was his first parish. He was small and spare, very much in earnest, very sure of his opinions. Aunt Phebe met him at the door and scanned him up and down. "Come in," she said briefly.

"I am deeply pained and surprised," he began, seating himself in the chair she placed for him.

He paused.

She waited for him to continue.

"Miss Allen," he began again, more earnestly, "how can you, now, when our little church for the first time sees prosperity before her, when for the first time she takes her stand among the largest and most respectable churches in this vicinity, how can you bring discord and unhappiness into our midst, merely because of one uncertain figure?"

"I guess you'd think one figger was consid'able, if anybody was owin' ye," returned Miss Phebe with acidity: "an' 'tain't uncertain; I know what it is, an' I keep a-tellin' 'em, but there won't nobody listen to me."

"I am convinced," the minister went on; "I have thought the matter over, and I am convinced that no one would put a false statement into a Family Bible Record."

"You believe the whale swallowed Jonah, don't ye?" returned Miss Phebe, irrelevantly. "Well, I don't."

For full thirty seconds neither spoke. Conversation was past recovery. The call came to an abrupt close.

Deacon Tupper was the next to try his hand at a reconciliation. "Oh, come now, Miss Allen, whether Abel was sixty-seven or sixty-eight, we've got to have peace an' harmony," he said, airily. "You act as if we'd been shortenin' his days while he had 'em; 'tain't goin' to hurt him now—allowin' that they be shortened."

Aunt Phebe fixed her great black eyes on his small, watery blue ones. "Ye think it's dretful funny, don't ye," she said with scorn, "to see an old woman like me all worked up over nothin'? Well, 'tain't nothin' to me; it's a good deal. An' I hain't ben treated right."

More than one of the neighbors said

that; they said Aunt Phebe ought to have been consulted as long as she was one of the family; "it was enough to mad anybody to be set aside that way."

But when they attempted to say this to Aunt Phebe herself, they were sent promptly about their business. She was not of those who discuss family troubles with outsiders. "I can manage my own quarrel," she told them. She could and did.

When the Griswolds came over, escorting Lois, she met them with an exasperating smile, and the elaborate manner in which she performed the rites of hospitality drove them precipitately home; nor did they appear again. Lois came once alone, having taken precautions to leave Sandy, yelping discomfiture, in the clutch of the Griswold children. She rapped timidly at the front door, but received no answer. She tried it; it was locked. Phebe had intrenched herself in the little gray house with her cat and her patchwork, and only the milkman and the butcher saw her after that.

Winter passed, and spring. Summer came, bringing Silas Allen back to the scene of his benefactions.

"How is everything, mother?" he inquired at the tea-table less than a half-hour after his arrival. "How's the little church?"

Eliza shook her head. "Phebe ain't set foot inside the door since the day of the memorial service," she said, sorrowfully. "What's more, she won't let none of us go near her, and I know there's times when she needs her own folks."

Silas gave a low whistle and looked at his wife. Her answering glance was too full of distress to find room for recrimination.

"What can I do?" he asked, helplessly, when they two were alone.

"Do?" she cried. "You can do just what I wanted you to do in the first place; you can go over to Hardwick and prove that tablet right or wrong."

"What if it's right?"

"Aunt Phebe will be the first to acknowledge a mistake."

"You think so?"

"I know it. Dear, let's go to-morrow."

"Will you go?"

"Of course."

They set off in the early morning, a

big lunch-basket before them and a bag of oats in behind for the horse. Before they were out of the yard Eliza came running after them.

"If I's you," she panted, "I'd see Phineas Fletcher—the old gentleman—Young Phineas is his son. He's a sort of second cousin of mine. He lives in Hardwick—or did—right on the Green. He knew your father, and used to visit Gran'pa and Gran'ma Allen. Ask him about the old Bible. He may know who wrote up the records. 'Twa'n't any of the Allens; they couldn't write that fine, copperplate hand."

"All right, mother. Anything more?" inquired Silas, gathering up the reins.

"No, I guess not. Hope you'll have a nice day." She ran back to the house, and the travelers drove on. A beautiful road lay before them, through fragrant pine forests, skirting lovely meadows, and over hills which afforded glimpses of distant mountain and valley between the clustering trees.

"Our errand seems very insignificant," sighed Elizabeth, "in the face of granite rocks and giant spruces"—

"But not in the face of Aunt Phebe," finished Silas, with a laugh. "I wonder what she'll say when we prove to her the correctness of those records."

Elizabeth gave him a quick glance. To her the problem was capable of another solution.

The first boy they met could tell them where Phineas Fletcher, "the old gentleman," lived, and it was "on the Green," as Eliza had said, in a large, square white house, with cornices over the front door and the windows. They tied the horse, and rang a loose-jointed bell, which rang crazily for several seconds after they pulled it.

The young girl who opened the door said "Gramper" hadn't been feeling well lately, but she guessed he'd be glad to see them.

He was. He shook hands vigorously first with one, then the other, and exclaimed with delight over Silas. "Abel Allen's boy, wal, I declare; it don't seem possible! I heard you's 'round, last summer, fixin' up the old meetin'-house. Fixed it up 'most too much for your Aunt Phebe, didn't ye? He-he-he!"

"That's why I'm here," rejoined Silas,

with equal heartiness. "My mother thinks you can help us out of this scrape. Do tell me if that record in the old Family Bible is correct—if you know."

"Know? I guess I do," chuckled Phineas. "Warn't I there? An' didn't I hear Uncle Joseph Morton explainin' his figgers to Mis' Allen?"

"Explaining his figures?" repeated Silas and Elizabeth in a breath.

"Ya-as," drawled Phineas, stroking his long gray beard, and enjoying to the full the sensation his words produced. "Tried to tell her how her children was born two years apart 'stead of a year an' a half, as she s'posed. Whether 'twas easier for him to figger that way, or he thought they looked better so, he's bound to have it they's born two years apart. I had to laugh when I heard what a row it had raised 'tween Phebe an' Lois."

"Then Aunt Phebe was right!" exclaimed Elizabeth, solemnly.

"Ya-as," repeated Phineas, still stroking his beard. "You'll find it on the books over to the town clerk's house."

"Where is the town clerk's house?" demanded Silas. He would not look at his wife.

"Jes' 'crosst the Green. You can see it, that yaller house, sets back from the street."

"Will you wait here?" asked Silas of Elizabeth, and still their eyes did not meet.

"Let her stay, let her stay," clamored Phineas. "An' you might's well put up your horse. Tea'll be ready soon's you get back—won't it, mother?"

He appealed to the chubby-cheeked old lady entering the door. She had delayed to put on her "t'other gown," and was flustered into a fine color by the haste with which she had "shifted." The young girl who met them at the door was close behind. The fragrance of fresh bread came in with her from the kitchen.

"Oh yes, tea'll be ready right away," chirped the old lady, and the young girl smiled hospitably.

Silas was gone but a few minutes. He entered without a word, and gravely hung his hat on a peg in the hall.

"Well?" exclaimed Elizabeth, interrogatively.

"Warn't it jest as I said?" inquired Phineas.

"Yes, it was just as you said," responded Silas, gloomily.

"You don't seem over an' above pleased," commented Phineas, jocosely.

"I'm not," was the laconic reply.

"What sort of a man was Uncle Joseph Morton?" put in Elizabeth, quickly.

"You saw them records?" returned Phineas. "Wal, they look just like him, proper an' pre-cise—an' *jus' as soon lie as not!*" The heat of an old grudge was in his words, but before he could say more "tea" was announced, and, confronted by its magnificent proportions, Uncle Joseph Morton's mendacity, with all the trouble it had wrought, became a matter of secondary importance.

Silas's gravity remained, however. His wife rallied him upon it, gayly, as they drove towards home, the next day. "I don't see why you are so down-hearted," she said, "now that everything is settled."

"Settled!" he cried, "settled! Everything is *un*-settled. I wish I had never touched that tablet!"

"I don't see why," she returned, obtusely.

"You don't?" he almost shouted. "Here I've got to go and haul down that tablet after it has been consecrated and memorialized and what-not and have it made over and stuck up again! I've got to tell Aunt Lois her Bible Records are full of lies—she'll think *that's* Infidelity and Higher Criticism!"

"Fudge!" cried Elizabeth. "You make too much of it. Just go there quietly and take the tablet down. Such a slight alteration can be made in no time. I'll attend to Aunt Lois."

"You don't know these people as well as I do," was all that Silas would say.

Nevertheless, he set off bravely as soon as he had let her out of the buggy, and returned an hour later with the tablet lying on the seat beside him, face down.

Elizabeth ran to meet him. "It wasn't so bad, after all, was it, now?" she demanded.

He smiled. "There was a special interposition of Providence," he said, light-heartedly. "The parson had 'gone to Conference,' and the parson's wife was entertaining callers in the parlor. Their youngest son showed me where the key to the church hung, on a nail in the hall, with instructions to 'put it back when I

was through with it.' He ran back to his game of 'Hi Spy,' and has forgotten all about the key, as long as I returned it. I borrowed a screw-driver of the heretics on the back street behind the church, who have never heard of the tablet, or, if they have, don't care."

Elizabeth clapped her hands. "Then we'll pack this off to New York by the first express," she said, "and after supper we'll settle the aunties. How you will sleep to-night!"

After supper she organized her expedition; the surrey with two horses, Eliza on the back seat, herself and Silas on the front seat. "To the Griswold Farm, first," she directed.

Lois came out, bareheaded, to greet them, followed by three of the Griswold children and the dog Sandy. "Get right out," she cried, hospitably. "I've been wonderin' all day if you wouldn't be over to-night."

"You get right *in*," responded Elizabeth, "as soon as you've put on your bonnet and shawl. Children, run and get Grandma's bonnet and shawl!" Away scampered the trio, with Sandy at their heels.

"We're going to take you for a little drive," explained Eliza. "It's such a nice evenin'."

"So 'tis," agreed Lois. "But I dunno; how 'm I goin' to dress, right here side the road?" She managed to get into the wrappings, however, when they came, and had clambered to her place beside Eliza before Silas could spring to her assistance.

"You're spry as a girl, Auntie," he exclaimed admiringly, and Lois drew up her bent little figure with a heroic effort to make it straight. She did not notice where they were going until the horses' hoofs rang out on the flinty road her feet had so often trod, over the hill to Phebe's. Then she clutched Eliza's arm. "Where be you takin' me?" she gasped.

"Over to see Aunt Phebe," called Silas over his shoulder, before his mother could reply. "Don't you want to go?"

"She don't wanter see me," faltered Lois. "I wish she did."

"How much would you give, Auntie?" asked Elizabeth, turning around and laying a caressing hand on Lois's knee.

"'Most anythin'," answered Lois, with emotion.

"Would you give the old Bible Records?" pursued Elizabeth.

"What d'ye mean, child?" ejaculated Lois.

"Tell her," said Elizabeth to her husband.

"Tell her yourself," he responded.

"Auntie," she exclaimed, giving the knee an affectionate squeeze, "we've been over to Hardwick to look at the town records, and, do you know, that old Bible Record isn't right! Aren't you glad? There was no other way to make up with Aunt Phebe, and you never did care as much as she did!"

Oh, wily Elizabeth! Before the horses trotted up to the little gray house where Phebe lived, Lois really believed she was as glad as Elizabeth said she was.

There was no sign of life about the place, but the front door was not locked, as when Lois last approached it. "I'm sca't," she muttered, her hand trembling on the latch. "She wouldn't be gone this time o' day!"

"Who's there?" called an imperious voice.

"Thank the Lord!" breathed Lois, and they hurried in.

"You'll have to wait on yourself," continued the voice. "I've turned my ankle. Why, Lois, 's that you? and Silas's folks! I declare, I ain't fit to see company—an' the kitchen fire's out—an' the breakfast dishes ain't done!"

No one replied. Lois was down on the floor beside her, removing shoe and stocking from the injured foot. "Bring me some cold water, s' long as there ain't any hot," she commanded.

"I'll have some hot in a minute," called Silas, making a rush for the kitchen. Eliza followed him. Elizabeth tucked a cushion between Aunt Phebe's back and the ribs of the chair, and drew her little shawl over her shoulders.

"How long you ben settin' here?" demanded Lois, sharply.

"Since eight o'clock this mornin'," was the reply.

Lois groaned.

"Go tell 'em to make her a cup o' tea," she said to Elizabeth, "an' cook her an egg on toast." Elizabeth flew.

"Bring me a basin of water as soon as it's het," Lois called after her, "an' make me a bandage—there's old linen in the

chist in the attic chamber. Sakes alive!" she murmured, "since eight o'clock!" Her bonnet with the mourning veil had tumbled off, her small, anxious face was a network of wrinkles, there was not a trace of her ordinary shrinking manner. She ordered Elizabeth about and hastened the movements of Silas and his mother. In an incredibly short time the ankle had been bathed and bandaged and the tea and the egg on toast were ready.

Phebe glanced from one to another of the four standing about her. "Can't ye find a place to set down, any of ye?" she inquired, humorously. "Anybody 'd s'pose I was of consid'able consequence. Makes me think"—she turned to Silas—"of the time your father spraint his ankle. You wouldn't remember it, Lois; you weren't but three. I was twelve an' Abel was nine." She paused, but no one challenged her figures. On the contrary, Silas, with a deference he had never shown this aunt before, drew a chair beside her and seated himself very near.

"You must remember just how he looked," he said, confidentially.

"Remember? I guess I do! Little freckle-face boy!" There was a wealth of tenderness in her tone.

Lois softly withdrew to the kitchen. Eliza went, too. Elizabeth hesitated a moment, then drew her chair to the other side of the big, motherly figure. "I know Silas wants you to tell about his father when he was a little boy," she said, caressingly, "and I'd like to hear it, too."

"'Tain't no great of a story," disclaimed Phebe. "'Cep' to those who are interested; 'course I like to go over it, here by myself, as I do, a great many times a day." With this prelude she began. Story after story fell from her lips; small, uneventful happenings, of consequence, as she had said, only to those who held their subject dear, tender trifles, whimsical personalities, until the form of the little lad stood before them distinct and real and living, from the torn brim of his straw hat where he "peeked through" to the soles of his bare brown feet.

The twilight fell and found them so, the listeners bending ever nearer, ever more absorbed and touched, the speaker gathering confidence as she proceeded.

Lois came in with the lamp, at last, and fidgeted about.

"Are we letting her talk too much?" inquired Elizabeth.

"We was sayin'," said Eliza, also returning from the kitchen, "that somebody ought to stay with her—"

"I shall stay," interrupted Lois, promptly.

"Oh yes, Lois'll stay," agreed Phebe, good-humoredly. "Silas, if you'll come over some day I'll show you those little things I spoke of. You'll have 'em when I'm gone, but I'll keep 'em for the present."

"I'll be over to-morrow," said Silas.

"We all will," said Elizabeth. And then they drove away and left the sisters together.

"Phebe," said Lois, timorously, "they've been over to Hardwick to the town clerk's house, an' our old Bible Records ain't right."

"Course not; never were," returned Phebe. "Lois, do you remember when Uncle 'Lisha pulled Abel's tooth—the first he ever had pulled? He led him out to the barn, and rolled open the big door. Then he moved all the carts and kerridges. Then he got a broom, an' swep' up clean, an' *then* he sat down in the middle of the floor, and took Abel's head atween his knees."

Phebe laughed softly to herself. "I've jus' been tellin' Silas about it."

"Should ha' thought 'twould ha' sca't Abel 'most to death!" exclaimed Lois.

"Not much!" returned Phebe. "He took it all in. He warn't nobody's fool, Abel warn't." She laughed again, and rubbed her hands.

Lois tiptoed gingerly about, straightening the familiar chairs and tables. Everything was unchanged since that last visit more than a year ago. She bethought herself of one thing which might be different. "Phebe," she asked, with sudden interest, "did you ever do any more on that shell-pattern quilt?"

"Got it done!" cried Phebe, triumphantly. "It's all laid out in the best chamber. Go and see how nice it looks."

Lois obeyed. The Old Family Bible Record was as if it had not been. The next Sunday the corrected tablet was in its place, and not many weeks afterwards Phebe was in hers.

# A Little Memory of a Swiss Adventure

By William Frederick Dix

RECENTLY, while standing on the corner of Twenty-third Street and Eighth Avenue, waiting for a downtown car, there happened to be a temporary lull in the street noises, a brief cessation of rumbling wagons, and as I became gradually conscious of the unusual stillness, suddenly a bewitching glimpse of Switzerland came into my mind. I seemed caught away from the sordid, unlovely New York street corner to the idyllic peace and beauty of the Rhone Valley. I saw the little paved square before the Hotel de la Post in the village of Brieg. The cream and russet walls of the houses surrounded me, the great six-horse diligence which had just come down from the Simplon Pass was beside me, and gray-clad, hobnail-booted hostlers were leading away the horses, while from the opposite side of the little square came a half-dozen sleek cows jangling their bells as they slowly stumbled along in the dusk to the stone watering-trough.

Jangling their bells! Ah! that was the fairy call that lured me so quickly off to Switzerland. Coming down Eighth Avenue was a ragman's cart, unpainted and creaking and with a string of discordant bells strung between two short posts at the back. They produced just the medley of sound of a drove of Swiss cattle! I shut my eyes, and, letting two downtown cars go by unheeded, was, as I listened, whisked back again to the little cobblestone square and the entrance of the Hotel de la Post.

All the way downtown I dreamed of Switzerland. I did not see the conductor as I mechanically paid my fare, and I forgot to ask for a transfer. I breathed the air of the Alps, and stamped into the Hotel de la Post demanding a hot supper and preparing for it in a dainty little bedroom *au deuxième*, with white tidies on the chairs. What a day it had been! The most adventurous of many. And here I was safe in Switzerland with my bicycle, and the diligence authorities outwitted!

The day before I had set out, with a light heart, on the last and more difficult

part of my bicycle trip. I had ridden from Florence across the Apennines to Bologna, thence up the smiling Lombardy plain to Milan and the Italian Lakes, and, leaving Pallanza, on Lake Maggiore, about mid-afternoon, I rode the twenty-five miles of level macadam road, reaching Domo Dossola, at the foot of the great mountain wall that separated me from Switzerland, at dusk. It was in early April, and as I looked across to the mountains, I noted how low the snow line was, and realized that I could not cross the pass on foot. Halting at the dismal hostelry opposite the diligence office, I secured a brick-paved, severely furnished room for the night and strolled across to the office.

To the man at the little window I made my request for a seat in the coupé.

"Perfectly, monsieur. What luggage have you?"

"Only a knapsack and a bicycle."

"Ah! a bicycle! I am sorry, monsieur, but the law does not allow us to take bicycles on the diligence."

"No bicycles!" I cried, aghast; "but I am traveling by bicycle! How can I get across?"

In reply, one of those detestable French shrugs by which one throws off all responsibility in the matter and leaves you helpless.

"I am living in the Rhone Valley at present," I explained, "and I have come from Florence on my bicycle. I must cross the Simplon to-morrow. How can I go, if not by the diligence?"

It was growing dark, and the post agent was anxious to close the business.

"Monsieur," he said, firmly and coldly, "many voyageurs have come hither *en bicyclette*, and they have all had to enter Switzerland by some other route. There are fifteen feet of snow on the pass at this season, and five hours of the journey are in open sledges. How, then, can a bicycle be transported? Besides," and he rose to close the window, "the law forbids. Good-night."

And I stood alone, looking blankly into the dark square across which were the

lights of the inn. I walked angrily back, summoned the landlord, and demanded that he come to my rescue. It began to rain, and the evening was chilly. I had been looking forward for days to my return to my beloved Switzerland, and here, at the very threshold, the door was suddenly shut in my face. To go to Lake Geneva by some other route meant by either the Mont Cenis tunnel via Turin and Geneva, or the St. Gothard via Lucerne, either route necessitating three or four additional days. My landlord stolidly verified the remarks of the agent, and said that frequently *messieurs les voyageurs* were thus disappointed.

"But," I persisted, "why cannot I go by extra post?"

A genial, full-bearded fellow-guest, a Dutch gentleman who had been listening to our conversation, here joined in, raising his hat with charming grace to me, in apology for the intrusion.

"Certainly," he said in excellent English, though we had been talking in French—a trick which most foreigners have when they recognize the American. "I and my two daughters go to-morrow by extra post; I should be glad to offer the fourth seat to monsieur, if—"

I was about to express my gratitude when mine host explained that the extra post was just as much under government control as the diligence, and "the law did not allow bicycles."

"Then," I exclaimed in desperation, "I will hire a private conveyance."

The landlord smiled. "Impossible," he said. "That would require a relay of horses, and relays are a government monopoly." As we three stared in silence for a moment at each other there in the damp little courtyard, suddenly an idea smote me.

"Landlord," I said, "have you any meal-bags?"

"Meal-bags, Monsieur?"

"Yes; four large, strong meal-bags. Send for them quickly." I crossed to my bicycle, unstrapped the knapsack from the handle-bars, took off the tool-bag and handle-bars, and, crouching down on the pavement, by the light of a lantern, removed the saddle, chain, and wheels. In a few moments the vehicle which had borne me stoutly over a thousand miles of rough Italian roads had resolved itself into its several parts. Then an elderly peasant

woman appeared with an armful of dusty burlap bags. The front wheel was popped into one, the rear one into another, the frame into the third, the handle-bars, chain, pedals, saddle, and sprocket into the fourth. The woman, quick to understand, was rapidly plying a large needle, and when I looked up from the completed work with flushed face and grimy hands, I heard a ripple of laughter, and there stood the bearded Dutch gentleman with his two daughters looking down on me from a little wooden balcony above.

We four had a merry supper together. I was again in high spirits, and we promised to sup together on the following night on the other side of the pass.

The next morning I was called at half-past five. It was dark, cold, and rainy. The brick floor of my bedroom was not comforting. I dressed rapidly and warmly, and soon presented myself at the window of the diligence office.

"Give me a ticket for a coupé seat in the diligence," I demanded, with some hauteur, of my acquaintance of the previous night. He thrust his head out of the little window, glared first at me, then at my luggage deposited at my side by the hotel porter. It consisted of one knapsack and four meal-bags, securely sewn up. For a moment there was a dramatic pause. Then he dropped the window, made out the ticket, and gave my luggage to the guard to be stored on top of the coach.

After a cheerful breakfast I took my place on the front seat of the great mediæval coach, and at seven o'clock the six horses started under a volley of whip-crackings, and the trip across the Simplon to Switzerland was commenced. And what a day of adventures! After climbing the rain-soaked roads for several hours we reached the snow-line, and changed from the coach to little wooden sledges, each drawn by one rope-harnessed horse, and carrying two passengers. I sat with a peasant man, and for five hours we toiled over the deep snow. Sometimes the horse would fall, and we would flounder out to help him up and warm our stiff limbs. Once we upset, and once, when the right trace broke, the rear part of the runners overhung a precipice. Several times, where the snow had avalanched across the road, workmen had dug tunnels, and through these treacher-

ous holes we had to go. At the summit was the hospice, where a kindly-faced old priest gave us warm things to drink. Clouds and snow-flurries buffeted us; the great mountain peaks rose, dimly discerned, on all sides; white drifts of clouds lay below us, shutting out the valleys, and the wind whirled around the corners where the narrow road turned, striking us from unexpected quarters. A vast silence encompassed us, broken only by the creak of the sledge and the bell on the horse. At last, about three o'clock in the afternoon, we climbed, half frozen, from the wretched sledge into the shelter and comparative comfort of the diligence awaiting us at the level where the snow ceased. For two or three hours more we whirled down the zigzag road toward the green valleys of Switzerland, the storm passed, and at sunset, with a resounding clatter of hoofs, our diligence rolled into the little cobblestone square of Brieg, and the doorway of the dear little Hotel de la Post invited us in to warmth and good cheer.

I clambered, with infinite weariness but with infinite peace of mind, down

from my red-cushioned seat in the coupé. My meal-bags were being taken down from the top; the horses, unhitched from the coach, were led to their stable; and across the dusk-veiled square, toward the stone watering-trough, came the cows with their jangling bells.

The Dutch gentleman and his daughters appeared at an upper window.

"Welcome to Switzerland, Monsieur!" he exclaimed, jovially. "The supper is ordered, and will be ready in half an hour! What an emotional day it has been! Never again in April will I attempt the Simplon! Monsieur, we congratulate you on bringing the first bicycle across the Pass!"

As I entered the house I looked back at the dim form of the diligence, standing silent and deserted in the square, which had carried me safely down from the snowy summits as St. Christopher had carried the pilgrims on his back. St. Christopher!

The Eighth Avenue car had halted! Christopher Street! I blinked, rose hastily from my seat, got off, and, having no transfer, walked down to the ferry.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Adventurous Quest (An): A Story of Three Boys.** By Laura Scherer Copenhaver. The Lutheran Publication Society, Philadelphia.  $5\frac{1}{4} \times 8$  in. 405 pages. \$1.25.

**Among Green Trees: A Guide to Pleasant and Profitable Acquaintance with Familiar Trees.** By Julia Ellen Rogers. Illustrated. A. W. Mumford, Chicago.  $7\frac{1}{4} \times 11$  in. 202 pages. \$3.

A thoroughly practical manual, sympathetically and interestingly written, and abundantly illustrated with half-tone and line engravings and photogravures. The latter full-page illustrations are especially fine.

**Annie Laurie Mine (The).** By David N. Beach. Illustrated. The Pilgrim Press, Boston.

There are to be found in this story both spiritual fervor and earnest desire for social reform. The author sets out his purpose in a preparatory way in several strongly worded sentences selected from Ralph Waldo Emerson, W. D. Howells, Senator C. K. Davis, and Bishop Henry C. Potter. These bear forcibly on the incessant conflict between the material and the moral, the infinite cruelty of industrial slavery, the spirit of modern feudalism among capitalists, and the spirit of caste as evidenced

in modern social conditions. Perhaps there may be improbabilities in this fictitious history of a mine first ruined and oppressed by selfish capitalists and then conducted not only in a spirit of human helpfulness, but of literal Christian brotherhood. Perhaps, too, the dramatic situations and the religious fervor are a trifle exaggerated. Nevertheless, the story is in a true sense vital; its characters act and talk like living human beings; the situations are novel and interesting; and, above all, the purposes and feeling of the author are in a noteworthy degree helpful and inspiring.

**Art of Living Long (The).** By the Celebrated Venetian Centenarian Louis Cornaro. (A New and Improved English Version.) With Essays by Joseph Addison, Lord Bacon, and Sir William Temple. William F. Butler, Milwaukee.  $6 \times 9\frac{1}{2}$  in. 214 pages.

A new translation of a curious old Italian treatise, together with some account of its centenarian author, and extracts on the subject of longevity from the works of Addison, Bacon, Sir William Temple, and other famous writers of English poetry and prose. The book is illustrated with full-page portraits of all of the authors named.

**Autobiography of a Beggar (The).** By I. K. Friedman. Illustrated. Small, Maynard & Co., Boston. 5x7½ in. 350 pages.

The Autobiography of a Beggar is preceded by some hundred odd pages concerning the Beggars' Club. In both chronicles we find much that is amusing, but even the picturesque "hobo" in a continuous performance of humorous adventure grows fatiguing.

**Bass, Pike, Perch, and Others.** By James A. Henshall, M.D. Illustrated. The Macmillan Co., New York. 5½x8 in. 410 pages. \$2, net.

No name otherwise the fisherman's interest in this part of the country as does that of the bass. This addition to the American Sportsman's Library—of the merits of which in typography, illustration, and thorough preparation we have already spoken more than once—deals with all, or nearly all, of the game fish of the United States east of the Rockies, with the exception of the salmon and trout and some of the larger varieties already described in other volumes. The number of varieties of the bass and pike families will surprise most readers. The book not only gives in convenient form scientific information about the fish themselves, but contains elaborate and expert advice about the kind of fishing-tackle and tools to be employed, the habitat of the different fish, and a great variety of other information which will be welcome to the sportsman and the naturalist alike.

**Beauce of Power.** By Ella Stryker Mapes. G. W. Dillingham Co., New York. Illustrated. 5x7½ in. 269 pages.

Reserved for later notice.

**Black Lion Inn (The).** By Alfred Henry Lewis. Illustrated. R. H. Russell, New York. 5x7½ in. 381 pages.

Through a rather antiquated device, the author has put the tales of this volume into the mouths of certain storm-bound travelers, who enliven the period of their imprisonment at the Black Lion Inn with the cheerful art of story-telling. The tales themselves, however, are sufficiently breezy to blow quite away the somewhat musty odor that clings to the manner of their introduction. The "interludes" are equally refreshing, and the illustrations are—Remington's.

**Bridge Book (The): Practical Talks about Bridge.** E. P. Dutton & Co., New York. 4x6½ in. 228 pages. \$1, net.

**Composition and Rhetoric: Based on Literary Models.** By Rose M. Kavana and Arthur Beatty. Illustrated. Rand, McNally & Co., Chicago. 5x7½ in. 423 pages.

**English Garner (An): A Re-issue in 12 Volumes of Professor Arber's Ingatherings from English History and Literature.** Vol. IV. Voyages and Travels. (In 2 vols.) Edited by C. Raymond Beazley, F.R.G.S. Vol. V. Social England in the Seventeenth Century. With Introduction by Andrew Lang. Vol. VI. Critical Essays and Literary Fragments. Introduction by J. Churton Collins. E. P. Dutton & Co., New York. 5½x8½ in. \$1.25 vol.

This reissue of Professor Arber's "Ingatherings from English History and Literature" constitutes a notable series for the careful and minute student of English life in the sixteenth, seventeenth, and eighteenth centuries. The

name of Professor Arber is, of course, a sufficient guarantee for the accurate collation of the text with the rare originals. The volumes already issued, as indicated above, comprise first a collection of voyages and travels mainly by Elizabethan Englishmen, next a collection of seventeenth-century tracts edited by Mr. Andrew Lang—who calls them "Ancient Journalism," for to-day they would be put forth as articles in newspapers and magazines; finally, an edition by Professor Churton Collins of essays and fragments which show especially the character and status of the clergy in the seventeenth and eighteenth centuries—the collection includes such notable publications as Eatchard's "Contempt of the Clergy" and Bickersteth's "Miseries of the Domestic Chaplain," and comes to a fit climax with Franklin's summary of the maxims in "Poor Richard's Almanack."

**Fur Traders of the Columbia River and the Rocky Mountains (The).** As Described by Washington Irving. (The Knickerbocker Literature Series. Edited by Frank Lincoln Olmsted.) Illustrated. G. P. Putnam's Sons, New York. 5x7½ in. 222 pages. 90c., net.

**Hereward the Wake, "Last of the English."**

In 2 vols. By Charles Kingsley. (Library Edition.) J. F. Taylor & Co., New York. 5½x8 in.

These are the first-issued volumes of a new edition of the works of Charles Kingsley, edited by his eldest son, Mr. Maurice Kingsley, who is to supply notes and introductions to the several volumes. The edition as to form is decidedly attractive, the type is clear, the illustrations are acceptable, and the binding is sensible and well adapted for library use. We shall comment on the edition when further volumes have been received.

**How to Keep Well: An Explanation of Modern Methods of Preventing Disease.** By Floyd M. Crandall, M.D. Doubleday, Page & Co., New York. 5x8 in. 511 pages. \$1.50.

**How to Make School Gardens: A Manual for Teachers and Pupils.** By H. D. Hemenway, B.S. Doubleday, Page & Co., New York. 5x7½ in. 107 pages. \$1, net.

**Jesus Christ: His Origin and Character.** By Frank Ballard. Charles Scribner's Sons, New York. 5½x8 in. 32 pages. 20c., net.

**Main Chance (The).** By Meredith Nicholson. Illustrated. The Bobbs-Merrill Co., Indianapolis. 5x7½ in. 419 pages.

The incident of this story, aside from a little case of kidnapping thrown into the bargain, as it were, and a single not too bloody murder, has to do with the commercial life of a small city in the Middle West. The characters include a bank president, a cashier, a good bishop, a weak and purposeless young man (native), a strong and purposeful ditto (from the East, and the hero), and a sweet young girl (the heroine, and the bank president's daughter). They are generally well drawn, and the book is readable.

**Medical Missions, Teaching and Healing.** By Louise C. Purington, M.D. The Fleming H. Revell Co., New York. 4½x7 in. 25 pages. 10c., net.

**Methods of Bible Study.** By W. H. Griffith Thomas, B.D. The Fleming H. Revell Co., New York. 5x7½ in. 120 pages. 50c., net.

The author's method is determined by the end in view, which is purely devotional, and for spiritual rather than literary or critical satis-

faction in adherence to traditional modes of thought.

**Oldest Code of Laws in the World (The):**

The Code of Laws Promulgated by Hammurabi, King of Babylon, B.C. 2285-2242. Translated by C. H. W. Johns, M.A. Charles Scribner's Sons, New York. 5x7½ in. 88 pages. 75c., net.

The stone block on which this code was engraved nearly a thousand years before the time of Moses was recently discovered by French explorers at Susa (the "Shushan" of the book of Esther), whither it had been carried as a trophy from Babylonia. The King who published it, Hammurabi, is the "Amraphel king of Shinar" in Genesis xiv. 1. Not only is it the oldest code in the world, but it points back to the remote antiquity required for such a body of laws to grow up in judicial processes. In its modern covers it is a most interesting relic of judge-made law. In a fair comparison it is distinctly inferior to the Mosaic code, lacking the humanitarian note which this makes prominent.

**On the Trail of Moses: A Series of Revival Sermons.** By Rev. Louis Albert Banks, D.D. Funk & Wagnalls Co., New York. 5¼x8 in. 298 pages. \$1.20, net.

**Poems and Verses of Charles Dickens (The):** Collected and Edited with Bibliographical Notes. By F. G. Kitton. Harper & Bros., New York. 5½x8¼ in. 206 pages. \$2, net.

A rather handsomely made volume which includes the poems from his novels, several of which are well known, and songs and choruses from "The Village Coquette," a comic opera, written in 1836 for a friend, which was not a success. There are also verses from other publications. The volume includes everything in verse which Dickens wrote, and supplements the editions of his work heretofore published.

**Present-Day Evangelism.** By J. Wilbur Chapman. The Baker & Taylor Co., New York. 5x7½ in. 245 pages. 60c., net.

The author of this book is Secretary of the General Assembly Committee of Evangelistic Work for the Presbyterian Church. He brings to his subject wide experience both as evangelist and as pastor. Although the book is marred by the use of conventional phraseology, by some lapses from good taste, and by rhetorical errors, its defects are mainly superficial. It is characterized by breadth of mind and sanity. Dr. Chapman, as the title of his book indicates, believes that the present age, like past ages, requires a form of evangelism suited to its own needs. This he describes as in method largely individual, in terms largely ethical and social, though in substance unchanged. He insists that the squalor of the slums and the materialism of the rich cannot be ignored by those who would announce the words of life to men of this day.

**Redfields Succession (The).** By Henry Burnham Boone and Kenneth Brown. Harper & Bros., New York. 5x7½ in. 318 pages. \$1.50.

A truthful and charming picture of present-day Virginia country life. Some of the *personae* that move in this scene are equally real and pleasing; others neither so commendable nor as convincing. The latter criticism is particularly applicable to the hero, Trueman Gault, whose quixotic renunciation of his

inheritance seems to us morally supererogatory and artistically untrue to the character so well drawn in the first half of the book.

**Studies of Familiar Hymns.** By Louis F. Benson, D.D. The Westminster Press, Philadelphia. 5x7½ in. 285 pages. \$1.50, net.

This book is a by-product, so to speak, of hymn-books which the author has edited. Twenty-five hymns, selected evidently because the author had interesting material on hand concerning them, are here given in their original or slightly modified text, the story of their composition is told, some account of their authors is given, and some points for discussion concerning them are suggested. The book is illustrated with portraits, facsimile reproductions of manuscripts, and the like. Although other books similar to this have been published, there is none of which we know that is more successful in giving the reader the sense of personal acquaintance with hymns. The treatment is marked by dignity, good taste, a respect for historical veracity, and human interest. The book is appropriately printed and bound.

**Sultan of Sulu (The): An Original Satire in Two Acts.** By George Ade. Illustrated. R. H. Russell, New York. 5x7¼ in. 128 pages.

**Summer Songs in Idleness.** By Katherine H. McDonald Jackson, Richard G. Badger, Boston. 5x8 in. 71 pages. \$1.25.

**Truths to Live By: A Companion to "Every-day Christian Life."** By the Very Rev. Frederic W. Farrar, D.D., F.R.S. Thomas Whittaker, New York. 4½x7 in. 372 pages. \$1.25.

Practical sermons by the late Dean of Canterbury. Fourteen are based on texts from the Gospel and the First Epistle of John, the remainder on texts from the Pauline Epistles. Like his other writings, these are vital, hopeful, suggestive. The volume also contains three of Dean Farrar's Christmas carols, the first of which is frequently sung in this country.

**Veil of Solana (The).** By Emma Mersereau Newton. The Frank F. Lovell Book Co., New York. 5x7½ in. 362 pages. \$1.25.

Doubtless this book's crude and cheap style and the "thrilling" adventures recorded in its pages will find admirers, but we cannot truthfully write ourselves down among them.

**Walks in New England.** By Charles Goodrich Whiting. Illustrated. John Lane, New York. 5½x8 in. 301 pages. \$1.50.

Reserved for later notice.

**Wars of Peace (The).** By A. F. Wilson. Illustrated. Little, Brown & Co., Boston. 5x7½ in. 392 pages. \$1.50.

A thoughtful and interesting novel. The scene is laid in a New England factory town, and the wars waged in this not altogether peaceful time are the grimly familiar struggles of labor and capital. The characters involved are vividly pictured, and the situations, always natural, become on occasion absorbingly dramatic.

**Wild Birds in City Parks: Being Hints on Identifying 100 Birds, Prepared Primarily for the Spring Migration in Lincoln Park, Chicago.** By Herbert Eugene Walter and Alice Hall Walter. (Revised Edition.) A. W. Mumford, Chicago. 4¼x5½ in. 45 pages. 25c.

LITTLE  
RED  
DEVIL

## UNDERWOOD'S ORIGINAL DEVILED HAM

The pure and delicate Deviled Ham which has been on the market for years. Sugar-cured ham and fine, pure spices is all that we use. It is delicious for sandwiches, in camp, at lunch, picnic, or tea, and in the chafing-dish. It may be bought at any good grocers, but be sure you see on the can THE LITTLE RED DEVIL. There is only ONE Deviled Ham—**Underwood's Red Devil Brand**. All others are imitations, but imitations in name only, as the goods commonly labeled and sold as potted or deviled ham, made as they are from the odds and ends of the packing house, are no more like **Underwood's Original Ham** than chalk is like cheese. Our Book contains a lot of unique and practical receipts. We will send it FREE.

# COME TO NORDRACH

A Sanitarium in the  
 Catskills

DR. A. JUDSON BENEDICT  
 Medical Director

PHOENICIA, N. Y.

## Location and

### Appointments

The Nordrach Rest Cure Sanitarium is located at Phenicia, Ulster Co., N. Y., in the Southern Catskills, in the midst of purest air, with perfect spring water and sanitation, 1,050 feet above the sea level; no malaria, no hay fever, and no mosquitoes.

The house is so situated that there is a constant breeze and a delightful coolness in summer. The sanitarium is neither a boarding-house nor a hospital, but a home.

Vapor, Hot Air, Nauheim, Electric, Medicated, Oil, and Alcohol baths, Electricity, Massage, are all administered under the care of skillful physi-

cians. Lawn Tennis, Table Tennis, Card Rooms, Billiard and Pool Tables, furnish recreation, while a handsome Bowling Alley is provided for those taking special treatment to reduce flesh.

## Rest and Exercise

Such chronic cases as Rheumatism, Diabetes, Albuminuria or Bright's Disease, Constipation, Mal-assimilation, Wasting, Insomnia, Neurasthenia, are distinctly amenable to the treatment given by the Nordrach Sanitarium. Its purpose is to cure disease by placing the patient in such surroundings as will give the overworked organs rest, and then let nature finish the work.

The exercise prescribed depends upon the particular ailment for which the patient is being treated.

## Treatment

Natural methods of treatment are used—lots of rest, pleasant surroundings, and the simplest of all foods, milk, which supplies the body with every chemical want.

Our treatment will appeal to those women who have an atrophied condition of chest, neck, and arms. The undeveloped woman can fill the ugly hollows and become the proud possessor of a proper amount of flesh and the subsequent graceful curves attendant upon this improved condition. From three to four pounds a week can be gained under the Nordrach treatment.

The Nordrach Rest Cure Sanitarium is being advertised in the *New York Medical Record and Journal*, and we would be glad to have you ask your own physician about our methods and practice. For further information and references, send for illustrated pamphlet.

## Mr. Chamberlain's Proposals

The bold reversal of English policy recently proposed by Mr. Joseph Chamberlain, British Colonial Secretary, has done more than merely to stimulate heated discussion in England between Free Traders—the majority—and the many so-called Fair Traders; or between Free Traders and the few declared Protectionists. Mr. Chamberlain's definition of his policy is puzzling. He adopts Cobden's definition of free trade, "to bring about a free interchange of commodities at their natural prices," and assures the country that he is proposing precisely that in endeavoring to put a protective preferential tax on the foodstuffs consumed by Englishmen, so that the colonies might receive the benefit. By this means, he declares, the colonies would become genuinely attached to the mother country. On the other hand, if such consolidation is not insured, Mr. Chamberlain warns his hearers that the British Empire may disintegrate. He does all this with such clever political eloquence as to induce many at home and abroad to believe that the colonies will reciprocate in time if only they are afforded some system of preferential fiscal treatment. Mr. Chamberlain still calls himself a free-trader, because, as he says,

Mr. Cobden did not hesitate to make a treaty of preference and reciprocity with France, and Mr. Bright did not hesitate to approve his action. I cannot believe, if they had been present among us now, and knew what this new situation was, that they would have hesitated to make a treaty of preference and reciprocity with our own children. Well, you see the point. You want an empire. Do you think it better to cultivate the trade with your own people, or to let that go in order that you may keep the trade of those who, rightly enough, are your competitors and rivals?

Mr. Chamberlain was quickly corrected as to his illustration by Mr. Leonard

Courtney, who showed that in the French treaty no preference was given to French goods as such and no certificates of French origin demanded. Lord Rosebery's rejoinder was also noteworthy. As a militant Imperialist, he declared that, first of all, there was the burden of Imperial defense, borne wholly and cheerfully by the mother country, but, "even if additional defense were to be obtained from the colonies, would any system of reciprocal tariffs really bind the mother country more closely to them than at present?" Lord Rosebery admitted that free trade did not benefit all branches of industry, least of all the landed interest; but he concluded:

If we quarreled with, or separated materially from, the customers who gave us at least two-thirds and possibly three-quarters of our trade, to oblige a customer who gave us a quarter or a third, we should not be doing a wise thing in our own interests or even in that of our colonial customer.

⊙

**The Liberal Opportunity** More strenuous still, as might be expected, was the objection from that veteran radical Liberal statesman, Sir William Harcourt. He spoke of his own recollections of "the miserable conditions of agricultural laborers and industrial artisans when food was taxed and every manufacturer protected." He declared that—

The pretense of colonial preferences is only a shallow mask to cover the restoration of the whole doctrine of protection, and thus to restate the injustice of a system by which the burden of indirect taxation was imposed upon the mass of the people to relieve the wealthier classes from their due contribution to the expenditure of the State. . . . The system of colonial preferences, far from uniting the Empire, will be a fruitful cause of dispute between the United Kingdom and the self-governing colonies as to the equivalents which each is to receive, and their relative demands will be impossible to reconcile in practice. They will deprive the United Kingdom of

that absolute freedom in dealing with its own finance according to the needs of our people at home, which is more than ever indispensable in the crushing weight of the present inordinate expenditure.

It was to be expected that the Liberals would make capital out of the opportunity which Mr. Chamberlain has given to them. Whether they can come together on a platform of opposition to the present Government's fiscal, military, and educational policy, however, is quite another question. If they do, they may be in a considerable degree aided by the strong opposition in Liberal-Unionist and in Conservative circles which Mr. Chamberlain's proposition has excited. The London's "Spectator," while heartily admiring the great services which Mr. Chamberlain has already rendered to his country, emphatically opposes the preferential system, not only from a free-trade but from an Imperialist standpoint. It says:

If free trade is a counsel of economic perfection, the Imperial union is, in our view, vital to the race. . . . We hold that protection in any form and under any alias is always economic waste, and that free trade always represents the conservation of economic and material energy. . . . If we thought the Empire would really benefit, we would cheerfully endure the economic waste and injury involved in Mr. Chamberlain's scheme.

The opposing forces among the Conservatives seem now united, and it is hinted that their action may precipitate marked political changes. This storm of opposition in England is a reasonable one. Not only would Mr. Chamberlain's scheme induce the colonists to hope for that which cannot be satisfied without injuring Englishmen, but it might induce retaliatory tariffs from many countries and thus precipitate a general commercial disaster. In the words of Sir Henry Campbell-Bannerman, the Liberal leader, we do not rate loyalty to the British Empire so low as to believe such bonds necessary to maintain it.

**The Food Tax** As offsetting this, Mr. Chamberlain indulges in the somewhat socialistic proposal: "The working class would pay three-quarters of the food tax, and we would be prepared to devote, not the three-quarters, but the whole, to social and domestic reforms—to old-age pensions, or to some corresponding objects

of a national character." The prospect of an old-age pension to be won by protracted hunger or by paying high prices for food, so that distant colonial agriculturists might thereby be helped, had an immediate effect upon the fifteen hundred delegates of the co-operative societies of the United Kingdom at their annual meeting last week. They represent two millions of the best class of workers. With but three dissenting votes, they adopted a resolution vigorously protesting against any "tampering with the free-trade policy of this country by preferential tariffs." Not even in the colonies has the feeling been exultant, although, since the Canadians hope one day to provide the great granary for the mother country, more satisfaction has been expressed in Canada than elsewhere. In Australia, however, Sir William McMillan has already declared himself to be "absolutely opposed to a preferential tariff which would hamper the trading relations of Australia with foreign countries." The "South Australian Register" adds: "Preferential trade, with the added obligation of a special colonial contribution to Imperial defense, would work out badly for the producer, whose outlets would be restricted, while British manufacturers would enjoy a monopoly in the colonies." Referring to these and other criticisms, Mr. Chamberlain declares that he does not accept them as in any way conclusive; he adds, however, that unless he is warmly supported by the colonies he may feel justified in abandoning the struggle. Mr. Chamberlain already sees that in the colonies he may have a far from united support, while at home there is the weight of the opposition from political leaders irrespective of party, and of the trades-union leaders. He has now published a letter in which he says:

I do not attach excessive importance to the opinions of trades-union leaders, because they are, almost without exception, strong Radical partisans; . . . for instance, I may mention that in Birmingham the members of the Trades Council, almost to a man, opposed me politically, notwithstanding which my majority at the last election in a purely working-class district was 4,500. . . . Even if the price of food is raised, the rate of wages will certainly rise in greater proportion. This has been the case both in the United States and Germany. In America the available balance left to the worker after he has paid for necessities is much larger than here. These are

facts we must bring to the notice of workmen generally. There is another side of the question which requires discussion. At present we enter into negotiations with foreign countries empty-handed. If we were able to bargain on equal terms, I believe the duties now imposed on our products would be generally reduced. There would be competition among foreign nations for our markets, which would bring us nearer to real free trade than we have ever been.

⊙

#### Peonage in the South

The Federal Grand Jury at Montgomery, Alabama, last week handed up twenty-two more indictments for the crime of holding negroes in peonage. This appears to make a total of thirty-five such indictments at this term of the court. Five of the reported indictments have been against Robert N. Franklin, the kidnapping constable whose crimes were reported in last week's issue, and one is against J. W. Pace, the manager of the convict camp to whom Franklin took his friendless victims. The Montgomery "Advertiser" of May 31 contains the report of an interview with Pace, which gives the buyer's side of the infamous transaction described last week. In substance the report is as follows:

Without any hesitation Pace said that he had bought the negro from Constable Franklin, paying \$70 for him. The negro [unable to read] had signed a contract to work for him for sixteen months. Pace did not know what justice of the peace had tried the negro and did not ask. . . . Asked if he did not think sixteen months a severe sentence from a justice's court, Pace said he did not ask about it. He denied that a large number of negroes had been bought by him. He said that he had bought about five from Coosa County constables during the past year. He had received two from the City Marshal of Goodwater, Coosa County, and had paid \$70 each for them. Pace said the laborers he secured from constables were not desirable and in each instance he thought he was accommodating the negroes. He said he frequently lost money by negroes escaping, and declared that he had not treated them brutally.

Of course such a defense merely verifies the worst features of the charge. The planter's claim that he had paid the seventy dollars each for the negroes with the thought that he was accommodating them is simply preposterous, and the claim that he did not treat brutally the negroes guarded with bloodhounds in his convict camps is merely further evidence of his own insensibility to his victims' wrongs.

So far as Pace and the Coosa County constables and marshal are concerned the peonage system carried on was an inhuman form of slave catching and slave holding. It is not, however, just to herald these crimes as a restoration of slavery to Alabama. Under slavery all negroes, without any alleged offense, were compelled to work without wages for life, with the approval of Church and State. Under the peonage system disclosed, a few negroes for alleged offenses, are compelled to work without wages for definite terms, to men regarded as criminals by nearly all the elements of Southern society. It is true, as the Montgomery "Advertiser" admits, that "such a system as seems to be practiced . . . can only be possible through the indifference or fear of a considerable part of the white men in the community." But the condemnation which the crime receives from such papers as the "Advertiser," and the prosecution to which it is being subjected by the Southern Judge who presides in the Federal Court in Montgomery, are evidence of the vast advance since slavery times.—The peonage to which negroes have been reduced in the convict camps of Alabama is only a little more revolting than the peonage to which Italians have been reduced in the labor camps of West Virginia, described by Mr. Speranza in this issue of The Outlook. It is a condition to which the friendless poor of any race may be brought in the absence of a vigilant and humane public sentiment.

⊙

In the "Congregationalist" of May 30 there appeared an article by the Rev. T. Nelson Baker, of Pittsfield, Massachusetts, entitled "A Negro's View of the Race Problem." Of the author we know only that he is the pastor of a small church in that Massachusetts city; he therefore may be supposed to be speaking as a Northern rather than as a Southern negro; but what he says comes with somewhat stronger force for that reason, inasmuch as he defends certain conditions which exist at the South and do not exist at the North. He denies, first, that separate schools for the whites and blacks are a wrong against the negro; and asserts, on the contrary, that they did not originate

malice toward the negro, but in genuine interest for the good of both races; that they have resulted in giving to the negro children a wholesome school environment wother than the abnormal one which would have existed in mixed schools where the presence of white children would have kept fresh in the minds of the colored children their feeling of inferiority; and that they have made possible the existence of colored teachers who are becoming respected by members of their own race, whereas in mixed schools there could have been no colored teachers and therefore no such impulse as they supply for racial self-respect. The author adds that he hopes to see more rather than less separation. In this he is but saying what many intelligent negroes have said less publicly, that separation between the races, in street-cars for instance, is a mode of protection for the colored people. He denies, in the second place, that disfranchisement of the negro as embodied in recent Southern constitutions is a wrong against the negro; he declares it is rather a wrong against the white man, and believes that the raising of the standard of citizenship which is involved in the movement should be welcomed. In the third place, he denies strongly and with evident feeling that the supposed advantage of the existence of white blood in the veins of colored people is any compensation for the disgrace brought upon the women of their race. He agrees with Mr. Alfred H. Stone, who has written on the subject in the "Atlantic Monthly," that it is the mulatto, with his dual racial nature, who occasions the most difficult elements in the race problem. In closing, he expresses his approval of the conditions in the South, which, by keeping the negro race separate from the white, give to it a social unity, and "make it impossible for the educated negro to separate himself from the uneducated," by whom he is needed, and for whose uplifting he has been destined. Such an article as this shows that differences of opinion on questions involved in the race problem are not identical with differences of race, and that friends of the negro may disagree on such matters as negro suffrage, separate schools, and negro education, without altering in the least their earnest desire and effort for his welfare.

#### Industrial War and Peace

Last week the country was alarmed by the threat of a renewal of the anthracite coal miners' strike. The men selected to represent the operators on the board of conciliation refused to confer with the district presidents selected to represent the miners, on the ground that they had merely been appointed by the miners' organization instead of being elected by the whole body of miners, non-union as well as union. Inasmuch as the board of conciliation to settle new disputes was one of the most essential features of the Strike Commission's award, and inasmuch as several questions for settlement had already arisen, a breakdown in the formation of this board seemed to involve the collapse of the whole great plan. The public almost angrily demanded to know which party was in the wrong, and when, on reference to the Commissioners' report, it was found that nothing was said about the "election" of the labor members of the board of conciliation, but that, on the contrary, distinct provision was made for their appointment by the miners' organization, the fact was recognized that the operators had indefensibly put themselves in the wrong. However wise it might have been for the Commission to have provided that the miners' representatives should be elected by all the miners, they clearly had not done so, and even so persistent an opponent of the unions as the New York "Sun" had to admit that in this instance the union was merely standing upon its rights. Fortunately, the correspondence between the operators and the union had not been conducted in a belligerent vein, and the way was easily opened for the operators to abandon their untenable position. In the iron trade a substantial peace victory was achieved in the speedy agreement reached between the organizations of the employers and employed fixing wages, hours, and other conditions until June 1 of next year. In the cotton trade the Lowell mills were able to effect a partial resumption of work without concessions to the mill workers' unions. The extraordinarily high price of raw cotton, as explained in Mr. Kennan's recent article in The Outlook, combined with the relatively small advance in the price of manufactured cottons, had plainly reduced the margin of profit to the mills, and

most of the workmen concluded that the demanded advance could not be obtained. In the woolen trade the fifty or more thousand operatives on strike for a fifty-five-hour week made an offer to Mayor Weaver, of Philadelphia—which is the center of the strike district—to accept arbitration. The Mayor congratulated the strikers upon the good order they had preserved, and expressed his readiness to aid them. In the building trades the one hundred and ten thousand men who have been idle in New York for over a month showed their restiveness last week, and the central labor organizations tried ineffectively to force a settlement upon the recently organized building material drivers' union, chiefly responsible for the conflict. The employers' organization, on its side, proposed a plan for the future arbitration of all disputes in the building trades. In most respects the plan was admirable, but, as Mr. Emerson McMillan, the Chairman of the Conciliation Committee of the New York Civic Federation, pointed out, it contained the vital defect of providing that the business agents or walking delegates of the unions could not act as arbitrators. Said Mr. McMillan: "The Board of Governors of the Building Trades Employers' Association is a board of delegates or business agents. How can it refuse to recognize a board of workmen of the same kind?" Upon this very ground the unions seem disposed to reject the employers' plan, though confessedly anxious for peace. In Chicago one of the unions last week refused to accord the employers' organization the rights it claimed for itself. The hotel waiters ordered sudden and exasperating strikes at certain selected hotels to demonstrate their power, and refused to deal with the employers' organization. This attitude brought down upon them the condemnation of all classes, including their own. Equal rights is plainly the only basis for friendly relations.

**Ohio Politics** All was harmony in the Ohio Republican Convention last week. Senator Hanna had previously acceded to Senator Foraker's demand that President Roosevelt be indorsed as the party's candidate in 1904, and, having made this concession, he was able to guide the Convention as he wished. His speech

containing the watchword "hands off" as the expression of the party's attitude toward tariff revision was received as the "keynote" of the Convention. His candidate, Mr. Myron Herrick, a Cleveland banker of fine reputation, was nominated for Governor, and the platform was acceptable to him, even in the detail of damning with faint praise the "possible" benefits of reciprocity. On National issues the only declaration of importance was a vigorous demand for the enforcement of the Fourteenth Amendment to the Federal Constitution, requiring the reduction of the representation of States which abridge the suffrage. On State issues the platform declared in favor of pending constitutional amendments giving the Governor of the State a veto power and removing the present provision making the stockholders in Ohio corporations liable to assessment for the debts thereof up to the par value of their stock. In the Democratic ranks there is less harmony, but Mayor Johnson is establishing a leadership more commanding than that of Senator Hanna. His most recent exploit has been his fulfillment of his promise to drive out of public life every one of the Democratic legislators who voted in support of the fifty-year franchise for Cincinnati street railroads, in disregard of the municipal ownership and referendum planks in the party platform. Six of the eight Democratic legislators who had voted for the Cincinnati monopoly did not attempt to secure re-nomination, and the other two were defeated; Mayor Johnson made a three days' campaign in the one county where the pro-monopoly legislator seemed likely to be returned. By this aggressive course Mayor Johnson has placed himself in entire accord with Mr. Bryan's position that the Democratic party can gain nothing by compromise, but has only to stand true to its anti-monopoly declarations in order to win the support of Republicans in sympathy therewith, and secure a real victory when economic conditions no longer counsel the people to "let well enough alone."

**President Roosevelt's Journey** The journey through the West just completed by President Roosevelt without the slightest misadventure or accident was in many respects

remarkable. The President's party traveled in all more than fourteen thousand miles on railroads—not to speak of several hundreds of miles traversed by stages, carriages, or on horseback. The party passed through at least twenty-four States, and was absent from Washington, we believe, sixty-five days. During this period the newspapers report that President Roosevelt made not fewer than two hundred and sixty-five speeches. The welcome accorded Mr. Roosevelt was universally cordial and enthusiastic, and it is a noteworthy fact that in many places Democratic officials and citizens seemed to vie with Republicans in respect and regard. In this journey the President has followed the example set by President McKinley, and one which we hope to see followed by other Presidents, and on a smaller scale by Governors of States. The political peril of a four years' continuous residence in Washington is very considerable. He who lives always in the District of Columbia tends, in the first place, to become provincial; further, getting his contact with the country chiefly through the official class, he misreads and misinterprets public sentiment. Washington has a distinct atmosphere—not agricultural, nor industrial, nor commercial, nor academic, but political. Its society, its thought-currents, its life, are created by officialdom. It is of the first value to the country that the President should at times get out of this atmosphere and into direct contact with representatives of the agricultural, industrial, commercial, and academic thought of the country; that he should learn at first hand how farmers and manufacturers, workingmen and merchants, and the various classes of professional men are thinking on National problems; and that they should also meet the President and make their own direct personal measure of the man, from seeing and hearing him. And the same advantage would be derived in a lesser measure from similar journeys by Governors through their respective States. An analogue to this Presidential journey, but on a larger scale, is furnished by the modern method of interchanging international visits by European sovereigns. In each case the same result is obtained; the public official is enabled to see through his own eyes, not those of another; and

the people are able to see through their own eyes, not through those of the newspaper press.

⊙

Non-Partisan Voting  
vs.  
Non-Partisan Nominations

One of the most significant features of the recent mayoralty campaign in Chicago was that the reform element in both parties demanded a return to party nominations of candidates for the judiciary. The reason for this demand was the conviction born of experience that the custom of presenting a "non-partisan" ticket agreed upon by both parties gave to the party machines the arbitrary power to appoint their own creatures to the bench without giving the voters the opportunity to reject. To some extent both party machines were likely to be influenced by the same outside financial interests in making these appointments, and to some extent both machines were likely to agree together to divide the nominations among their respective thick-and-thin supporters. In this way, as has often happened before, bi-partisan nominations may result in the very opposite of non-partisan nominees. For these and perhaps other reasons, it was determined that this year each party should put in the field a full judicial ticket and permit the voters to choose. The Republican ticket, largely because of the renomination of Judge Hanecy, incurred the odium of having been named by "Boss" Lorimer, while the Democratic ticket commanded unusual support among the members of the Chicago bar, regardless of party affiliations. As the Republican party has usually been the stronger in Chicago for the past ten years, the Republican organization hoped to the end that its ticket would be successful; but when the judicial elections were held on Monday of last week, it proved that the voters were singularly little influenced by party affiliations. Of the fourteen circuit court judges chosen the Democrats secured twelve and the Republicans two—the nominally Democratic vote ranging from approximately 102,000 for Judges Dunne and Tuley to only 62,000 for one of the defeated candidates, and the Republican vote ranging from 78,000 for Judge Tuthill down to 53,000 for the nominee most unsatisfactory to the voters. In short, it was a day of

non-partisan voting—a thing vastly preferable to non-partisan nominating.

**The Lake Mohonk  
Arbitration Conference**

The development of an appreciation of expert service, which has helped on civil service reform, and which shows itself in the business and commercial world in the arbitration clauses affixed to all important contracts (because in case of difference of opinion recourse to experts is better than recourse to courts ignorant of details), has made possible the application of this principle to national and international interests. It is not strange, therefore, that men who have been applying this method of administering business should claim that it is not the Lake Mohonk Conference which is compelling international arbitration, but it is the spirit of arbitration which is in the air that has made the Lake Mohonk Arbitration Conference possible. Whichever way it comes about, it is a matter for congratulation that literally hundreds of the leading men of the country—lawyers, judges, lawmakers, divines, teachers, and business experts of all kinds—should meet for three busy days and nights to plan how they may stand shoulder to shoulder to press this great reform along, under the genial generalship of the host of the occasion, Mr. Albert K. Smiley, the apostle of peace. The clergy were summoned to preach the doctrine of arbitration to their people; the college presidents, professors, and teachers to incorporate the subject more closely in the curriculum of the schools; the women to use their influence in the home that a spirit of peace might be inculcated. As in many countries women have held hundreds of peace meetings during the last few years in connection with the International Council of Women, they will gladly continue to lend their aid in this direction. The business men who took part in the discussion were as inspiring in their determination to forward the blessed outcome of peace and arbitration as any bishop could be. One admirable method already in operation by several business men in Boston, New York, and Philadelphia is the distribution of literature pertaining to the subject, either free or at cost price. In that way reports of peace and arbitration conferences, and

of Emerson's and Channing's writings on war and kindred themes, are made accessible to the multitude.

**The Armed Allies  
of Arbitration**

A significant note in the Conference was the frank recognition of the aid that has been given by the army and navy of the United States in bringing about such civilizing conditions as may eventually lead to the settlement of all international disagreements by peaceful methods. The work of the army in Porto Rico in matters of health, of education, and of civic reform was cited as an illustration of what is possible. Rear-Admiral Barker's brief address brought out so vividly the attitude of the navy toward peace that we reproduce it in full:

As the senior naval officer in this Conference, I have been asked to say a few words on the subject under consideration. For my part, I am not surprised at the rapid advance which arbitration has made during the last few years. Christianity has been preached for nineteen centuries, and it would be strange indeed if such results did not follow; for to me, a layman, it seems axiomatic that just in proportion as individuals and nations are guided by the principles of the Golden Rule war will disappear. But, sir, I would not stand here to-night if I did not know that many in this audience honestly believe that officers of the United States navy not only are opposed to arbitration, but that they desire war upon the least provocation, in order that they may be promoted thereby. Indeed, an Englishman on this very spot last night asserted it in so many words in regard to his own countrymen; and a few months ago I was told, by one who ought to know, that it was the prevailing opinion among the intelligent people of the United States that we (the officers of the navy) wanted the war with Spain. Why such an opinion should prevail I cannot imagine. I believe that there are no people in the United States to-day—and I do not except the Society of Friends or the educated clergy—who would so gladly welcome arbitration in settling disputes between nations as the officers of the United States navy.

And now tell me, What is there in the history of the navy from its very beginning until now to give you such a contemptible opinion of us? [Laughter.] Was Commodore Preble governed by unworthy motives when he taught the pirates of the Mediterranean to respect our flag, and rescued Christian captives from Moorish dungeons? Did Commodore Perry want war when, through courtesy and kindness and diplomacy, he introduced Japan to the civilized Western world [applause], and made Japan a friend of ours forever? [Applause.] Did Admiral Farragut, when with sad, breaking heart he left kindred and friends to fight

for the preservation of the Union? Mr. Chairman, since we have been here we have heard a great deal said, and justly said, of the honest, straightforward, and brilliant diplomacy of the State Department in regard to affairs in China: but, sir, I have heard not one word said in commendation of Admiral Kempf, who commanded our ships in Chinese waters, and, without instructions from his Government, but on his own responsibility, resisted the appeals of all the other admirals of the foreign services, and declared that he would not fire on the Tapu forts and thus make war upon a nation with whom we were at peace! [Applause.] I tell you, sir, that the naval officers do not want war, but they do desire peace. But, as honestly as they desire peace, they know, at least they believe, that to maintain peace a strong navy is necessary. [Applause.] In Madagascar, the French army has been helping on the agricultural life of the people. While army and navy must exist, if only for the policing of the nation, they may well turn their efforts toward making war impossible. If that may not be for the world at large, then it must be for the English-speaking part of it, and a determined effort is to be put forth to secure a treaty between Great Britain and the United States which shall keep the peace forever. The cases which have already been brought before the Hague Court of Arbitration, though of great value in showing what can be done, also prove to some minds that the creation of the Court is not enough without the passage of a treaty making resort to that high Court mandatory for the two great Anglo-Saxon peoples who stand in such close relations.

#### Ritualists in Council

The semi-annual meeting of the Clerical Union for the Maintenance and Defense of Catholic Principles in the Episcopal Church, held at St. Ignatius Church in New York City last week, was picturesque, but its importance may easily be overestimated. The Union is composed of clergymen of the most advanced ritualistic faith and practice, who call themselves the Catholic party in the Church. The Union has branches throughout the country, the largest being in Boston, Milwaukee, and Cleveland. About one hundred clergymen attended the meeting last week began with a celebration of the communion which it would be difficult to distinguish in any particular from a mass. The altar was covered with candles; the

procession of the clergy included acolytes bearing candles; the usual eucharistic vestments had elaborate and striking additions; there was constant use of the sign of the cross, incensing of the altar and of the celebrant and of his assistants. When the prayer of consecration was said, additional candles were lighted, the altar was incensed, the bell sounded, and the wafer was held up for the adoration of the congregation. It is reported that the only difference between the service at St. Ignatius and the Roman Catholic mass was that English was used. The rector of the Russian Church of this city was present in the chancel, as was also a priest of the Russian Catholic Church, both expressing the hope and making the prophecy that the union of all Catholics is an event of the near future. The discussions of the session related largely to details of the ritual, and are not of interest or of significance. According to the reports presented, decided progress along the lines of action marked out by the Union were evident in New York, Philadelphia, and Boston. This ultra-ritualistic movement is not numerically strong as compared with the High Church and Broad Church wings of the Episcopal Church; but its principles are clearly defined, it has a definite policy, and it is led with skill, although not always with large ability. There is no doubt that many people, both here and in England, have gone into the movement as a reaction against the extreme materialism of the time, finding an elaborate symbolism a more adequate language for the expression of devotion; others, especially clergymen, are drawn to it by the natural love of ceremony and ritual, by the instinctive gravitation from the emphasis of religion on character to the emphasis of religion on form and authority; others still have been led to it by its exaltation of the priestly function and office. Five years ago the movement seemed to be gaining strength rapidly; it has relatively lost ground in the Episcopal Church since that time.

The most significant feature of the seventy-seventh annual meeting of the Congregational Home Missionary Society, which was held at

The Congregational Home Missionary Society

Providence, Rhode Island, last week, was the provision made for young people. Under the direction of Mr. Don O. Shelton, the new Associate Secretary, the sessions of Tuesday afternoon and evening were devoted to them. The practical education of the young people of the Congregational churches on the subject of Missions has lately been undertaken with special energy by secretaries of the leading Congregational Societies, and the movement has received a strong impetus from the attention which it received at Providence. There was an unusually large audience at all the sessions of this annual meeting, which were held in the old Beneficent Church at Providence, of which for fifteen years the Rev. A. H. Clapp, D.D., formerly Secretary and later Treasurer for many years of the Home Missionary Society, was the honored pastor. The annual sermon was preached by the President, the Rev. Newell Dwight Hillis, D.D., of Plymouth Church, Brooklyn, and was a strikingly eloquent presentation of what has already been achieved by the Home Missionary Society and the work which presses immediately upon it. In this address by Dr. Hillis, in another by the Rev. W. G. Puddefoot, and in two or three others of the addresses, the increasing interest felt in the negro problem at the South received special attention. Mr. Puddefoot pointed out that the Congregational churches have a deep responsibility resting upon them for co-operating in Christian work with the white people of the South, to the end that the principles of the Gospel in their relation to the race question may grow into the consciousness of the people.

#### The Society's Finances and Officers

The annual business meeting of the Society occurred on Thursday morning, and was the first meeting to be held under the amended constitution, which makes the Society specifically representative of the churches. The report presented by Secretary Washington Choate was an encouraging review of the work of the year, and of the successive steps which have been taken by the Executive Committee of the Society in conformity with the recommendations made from time to time by the National Council.

A further statement along the same line was made by Mr. Edwin H. Baker, the Chairman of the Executive Committee, in which it was pointed out that, of eight recommendations which had been made by the Council, seven had been already put into operation, and one had been, after the fullest conference with other interested societies, laid aside as for the present undesirable. The Treasurer reported that for the first time since 1893 the Society had closed the year free from debt and with a cash balance in the treasury. The receipts of the year were \$317,669.83; the expenditures of the year for missionary labor and operating expenses were \$304,167.04; the debt at the beginning of the year was \$9,912.49, and the free balance at the close of the year was \$3,590.30. The State Auxiliary Societies received and expended on their own fields during the year \$265,567.43. Cyrus Northrup, LL.D., President of the University of Minnesota, was elected President for the ensuing year. The new names added to the list of Vice-Presidents were the Rev. W. A. Bartlett, of Chicago, President Dan F. Bradley, of Iowa College, and the Rev. Nehemiah Boynton, D.D., of Detroit; and six new members were elected to the Executive Committee. The Rev. T. O. Douglass, D.D., Secretary of the Iowa Home Missionary Society, presented a message from the churches of Des Moines, inviting the Society to hold its next annual meeting there, simultaneously with the meeting of the National Council in October of next year. Notwithstanding the fact that this date is four months later than the usual annual meeting, the advantage of bringing the two meetings together was so heartily appreciated by those present that the invitation was unanimously accepted, and the Executive Committee authorized to arrange for the meeting. It is hoped by very many that this may be the beginning of a united annual meeting for all the missionary societies of the Congregational churches, together with an annual session of the National Council.

#### Other Anniversaries

The centennial year of the Rhode Island Home Missionary Society was commemorated at the same meeting, the Rev. T. Calvin

McClelland, of Newport, giving the historical address. This brought out the fact that home missionary work had been carried on in Rhode Island for thirty years before the date of its formal organization. The semi-centennial year of the Congregational Church Building Society was likewise commemorated in an address by the Rev. Charles H. Richards, D.D., recently of Philadelphia, the new Secretary of the Society. Organized at first under the name of the "Congregational Union" to promote fellowship and practical fraternity, and then "permitted," against stout opposition, to raise money to aid needy churches in building, it had been the precursor of all such undertakings in this country. Three-fifths of all American Congregational churches, nearly half of the seventy-nine in Chicago, had been aided by it, some of whom, now grown strong, had in turn contributed to its work many times more than they had received—in one instance thirty-two-fold. Its business methods command the hearty approval of business men. At present it is aiding to build the average number of two churches and one parsonage every week. The importance of the work which such societies of various denominations are doing appears from Dr. Richards's statement that some seventeen million dollars' worth of church property has been secured through the aid rendered by this one Society.

#### College Events

The Commencement season has begun, and college events of interest are being reported from all parts of the country. On Thursday of last week the Commencement exercises at Bryn Mawr were made notable by the laying of the corner-stone of the new and magnificent library which is to cost nearly \$250,000 and will take rank among the most commodious and impressive college libraries in the country. The day was beautiful, the exercises admirably arranged, and the address by the eminent scholar, Dr. Horace Howard Furness, full of quality and individuality. The corner-stone was laid by President Thomas; the Commencement address was delivered by Mr. Hamilton W. Mabie. On Friday the Hotchkiss School, at Lakeville, Connecticut, celebrated its tenth anniversary

under unusually interesting circumstances. It is not often that a school makes such an extraordinary showing of intellectual and material progress in a decade as this well-established and thoroughly organized preparatory school. The report of the Head Master, Mr. Coy, made a notable showing of work done for so brief a period. The school is in a beautiful country, with noble scenery all about it, is handsomely and commodiously housed, and its students have made a marked impression by their all-around ability and character. They have been especially conspicuous at Yale, and the celebration had a distinct flavor of Yale association. Ex-President Dwight presided, and President Hadley made a characteristically clear and admirable speech. At Princeton on Sunday Dr. van Dyke preached a vigorous and inspiring Baccalaureate sermon; the Rev. Dr. George A. Gordon, of Boston, on the same day spoke to the graduating class at Columbia University in this city, presenting ideals of the Christian life as illustrated in the personality of Christ which were at once commanding and persuasive; Dr. Taylor preached to the graduating class at Wellesley. The inauguration of Dr. Finley as President of the College of the City of New York is announced for October 1st.

#### Floods, Fires, and Drought

Last week was truly remarkable for the diversity of devastation wrought by the elements in different sections of the country. In the Eastern States there closed with the grateful rains of last Sunday an almost unexampled period of drought—lasting in New York and New Jersey for fifty-two days, and interrupted only by one or two light and local showers. Fruit has been greatly injured, other crops retarded but happily not destroyed altogether; but the saddest outcome of the drought has been the sweeping forest fires, started usually through carelessness or thoughtlessness; in Maine, in the Adirondacks, and elsewhere, these fires have seized upon the dry underbrush, have gained tremendous volume and power, and have left many square miles of blackened stumps where once were beautiful and valuable forests. Life, too, has been lost in these forest fires, but not

to as great an extent as might be feared. Strenuous efforts of bands of fire-fighters, aided at last by the rainfall, have saved great tracts that in the middle of the week seemed doomed. The suffering and loss in the South and West came from exactly opposite weather causes. Repeated storms and cloudbursts caused sudden swellings of the great rivers; the Kansas and Missouri Rivers, in particular, passed all former marks and records of floods, and so suddenly that there was distressing loss of life, the destruction of hundreds of homes, serious injury to the crops of the section involved, and strange shiftings of river boundaries. In East Topeka nearly a hundred lives were lost; in Kansas City (Kansas) there was some loss of life and much loss of property; even in St. Louis, as late as Sunday of this week, trains and street-cars were being abandoned, and near-by places on the river with a population of perhaps 20,000 were endangered or flooded. Levees have broken, submerging a large acreage of crops, but the expert opinion seems, as we write, to hold that the total loss is not heavy enough to affect seriously the general crop situation. The South also has had its own disastrous incidents. On Monday of last week the city of Gainesville and the vicinity were struck by a tornado; the Gainesville Cotton-Mills were in part demolished, and the number of persons, mostly operatives, who were killed was at first reported as a hundred; almost exactly a week later mill villages in Spartanburg, South Carolina, were swept by flood; scores of men, women, and children were drowned; mills, railway bridges, warehouses, stores, and houses were destroyed; current news reports declare that the money loss in Spartanburg County may reach three or four million dollars.

**The Famine in China** Last month Mr. Clemente, the British official sent into the Province of Kuangsi in the southern part of China to investigate reported famine conditions there, announced that about 150,000 inhabitants were in immediate want of the necessities of life, besides a large number who were in straitened circumstances. Mr. Clemente said that he found the men of Tsamchau, in the vicinity of Wuchau, enduring terrible sufferings. They had

sold their entire possessions, including their farm implements and the water-buffaloes with which they had been accustomed to plow; they had disposed of the tiles from their houses, and, finally, they had sold their daughters, sons, and wives. The farmsteads were simply bare walls, and were empty of everything except a little straw for beds. The official added that the destitution must increase until the next rice harvest, at the end of July. The destitution has increased alarmingly, if we may judge by the appeal last week from the Viceroy of the Province. He puts the number of starving natives at one million. He appeals for help from American charity, the distribution to be made through American missionaries.

## Negro Suffrage in the South

In undertaking to solve any problem it is of the first importance that we know what are the facts out of which the problem arises. If the people of the North are to form any intelligent judgment as to their duty respecting negro suffrage in the South, they ought first to know what has been done respecting negro suffrage in the South. There seems to us to be a widespread misapprehension as to what the Southern States have done in respect to negro suffrage by their recent constitutional action. We desire in this article to tell our readers, first, what they have done, and, secondly, to consider the constitutional and ethical aspects of their action.

The Fifteenth Amendment to the Constitution of the United States provides that "the right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any State, on account of race, color, or previous condition of servitude." This clause seems to us to be absolutely right. Democracy does not demand that every man in the community shall vote; it does not involve unconditional suffrage. But it does demand that men shall not be excluded from participation in the government by the accident of birth, race, or color. It does not demand that every man shall participate in the government; but it does demand that every class shall be represented in the government. It

does not demand that the suffrage shall be given to the ignorant, the idle, the vicious, and the incompetent; but it does demand that the conditions of suffrage shall be such that men of intelligence, probity, industry, men who have proved their competence by the management of their own affairs to take part in the administration of the community's affairs, shall not be excluded from such participation by conventional, racial, or artificial barriers. It is not right, and certainly it is not American, that the interests of any one hereditary class in the community shall be intrusted solely to the keeping of another class. It is not right, it is not American, and the history of the world has shown that it is not safe. The affirmation of the Fifteenth Amendment that negroes shall not be excluded from representation in the government simply because they are negroes does not imply any distrust of the Southern whites; it simply implies faith in the universal principle, equally applicable in North and in South, in domestic and in foreign policy, that no race or class of persons in the community can be safely left without any voice in the government under which they live. Have the Southern States violated this principle? Have they passed laws which exclude the negroes from the suffrage *because they are negroes?*

The conditions for registration in the amended Constitutions of the Southern States are substantially as follows, and in all of them registration is a prerequisite to voting:

*Mississippi:* Only those can register who have paid their poll tax of not less than two nor more than three dollars, and who can read, *or* understand when read to them, any clause in the Constitution.

*Alabama:* All honorable soldiers and their descendants, and "all persons who are of good character and who understand the duties and obligations of citizens under a republican form of government," can register prior to 1903. Thereafter those and only those can register: (1) who can read and write the English language, and are regularly employed in some lawful occupation; (2) or who own real or personal property assessed for three hundred dollars or more, and who have paid the taxes thereon.

*South Carolina:* To register prior to

January 1, 1898, the voter must be able to read a clause in the Constitution, *or* understand or explain it when read to him. All who register subsequently to the first of January, 1898, must be able to both read and write, *or* else show ownership of property assessed at three hundred dollars or more, and the payment of taxes thereon.

*Louisiana:* To register, the voter must be able to read and write, *or* must be the owner of property assessed at a valuation of not less than three hundred dollars. If such property be personal only, the taxes on it must have been paid. But in Louisiana and also in North Carolina no male person who was entitled to vote on January 1, 1867, and no descendant of such person, is deprived of the suffrage, provided he registers within the time-limit of the terms of the Constitution, which in Louisiana was about six months and has already passed; in North Carolina it is about five years from the present date.

*North Carolina:* To register, the voter must have paid his poll tax, not exceeding two dollars, and must be able to read *and* write; there is no property qualification.

*Virginia:* Any soldier or son of a soldier, any owner of property of value liable to one dollar of State taxes—that is, about three hundred dollars' worth—and any person able to read any section of the Constitution, *and* to give a reasonable explanation of the same, or to understand and explain it when read to him, can register prior to January, 1904. After January 1, 1904, any male citizen who has paid his poll taxes for the three years preceding *and* who is able to make his application for registration in his own handwriting, without aid, suggestion, or memorandum, can vote. But if he has served as a soldier in the army or navy of either the United States or the Confederate States, or any of them, he is not required to pay his poll tax as a requisite to the right to register.

In addition to these clauses are some general ones common to all States in the Union, disqualifying idiots, insane persons, paupers, criminals, and the like.

We believe that we have here given, with as substantial accuracy as the necessities of brevity permit, the qualifications respecting the suffrage adopted by the

Southern States. No one of them makes color and race, *per se*, a disqualification for suffrage. No one of them, *in terms*, violates the provisions of the Fifteenth Amendment to the Constitution. In all of them alike the negro as well as the white man who complies with the conditions is entitled to be registered. This is the first and evident fact which ought to be understood and recognized by all. Whatever may be the *effect* of these provisions, whatever may have been the *object* with which they have been framed, they do not, in words, exclude the negro from the ballot because he is a negro.

How far do they exclude him in point of fact? In answering this question the reader must note that in three of the States, Alabama, South Carolina, and Virginia, a negro who possesses property amounting in value to three hundred dollars and has paid his taxes may vote. He may not be able to read and write, he may not be able to understand the Constitution when it is read to him. But if he has had the industry, the sobriety, the thrift which have enabled him to accumulate taxable property to the amount of three hundred dollars, he has the ballot. How many negroes there are in the South who under this provision are admitted to the ballot we have no means of knowing. It has been estimated that the total ownings of negroes in the Southern States mount up to three hundred million dollars' worth of personal and real estate. It is officially reported that in Virginia they own one-twenty-sixth of all the land in the State. These facts would seem to indicate that a not inconsiderable number of negroes are admitted to the ballot in the Southern States under the property qualification. On the other hand, a considerable white population has been disfranchised under this property qualification clause. We are informed by a Southern correspondent, whose means of acquaintance justify our placing some confidence in his statement, that in Alabama fully fifty thousand white men, under the practical operation of the Constitution, by non-payment of poll taxes or other clauses, have been disfranchised.

Under some of these Constitutions those who do not possess taxable property are entitled to register and vote, provided they are soldiers or the sons of soldiers.

This provision is, however, temporary, not permanent, and it is in terms equally applicable to blacks and to whites. In fact, it admits many more whites to the ballot than blacks, because in the wars of the United States and of the seceding States there have been many more white soldiers than colored soldiers. Still, it ought to be recognized that this clause operates to admit some colored voters. As the registrars keep no record of the color of the applicants for registration, we are not able to state how many colored men have registered under what is known as the veteran clause. In some sections, however, a considerable number of such registrations have taken place. "I should think it safe to say," writes a Virginia gentleman to us, "that from one-fourth to one-third of the negroes in the two counties [of Accomack and Northampton] registered under this clause." But no doubt this is a large proportion even for the State of Virginia, and the number of registrations under this clause in the Gulf States would probably be very small.

There are two provisions in the Southern Constitutions to which there are serious objections, which, it is only just to say, were vigorously opposed by leading and influential citizens in the Southern States. One of these is the "grandfather clause," the other the "understanding clause." The "grandfather clause," which allows all persons who could vote in 1867 and their descendants to register prior to a certain fixed date, was evidently designed to admit white and exclude negro voters, although it is true that it admits a few free negroes and their descendants, and excludes a few white immigrants and their descendants. Two things are to be said in excuse, if not in justification, of this clause. First, in order to secure the necessary number of white votes to a Constitution requiring an educational or property qualification for suffrage, it was supposed to be politically necessary to allow the suffrage to be retained by those white voters who already possessed it, or were just coming into the possession of it. Second, this "grandfather clause" has already expired in Louisiana, and will expire in North Carolina in five years, after which time no one can register who does not possess qualifications equally applicable to black and

to white. But it must also be remembered that, though the clause ceases to be operative, its effects do not cease. For all who have registered under this clause will continue to vote.

The "understanding clause" seems to us more seriously objectionable. It allows the registrars to exclude from the suffrage the applicant who, in their opinion, does not understand the Constitution when he reads it or when it is read to him. If such a clause existed in New York State, we are very sure that there would be Democratic registrars who would exclude a Republican for thinking that the Constitution forbade an income tax, and Republican registrars who would exclude a Democrat for thinking that it allowed an income tax. No such perilous discretion should be allowed to registrars as is allowed by the amended Constitutions of Mississippi, South Carolina, and Virginia. We cannot doubt that the object of this clause was to enable registrars to exclude negroes and admit white persons; from information we have received, we cannot doubt that it has been freely used for this purpose. It is true that the disfranchised negro has the right of appeal to the courts, but it is also true that the courts would be very loth to interfere with the discretion of the registrars, unless the case were so clear as to give unmistakable indication of fraudulent intent. The only thing that can be said on behalf of the "understanding clause" is that in the State of Virginia it expires by its own limitation in 1904. It does not so expire in Mississippi. We cannot better express our condemnation of this "understanding clause" than in the words of the Hon. John B. Knox, of Alabama: "But to this plan the objection has been urged with force that it perpetuates the very form of abuse which we are seeking to escape; that elections by managers, or registrars, is not what we want. Our aim should be for a correction of all evils which threaten the purity of the ballot and the morals of the people."

To sum all up in a paragraph: In all of the Southern States any negro who possesses a limited amount of taxable property, about three hundred dollars' worth, assessable value, and can read and write the English language, can vote; in three of the Southern States any negro who

can read and write the English language, and has paid his poll tax, can vote, although he may not be the owner of taxable property; and in three of them he can vote if he owns taxable property, even though he cannot read or write. In none of the Southern States is a negro legally disqualified from voting because he is a negro; in none of the Southern States is he disqualified if he possesses three hundred dollars' worth of property and gives evidence of his ability to use intelligently the English language.

It may and will be said that the negro has been so long accustomed to find himself excluded from the polls by violence, or his ballots not counted when they are cast, that he has grown discouraged and will no longer attempt to register and vote. There are sections in the South in which this is true. Whatever excuse ever existed for these revolutionary methods is taken away by the amended Constitutions. Something could be said for lawless methods of excluding ignorant and incompetent voters; nothing can be said for lawless methods of excluding intelligent and competent voters. If these methods continue to be pursued when the only excuse for them has been taken away, it will be time enough to consider what steps can be taken to prevent their continuance. Here we consider only the *laws* concerning suffrage, their nature and effect. In our judgment, whatever injustice there is in the Southern suffrage laws lies in their provisions for admitting to the suffrage white men who are not competent to exercise it, not in excluding negroes who are competent to exercise it, and these provisions are temporary, not permanent, in their operation, though not in their effects. If we have stated the facts here correctly, no negro showing evidences of competence, by his possession of a very limited amount of property, and by ability to read and write the English language, is permanently excluded from the suffrage in any of the Southern States. Before Northern reformers consider the question what they ought to do to rectify the wrong supposed to have been perpetrated on the negro race by the Southern Constitutional Conventions, they certainly should understand carefully what the wrong is, and how far time and education and the establishment of kindly relations between

black and white in the South will have the effect to correct it.

### Mr. Chamberlain's Plan

Mr. Chamberlain's plan for reciprocal trade of England with her colonies aims to seek a valuable end by perilous means. The end is a consolidation of the colonies with the mother country; the means is special trade legislation, giving to the colonies preferences in trade by a tariff on importations from other countries.

All Mr. Chamberlain's special pleading will not suffice to satisfy Englishmen that preferential trade arrangements are *free* trade. His plan for buying the labor vote to favor higher breadstuffs by agreeing beforehand to pay the result over to the laborers in old-age pensions indicates less respect for the laborer than the laborer is entitled to. Years ago Carlyle said that the workingman demands not charity but justice. That is to-day much more true, as an interpretation of workingmen, than it was when Carlyle said it. The proposition to tax the workingman for his food products and pay him back the taxes in old-age pensions is a proposition to give him charity and deny him justice, to coddle him in his old age in return for impoverishing him in his manhood. It is more direct and therefore more easily seen through than the American plan to tax all the people on their purchases and pay the proceeds back to some of the people in their wages. America will have no reason to complain if she should find her food products excluded from the English market in exchange for her exclusion of English manufactures from the American market. But neither the English nor the American people can be fooled into the belief that such a policy will not both raise the price of food in England and create a new and serious hindrance to the cordial though unofficial alliance that is growing up between England and America.

If the Liberals had a great statesman to set against Mr. Chamberlain, who is a shrewd politician, they would recognize the value of the *end* which he seeks to accomplish, and would propose to accomplish it by different *means*. It can hardly be doubted that either England must draw her colonies to her more closely or they

will tend to become more and more independent of her. Their ultimate and complete independence would mean the fall of Great Britain from a first-rate to a third or fourth rate power. But there are other methods of uniting the colonies to the mother country than the method of a preferential tariff and the abandonment of free trade. One such method, which strikes the American as natural because it is in accordance with our traditions, would be some scheme of colonial representation in the Imperial Government. Participation of Australia and Canada in the government of Great Britain would do far more to bind them to one another and to England, far more to make a true imperial unity out of the now dissevered portions of the loosely knitted colonial system, than any mere treaties of reciprocity. If the Englishman has to choose between a commercial imperialism and a "little England," we are inclined to think that he will choose the former. If England had a Liberal statesman wise enough to show a method by which the Greater Britain could be made really one Empire, and the freedom of trade on which her past greatness has been based could still be preserved, we cannot doubt that England would follow the statesman, not the politician, and would choose a genuine national unity rather than a mere British zollverein.

### A Text from Luther

Luther, who at his best had command of that kind of speech which combines clearness of statement, beauty of imagination, and warmth of heart, whose words, as Carlyle has said, were "half battles," has left an exhortation to fraternal love and sacrifice which is a noble sermon compacted into a paragraph: "Every Christian should be unto his fellow-man a willing servant, willing to help and aid his neighbor, even as God acts towards us through Christ. Thus all of God's gifts must flow from one into the other and be common to all, flowing from Christ to us, from us to our neighbor, who stands in need thereof." These words might be taken as a description of the fundamental office of the Christian Church, which is not only to bear testimony to the Christ who lived and died nineteen hundred

years ago, but to share with all men that truth which he communicated, to divide with all men the love of which his life was the supreme expression, and to include all men in the universal care of God.

For the individual man or woman who is trying to repeat the life of Christ these words have the most searching significance. Over the portal of every day's life they ought to be written; for unless the truth which they contain is practiced, there is no real religion. The final evidence of religion is always the fruit it bears. No conformity to creed, no rigidity of observation of ritual, no devotion to any church as an organization, no ritualistic act or service, can be the final test of the love of Christ in a man's heart. The final test of the presence of that love is always the disposition to treat others as Christ treats us, to do unto others as Christ has done unto us, and to illustrate in our relations with others the charity, kindness, and sacrificial spirit which gave the life of Christ and his death their beautiful and supreme significance. In the clamor of contending interpretations of the Christian life, in the tumult of antagonistic claims of authority from this church or from that, in all the uncertainty of thought, of practice, or of organization which prevails throughout the world to-day, the spirit of Christ manifested in our relations with our fellows is the definite and fixed thing which any man or woman may learn and which every man and woman ought to practice. Better a thousand times heterodoxy of opinion than heterodoxy of spirit; better a thousand times imperfect ritual than the selfish heart. It is best to think right and to worship God wisely and nobly; but if the Bible teaches anything definitely, it teaches the great fundamental fact that what the Infinite cares for supremely is not correctness of opinion or of ritual, but the right spirit, not only towards man, but towards every creature He has made. This is the test to which the Old Testament, through its great teachers, was constantly bringing the Jewish people; and it is one of the awful tragedies of the race that those who were highest in the Church, most orthodox in opinion, most scrupulous in ritual, failed most completely to interpret and practice the spirit of Christ. No man is

saved by his orthodoxy, but any man may be saved by his life; no man is saved by his churchmanship, but any man may be saved by his character.

Men are not likely to undervalue the importance of correct opinion and proper ritual, but they have shown a constant tendency to undervalue and obscure the supreme importance of the right relations toward their fellows; and Luther's words, spoken in the sixteenth century, are as applicable to the twentieth century as if they had been written by a contemporary prophet or teacher. In the exact degree in which God's gifts in our keeping are made common to all, in which the spirit of Christ received by us is illustrated in our lives, in which the love of God, accepted by us, is not only passed on, but interpreted by our own attitude toward others in thought, word, and deed, have we a right to consider ourselves followers of Christ.

## The Spectator

Not very long ago the head of the English Department in one of our first colleges received from his President a letter asking in substance, "Is there nothing we can do to prevent this?" Inclosed with this appeal was a note received by the President from a senior of the college accepting an invitation to a formal dinner in three differing persons. This historic note is, the Spectator believes, now read (without the signature) to each graduating class as an awful warning; but that this is any more efficient as a cure than a formal lesson in English grammar, the Spectator seriously doubts. After the bad habit of poor English is once firmly established in the mouth, the Spectator is convinced that such polite efforts are but as "squirting rose-water at a house afire."

There must be an amazing power of resistance in a bad habit so fixedly formed that it can protect its possessor from the serried ranks of grammars which lead up to his Alma Mater and from assimilation of the well-spoken English by which every college-bred man is surrounded during the years of his progress through the Alma Mater itself. The fact is, to teach a lad pure English so that he uses it instinct-

ively, you should "catch him in the velvet." Thus his English may be, as it were, born with him. Failing this, it must be otherwise gotten under his skin, and with any process less thorough you may depend upon his departing from correct usage in his moments of ease; and in his moments of excitement—the less said of them the better.

⊙

The Spectator is of the opinion, if he may modestly express his views from a layman's standpoint, that teachers of young children do not sufficiently appreciate the importance of training the *ear* of the pupil to detect the difference in sound between pure and impure English. If, as a daily exercise, a scholar who speaks carelessly is forced to repeat phrases over and over, first correctly and then incorrectly, for comparison, the ear catches the tune—if it may be so termed—of the pure speech and learns to mark the difference. In this way a better speech may be acquired—if not the perfect language.

⊙

But the Spectator has no idea of meddling with pedagogics. Far be it from his path! He is thinking rather of those who wish to teach themselves than of those to be taught of others. To those unfortunates who have education in plenty, and are conscious that they speak without that stamp of education given by pure English, the Spectator would like to hold out the examples of some he has known who have suffered likewise—and conquered. What man has done man can do—when his heart is in the effort. But this introducing pure English under the epidermis of an adult is a serious operation, and one not to be performed under anæsthetics either, for the patient must not only be conscious but must be the operator himself. How is an adult to be almost born again—as he must be—to become receptive to a new, pure language? He must be born again of *the spirit*, of course, and be willing to labor earnestly for his own redemption. Then his redemption is possible, if difficult. Time, effort, and constant watchfulness are the price. But is not the gain worth the expenditure?

②

The Spectator is not now speaking of what is called cultivated English. We all

know that that is an elusive quality, and granted only to the elect. It has no grammar, no law. It is learned by long and intimate fellowship with the great English speakers of the earth—dead and alive—and cannot be learned at all save by one who has been born with the most sensitive ear. The Spectator is speaking of something much less ideal than this—namely, a mere grammatical English. This seems a slender ambition, and yet we have to face the fact that not even a college education, with all its fitting-school requirements back of it, can insure grammatical English. It is a depressing outlook for those who have learned so much and still lack that essential stamp of education. Many feel that it should have come to them somehow as a *right* after the years and the money spent on education. And it does seem that there is something wrong when this deficit can occur—but that is not for the Spectator to settle. He is only humanly interested in the disappointed ones, not in the defects of the process. Depressing their case is, but by no means desperate. Poor English we know is as catching as the measles, but so is good English contagious. The question, then, for the patient to consider is how to protect himself from the first disease, and how to catch the contrary contagion. The charm of an English grammar worn, camphor-bag fashion, about the neck is no true protector. Indeed, the Spectator knows but one sure charm against the infection of bad English, and that is the training of the ear by good English. As a matter of course, this is not so easily won by the adult as by the child. An instinctive shrinking from the wrong word is the imperative need, and this instinctive shrinking is to be acquired only by the constant hearing of the right sound. A painstaking use of pure English, a patient listening with open ears for correct English, are the only charms the Spectator knows of against the contagion of poor English.

⊙

The Spectator once read a very interesting prescription for the acquisition of style. This plan suggested a wide reading and the marking by the student of every sentence which by captivating quality lifted the phrase above the ordinary

"the whole town," not excluding certain sworn officers of the law, seeing that the prisoners still refused to march back to camp, the contractor hitched the rope by which they were tied to a mule, urging it on. The squire who had issued the warrant of arrest fortunately appeared then and cut the men free. Praise be to him for this act! But why did he urge these men to go back, as he did, with that brute of a contractor, and why did he, instead of trying the prisoners then and there according to law, go back to camp with them and help to induce them to "work out" their "board" and transportation? Why did he not take action against the contractor caught *in flagrante*? Why was there no entry made in his official docket of the disposition of this case till months after? Why did not the Prosecuting Officer at Beckley, who knew of this barbarity, take any action until two months after the event, when a society six hundred miles away submitted to him evidence which he could have gathered fifty yards from his office; and even then why did he merely promise to submit "this small matter" to the next Grand Jury?

Of the twenty-two of the men who worked out their "debts," one escaped and cannot be traced; eleven walked practically all the way from Charleston, West Virginia, to Washington, District of Columbia; two I found in a Washington hospital; the others had money enough to return to New York.

I have given this case at length, not because it is an example of exceptional cruelty and lawlessness, but because it is an uncommonly well substantiated and corroborated case of the system of intimidation in force in some labor camps of West Virginia, ranging from the silent intimidation of armed guards to an active terrorism of blows and abuse, of which the general public knows nothing.

It was in the latter part of April, 1903, that I was sent by the Society for the Protection of Italian Immigrants of New York to investigate a large number of complaints of alleged maltreatment suffered by Italians in certain counties of West Virginia. That State is developing her splendid resources of coal and lumber, and this necessitates the building of railroads for the transportation of such prod-

ucts. The demand for labor is tremendous and the supply totally inadequate. If it is true that too many immigrants come to our shores, it hardly holds good for West Virginia. There capital is in danger of becoming paralyzed from lack of the labor supply. To supply the feverish demand, laborers of all conditions and classes have been literally dumped into that State by the brokers in human flesh in the cities—not only men unfit for the hard work required, but a lawless and criminal element as well. The problem for the contractor does not end with the getting of the men to West Virginia; an even harder task is to keep them there, for the isolation of the camps, the absence of human intercourse, and the hardships of life create a feeling of discontent among the laborers almost from the first day. It is not strange, under these circumstances, therefore, that contractors should resort to methods both to get and to keep laborers which are in defiance of law and repugnant to the moral sense. The temptation to illegitimate practices is further strengthened by the method employed of advancing transportation for the men. Thus, two hundred laborers at \$10 each means an investment of \$2,000; if the men become dissatisfied and leave, it means a clear loss to the contractor. Yet, however strong the temptation, it cannot justify acts of restraint which in practice amount to white slavery. The use of armed guards around the camps is notorious. Worse yet, the evidence seems to show that the men are charged for the expense of such unlawful surveillance.

Cases of brutality are frequent and inexcusable. One may find some palliation for the unlawful restraint exercised over men who wish to escape before they have "worked out" their transportation. But what can be said in extenuation of such acts of brutality as those of men felled with blows from iron bars or gun butts, or marched at the point of rifles and cursed and beaten if unable to keep up with the pace of the mounted overseers? I have before me the sworn declaration of one Girardi—a bright young Piedmontese, who had been employed by Boxley & Co. near Kayford. He was ordered to lift a heavy stone, and asked a negro co-laborer to help him. His was not, evidently, a permissible request, as his foreman,

on hearing it, called him a vile name and thrust a revolver in his face. Thereupon Girardi lifted the stone, at the cost of a very bad rupture. That man to this day has had no redress.

"Tired of abuse," reads the sworn statement of another laborer, "we decided to escape from the camp; we had proceeded but a short distance when we were overtaken by several men armed with rifles and revolvers, who drove us back. One of the pursuing band took from me an iron rod which I held over my shoulder, over which I had slung my valise, and with it repeatedly struck several of my companions." Another, a splendid type of hardy Calabrian, described under oath the following picture: "My attention was drawn to the other side of the creek, where an Italian was shouting for help—appealing to us as fellow-countrymen to aid him. He had been felled by a blow of a heavy stick dealt him by one of the guards. Cervi, my friend, and I tried to cross over to help him, but were prevented by our boss, who drove us back at the point of a pistol; all I dared do was to shout to him not to resist or he would be killed, and to go back; the man who had struck him lifted him bodily by his coat and pushed him on, striking him every time he stumbled or fell from exhaustion."

These are a few of a number of well-substantiated cases. It will be hard for many of us to believe these facts; it will seem impossible that such barbarities should be allowed in a civilized community. Perhaps they would not be allowed if they were known. Publicity is the great hope for reform; a wide publicity that will, on the one hand, arouse public sentiment and react on the local authorities, and, on the other hand, that will further cut off the supply of laborers, thereby forcing the contractors to reform.

Little, if anything, can be hoped from the local officials. The Chief Executive of West Virginia admitted to me that it was practically impossible to obtain convictions through the local courts, and, however good his intentions, his powers seem very limited. In a recent letter the Governor of that State writes: "I am willing to do anything I can to bring about a better condition of affairs and to co-operate as I have the power in bringing to justice those guilty of the acts com-

plained of, but you see my limitations. . . . The executive in West Virginia has practically no power in controlling the administration of justice in our courts. . . . The Legislature refused last winter to give me the necessary powers asked for in as grave a matter as lynching."

It is a reasonable presumption that contractors do not engage men with the express purpose of maltreating them, for it is a plain business principle that dissatisfied men make poor workers. I believe, therefore, that, with some few exceptions, these abuses are to a great extent due to that lack of mutual confidence and more especially of mutual understanding which is the basis of much of the unrest and spirit of reprisal in the labor situation. This lack of mutual understanding is especially evident in the relations between American employers and Italian laborers. It is not merely ignorance of the language, it is rather a lack of clear-sightedness and perception as regards what counts with these foreign laborers. Employers of Italian labor too often forget that their employees are proverbially sensitive, but are also susceptible to kind treatment. Courtesy and kindness will hold these men even in distant and isolated camps much better than curses and forcible threats. As a purely business proposition, the employment of a capable and honest interpreter or confidential secretary who knows both Italian and American ways, to whom laborers could go, would be a better and cheaper investment for contractors than the maintenance of armed guards or brutal foremen. As it is, not only in West Virginia but wherever Italian labor is employed the Italian is at the mercy of the middleman, without any right of appeal. Whether it be the fraud of his own countryman, the banker-agent who sells his labor under false pretenses, or the extortion of his countryman, the camp storekeeper to whom the contractor lets the commissary privileges, whether it be the "rake-off" of the foreman or the peculations of the paymaster, whether it be the brutality of the boss or the unlawful order of the gang-foreman—no matter what the injustice may be, the laborer has no opportunity to appeal to his employer, either because the employer recognizes the decision of his middleman as final or because he will not

"bother with details." While this system, popularly called the "padrone system," is tolerated by contractors, abuses will continue. Much, however, can be done to lessen its evils by institutions like the Society for the Protection of Italian Immigrants, a society administered by Americans, which aims to destroy the padrone system by competing with padrones, using legitimate methods in supplying laborers and safeguarding their rights.

The responsibility, in the last instance, however, rests on the employers. Their duty to the men should not cease with the

payment of agreed wages; without a careful, businesslike, and humane supervision, workmen are very likely to be abused by the middlemen. Especially is this true of the foreign workman, whose helplessness in the face of unlawful and brutal treatment such as that in West Virginia would almost justify an extra-judicial reprisal. Certainly it is of vital importance that these numberless foreign laborers who come to us should learn, as a first step towards assimilation, that Americanism means honesty, regard for law, fair play, and plain dealing.

## The Efficiency of Unions From an Employer's Standpoint

**T**HE Outlook has a well-earned reputation for discussing the relations of capital and labor in so broad and catholic a spirit that many of its readers have hoped that in its columns would appear some reply, from the employers' standpoint, to the symposium of the representatives of certain unions which was published some weeks since under the head of "The Efficiency of Union Labor."

The subject of labor organizations is too large a one to deal with in the compass of a short paper, and it is proposed here only to touch, very briefly, upon the statements contained in the article already referred to and so often urged by the officers of the unions in various departments of manufacture.

The present writer approaches the whole subject of labor organization from the employers' point of view, with an experience of many years in managing a business employing several hundred hands. It should be distinctly stated, however, that the study of these years has shown him that it is only the very narrow and bigoted employer who sweepingly condemns all labor organizations as meretricious and as an injury to the community at large. On the contrary, it is his conviction that "organized labor" has brought about many desirable reforms, and that it has had the tendency to advance the condition of the workman, and by so doing benefit the community.

But it should, assuredly, be the aim of those who would approach this subject fairly, to eliminate from their minds the prejudices and the narrowness which unfortunately are so apt to appear in these labor discussions, whether coming from employers or the representatives of the unions. When, therefore, such statements are made by the latter as have recently appeared in your columns, it is in order to inquire whether they are entirely trustworthy, and, if not, whether "labor" is benefited by their use.

The present writer merely proposes to take up, very briefly, that department of manufacturing included in the business of printing and binding, with which he claims some familiarity; and he has no hesitation in saying that if all the aims and the methods of the unions were as fair, virtuous, and beneficent as is claimed by their officers, they should, in their entirety and in all their details, receive the unqualified support of every fair-minded man.

But we venture to think that an employer may have a very full appreciation of the laudable aims of the proper organization of labor without being entirely oblivious to the fact that many of the methods of the unions are not only unfair, but that they are a distinct injury to the very men they are supposed to benefit. We must not lose sight of the fact that the government of many of the unions is in the hands of very fallible and, not infrequently, of very shortsighted and self-

seeking men, whose proceedings by no means always "make for righteousness."

In taking up the consideration of the labor organizations connected with the printing business, it must be borne in mind that the membership of these special unions contain a far more intelligent body of men than is often found in other similar organizations. It is fair, therefore, to consider their shortcomings, if such exist, upon a somewhat different basis than would be the case if we were examining the actions, say, of the hod-carriers' or the blacksmiths' unions.

One of the writers in the article already referred to, in speaking of the stereotypers' union, claims that "all the members of his organization know as much about the business as the man in charge," and, further, that "the best men are always anxious to get into the union."

Now, let us analyze for a moment two such sweeping statements. If the first means anything, it is that all the members of the stereotypers' union are thorough experts in all branches of their business. Such a statement would convey to the average reader a somewhat exalted view of the educational capacity of this organization, if it is not pointed out that in the manufacture of electrotype and stereotype plates there are a number of different operations, none of which are interchangeable as far as the individual workman is concerned. The "molder" knows nothing of the work of "finishing," and the "backer-up" would produce sad results if placed in the position of the "battery man." Each one of these men may be an expert in his own specialty, but none of them would be competent to supervise the whole department. The disingenuousness of the statement is further shown by the fact that the union rules will not permit one man to take another man's position in even the temporary absence of the latter.

Further than this, it is equally absurd to claim, as has been done, that *all* union men must necessarily be able workmen, even in their own special branch. While it is doubtless true that the majority of good men are members of the unions (not always, however, from choice, but from necessity), it is nevertheless the fact—well known to every employing electrotypist in New York—that there are a large number

of union members inefficient or totally incompetent. It is these men who are sent from the unions to fill positions during a busy season, which positions they occupy for but a short time, and, wandering thus from office to office, they make up the radical contingent which is always striving to stir up trouble in the meetings of the unions.

Without any qualifications, the claim is made that "all the good men are anxious to get into the unions." But a moment's thought will show the peculiar nature of this statement. Before the stereotypers' union became as strong as it at present is in New York, there were many of the best workmen entirely ready to do without union support. And this was simply because they were always sure of employment and of their ability to earn more than the union scale, and there was absolutely nothing for them to gain in joining the union. *But they were forced to join.* It was the poorer grade of workman, who, without outside pressure, could not command a position or what he thought proper wages, who was "anxious to join the union," hoping that its assistance would make up for his own deficiencies.

One of the great troubles in union management is the extremely shortsighted and narrow policy pursued by its officers if they are aiming at the *permanent benefit* of their members. It is certainly entirely in order for the managers of such organizations to demand the highest wages which they can secure for their work, and in all such demands the sensible employer is always ready to discuss the questions at issue fully and frankly, and he certainly should be prepared to accord to labor its full share of the earnings of the business. The trouble is, however, that in these days of easy communication between distant points the employer is compelled to keep steadily in view the close competition in his business of neighboring cities, while the unions—or rather its officers—are extremely apt to give their thought and their attention merely to the question, "Can we *force* the trade of New York to pay a higher scale?" and if it is believed that this result can be secured, no thought is considered necessary as to the permanent effect of any such movement. Indeed, the history of the many discussions

between employers and the printing unions of late years shows an extraordinary obtuseness upon the part of the latter which is as strange as it is discouraging; and no argument presented showing that the constant advance in wages is year by year not only handicapping business, but clearly driving work away from New York to competing points with more moderate wages—no such argument appears to produce the slightest effect upon the representatives of labor. The law of supply and demand is often quoted in a brutal manner by both "capital" and "labor:" by the former in its declination to pay the poor Italian laborers more than \$1.35 a day in the present time of high cost of living, because there are "plenty more to take his place if he is not satisfied;" in the latter, when a compact union forces an exorbitant price upon the manufacturers of one locality because the stoppage of work means disaster and bankruptcy to the employer. Neither can properly represent the wider view of "supply and demand," because the ignorant excavator is entitled to "a living wage," while the acceptance by the employer of an exorbitant demand by a union does not by any means carry with it the justice of this demand, but, on the other hand, often leads to disaster to the local industry so affected—a disaster from which the wage-earner eventually suffers quite as much as the capitalist.

It should be noted that the wage scale for all labor connected with printing and bookbinding is very much higher in New York than anywhere else in the country. This condition is steadily driving work away from this locality to points where the union demands are materially less. The representative of the stereotypers' union says in *The Outlook*, in connection with the recent demand for an increase in wages from \$24 to \$27 per week: "We felt that the employers were getting more for their work, and we wanted our share." This statement is logically correct if based upon facts. The truth is, however, that the only advance the New York employers have secured in recent years was a slight increase in prices to meet the extra cost of output when they were forced to reduce the working day to nine hours. No increased rate had been made or contemplated by the master printers of New

York when last November they were given twenty-four hours to accept an advance of from \$24 to \$27 a week. And it must be remembered that this figure now paid represents, as a rule, steady work by the year, and not, as with the carpenters and masons, employment only during good weather. Further, it is quite susceptible of proof that never in recent years have the margins of profits in the printing business of New York been as small as they are at present, this condition being due (1) to high rates of wages, (2) to the nine-hour scale, (3) to the fact that a very large and growing amount of work is being sent to competing points where the unions are less stringent in their methods.

Now, this action upon the part of the stereotypers' and electrotypers' unions, and similar demands in the composing-room, are slowly but steadily driving this class of work to other manufacturing centers, or, in the case of book-plates, to small towns and villages where non-union electrotypers and printers can do the work; and assuredly, sooner or later, this loss will be locally felt by organized labor, as it already is by the printing interest, controlled by the shortsighted unions in New York and the vicinity.

The representatives of the union in the article referred to state very specifically that no rules exist in their respective organizations limiting the output of the members; and the present writer is quite ready to accept this statement. This does not at all do away with the certainty that the influence—or shall we say the moral suasion?—of the majority of unions is directed towards keeping down the amount of work done by the individual. And this is certainly consistent with the often expressed aim of union officials that as many men as possible should be employed, provided that not less than the union scale is paid for their work.

If such be not the case, why is it one of the most strenuous aims of the unions to do away with piece-work and insist upon a time scale, when the inferior workman (of course always in the large majority) shall set the pace, beyond which his more able fellow shall go only at his peril?

It is invariably the desire of the unions to "level down" to a point where the individuality and capacity of the workman are

lost, and never to "level up" to the standard of the better class of workers; and it is quite easy to see why this should be the case when we remember that, in the nature of things, the unions cannot, by any chance, be controlled by the better class of workman, who must ever be in the minority.

The writer already quoted (Mr. Boulton, of the stereotypers' union) says that the very strenuous rules limiting apprentices are for the purpose of avoiding "too great a surplus of labor in the market." This seems reasonable, but so little judgment is exercised that apparently no consideration is given to the future and to the natural growth of the business. The officers of the unions apparently care for nothing but in providing, for the present, high wages, and, for the future, a stringency of workmen. This will show the *raison d'être* of their existence, and the future of the trade does not, apparently, interest them.

We are told that in the management of an electrotype office "the chairman represents the union, and the foreman represents the management;" and it should be noted that the "chairman" is placed first as of by far the greater importance. But the reader is not told that if the foreman touches his hand to any work the union insists that he shall join their organization! By so doing he ceases to "represent the management" in the proper sense of the word, but is bound by his oath to carry out the commands of the union or suffer the consequences.

Now let us look at a single instance of the actions of the stereotypers' union. In a certain office known to the writer, one of the finishers (salary \$27) was laid off sick, and it seemed likely that it might be some weeks before he could again take up his work. The manager might have felt entirely justified in considering his place vacant and filling it with a new hand, but this particular finisher had held the position for many years, and it seemed nothing more than fair to hold the post open for him.

A "helper" (wages \$18) was put at his bench in the interim to try and clear up a part of the unfinished work, this helper being quite incompetent permanently to take the position of the absent finisher. At once the "chairman" of the office

notified the foreman that this helper could not be allowed to use a tool unless he received the scale of \$27. This "chairman," by the way, was a thoroughly able workman who had been employed in the office for many years, and he ventured to say to the foreman that he thought this rule, under the circumstances, rather a severe one, but if he failed to insist upon it he would lay himself open to a heavy fine from the union.

This is but one instance of many which might be cited of the arbitrary and tyrannical methods of the union—methods to which the better class of workmen are always opposed, tending to irritation between employer and workman without any possible advantage to the latter. Such regulations are made by the union's officers because of their dread of any freedom of action being allowed to members, and of the fear that its arch-enemy, the employer, "may take advantage" if the rules are not made very strict and inflexible.

The situation between the several unions controlling the printing business and the employers may be briefly summarized as follows:

I. No reasonable employer objects to unions *per se*, fully recognizing that the workmen have the same legal and moral right as the employer to form organizations with the aim of bettering the condition of their members. It should, therefore, be the attempt of all such employers to strive by all reasonable methods to minimize the many difficulties and frictions incident to the present relations between employer and workman, to the end that the former may help to show the absurdity of the alleged existence of a natural antagonism between capital and labor.

II. Contrary to the view so often expressed by the officers of the unions, who are not workmen, but whose salaries are produced by the dues of the laborer, there are, as every employer fully realizes, many of the best workmen in the printing business who have been forced into the union strongly against their own better judgment as to its efficacy. These men, realizing that they can always command the highest wages, would prefer personal freedom of action and the saving of their union dues for their families.

III. The meetings of the unions are

by no means controlled by the better class of workmen. And here is the same danger in union methods as exists in the workings of the political primaries. The best workmen remain away from the first, and "the intelligent citizen" shuns the second, to the far-reaching injury of the industry affected and of the community at large. Almost every employer in the printing business has heard again and again from old and tried workmen remarks like the following: "There is no use in attending the meetings of the union and trying to prevent too radical actions. We are always in the minority, while the riffraff—the poor workmen—who can never long retain their positions, and the dyed-in-the-wool radicals, always outvote us, because they feel that troubles and strikes can do them no harm, while they may prove of some temporary advantage. Our influence and our vote against such odds are of no avail." Now, it must be remembered that this majority, made up as it is, represents the power which elects the officers of the union, and it is perhaps not to be wondered at that these officials feel that they can best carry out the wishes of their constituents by "showing their power" and submitting radical demands and regulations to employers.

IV. It is manifestly the aim of the union to place all its members upon the same footing—to stifle individual effort and to produce, as near as may be, absolute uniformity in work and wages. To best serve the purpose of the *officers* of a union, each workman should be like a cog in a wheel, doing precisely the work of its fellow cog, with no incentive to better his position by his superior ability or by more energetic work. Let any one cog be larger and of greater capacity than its neighbor, and the working of the union machinery begins to show friction.

V. When, however, as sometimes happens, the officers of a union are fair and broad minded men, with the aim in view of bettering the *permanent condition* of its members (as is apparently the case with the Brotherhood of Locomotive Engineers), then such an organization may be made of great value, not only to its members, but to the industry thus organized and to the community at large. But no lasting benefit will ever accrue to organized labor until its officers feel more

clearly the responsibility of their positions, until the walking delegate is abolished or at least deprived of his arrogant anxiety at all times "to show his power," and last, but by no means least, until the unions feel sufficient confidence in the integrity of their motives to incorporate, and thus accept the full responsibility for their actions.

VI. But we must not lose sight of one of the marked characteristics of present labor conditions. The old and often friendly and cordial relations formerly existing between employer and employee seem to be things of the past, no matter how long these pleasant personal associations may have existed between the two. It is, sadly enough, quite impossible to feel the old regard for the personality and the good will of a man who may have been in your employ for twenty years when union affiliations compel him to consider as paramount his allegiance to his organization. At the mandate of a "walking delegate" he is forced, by his oath, to drop his tools and leave his work, utterly unmindful of the damage he is doing to a business from which for so many years he has made his living. He may often be an intelligent and self-respecting man, and yet, because he has no alternative but to obey the union's orders, he is the victim of tyranny. Frequently he may have to act in this manner without any knowledge of the alleged cause for this action. He has simply to obey orders, or lay himself open to expulsion from the union and have all his opportunities for work in his trade permanently cut off.

Formerly, when differences arose as to wages, time, or amount of work, these differences were adjusted by direct conferences between those individually interested. Now the officers of the unions say, in effect: "These men, whom you have heretofore considered as intelligent beings, some of whom may have been holding their present positions for many years, are totally incompetent to look after their own interests. We cannot permit them any freedom in their relations with their employers, and we must insist that all such matters be placed in our hands for adjustment. It is a matter of perfect indifference to us whether or not your employers feel themselves wrongly treated. If some

other concern is 'unfair,' it is incumbent upon us, if we think we can gain by so doing, to order your men to injure your business as much as possible, upon the principle that an injury to one is an injury to all."

# THE FOREST'

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

## Chapter XIII.—The Hills

WE explained carefully to Dick that he had lit on the only spot in the Half-way Pool where the water was at once deep enough to break his fall and not too deep to stand in. We also pointed out that he had escaped being telescoped or drowned by the merest hair's breadth. From this we drew moral conclusions. It did us good, but undoubtedly Dick knew it already.

Now we gave our attention to the wetness of garments, for we were chilled blue. A big fire and a clothes-rack of forked sticks and a sapling, an open-air change, a lunch of hot tea and trout and cold galette and beans, a pipe—and then the inevitable summing up.

We had in two and a half days made the easier half of the distance to the Falls. At this rate we would consume a week or more in reaching the starting-point of our explorations. It was a question whether we could stand a week of ice-water and the heavy labor combined. Ordinarily we might be able to abandon the canoe and push on afoot, as we were accustomed to do when trout-fishing, but that involved fording the river three times—a feat manifestly impossible in present freshet conditions.

"I t'ink we quit heem," said Billy.

But then I was seized with an inspiration. Judging by the configuration of the hills, the River bent sharply above the Falls. Why would it not be possible to cut loose entirely at this point, to strike across through the forest, and so to come out on the upper reaches? Remained only the probability of our being able, encumbered by a pack, to scale the mountains.

"Billy," said I, "have you ever been over in those hills?"

"No," said he.

"Do you know anything about the country? Are there any trails?"

"Dat countree is belong Tawabinisáy. He know heem. I don' know heem. I t'ink he is have many hills, some lak'."

"Do you think we can climb those hills with packs?"

Billy cast a doubtful glance on Dick. Then his eye lit up.

"Tawabinisáy is tell me 'bout dat Lak' Kawágama. P'rhaps we fine heem."

In so saying Billy decided the attempt. What angler on the River has not discussed—again idly, again academically—that mysterious Lake alive with the burnished copper trout—lying hidden and wonderful in the high hills, clear as crystal, bottomed with gravel like a fountain, shaped like a great crescent whose curves were haunted of forest trees grim and awesome with the solemnity of the primeval? That its exact location was known to Tawabinisáy alone, that the trail to it was purposely blinded and muddled with the crossing of many little ponds, that the route was laborious—all those things, along with the minor details so dear to winter fire chats, were matters of notoriety. Probably more expeditions to Kawágama have been planned—in February—than would fill a volume with an account of anticipated adventures. Only, none of them ever came off. We were accustomed to gaze at the forbidding cliff ramparts of the hills, to think of the Idiot's Delight, and the Half-way Pool, and the Organ Pool, and the Burned Rock Pool, and the Rolling Stone Pool, and all the rest of them even up to the Big Falls—and so we

would quietly allow our February planings to lapse. One man Tawabinisáy had honored. But this man, named Clement, a banker from Peoria, had proved unworthy. Tawabinisáy told how he caught trout, many, many trout, and piled them on the shores of Kawágama to defile the air. Subsequently this same "sportsman" buried another big catch on the beach of Superior. These and other exploits finally earned him his exclusion from the delectable land. I give his name because I have personally talked with his guides, and heard their circumstantial accounts of his performances. Unless three or four woodsmen are fearful liars, I do Mr. Clement no injustice. Since then Tawabinisáy had hidden himself behind his impenetrable grin.

So you can easily see that the discovery of Kawágama would be a feat worthy even high hills.

That afternoon we rested and made our *cache*. A cache in the forest country is simply a heavily constructed rustic platform on which provisions and clothing are laid and wrapped completely about in sheets of canoe bark tied firmly with strips of cedar bark, or withes made from a bush whose appearance I know well, but whose name I cannot say. In this receptacle we left all our canned goods, our extra clothing, and our Dutch oven. We retained for transportation some pork, flour, rice, baking-powder, oatmeal, sugar, and tea; cooking utensils, blankets, the tent, fishing tackle, and the little pistol. As we were about to go into the high country where presumably both game and fish might lack, we were forced to take a full supply for four—counting Deuce as one—to last ten days. The packs counted up about one hundred and fifteen pounds of grub, twenty pounds of blankets, ten of tent, say eight or ten of hardware including the ax, about twenty of duffel. This was further increased by the idiosyncrasy of Billy. He, like most woodsmen, was wedded to a single utterly foolish article of personal belonging, which he worshiped as a fetish, and without which he was unhappy. In his case it was a huge winter overcoat that must have weighed fifteen pounds. The total amounted to about one hundred and ninety pounds. We gave Dick twenty, I took seventy-six, and Billy shouldered the rest.

The carrying we did with the universal tump-line. This is usually described as a strap passed about a pack and across the forehead of the bearer. The description is incorrect. It passes across the top of the head. The weight should rest on the small of the back just above the hips, not on the broad of the back as most beginners place it. Then the chin should be dropped, the body slanted sharply forward—and you may be able to stagger forty rods at your first attempt.

Use soon accustoms you to carrying, however. The first time I ever did any packing I had a hard time stumbling a few hundred feet over a hill portage with just fifty pounds on my back. By the end of that same trip I could carry a hundred pounds and a lot of miscellaneous traps, like canoe poles and guns, without serious inconvenience and over a long portage. This quickly gained power comes partly from a strengthening of the muscles of the neck, but more from a mastery of balance. A pack can twist you as suddenly and expertly on your back as the best of wrestlers. It has a head lock on you, and you have to go or break your neck. After a time you adjust your movements, just as after a time you can travel on snow-shoes through heavy down timber without taking conscious thought as to the placing of your feet.

But at first packing is as near infernal punishment as nearly mundane conditions can compass. Sixteen brand-new muscles ache, at first dully, then sharply, then intolerably, until it seems you cannot bear it another second. You are unable to keep your feet. A stagger means an effort at recovery, and an effort at recovery means that you trip when you place your feet, and that means, if you are lucky enough not to be thrown, an extra tweak for every one of the sixteen new muscles. At first you rest every time you feel tired. Then you begin to feel very tired every fifty feet. Then you have to do the best you can, and prove the pluck that is in you.

Mr. Tom Friant, an old woodsman of wide experience, has often told me with relish of his first try at carrying. He had about sixty pounds, and his companion double that amount. Mr. Friant stood it a few centuries and then sat down. He couldn't have moved another step if a gun had been at his ear.

"What's the matter?" asked his companion.

"Del," said Friant, "I'm all in. I can't navigate. Here's where I quit."

"Can't you carry her any farther?"

"Not an inch."

"Well, pile her on. I'll carry her for you."

Friant looked at him a moment in silent amazement.

"Do you mean to say that you are going to carry your pack and mine too?"

"That's what I mean to say. I'll do it if I have to."

Friant drew a long breath.

"Well," said he at last, "if a little sawed-off cuss like you can wiggle under a hundred and eighty, I guess I can make it under sixty."

"That's right," said Del, imperturbably.

*"If you think you can, you can."*

"And I did," ends Friant with a chuckle.

Therein lies the whole secret. The work is irksome, sometimes even painful, but if you think you can do it, you can, for though great is the protest of the human frame against what it considers abuse, greater is the power of a man's grit.

We carried the canoe above the larger eddies, where we embarked ourselves and our packs for traverse, leaving Deuce under strict command to await a second trip. Deuce disregarded the strict command. From disobedience came great peril, for when he attempted to swim across after us he was carried down stream, involved in a whirlpool, sucked under, and nearly drowned. We could do nothing but watch. When finally the River spewed out a frightened and bedraggled dog, we drew a breath of very genuine relief, for Deuce was dear to us through much association.

The canoe we turned bottom up and left in the bushes, and so we set off through the forest.

At the end of fifteen minutes we began to mount a gentle ascent. The gentle ascent speedily became a sharp slope, the sharp slope an abrupt hill, and the latter finally an almost sheer face of rock and thin soil. We laid hold doggedly of little cedars; we dug our fingers into little crevices, and felt for the same with our toes; we perspired in streams and breathed in gasps; we held the strained muscles of

our necks rigid, for the twisting of a pack meant here a dangerous fall; we flattened ourselves against the face of the mountain with always the heavy, ceaseless pull of the tump-line attempting to tear us backward from our holds. And so at last, when the muscles of our thighs refused to straighten our legs for the ascent of another foot, we would turn our backs to the slant and sink gratefully into the only real luxury in the world.

For be it known that real luxury cannot be bought; it must be worked for. I refer to luxury as the exquisite savor of a pleasant sensation. The keenest sense-impressions are undoubtedly those of contrast. In looking back over a variety of experience, I have no hesitation at all in selecting as the moment in which I have experienced the liveliest physical pleasure one hot afternoon in July. The thermometer might have stood anywhere. We would have placed childlike trust in any of its statements, even three figures great. Our way had led through unbroken forest oppressed by low brush and an underfooting of brakes. There had been hills. Our clothes were wringing wet, to the last stitch; even the leather of the tump-line was saturated. The hot air we gulped down did not seem to satisfy our craving for oxygen any more than lukewarm water ever seems to cut a real thirst. The woods were literally like an oven in their hot dryness. Finally we skirted a little hill, and at the base of that hill a great tree had fallen, and through the aperture thus made in the forest a tiny current of cool air flowed like a stream. It was not a great current, nor a wide; if we moved three feet in any direction, we were out of it. But we sat us down directly across its flow. And never have dinners or wines or men or women or talks or books or scenery or adventure or sport or the softest, daintiest refinements of man's invention given me the half of luxury I drank in from that little breeze. So the commonest things—a dash of cool water on the wrists, a gulp of hot tea, a warm dry blanket, a whiff of tobacco, a ray of sunshine—are more really the luxuries than all the comforts and sybaritisms we buy. Undoubtedly the latter would also rise to the higher category if we were to work for their essence instead of merely signing club checks or paying party calls for them.

Which means that when we three would rest our packs against the side of that hill, and drop our head-straps below our chins, we were not at all to be pitied, even though the forest growth denied us the encouragement of knowing how much farther we had to go.

Before us the trees dropped away rapidly so that twenty feet out in a straight line we were looking directly into their tops. There, quite on an equality with their own airy estate, we could watch the fly-catchers and warblers conducting their small affairs of the chase. It lent us the illusion of imponderability; we felt that we too might be able to rest securely on graceful gossamer twigs. And sometimes, through a chance opening, we could see down over billows of waving leaves to a single little spot of blue, like a turquoise sunk in folds of green velvet, which meant that the River was dropping below us. This, in the mercy of the Red Gods, was meant as encouragement.

The time came, however, when the ram-parts we scaled rose sheer and bare in impregnability. Nothing could be done on the straight line, so we turned sharp to the north. The way was difficult, for it lay over great fragments of rock stricken from the cliff by winter, and further rendered treacherous by the moss and wet of a thousand trickles of water. At the end of one hour we found what might be called a ravine if you happened not to be particular, or a steep cleft in the precipice if you were. Here we deserted the open air for piled-up brushy tangles, many sharp-cornered rock fragments, and a choked streamlet. Finally the whole outfit abruptly ceased. We climbed ten feet of crevices and stood on the ridge.

The forest trees shut us in our own little area, so that we were for the moment unable to look abroad over the country.

The descent, abrupt where we had mounted, stretched away gently toward the north and west. And on that slope, protected as it was from the severer storms that sweep up the open valleys in winter, stood the most magnificent primeval forest it has ever been my fortune to behold. The huge maple, beech, and birch trees lifted column-like straight up to a lucent green canopy, always twinkling and shifting in the wind and the sunlight. Below grew a thin screen of underbrush, through

which we had no difficulty at all in pushing, but which threw about us face-high a tender green partition. The effect was that of a pew in an old-fashioned church, so that, though we shared the upper stillnesses, a certain delightful privacy of our own seemed assured us. This privacy we knew to be assured also to many creatures besides ourselves. On the other side of the screen of broad leaves we sensed the presence of life. It did not intrude on us, nor were we permitted to intrude on it. But it was there. We heard it rustling, pattering, scrambling, whispering, scurrying with a rush of wings. More subtly we felt it, as one knows of a presence in a darkened room. By the exercise of imagination and experience we identified it in its manifestations—the squirrel, the partridge, the weasel, the spruce hens, once or twice the deer. We knew it saw us perfectly, although we could not see it, and that gave us an impression of companionship, so the forest was not lonely.

Next to this double sense of isolation and company was the feeling of transparent shadow. The forest was thick and cool. Only rarely did the sun find an orifice in the roof through which to pour a splash of liquid gold. All the rest was in shadow. But the shadow was that of the bottom of the sea—cool, green, and above all transparent. We saw into the depth of it, but dimly, as we would see into the green recesses of a tropic ocean. It possessed the same liquid quality. Finally the illusion overcame us completely. We bathed in the shadows as though they were palpable, and from that came great refreshment.

Under foot the soil was springy with the mold of numberless autumns. The ax had never hurried slow old servant decay. Once in a while we came across a prostrate trunk lying in the trough of destruction its fall had occasioned. But the rest of the time we trod a carpet to the making of which centuries of dead forest warriors had wrapped themselves in mold and soft moss and gentle dissolution. Sometimes a faint rounded shell of former fair proportion swelled above the level, to crumble to punkwood at the lightest touch of our feet. Or, again, the simulacrum of a tree-trunk would bravely oppose our path, only to melt away into nothing, like the opposing phantoms of Æneas, when

we placed a knee against it for the surmounting.

If the pine woods be characterized by cathedral solemnity, and the cedars and tamaracks by certain horrid gloom, and the popples by a silvery sunshine, and the berry-clearings by grateful heat and the homely manner of familiar birds, then the great hardwood must be known as the dwelling-place of transparent shadows, of cool green lucence, and the repository of immemorial cheerful forest tradition which the traveler can hear of but which he is never permitted actually to know.

In this lovable mystery we journeyed all the rest of that morning. The packs were heavy with the first day's weight, and we were tired from our climb; but the deep physical joy of going on and ever on into unknown valleys, down a long, gentle slope that must lead somewhere, through things animate and things of an almost animate life, opening silently before us to give us passage, and closing as silently behind us after we had passed—these made us forget our aches and fatigues for the moment.

At noon we boiled tea near a little spring of clear, cold water. As yet we had no opportunity of seeing farther than the

[TO BE CONTINUED]

closing in of many trees. We were, as far as external appearances went, no more advanced than our first resting-place after surmounting the ridge. This effect is constant in the great forests. You are in a treadmill—though a pleasant one withal. Your camp of to-day differs only in non-essentials from that of yesterday, and your camp of to-morrow will probably be almost exactly like to-day's. Only when you reach your objective point do you come to a full realization that you have not been the Sisyphus of the Red Gods.

Deuce returning from exploration brought indubitable evidence of porcupines. We picked the barbed little weapons from his face and nose and tongue with much difficulty for ourselves and much pain for Deuce. We offered consolation by voicing for his dumbness his undoubted intention to avoid all future porcupines. Then we took up the afternoon tramp.

Now at last through the trees appeared the gleam of water. Tawabimisáy had said that Kawágama was the only lake in its district. We therefore became quite excited at this sapphire promise. Our packs were thrown aside, and like school-boys we raced down the declivity to the shore.

## The New American Navy: The Coming of Cervera's Fleet'

By John D. Long

Secretary of the Navy from 1897 to 1902

SPAIN'S naval division, under the command of Admiral Cervera, arrived off the island of Martinique on May 11, 1898. Thirty-six hours later, information of its appearance there reached Washington. Vital as was this intelligence, there was natural irritation because of the time lost in its transmission, and there was some disposition to attribute the delay to the pro-Spanish sympathies of the inhabitants of the French island. If so, redress was out of the question and

recrimination was useless. The Department, therefore, centered its attention upon Cervera's fleet. With it afloat there was constant menace to our blockade and to our coast; with it destroyed or shut up in port, our blockade and coast were absolutely safe, Spain's defeat was assured, and Cuba would fall, a ripe apple, into our mailed hand.

There was no fear that Cervera would escape ultimate annihilation; rather was there an uneasy feeling that, in the game of strategy which had begun, he might evade us at first and thus postpone the inevitable. The men who studied the war board at midnight of May 12-13, when news of Cervera's appearance reached

<sup>1</sup> Copyright, 1902, by the Outlook Company. All rights reserved.

This is the eighth of a series of twelve papers to appear in the Magazine Numbers of The Outlook. Other papers will be: Schley's Movement to Santiago, The Battle of Santiago, Valiant Deeds in the War with Spain; Samoa, the Philippines, and China; Recent Naval Lessons.

them, were confident, however, that the dispositions arranged were such as to insure his apprehension within a reasonable time. Notification that he had been sighted was at once transmitted by cable and scout to Rear-Admiral Sampson, then returning to Key West from his arduous trip to San Juan. Commodore Schley, at Hampton Roads, was preliminarily instructed to get ready for sea, and a few hours later was directed to proceed to Charleston, South Carolina, where he would be in a better geographical position to reinforce Sampson or to protect the naval base at Key West. The news of Cervera's presence was telegraphed to Commodore George C. Remey, the efficient commandant of the naval base at Key West, and twenty-four hours later he was ordered to remove all but the smallest blockading vessel from Cienfuegos and to advise the ships off the Cuban coast to be prepared in case of the appearance of the enemy.

These orders were intended to improve the strategic position of the units into which our fleet was divided; they were certainly in the direction of concentration, that illuminating principle which had lighted our way from the outset of the war. When Schley was directed to sail for Charleston, the intention existed to make this merely a port of call. To Key West he was now ordered, and proceeded at 6 P.M., May 15. Sampson, in the meantime, had arrived off Puerto Plata, Santo Domingo, from which point he cabled to the Department in regard to a press report that Cervera had returned to Cadiz, Spain, and to Commodore Remey, directing him to send the dynamite cruiser *Vesuvius* to San Juan, provided the Spanish division had been sighted in Peninsular waters. Freed from concern in regard to Cervera, Sampson proposed to return and capture the capital of Porto Rico, the weakness of which he had developed by a bombardment. To him, however, as it had to the Department, the situation changed when he received despatches from Washington, the first of which announced the appearance of Cervera off Martinique, and the second his arrival on May 14 at Curaçao. The later message directed Sampson to hasten to Key West.

When Cervera flashed like a comet across the narrow horizon at Martinique,

he added a new feature to the problem of search which we had been attempting to solve. At the time he sailed from the Cape Verde Islands, his objective was clouded by the comparatively numerous points to which he might proceed; his arrival off Martinique established the fact that either Cuba or Porto Rico was his destination. The coast of the United States was out of the question at the moment, because he had necessarily burned the greater part of his coal, and he must replenish his supply before he could undertake any distant and offensive movement. It may be interpolated here, as characteristic of human nature, that with the appearance of Cervera in American waters, and the departure of Schley from Hampton Roads, there was practically immediate cessation of demands from our ports for protection. On the day Cervera lay off Martinique, Sampson bombarded San Juan, Porto Rico, and, while we did not know it then, this fact, which Cervera learned through the commander of his torpedo-boat flotilla, as well as the information that he could not obtain coal at Fort de France, determined him to seek refuge elsewhere. Three days before Cervera's arrival, the Department had been advised that colliers would probably meet him off the north coast of Venezuela. When he was reported at Curaçao, therefore, it seemed likely that this information was correct, and in the light of it the Naval War Board and the Department studied the possibilities of the situation. The four ports, one of which must be his ultimate destination, were San Juan, Santiago de Cuba, Cienfuegos, and Havana. The last named seemed out of the question, because to enter it he would have to encounter a superior force, and once in it he could not hope to escape the fleet which we were certain to assemble before it, and which would be able to operate from the base of Key West, only ninety miles away. Cienfuegos appeared the most probable in view of the report that he was carrying munitions essential to the defense of Havana, with which Cienfuegos had railroad connection; but it was also probable that he might make Santiago de Cuba, and, after coaling, attempt a dash into the Gulf of Mexico—a campaign which, however, would have had little justification when there existed

but two means of exit, each of which would be promptly guarded by a squadron superior to his own.

This speculation is interesting in showing the way in which the Department reasoned with respect to anticipated developments. How nearly it conformed to the views of the Spaniards themselves may be seen by a quotation from a book written by Captain Victor M. Concas y Palau, who served as commander of the Infanta Maria Teresa and Cervera's Chief of Staff. "The only harbors which we could enter," Captain Concas wrote, "were: First, San Juan, which we had to discard altogether, because, as the United States Admiral has said, with good reason, he could have taken it whenever he pleased. Second, Havana, which we supposed to be well guarded, and it was indeed, since the Americans have since said that it was considered highly improbable that we should attempt to enter Havana, and it must be understood that it was better guarded by the squadrons at a distance than those near by, because, in spite of the blockade, it would have been difficult to prevent ships, whether injured or not, from placing themselves under the protection of the batteries of the city, while an encounter at a distance from Havana meant the total destruction of our squadron. Third, Cienfuegos, which we also supposed guarded, especially since, our squadron having been sighted from the southward, it was from here that our passage to Havana could be most effectually cut off; moreover, this harbor, situated at the head of Cazones Bay, is a veritable rat-trap, very easy to blockade, and from which escape is more difficult than from any other harbor of the island. We knew there were torpedoes there, but no fortifications to amount to anything, and, moreover, the entrance is very difficult to defend against a serious attack from the sea.

"On the other hand, we were twelve hundred and fifty miles distant from the latter harbor, while from Havana, or Dry Tortugas and Key West, the enemy's base of operations, they had to make a run of only five hundred miles to cut us off. For this reason, Cienfuegos Harbor was not seriously considered by us at that time. Later, when starvation stared us in the face at Santiago de Cuba,

the former harbor was thought of as a possible solution, but not on the day of our arrival at Martinique.

"There remained as the only solution going to Santiago de Cuba, the second capital of the island, which we had to suppose, and did suppose, well supplied with provisions and artillery in view of the favorable conditions of the harbor entrance. Moreover, the southern coast of the island offered chances of sortie on stormy days and an open sea for operations, after we had refitted and made repairs. But as we also supposed that the fortifications there were not sufficient to afford us much support in the sortie, it was not at that time decided to go to said harbor in the hopes of a solution which would permit us to force our way into Havana harbor. The distance from Martinique to Santiago is about nine hundred and fifty miles, so that the hostile squadron, which was at San Juan, could easily have arrived there ahead of us. But we never believed that it would do so, thinking that Admiral Sampson—though it has since come to light that he did not know of our arrival—would do what he actually did, namely, cover the remotest possibility, the entrance to the only fortified point, Havana."

We knew nothing, of course, of the conditions under which Cervera was acting; but strategical and geographical considerations determined our plan of campaign. The moment the Department learned of the enemy's presence in the Caribbean Sea, it turned the eyes of the navy—its scouts—in his direction. The Minneapolis was directed to proceed at her utmost speed to Caicos Bank, Bahamas, and cruise between that point and Monte Cristi, Hayti, and keep a sharp watch for the Spanish division. The St. Paul was ordered to cruise between Morant Point, Jamaica, and the west coast of Hayti. By means of these two vessels, the Department believed it would prevent the unperceived passage of Cervera around the eastern end of Cuba. As an indication of how quickly the situation changed, the St. Paul, which was coaling at Hampton Roads, and had not carried out her original orders, was, a few hours later, on May 14, directed to proceed to Key West, there to coal to her full capacity and await further instructions. The modifica-

tion of the orders to the St. Paul was the result of the arrival of the Spanish division at Curaçao. Cervera's failure to proceed directly to Cuba, which was his objective, could only be attributed to his expectation of obtaining coal in the vicinity of Curaçao, and this inference was supported by the report of the impending arrival of colliers in the Gulf of Venezuela. The colliers did not arrive, and the armored cruisers Infanta Maria Teresa and Vizcaya took on four hundred tons of coal at Willemstadt. At Key West the St. Paul would be strategically in a central position—not much farther from the Windward Passage, to which she had first been ordered, than the Spanish division, and only two hundred miles from the Yucatan Passage, which the enemy might use in order to enter the Gulf of Mexico or to reach Havana, and available for service in any direction in which developments in the situation might require the presence of a fast scout. While the St. Paul was covering the distance of a thousand miles between Hampton Roads and Key West in four days, the Department decided again to modify her orders. It was planned to dog the movements of Cervera—to send three of our fast cruisers, one of which should be the St. Paul, the second the Minneapolis, and the third the Harvard, to the Gulf of Venezuela, there to get and keep in touch with him. Thus, wherever he should go, he would be preceded or followed by a vessel of superior speed, which, upon approach at a near-by cable station, would drop out of the race for a short time to communicate with the Department or the commander-in-chief. The St. Paul was due at Key West, the Minneapolis was cruising in accordance with the orders given between Caicos Bank and Monte Cristi Island, and the Harvard was at St. Pierre, in which it at first had been believed she was blockaded by a Spanish torpedo-boat destroyer. It subsequently developed that the enemy's vessel, the Terror, had been compelled to enter Fort de France to make repairs. The Terror later crept to San Juan, where she was badly injured in an engagement with the St. Paul.

The plan to keep in touch with the Spanish squadron was not put into execution, because of the enemy's departure from Curaçao, and Rear-Admiral Sampson

suggested a different disposition of the scouts. His instructions contemplated that the Yale and St. Paul should cruise between Morant Point, Jamaica, and Mole St. Nicholas, Hayti, and Cuba, and the Harvard across the Mona Passage, which separates Santo Domingo and Porto Rico, and along the northern coast of the latter island. The Department modified these orders so as to have the St. Paul and Yale proceed to Cape Haytien, Hayti, and there await further orders. The Yucatan Passage was patrolled by the Cincinnati and Vesuvius.

The orders and movements of the scouts have been given in detail because of the dependence placed on these ships by the Department. Captain Concas has not, apparently, a high opinion of this class of vessels. "A question arises here, which has since been discussed," he says in his book, "but which at the time seemed very clear to us, namely, that it would be the telegraph rather than the hostile scouts that would betray us, and as a matter of fact that is what happened." But Captain Concas, when writing this passage, perhaps lost sight of the fact that it was essential to the United States to keep close track of Cervera's squadron wherever it should go, and that physical impossibilities prevented our consular or other agents from keeping constant touch with it. Had Cervera succeeded in leaving Santiago de Cuba before May 26, he would have been followed by one of five vessels, all fast and most of which were of greater coal endurance than any of the ships of his own command. To one of these scouts, indeed, is due the credit of capturing the cargo of coal which in his possession would have enabled departure from Santiago.

In order to aid the reader it may be desirable now to state the position of the fighting ships of the opposing squadrons. Admiral Cervera was last reported as preparing to sail from Curaçao at 6 P.M. of May 15. Rear-Admiral Sampson received this information off Cape Haytien at 12:30 A.M., May 16. His squadron, which was pushing on as much as possible, was in a position at noon of May 17 to prevent the enemy from reaching Havana, via the Bahama Channel, without a conflict. Believing his personal presence more desirable at Key West, where he could

get into communication with the Department, he authorized Captain Robley D. Evans to take command of the squadron, and himself, in the New York, proceeded with all despatch to that naval base. The Flying Squadron left Charleston for Key West at the same hour Cervera was reported as having left Curaçao, and, steaming at twelve knots, arrived at its destination at 12:30 A.M., May 18. The New York reached Key West at three o'clock in the afternoon of the same day.

Instructions from the Department and Rear-Admiral Sampson had caused arrangements to be made at Key West for promptly coaling all the ships that might apply for fuel. Assured that Sampson's division was in a position to prevent Cervera's use of the Bahama Channel to reach Havana, the Department determined to send the Flying Squadron to Cienfuegos. In selecting Cienfuegos as the station of this squadron, the Department was actuated by the information that the Spanish vessels were carrying munitions of war necessary to the defense of Havana, and that the orders were imperative to reach either that or some other point in railroad communication with Havana. Cienfuegos appeared to be the only port fulfilling these conditions. Besides, it was necessary that the blockade there should be defended, and that the Yucatan Channel should be covered. Moreover, with Sampson before Havana and Schley at Cienfuegos, the armored vessels of the United States would be in a position from which they could strike either for the defense of our own blockade and coast, or engage in an offensive movement, combined or separate, against the enemy's squadron. We had learned from our Consul at Curaçao that the Spanish ships were short of coal. With the meager coaling appliances at the Spanish ports not covered by our ships, some days would have to be occupied by Cervera in refilling the bunkers of his vessels. If he sought refuge in San Juan, the plans adopted by the Department would have resulted in his being promptly reported by a scout off that port. The receipt of this information would have been followed by instructions to Sampson and to Schley to proceed at full speed to Porto Rico. These instructions could have reached Sampson within six hours, and Schley within eighteen hours,

the Department having determined to hold fast cruisers at Key West for the special purpose of conveying them. It was calculated that in five days there would be before San Juan a force of such strength that Cervera could not leave without annihilation. But if Cervera had succeeded in obtaining coal in such time that it might have been thought inadvisable to have ordered our armored ships before San Juan, then he would have been followed by scouts, just as it was intended he should be followed by the vessels stationed off Santiago. With our armored divisions off Havana and Cienfuegos, he would not have dared to proceed to either of those points, and had he attempted a demonstration against our Atlantic coast, Sampson would have started in pursuit and Schley would have been ordered to Havana to maintain the blockade of that harbor. These movements would have restored the conditions existing prior to Cervera's appearance off Martinique. A dash to the north by the Spanish division would have been disadvantageous in one sense to Sampson, but disadvantageous also to Cervera, who would have been compelled to act on exterior lines—that is, follow a curve, while Sampson would have steamed along a straight line. Deprived of the Iowa, which had joined Schley, the mobility of Sampson's division was sensibly diminished, and it was not until May 28, when the Oregon, which had reached Key West, had coaled, that it became tactically equal to the task of fighting and destroying such a swift foe as we believed Cervera's ships to be. But between May 19 and May 28 the only vessels under Sampson's command which were capable of maintaining a running fight with the Spanish division were his flagship, the New York, and the Indiana. The sluggish monitors could not hope to keep within range of the enemy, unless, as Cervera steamed by, they succeeded in disabling some of his vessels. The plans of battle issued by Sampson were calculated to keep the Spaniards within fighting range of the monitors as long as possible. From what we know now of the condition of the hostile fleet, it is not unlikely that the New York and the Indiana could, without assistance, have destroyed or seriously crippled the Spanish squadron; and the same result could perhaps have been

achieved by the Oregon alone. But the estimate of efficiency which we placed upon the Spanish cruisers and torpedo-boat destroyers made questionable the ability of the Oregon or of the Indiana and New York to annihilate them.

Sampson placed his squadron in the Bahama Channel so as to intercept Cervera in case he eluded Schley and attempted to make Havana via the Windward Passage; and he subsequently endeavored to obey the Department's instruction to cover that port from the westward also, in order to bring the Spaniards to action should they pass Schley off Cienfuegos and steam through the Yucatan Channel. No one better than Sampson understood the difficulties and perplexities of the commander of the squadron directed to remain off Havana. Yet he generously chose that station, though he had been authorized by the Department to proceed to Cienfuegos, where it was believed the enemy would seek refuge.

Promptness had been displayed by Rear-Admiral Schley in making the voyage to Key West, and there was equal promptness in the coaling of his vessels upon arrival—both auguries of what should have been his future swiftness of movement in order to insure the early overtaking of Cervera.

Upon his arrival, Schley had been instructed, through the Commandant of the naval base, to sail for Havana to support the blockade until the appearance of the naval force attached to Sampson's command. Before this order could be observed, Rear-Admiral Sampson now directed him to "proceed with despatch (utmost) off Cienfuegos." Rear-Admiral Sampson also directed him to establish, "with the least possible delay," a blockade "as close as possible." The Flying Squadron sailed at eight o'clock on the morning of May 19, and arrived at and established a blockade off Cienfuegos at seven o'clock on the morning of May 22, requiring almost three days to cover this distance. The Iowa and the Dupont sailed in company from Key West at 11:20 of the morning of May 20, twenty-seven hours after the departure of the Flying Squadron, and proceeded via Havana. The Dupont arrived at Cienfuegos early in the morning, and the Iowa at 1:30 P.M. of May 22. The battle-ship thus made the voyage in

two hours over two days, and reached its destination only six and a half hours after Schley. This absence of despatch on the part of Schley was certainly contrary to his instructions, and might have had unfortunate results. Had Cervera at Cuaçao selected Cienfuegos as his destination, he could, proceeding with the same speed he employed to reach Santiago, have entered the former port some hours before Schley arrived.

Thirty miles from Key West, the Flying Squadron sighted the Marblehead and Eagle, which formed a division under the command of Captain Bowman H. McCalla. Schley knew that McCalla had been at Cienfuegos, but did not attempt to communicate with him, and McCalla, believing the Flying Squadron bound for the Caribbean Sea, did not, except through the Eagle, seek to acquaint the Commodore with the situation at the Cuban port. All this was to have decidedly serious consequences, which might, under certain circumstances, have proven disastrous. That the failure to stop the Marblehead was not because of any desire to proceed "with despatch (utmost)" is shown by the fact that when the Commodore subsequently spoke the Cincinnati, he stopped his squadron, and called Captain Colby M. Chester, commanding the cruiser, on board his flagship, though the latter had no information of special importance to communicate.

Between thirty and forty-five miles from Cienfuegos Schley reports, and he is corroborated by one of the officers of the Brooklyn, that he heard guns fired with the cadence of a salute. As Cienfuegos had been reported as the destination of the enemy's division, Schley regarded the guns as the welcome of Spanish forts and ships to the incoming Spanish men-of-war, and this impression was strengthened when he subsequently sighted smoke in the harbor.

At dawn of May 19 the Spanish squadron entered Santiago de Cuba. "By a miracle," to again quote Captain Concas, "it arrived there intact, and there was nothing to be done but to suffer the consequences of its departure (from Cape Verde)." Through spies in Havana the efficient chief signal officer of the army, Brigadier-General A. W. Greely, learned on the same day that the Spanish division

was "probably" at Santiago. The Minneapolis, St. Paul, St. Louis, Harvard, and Yale were at once instructed by cable to proceed off Santiago, to watch carefully and to keep in communication with the Spanish division, reporting as often as possible to the Department. These orders were received by all the ships except the St. Louis, Captain

Goodrich commanding, the whereabouts of which was unknown, and the failure to reach her was doubly annoying in view of the fact that she had only recently come from Santiago and Guantánamo, where she had done very gallant service in cutting cables, and was consequently familiar with conditions at both those ports.

## Every Day

By Roy Rolfe Gilson

**L**OVE? I can tell by the way you talk of it that you read the newspapers. So do I, every evening. How otherwise could I keep abreast of the world's affairs? But in the matter of love I remember always that the press deals mostly with fashionable brides and domestic infelicities. I am not one of those who scoff at marriage in this money age. I believe there are happy love stories elsewhere than in books. How can I believe otherwise, I who have been married happily these twenty years? It is true that I am a grocer; that I sell cabbages, yes—but with my head I sell them, not with my heart.

"John," I say, "a pound of butter for this little boy."

I say that with my head.

"And how old are you, my little man?"

I say that with my heart. For I too had a little boy once, so that all little boys who come to buy butter from me make me forget that I am a grocer. I remember only that I am a man; that I was a father for a little while.

They write us love stories, these young authors of ours, pretty tales sometimes—love stories of the rich, on yachts, in palaces; love stories of the poor. We of the middle class—tradesfolk they call us across the sea—we also have our love stories. But we are neither elegant nor dirty enough, it seems, to put in books. We do not talk French, we do not talk dialect. Yet—strange, is it not?—we love our wives and our children, and, what is more, we are true to them.

Yes, we are true to them. You do not hear of us—of our contented marriages. We are not in the court-rooms; we are not in the press. You will find us day-

times in our stores; evenings in our homes. Your grocer does not ask, Is marriage a failure? He goes on selling cabbages and raising sons.

When I say Love, I do not mean trading coronets for bright new gold. I do not mean bartering women, here in this free land of ours, for money; there, on the other side, for an empty name. Neither do I mean the gamboling of school-children, which is harmless and sweet enough; nor the passion for other men's wives, which is vile.

I mean the love which is not brilliant when written down. Sometimes, twittingly, they call it the old-fashioned kind—just as they smile at hollyhocks and praise the rose, the rose, always the rose, the rose, big as one of my cabbages, which grows under glass. Hollyhocks grow in the open air and the naked sun. They may not be the prettier for that. I am only saying that the love I mean blooms humbly but lasts—lasts all summer, in God's own air.

I will tell you of such a love. You need not smile. I shall not tell you of a wooing. It is not for you or any other man, how I won Kate. You ought to know how honest wives are won. Besides, though they make the most of it in story-books, to me wooing is the least of love.

Kate married me—that is enough for you. I was young then, and a grocer's clerk, a boy just out of school. It was the time—you know that time—when you like poetry, and gather arbutus in the spring. I called her Little Flower. It was Burns put that into my head. There, it has slipped out, that foolish little name, though it seems a sacrilege to breathe those words. Dear and sacred they are to me—yes, to me, the grocer!—green-

grocer if you like!—those two little words of poetry.

She gave a boy to me. Children are burdens, I hear it said. Well, it is only the lazy, the selfish people who tell you that—the women who fondle lap-dogs, who dress and idle their days away; the men who have no thought save of money and their own sweet will. They are the ones who measure—measure as I do coffee—the trouble of rearing and loving a little child. Five years we kept that little son of ours; and of all my life, I tell you, those were the years I would choose to be judged by on the Judgment Day.

Now, when my work is done, to find that little boy again lying in wait for me behind my door, to see his eyes shine and hear his cry—what would I not give God for that? There never was worry—and you see for yourself my hair is gray—never was worry I could not forget in the doorway, when that little boy smiled.

We, we three together, lived the life of our little town. What that means every one knows—a little house in a little yard, with lilacs and geraniums and a plot of grass which I mowed myself. On Sunday we went to church. We took home some one to dinner—one of her folks or mine. Then we drove, perhaps, through the country, praising the farms. Work mostly—work and a little play. You live simply. You do not go in for show. You rear your children. You teach them a thing or two. You see them married, and settled down—presently with children of their own to dandle on your knee. Then they save a place for you on the hillside. But they miss you when you're gone.

Day after day we sit at our table, Kate by the coffee, I by the meat. Day after day we talk of the store, of the weather, of the doings and sayings of our little town—never a word of our love for each other, if you mean the love-words they put in books. Pretty enough when we used to read Burns together and pick the arbutus, they would only sound foolish now. They are for young folks, I'm

thinking. They are light and airy like a boy's love. They are made for a boy's lips. We have weighed them, somehow, and found them wanting now that our hair is gray. So, when the old mood comes to us to say some fond, sweet word, we talk of our little son. He is our love story.

Lilacs—you should smell our yard in May. There is a bush by the porch where we sit evenings. We take the blossoms, great scented bunches of them filling Kate's arms and mine. We go up to that hillside. We lay the flowers on the green grass—the grass that little boys love to play in. It grows as softly there above them as it grew once beneath their bare little feet. We go home with empty arms—empty they have been, empty now they will always be; but it is that, *that*, I tell you, that emptiness, that sorrow, the sharing of it through the days and years, which makes our love like the sky, like the sea.

You see me among my flour-barrels. You hear me bargaining for cabbages. You see me living the same old workaday life, day after day.

"What a humdrum fellow!" you cry.

Why, if I had a son, he would never dream of being some day like me. He would not wish to be like his father. Well, I know that. I, I too, expected to be a hero when I was a little boy.

And so you see me, yet do not see me. You see the grocer. You do not see the man. You see Kate, but you do not see *my* Kate. To live together while we are here, to live together Somewhere over There—maybe to have our arms full again—that now is our dream, our dream of happiness.

Yet poetry, they say, is dead. It is not true, I tell you—I, the grocer, tell you that. It lives where love is, in the hearts of men. If it is dead to you, then your heart is dead. I know, for my heart is living. A poem is there, though I cannot write it. I am a grocer, I cannot rhyme. It is for you, you poets, to find the words for it; to talk less about roses and sing more—sing of such love as mine.

## Felix Adler's Moral Faith<sup>1</sup>

NO one can read Dr. Adler's "Life and Destiny" without being impressed with the strength of his faith. The thoughts lovingly collected in this volume by some of his disciples are not the thoughts of an agnostic, but of a man who has a sustaining belief in the vital truths lying at the root of all religion. Not only does he think these truths, but he feels them—a far deeper perception and one infinitely more quickening to those who read his words. Again and again we are forced to recall Tennyson's lines:

There lives more faith in honest doubt,  
Believe me, than in half the creeds.

The beliefs here expressed are not borrowed beliefs, which really belong to others and might be swept away in times of crisis, but beliefs that have grown out of Dr. Adler's own experience, and have become a part of the very fiber of his being. There is almost a Methodist insistence that faith, to have a saving quality, must be based upon personal spiritual experience. "It is a mistake," he writes, "to approach the subject of religion from the point of view of philosophy. All really religious persons declare that religion is primarily a matter of experience. We must get a certain kind of experience, and then philosophic thinking will be of use to us in explicating what is implicated in that experience. But we must get the experience first. . . . The experience of religion is not reserved for the initiated and elect; it is accessible to every one who chooses to have it. The experience to which I refer is essentially moral experience. It may be described as a sense of subjection to imperious impulses which urge our finite nature toward infinite issues; a sense of propulsions which we can resist, but not disown; a sense of a power greater than ourselves with which, nevertheless, in essence we are one; a sense, in times of moral stress, of channels, opened by persistent effort, which let in a flood of rejuvenating energy, and put us in command of unsuspected moral resources; a sense, finally, of complicity of

our life with the life of others, of living in them, in no merely metaphorical signification of the word; of unity with all spiritual being whatsoever."

This is the language of the schools and not of the experience meeting, but the appeal is not the less distinctively to the "witness within ourselves." This witness not only reveals to us that we are a part of the Infinite Spirit, but also that we are parts of one another. "Others" to Dr. Adler means simply "other selves," and if his sense of union with God is less vital than that of most Christian teachers, his sense of union with his fellow-men is more vital. Distinctively Christian is his attitude toward others—the reverence which he teaches being not the worldly reverence for those who are exalted, but the Christlike reverence for "every man, however humble." Should Dr. Adler write a book upon Christian truths which Christian pulpits ignore, he would apparently find himself troubled by the number of texts on which he might wish to preach.

But the chapter which will be read with the most surprise by those who have thought of Dr. Adler as a mere teacher of unbelief is that upon immortality. Here again his faith rests entirely upon the inward witness, and it is less clear, perhaps, than his faith in the omnipresence of God and the divineness of man. Nevertheless, it has in it a sustaining power. Here, in part, is what he writes:

The conservation of moral energy is in a certain sense as true as the conservation of mechanical energy. We are not dust merely, that returns to dust. . . . Our moral ideal is destined to be realized, though we may not know *how* it will be realized.

Vast possibilities suggest themselves to us of an order of existence wholly different from all that we have ever known; a gleam reaches the eye, as it were, from a far celestial land, and the crimson dawn of a Sun of Truth appears, to which the splendors of our earthly mornings are as obscurity.

As for myself, I admit that I do not so much desire immortality as that I do not see how I can escape it. If I, as an individual, am actually under obligation to achieve perfection, if the command "Be ye therefore perfect" is addressed, not only to the human race in general, but to every single member of it (and it is thus that I must interpret the moral imperative), then, on moral grounds, I

<sup>1</sup>*Life and Destiny; or, Thoughts from the Ethical Lectures of Felix Adler.* McClure, Phillips & Co., New York.

do not see how my being can stop short of the attainment marked out for it, of the goal set up for it.

What may be the nature of that other life it is impossible to know and it is useless to speculate. Such terms as consciousness, individuality, even personality, are but finite screens which give no adequate clew to the infinite for which they stand. Only this I feel warranted in holding fast to—that the root of my selfhood, the best that is in me, my true and only being, cannot perish. In regard to that the notion of death seems to me to be irrelevant.

From his moral experience, from his faithful following of the light within, Dr. Adler has had revealed to him the kind of faith which, as he truly says, comes to all those who obediently subject themselves to their higher natures. "Act the Good," he writes, "and you will believe in it. . . . The conviction that the world is moving toward great ends of progress will come surely to him who is himself engaged in the work of progress." Not only faith, but also joy, has come to him from his obedience to the moral law. "To those,

he writes, "who take part with all their heart and all their might in the struggle, there comes at last a great peace, a purified gladness." He belongs not to the "moral bondmen . . . who see the satisfactions of which morality deprives them, and the pains which it imposes, but fail to see the superior satisfaction to which obedience opens the way, and the ineffable peace that comes after the pain." He belongs to the class of "moral free-men" to whom obedience to duty is "a source of exaltation." Yet it is at this very point that his experience and faith fall short of those upon which the world's transforming religious movements have been based. "Life," he writes, "has ever seemed to me a task. It has its interludes of joy, but, on the whole, it is an arduous, often a desperately arduous, task." The completeness of the new birth, the creation within us of a new heart, which delights to do the will of our Father, is as yet untaught by the spiritual leader of the Society of Ethical Culture.

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Aaron Burr Conspiracy (The): A History Largely from Original and Hitherto Unused Sources.** By Walter Flavius McCaleb, A.M., Ph.D. Dodd, Mead & Co., New York. 5½×8½ in. 377 pages. \$2.50, net. (Postage, 18c.)

Mr. McCaleb might, without effrontery, have called his book "The True Aaron Burr." After wide research in Texan and Mexican archives not accessible to Mr. Henry Adams, and after wide and thorough study of the documents more familiar to the now classic historian of the epoch covered, Mr. McCaleb has written an account of the Burr conspiracy strikingly different from that conventionally accepted, but strikingly in harmony with itself at all points, and strikingly in harmony with the spirit of the Western frontier communities in which the conspiracy threatened to command popular support. It was not, in these communities, Mr. McCaleb maintains, the spirit of disloyalty to the Union that Burr appealed to, but an aggressive and perhaps flamboyant patriotism which demanded Anglo-Saxon expansion toward the Southwest and the emancipation of Mexican provinces from Spanish rule. Burr's apparently treasonable correspondence with the British and Spanish Ministers is explained as certainly a piece of strategy employed to secure funds for the expedition against Mexico. To the very end : author points out, Burr's deep-

est enthusiasm was for the emancipation of the Spanish colonies. In his extreme old age, when the Texans began their struggle for independence, Burr exclaimed, upon reading some account of it, "There! you see, I was right! I was only thirty years too soon. What was treason in me thirty years ago is patriotism now."

**Adventurous Quest (An): A Story of Three Boys.** By Laura Scherer Copenhaver. The Lutheran Publication Society, Philadelphia. 5×8 in. 405 pages. \$1.25.

**American Heroes and Heroism.** By William A. Mowry, A.M., Ph.D., and Arthur May Mowry, A.M. (America's Great Men and Their Deeds.) Silver, Burdett & Co., New York. 5½×7½ in. 223 pages. 60c.

**Aphorisms.** By Ivan Panin. Alfred Bartlett, Boston. 3×6 in. 86 pages. 50c.

**Bible Class Primers.** Edited by Principal Salmond, D.D. Jeremiah, the Prophet. By the Rev. John Robson, D.D. Charles Scribner's Sons, New York. 4¼×5¼ in. 115 pages. 20c.

**Buckeye Doctor (The): A Tale for Physicians and for Physicians' Patients.** By William W. Pennell, M.D. The Grafton Press, New York. 5×8 in. 345 pages. \$1.50.

**Child Housekeeper (The): Simple Lessons, with Songs, Stories, and Games.** By Elizabeth Colson and Anna Gansevoort Chittenden. Illustrated. A. S. Barnes & Co., New York. 5×8 in. 187 pages. \$1.50, net.

**Creation of Matter or Material Elements, Evolution, and Creation.** By Rev. W. Prefeit, M.A. Charles Scribner's Sons, New York. 5x7½ in. 176 pages. \$1, net.

This can hardly be pronounced a satisfactory treatise. Its conception of the cosmos and of animated nature suggests the idea of a machine rather than of an organism, and its conception of mind and matter is too dualistic, while its idea of God seems to be more deistic than theistic. That life was generated by chemical action is quite too much to affirm.

**Divinity and Man.** By W. K. Roberts. (Revised Edition.) G. P. Putnam's Sons, New York. 5½x8 in. 330 pages. \$1.75.

The theosophical scheme expounded by Mr. Roberts is of great antiquity. Latin, Greek, and Oriental thinkers have left little new to add, except in ethical counsels, in which, as in this volume, the principles and practices enjoined by Christianity contribute an element that lends attractiveness to what has little else to recommend it. The radical error of this theosophy is very ancient—the essentially evil nature of "matter," a notion which modern science, by its reduction of the material to the immaterial, tends to extirpate. Human souls of divine origin, in "an endless chain of cycles of individual consciousness," go through the process of contracting taint from contact with earth, and of purifying from this to be reincarnated again after a period in "ultimate Heaven." Science smiles at the notion that every solar orb has its "allotment of base and inherently inert matter adapted to the construction of planetary satellites."

**Drama of the Apocalypse in Relation to the Literary and Political Circumstances of Its Time.** By Frederic Palmer. The Macmillan Co., New York. 5x7½ in.

Mr. Palmer regards the Book of Revelation as a drama, different from but comparable to the Book of Job and the Song of Songs. It is historico-prophetic; deals with and portrays the events of the author's own time; borrows its scenery from current events, and is so far historical; but it anticipates and portrays the immediate coming of the Lord, the immediate overthrow of Rome, mother of harlots and modern Babylon, and the immediate advent of the kingdom of God in the temple of Jerusalem to be enthroned as the world capital and the mistress of a redeemed and renovated mankind. It is thus a representation, the last and also the fullest, of that political conception of a Messianic principle and a Messianic reign which Jesus Christ and, in his later Epistles, Paul disowned and which history has disproved. It is truly prophetic in that it encouraged and sustained hope in a time of darkness and despair, and foretold truly the overthrow of the physical power embodied in and typified by Rome, and the victory of the spiritual power represented in and typified by Israel; but erroneously in that it did not perceive the difference in the kinds of power, and anticipated a physical and immediate triumph for the spiritual forces of the New Jerusalem. The author did not and could not understand that Israel was to be more than conqueror; that she was to conquer by converting. Mr. Palmer draws clearly the distinction, often

ignored by teachers, between images and symbols, and shows clearly that the Book of Revelation is symbolical, *not* imaginative. He does not seem to us to recognize sufficiently what we may call the dreamlike character of the book. We would classify it with dream literature, and would characterize it in a word as a dream-drama. But he makes intelligible a book which to most readers is unintelligible, and his volume, as an illustration of modern criticism, its methods and its value, deserves to stand with Professor Genung's "Epic of the Inner Life" (Book of Job) and Dr. Griggs's "Lily Among Thorns" (The Song of Songs).

**English Verse: Specimens Illustrating its Principles and History.** Chosen and Edited by Raymond MacDonald Alden, Ph.D. Henry Holt & Co., New York. 4½x6½ in. 459 pages. \$1.25.

**Esperanto (The Universal Language).** The Student's Complete Text Book. Compiled by J. C. O'Connor, B.A. The Fleming H. Revell Co., New York. 4½x7 in. 175 pages. 60c., net.

This little volume may be of use to those who believe in the possibility of a universal language; it certainly contains entertainment for those who do not.

**Fighting Chance (The): The Romance of an Ingénue.** By Gertrude Lynch. Illustrated. The Smart Set Publishing Co., New York. 5x7½ in. 219 pages.

**General History of Commerce (A).** By William Clarence Webster, Ph.D. Ginn & Co., Boston. 5x7½ in. 526 pages. \$1.40.

This book supplies a distinct lack. So far as we know, its information is contained in no other single volume. It gives a general survey of the world's commercial development from the earliest times to our own, but it does much more; it attempts to interpret the history of civilization from the commercial point of view. Its most interesting chapters are naturally those which have to do with latter-day developments—such as the strides of the new German Empire in over-sea traffic, the place occupied by the British Colonies in the world's trade, and, above all, the place which expanded America is occupying. In connection with our own country, we are glad to note that the author impressively points out the possibilities of South American commerce. The work is equipped with a wealth of maps and other illustrative material, and is in every way admirably adapted either as a text-book for higher schools and colleges or as an instructive companion for the general reader.

**Geography and Geology of Minnesota.** By Christopher Webber Hall. Illustrated. The H. W. Wilson Co., Minneapolis. 5x7½ in. 299 pages.

**Georgia and State Rights.** By Ulrich Bonnell Phillips, A.M., Ph.D. Printed by the American Historical Association. Copies may be had of Ulrich B. Phillips, Madison, Wisconsin. 6x9 in. 224 pages.

**God's Children: A Modern Allegory.** By James Allman. Charles H. Kerr & Co., Chicago. 4½x7 in. 113 pages. 50c.

**Grace of Life (The): A Series of Short Papers on Practical Religion for Busy People.** By Robert Laurence Ottley. E. P. Dutton & Co., New York. 5x7 in. 229 pages. \$1, net.

The author, an Anglican clergyman already favorably known in this country by his previous publications, has collected under the

above title a series of short papers on the Christian life originally contributed to the "Churchman." They cover the whole round of private and public opportunity and duty so fully and well that their one omission is the more noticeable. The fact that the Church is commissioned to carry its Gospel through the world is briefly referred to, but the individual Christian's privilege and obligation to promote Christian missions fails to receive any adequate recognition. This is a serious defect in so good a book, and should be repaired by an additional chapter.

**Hero Stories from American History: For Elementary Schools.** By Albert F. Blaisdell and Francis K. Ball. Illustrated. Ginn & Co., Boston.  $5\frac{1}{2} \times 7\frac{1}{2}$  in. 259 pages. 50c. (Postage, 10c.)

Well adapted to the purpose, set forth in the preface, of serving as supplementary historical reader for public school or other pupils from twelve to fifteen years of age.

**His Daughter First.** By Arthur Sherburne Hardy. Houghton, Mifflin & Co., Boston.  $5 \times 8$  in. 349 pages. \$1.50.

Reserved for later notice.

**Historical and Critical Discussion of College Admission Requirements (A).** By Edwin Cornelius Broome, Ph.D. (Columbia University Contributions to Philosophy, Psychology, and Education.) The Macmillan Co., New York.  $6 \times 9\frac{1}{4}$  in. 158 pages. \$1. net.

**Historic Highways of America. Vol. 5. The Old Glade (Forbes's) Road.** By Archer Butler Hulbert. Illustrated. The Arthur H. Clark Co., Cleveland.  $5 \times 7\frac{1}{2}$  in. In 16 vols. Sold only in sets.

The latest volume in Mr. Hulbert's welcome series, "The Historic Highways of America," has to do with the "Old Glade" or "Forbes" Road through the "Glades" of Pennsylvania. By means of the building of this road Fort Pitt was relieved, and the highway became a distinct factor in the expansive movement which followed the Revolution.

**History of the Deaconess Movement in the Christian Church.** By Rev. C. Golder, Ph.D. Illustrated. Jennings & Pye, Cincinnati.  $5\frac{1}{4} \times 8$  in. 614 pages. \$1.75.

The modern revival in the last century of the female diaconate of the primitive church has attained such proportions as to make this history of its development a timely work. It began in 1836 at Kaiserswerth, Germany, and in 1849 at Pittsburg, Pa. Now there are in the United States alone a hundred and forty deaconess institutions, besides branch Homes. The Lutheran Church led in their first founding; the Methodist Church has now the largest number—ninety. The present work not only outlines the history of the movement in Continental Europe, Great Britain, and America, but goes into many details of method and management.

**How to Make School Gardens: A Manual for Teachers and Pupils.** By H. D. Hemenway, B.S. Illustrated. Doubleday, Page & Co., New York.  $5 \times 7\frac{1}{2}$  in. 107 pages.

**In the Guardianship of God.** By Flora Annie Steel. The Macmillan Co., New York.  $5 \times 7\frac{1}{2}$  in. 357 pages. \$1.50.

This is another collection of short stories of Indian life of the type which Mrs. Steel has already made familiar to most readers of the *Outlook*. They vary decidedly in merit; that

which gives the title to the book being, in our judgment, far the best. No one—not even Mr. Kipling—knows certain phases of Indian life better than does Mrs. Steel. Her literary method of expression is not always quite as clear as one could wish, but these tales, like her other short stories and novels, bring out into relief many characteristics and traits of the people of India in a dramatic way.

**Introduction to the Study of Textile Design (An).** By Alfred F. Barker. Illustrated. E. P. Dutton & Co., New York.  $5\frac{1}{2} \times 9$  in. 211 pages. \$2.50, net.

An English work which gives with lucid illustration the main points of information which a student of textile design should master in the first two years of textile school study. Examination papers are added.

**Isabella d'Este, Marchioness of Mantua, 1474-1539: A Study of the Renaissance.** By Julia Cartwright (Mrs. Ady). Illustrated. In 2 vols. E. P. Dutton & Co., New York.  $5\frac{1}{2} \times 9$  in. 392 pages. \$7.50, net.

Mrs. Ady's "Life of Beatrice d'Este" is perhaps her most graphic and readable book. She now gives us the story of the life of Isabella, the sister of Beatrice and wife of the Marquis of Mantua. Isabella's personality was hardly less interesting than that of her more famous sister, and the story of her life as told here is a brilliant picture of the Renaissance in Italy. At a later date we shall speak more fully of this work.

**Kempton-Wace Letters (The).** The Macmillan Co., New York.  $5 \times 7\frac{1}{2}$  in. 256 pages. \$1.50.

Reserved for later notice.

**Land of Joy (The).** By Ralph Henry Barbour. Doubleday, Page & Co., New York.  $5 \times 8$  in. 416 pages. \$1.50.

This is a readable tale of Harvard College life, with a pretty bit (two bits, in fact) of sentiment thrown in. The characters are real and likable, and both Cambridge and the old Virginia plantation are faithfully and affectionately drawn.

**Law of Mental Medicine (The).** By Thomson Jay Hudson, Ph.D., LL.D. A. C. McClurg & Co., Chicago.  $5 \times 7\frac{1}{2}$  in. 281 pages. \$1.20, net.

Reserved for later notice.

**Lomai of Lenakel: A Hero of the New Hebrides.** By Frank H. L. Paton, B.D. Illustrated. The Fleming H. Revell Co., New York.  $5\frac{1}{2} \times 8\frac{1}{2}$  in. 336 pages. \$1.50, net.

The conflict of Christianity with heathenism in the New Hebrides has been invested with dramatic interest by the narrative of the veteran John G. Paton. The story is continued in this volume by his son, and exhibits the same courage and patience of the missionary, and the same power of his Gospel to humanize the lowest savage life.

**Love of Monsieur (The).** By George Gibbs. Harper & Bros., New York.  $5 \times 7\frac{1}{2}$  in. 297 pages. \$1.50.

Here we have a book with a hero of the good old swashbuckler type. A polished courtier, the familiar friend of Charles of England and Louis of France, Monsieur Mornay, Vicomte de Brasac, can yet turn buccaneer, and, as Bras-de-Fer of the Saucy Sally, piratically sweep the Spanish Main. Mistress Barbara

Clerke is a heroine worthy of such a hero, But the reader must find out for himself what the love of Monsieur was like, and the stirring adventures on land and sea that befell this strenuous pair.

**Maimonides.** By David Yellin and Israel Abrahams. The Jewish Publication Society of America, Philadelphia. 5x7½ in. 239 pages.

The subject of this memoir well deserves to head the contemplated series of biographies of Jewish worthies. A Spanish Jew of the twelfth century, Maimonides was the great codifier of Jewish law and custom—the second Moses of his people. As the foremost Jewish metaphysician of the Middle Age, he exercised no small influence on Christian thinkers. In fact, he is one of the world's historic characters.

**Man Called Jesus (The).** By John P. Kingsland. Thomas Whittaker, New York. 5x7½ in. 330 pages. \$1.40, net.

This work by a devout Churchman reflects the present evidently transitional stage of thought concerning the person and work of Christ as the Saviour of men. Tennyson's lines,

"Thou seemest human and divine;  
The highest, holiest manhood Thou,"

closely express the writer's view. It presents the character of Christ and construes his sonship to God in entirely ethical terms. At the same time it recognizes the strict unity of life, whether divine or human, and the immanence of God in man. The pre-existence of Christ as an eternal individual being is held to be incompatible with the truth of his proper humanity. The popular conception of his pre-existence is pronounced "not so much untrue to fact as a partial and inadequate statement and conception of fact." Few of the events of the life of Christ are touched upon. Two-thirds of the work is devoted to his last days, and includes a long exposition of the significance of his death, illustrating the conception of his vicarious sacrifice as a truly human experience. But it is a mistake to represent the death of Jesus as demanded by the Jewish people, or any of them but the rabble incited by Sadducean leaders. However far Mr. Kingsland deviates from traditional ideas, he is solicitous for their substance as distinct from their form, and refuses to break with it in his advance from the old toward the new.

**Next Step in Evolution (The).** By I. K. Funk, D.D., LL.D. The Funk & Wagnalls Co., New York. 3¼x6¼ in. 107 pages. 50c., net.

This was recently published as Preface to a new edition of Croly's story, "Salathiel," based on the legend of the Wandering Jew, and is fitly reissued in this separate form. The "next step" is the evolution from the natural man of the spiritual man whose type is seen in the Christ. This evolution is "the essential coming of Christ," on the plane of spiritual comprehension, as his first coming was on the plane of the senses.

**Old Testament Criticism and the Christian Church.** By John Edgar McFadyen, M.A., Professor of Old Testament Literature, etc., in Knox College, Toronto. Charles Scribner's Sons, New York. 5¼x8 in. 376 pages. \$1.50, net.

This volume is to be classed with Introductions to the Study of the Bible. It is judicial

in temper, Christian in spirit, and scholarly in its equipment. The author neither sneers at old opinions nor vituperates new opinions. His book "has in view the man whose faith has been perplexed by current criticism, or by the rumors and representations of it. It tries to show him what that criticism is, and how it not only in no way imperils his faith, but even helps him to bridge the gulf between faith and reason." These sentences from the preface indicate the avowed purpose of the author; the volume itself carries out that purpose admirably. In general it may be said to embody the views of Professor Briggs or Professor Driver in the spirit of Professor George Adam Smith. It is constructive in its aim, cautious in its conclusions, tender in its sympathy for the anxious and the troubled. It recognizes the contradictory hypotheses of the modern school, or what the author calls "the confusions of criticism;" but it tabulates very well certain results "most surely believed by the critics:" the composite character of the historical books; the three legal codes; the enormous intellectual and spiritual significance of the exile; the value of the post-exilic period; the late date of some notable Old Testament books, e.g., Jonah, Daniel, Ecclesiastes, and many of the Psalms; and the progressive nature of revelation—the truth that "God took men where they were in order to lift them *progressively* to Himself." It does not, however, to any great extent, give the results of criticism. It is a book about criticism, not a critical book about the Bible. It thus differs in its character from such volumes as Dr. Gladden's "Who Wrote the Bible?" and Lyman Abbott's "Life and Literature of the Ancient Hebrews." It believes in the necessity of criticism; regards it as an essential product of Protestantism; shows its relation to personal faith in Christ, and to theological belief in the supernatural and in inspiration; indicates the limits and methods of legitimate criticism; and exemplifies the spirit in which it should be employed. We recommend this volume to Bible students, Bible-class teachers, Young Men's Christian Association workers, and young ministers, both for the information it furnishes and for the example it affords of the spirit in which the Bible should be studied and the problems presented by modern criticism concerning the date, authorship, etc., of the different books should be investigated.

**Papers of Pastor Felix (The).** By Arthur John Lockhart. Jennings & Pye, Cincinnati. 5x8 in. 386 pages. \$1.25.

**Pauline Epistles (The): Introductory and Expository Studies.** By Rev. R. D. Shaw, M.A., B.D. Charles Scribner's Sons, New York. 5¼x9 in. 508 pages. \$3.50, net.

Mr. Shaw's work is not a commentary, as one might suppose, but a series of introductions, giving a comprehensive view of the conditions existing in the young Christian churches to which the Apostle wrote, and outlining his dealing with them, severally. The genuineness of all his letters is strongly maintained, even of the Pastorals. The new views of the Dutch school, to which the "Encyclopædia Biblica" has given currency, in denial of the Pauline authorship of the four great epistles are

sharply controverted. Large space is given to the brief letter to Philemon, as showing more than any other the secret of Paul's missionary successes, and the method by which the moral conquests of Christianity were achieved. In points of historical criticism the work is strongly conservative, but with protests against seeking to ground the unity of the Church either in creeds or in ecclesiastical polity. In the latter point the author joins issue sharply with Bishop Gore.

**Perkins, the Fakcer.** By Edward S. Van Zile. Illustrated. The Smart Set Publishing Co., New York. 5x7½ in. 377 pages. \$1, net.

Three cleverly extravagant performances on the kindred themes, psychic transposition and metempsychosis. An amusing and original book.

**Perverved Proverbs: A Manual of Immorals for the Many.** By Col. D. Streamer. R. H. Russell, New York. 4½x7¼ in. 47 pages. \$1.

**Power of God unto Salvation.** (The Presbyterian Pulpit.) By Benjamin B. Warfield, D.D., LL.D. The Presbyterian Board of Publication and Sabbath-School Work. 5x7½ in. 234 pages. 75c., net.

The eight sermons in this volume were preached in the chapel of Princeton Theological Seminary. After twice reading the two which deal with the most vital themes, "The Saving Christ" and "The Leading of the Spirit," we are compelled to say that they are not sermons which theological students should adopt as models. Deeply marked, indeed, with a religious spirit, and phrased in choice language, they move in the region of the abstract to the neglect of the concrete, dealing wholly with generalities, without grip on the needs and problems of real life.

**Primer on Teaching: With Special Reference to Sunday-School Work.** By John Adams, M.A. Charles Scribner's Sons, New York. 3½x5¼ in. 129 pages. 20c.

**Salads, Sandwiches, and Chafing-Dish Dainties.** By Janet McKenzie Hill. Illustrated. (New Edition, with Additional Recipes.) Little, Brown & Co., Boston. 5x7¼ in. 230 pages. \$1.50.

**Samaritans (The): A Tale of To-Day.** By John Alexander Steuart. The Fleming H. Revell Co., New York. 5x8 in. 405 pages. \$1.50.

This story of the London slums is hardly cheerful reading; but it is an interesting and well-written book, despite the fact that the earnestness of the author's purpose at times overbalances the writer's art.

**Science and Key of Life: Planetary Influences.** By Alvidas. Vol. III. The Astro Publishing Co., Detroit. 6x9 in. 261 pages.

**Sciences (The): A Reading Book for Children.** By Edward S. Holden. Illustrated. Ginn & Co., Boston. 5½x7½ in. 224 pages. 50c.

**Soul Winning Stories.** By Rev. Louis Albert Banks, D.D. The American Tract Society, New York. 5x7½ in. 223 pages. \$1.

**Spanish in the Southwest (The).** By Rosa V. Winterburn. (Eclectic School Readings.) The American Book Co., New York. 5x7½ in. 224 pages.

**Temptation of Jesus (The): A Study of Our Lord's Trial in the Wilderness.** By A. Morris Stewart, M.A. Andrew Melrose, London. 5½x8 in. 230 pages.

One is not quite prepared for a Scottish

thinker who takes the line of thought here followed, that Satan personally confronted Jesus in his introductory temptations. Modern thought generally regards the narrative as symbolical of his mental conflict. But Mr. Stewart ventures the surprising hypothesis of a "fourth dimension" to account for a sudden bodily transportation of Jesus by Satan to the pinnacle of the temple. Aside from this reversal to ancient literalism, the practical and homiletical applications of the story of the great conflict are instructive.

**Trapper "Jim."** By Edwyn Sandys. Illustrated. The Macmillan Co., New York. 5x8 in. 441 pages. \$1.50, net.

It would be hard to find any boy fond of outdoor life who would not rejoice to have this book. Mr. Sandys in at least one other volume has shown his intimate knowledge of hunting and natural history. Now he accomplishes a quite unusual feat—that of combining a cheerful, lively, amusing story about boys and for boys with full instruction in such subjects as trapping, fishing, shooting, camping, paddling, taxidermy, and kindred matters. Throughout he writes with such evident enjoyment of his subject that his pleasure is contagious. The book is illustrated by many pictures and diagrams. Apart from the information it gives and the story it tells, it is pervaded with a fine love of nature and particularly of animal life.

**True Abraham Lincoln (The)** By William Eleroy Curtis. Illustrated. The J. B. Lippincott Co., Philadelphia. 5x8 in. 409 pages. \$2, net.

As interesting as an interesting subject can be made by a trained journalist and popular biographer, but not sufficiently original or penetrating to warrant the arrogant title. Washington and the American Revolution had been so systematically lifted out of the sphere of reality by successive eulogists that there was need of a "True George Washington" and a "True History of the American Revolution," but the strong lines of Lincoln's character have not been so effaced by other biographers as to justify any one in calling a new biography "The True Abraham Lincoln."

**Truth and a Woman.** By Anna Robeson Brown. Herbert S. Stone & Co., Chicago. 4½x7 in. 206 pages.

**Victim's Triumph (The).** By Josephine Zeman. G. W. Dillingham Co., New York. 5x7¼ in. 241 pages. \$1.25.

**Vulgarians (The).** By Edgar Fawcett. Illustrated. The Smart Set Publishing Co., New York. 5x7¼ in. 213 pages. \$1.

The Vulgarians are three young Westerners, two sisters and a brother, heirs to a fabulous fortune, who come East, where, after a brief and disconcerting standstill, they find themselves directed along a royal road to the inner circle of New York and Newport society. This enviable journey is accomplished through the trio's acquisition of an unerring social guide and mentor in the person of a charming young widowed member of the Four Hundred, who (for a consideration) attaches herself to their interests. What she does for them and how she does it make the burden of the novel.

# Correspondence

## Pennsylvania's Child Labor Laws

*To the Editors of The Outlook:*

Mr. Durland's well-written article in *The Outlook* for May 9 so states a fact as unintentionally to mislead. It is a fact, as he says, that the maximum legal day's work of a child in Pennsylvania is twelve hours; but the maximum in any week must not exceed sixty. Thus it is seen that the average is ten hours per day for six days; or, where the full daily maximum is exacted, the child may be required to work but five days out of seven. So that the child who labors in the mill is, in respect to "days off," on a footing with the child who slaves at school, except that the latter has a long vacation during the heated term.

Strength to you in your agitation for the emancipation of the child from overwork, whether in the mine, mill, or school!

The Department of Factory Inspection of Pennsylvania has the Factory Laws printed in English, Italian, Hungarian, Slavonian, and Hebrew. We have had no call for them in any other languages, but we are ready to respond should such a call come.

C. V. HARTZELL.

## Southern Representation

*To the Editors of The Outlook:*

I am a reader of your magazine and usually approve of the position you take on public affairs, but I cannot agree with the opinion you express in your issue of May 9, in which you discuss the "Alabama Case" and take the position that Alabama's representation in Congress (and in the Electoral College) should not be reduced to conform to section two, article fourteen, of our Constitution. In a recent election it took about 47,000 votes to elect a Congressman in Minnesota, and only 7,000 in Louisiana; in other words, the vote of one man in Louisiana offsets the vote of seven men in Minnesota. This is more power than the Southern gentlemen ever dreamed of, for in 1787 they agreed that it should take five slaves to offset the vote of one man in the North; but now it takes my vote and the vote of six of my friends to equal one of the most ignorant voters in Louisiana. Do you think that a voter in the latter State

should have seven times more influence in Congressional and Presidential elections than a voter in Minnesota? If so, you must ask that the minority rule and not the majority. I do not claim that we in Minnesota are any better than the men in Louisiana, but I do claim that we are just as good, and I see no reason or justice in allowing six-sevenths of our voters to be counted out in National elections. I believe that ignorant men, white or black, should not be allowed to vote, but the provisions of our Constitution should be enforced without regard to State or section.

D. D. S.

St. Paul, Minnesota.

## Breathing-Places for the People

*To the Editors of The Outlook:*

Very soon the hot, sultry weather will be here, with all its exhausting effects, and, as is the case every year, the suffering and anguish that will have to be endured by thousands of those who are compelled to live in the crowded and congested parts of the cities will be very great. In the onward march of civilization and pressing business in all our large cities block after block, with apartment and tenement-houses, is built up with a rapidity which is almost startling, and in many cases very few spaces are left for breathing and recreation grounds. Doubtless in the poorer and congested parts of the cities there are many vacant lots that might be utilized as breathing and recreation grounds. I sincerely hope and trust that the citizens will do all in their power to urge and aid this noble cause, and by so doing much misery and suffering will be avoided. Last year the city of Chicago opened several additional small parks in various densely crowded districts, and this was much appreciated by the people.

Minneapolis, Minnesota.

A. M.

## The Roman Ritual

*To the Editors of The Outlook:*

It seems to me, a Congregational Protestant, to be regretted that Protestants in general have so vague a notion of the significance of the Roman ritual—the order of its parts, its religious contents, its symbolism, ceremonies, and vestments.

I am sure it would be a favor to your readers, especially as the season is at hand for the visit of summer travelers to Europe, to recommend to them as an addition to their guide and reference books the "Guide in a Catholic Church for Non-Catholic Visitors," by W. L. Fox, a pocket edition published by Robert Washbourne, 18 Paternoster Row, London, and purchasable in Florence and other Italian cities, I presume. Something of the sort is nearly indispensable to Protestants who have no special preparation for intelligent observation in Catholic churches.

M.

#### Prohibition and Drugs

##### *To the Editors of The Outlook:*

In different issues of your paper within the past few weeks there have been printed communications which assume to show that prohibition in Vermont has greatly fostered the use of drugs and patent medicines. Two of these letters have been favored with an editorial indorsement of their claims in the heading under which they were printed.

But in proving a given effect to be due to an assumed cause, it is at least necessary to show that the effect varies as the assumed cause varies. Nothing of this sort has been even attempted in these articles, and one of the writers declares that he "knows of no present statistics anywhere showing how it may be"—i.e., the comparative consumption of drugs in prohibition and license States.

Yet with the Vermont statistics alone, which we are assured have been very fully and carefully gathered, something may be shown. The prohibitory law has been very unequally enforced in that State. It has been more effective in the country than in the cities, and more effective in some cities than in others. If the claim advanced is well founded, a comparison of these different cities with one another and with the country districts ought to show that where alcoholic stimulants were more easily obtained the use of drugs was proportionately less.

It is possible that patent medicines are more used in the country than in the city under any law. People sick and ailing, living at a distance from the doctor, and with scanty incomes, may, for these reasons, be more ready to try the patent cures. The term patent medicines may also be

used to cover veterinary remedies, which are, of course, largely used in the country. The effect of the law on the use of these medicines should be learned by a comparison of sales in the country districts of a prohibition State with those in an adjoining license State.

But with drugs the case is different. If their use has been greatly stimulated by prohibition, the comparisons suggested ought to show it.

Since *The Outlook* and its correspondents have given widespread publicity to a claim which is exceedingly important if true, and very pernicious if it is not true, is it too much to ask that the comparisons here indicated should be prepared and published? If the claim proves to be well founded, it bears against local as truly as against State prohibition, and against both in proportion to their effectiveness.

ARTHUR SMITH.

Piermont, New Hampshire.

#### Organized Labor and Good Government

##### *To the Editors of The Outlook:*

Things are as they are, and theorizing as to what should be does not change them. Sympathy with a cause does not transform vicious into legitimate methods, nor minimize the peril they involve, if they are perilous. What might be an organization worthy of generous sympathy may be deserving only of practical annihilation.

I am not an employer of labor, and am entering into no defense of employers; but I am an American citizen, with what I conceive to be a true American's love for his country and its laws, and it is borne in upon me with great force that the day is fast approaching when the labor union will have to be "smitten, hip and thigh;" not because it is a labor union, but because of what it has in reality come to be—a teacher of defiance to law, and a practical abettor of crime, even to murder; with force and terrorism as cardinal principles of its system.

This is strong language, but is it not true? Does organized labor recognize any law that conflicts with its wishes? Does it not invariably resist, by physical violence if need be, and too often by actual murder, all attempts to replace striking workmen? Does it not daily grow more aggressive and contemptuous

of lawful restraint, and constantly trample under foot the right of personal liberty, that most sacred of all rights, which is the very foundation of our institutions and has always been our proudest boast? Its war on the militia alone stamps it what it is, an enemy of the State—for the forces of law and order are the State.

The individual workman is by nature a law-abiding citizen, but the union, under misguided leadership, is, in practice, a criminal conspiracy. The conditions grow worse year by year, and it is only a question of time—perhaps a very short time—when they will have to be met with whatever force is necessary to abate the evil and teach the lesson that the people—the whole people—through the powers of government, are still supreme.

You will say, perhaps, that I argue from exceptional cases; but the exceptions, if in the past they have been such, are becoming too numerous to be so rated now, and it is to be remembered that behind all the so-called peaceful settlements is the menace of disorder, ready to be called into existence if the demands are not satisfied.

If there has ever been a strike, where resistance was offered, which was wholly unaccompanied by disorder, or one in which the leaders made active efforts to suppress it, I have yet to hear of it. "Strike" and "terrorism," in the vocabulary of labor, are synonymous terms. Some organizations are slow to use extreme measures, and others are malignant beyond words, but from the highest to the lowest, the unwritten law, "Thou shalt not take thy neighbor's job," is enforced by fair means or foul. The heaven is in them all.

In your desire to be just, you have been most generous to labor, hoping, no doubt, as we have all hoped, that it would in time see the right and do it; but the day for that attitude, as I read the conditions, has gone by; to me there is a question of morals, and of public safety, which will make it essential for all patriotic men and publications to make a stand against the present form and methods of what might be a useful organization, but *is* a dangerous one.

Unionism, we all believe, will survive, but let us hope that from the wreck which is sure to come an organization will arise,

based on the rights of man, which, under wise leadership, will prove a blessing and not a curse to the Nation.

ARTHUR W. ALLEN.

#### "Jews, Turks, Infidels, and Heretics"

*To the Editors of The Outlook:*

The above classification of unbelievers is to be found in one of the Good Friday collects of the Book of Common Prayer; also in the first prayer-book of Edward the Sixth, from which it was taken—that missal having adopted it from ancient liturgies. "Jews, Turks, infidels, and heretics"—words inseparable to all good churchmen from the Good Friday service; as is also the claim of those using the prayer, that they alone are "the remnant of the true Israelites"—the "one fold under one Shepherd, Jesus Christ our Lord."

"Jews, Turks, infidels, and heretics." Strange that the classification escaped the severe pruning given to the Book of Common Prayer of "the Protestant Episcopal Church in the United States of America" a few years ago. Stranger still that revolt against that classification of Jews with Turks and all the rest has only recently shown itself; the convictions of some of the younger clergy of the Episcopal Church compel them to omit it altogether, and they are willing to take the consequences, which in some dioceses means episcopal censure at least.

The third of the three collects to be used on Good Friday is as follows:

O merciful God, who hast made all men, and hatest nothing that thou hast made, nor desirest the death of a sinner, but rather that he should be converted and live; Have mercy upon all Jews, Turks, infidels, and heretics; and take from them all ignorance, hardness of heart, and contempt of thy Word; and so fetch them home, blessed Lord, to thy flock, that they may be saved among the remnant of the true Israelites, and may be made one fold under one Shepherd, Jesus Christ our Lord, who liveth and reigneth with Thee and the Holy Spirit, one God, world without end. Amen.

"No, I did not omit that prayer by mistake," said a clergyman last Good Friday when asked why it had not been offered. He is the rector of a strong parish in a large city—a man of broad catholicity, wide scholarship—too big a man for holding fast in any paddock of sectarianism, or for restraining from eating with publicans

and sinners. "I shall never use it again. . . . Think of it—our classifying the Jews, his chosen people, with Turks, infidels, and heretics! Think of the Jews in this community alone; of all they do for the public good; their high ideal of citizenship; their loyalty to their religious convictions and their charity for ours; of all they are doing for our hospitals and for all our good works; and then, if you can, after asserting that they are not of the true Israel and accusing them of "ignorance, hardness of heart, and contempt of his holy word," classify them with Turks and the rest! In the day that prayer was written "Jews, Turks, infidels, and heretics" stood for what the anarchist, the thug, the most pestilential classes of any community, are in this. Why not include the Mormons, Christian Scientists, Seventh-Day Adventists, all who do not believe just as we do? Rabbi — [giving the name of the leading Rabbi of the city] and I are close friends. I honor his high ideals, reverence his spirituality and the sincerity of his conviction that the faith of his fathers is the true faith. With him in my mind, and many others of his people, can I repeat that classification as a prayer? . . . I sat in his congregation not long since, uplifted my prayers with his, and heard nothing like a classification of Christians with Turks, infidels, and heretics. I am not sure" (this was before the Kishinev massacre) "but that that prayer has been a promoter of racial antagonism."

"But you do not omit on Good Friday the offertory for the conversion of the Jews?" I asked.

"Not yet," he replied; then, after a pause, more slowly and softly—"no, not yet."

CHURCHMAN.

#### Salvini Again

#### To the Editors of The Outlook:

I fear your contributor, Mr. Crellin, in his article about Signor Salvini in the April Magazine Number of The Outlook, gave a little too much credence to unreliable hearsay in two or three instances. In the first column of page 817 he tells a story about an actress playing Emilia in "Othello," and represents her in a situation which cannot occur in the play. I have played

Iago frequently with Signor Salvini, and am sure that such an incident is quite improbable. In the second column of the same page he makes the late Edwin Booth a victim to the Gorgon power of the Italian tragedian. Surely Mr. Crellin could not have been a witness of the accident to which he refers in such unwarrantably exaggerated terms. If so, as he professes love and respect for Mr. Booth, he should not have insulted the memory of that gentle player by printing a story invented only to ridicule. Such tales belong to the repertory of the camp-followers of the drama, who invent reminiscences upon the spurs of over-festive moments.

As a knight-commander in two orders of merit, one Italian, the other Portuguese, Salvini was sometimes addressed by those who spoke Italian as *Commendatore*, but the title has no military significance. See any Italian dictionary. I lament, in common with my serious-minded comrades, the disposition of writers to overrate the actor both as to his ability and as to his faults.

JOHN MALONE.

The Players, New York City.

#### In reply Mr. Crellin writes us:

The incidents and assertions to which Mr. Malone takes exception will no doubt find friendly echo from my old friend John Lane, who was the Iago in the cast at the time. Salvini did or had just issued from behind the portières after the smothering of Desdemona, and did, as I said, frighten the lines of Emilia out of the consciousness of Mrs. Augusta Foster, who was playing the part. "Issued forth, licking his chops like a human tiger" is not, and was not, any stretch of metaphoric allusion. Emilia is not on the stage when Othello thrusts his head through the curtains, but she is and always has been the first one admitted to him after the murder. I loved the late and surely lamented Edwin Booth, and probably had as good cause as most other actors. Not only is my story of his apprehension of danger from the unconscious rage of Othello true, but what I, out of love, omitted could be borne out by the added witness of one who has, unhappily for my contention, passed to the same side of the stream with the noted actor himself. That Salvini was called "Il Commendatore," and had fought under Garibaldi during the Italian Revolution, history may not bear me out, but I have the confirmation from his manager, Chizzola, his interpreter and valet, and his son Alessandro, a dear friend of mine, since dead.

## The Servian Slaughter

Last week the King and Queen of Servia, Nikodem and Nikola Maschin (the Queen's brothers), Zingar Markovic (the Premier), two Cabinet Ministers, and several other persons, were slain by army officers at Belgrade, the capital. As these murders occurred simultaneously and in several different places, a carefully arranged plot for the destruction of the government was revealed; later events would indicate that it had the secret co-operation, or at least the consent, of almost the entire corps of officers. At midnight on Wednesday, June 10, a battalion of infantry marched out of its barracks and silently occupied every approach to the royal palace. The guard inside the building had been corrupted, and when the forty officers selected to commit the murder pressed forward, the gates were flung open. Yet even under the guidance of the traitor Naumovic, the King's aide-de-camp, the task of finding the King and Queen was not easy, since the latter had been aroused by the shooting of a servant who remained faithful to his trust, and had taken refuge in a closet behind a barred door. According to some accounts, Naumovic demanded that Alexander abdicate and proclaim his Queen an unworthy woman. Alexander's reply was to shoot Naumovic on the spot. Then the assassins shot the King and Queen, mutilated their bodies with sword-thrusts, and threw them into the courtyard. The slaughter scene in Sardou's "Theodora" was thus strikingly paralleled, save for the anachronism of the occurrence of the recent event in a modern, twentieth-century city, and not in the Byzantium of the sixth century. At the same time in other places the other murders were being accomplished. This wholesale policy of "thorough" has hardly been equaled in modern times. While the expulsion of the Obren-

ovic family by the people might have been accepted as a welcome sign of national self-respect, the horrible slaughter perpetrated by trusted army officers will be rightly interpreted as significant of a barbarism which indicates that the people in whose name it has been perpetrated are unworthy to possess and are unable to maintain an independent national life.

⊗

## The Reigning Families

Ever since 1804, when Servia emerged from Turkish tyranny, two families, now one, now the other, have held supreme power. The brigand and swine-raiser Kara (black) George was the founder of Servian autonomy. Having led a successful revolt against the Turkish janissaries, he was made Prince of Servia under the Sultan's sovereignty. Kara George pleased the democratic folk by allowing his daughter to carry water from the public well like any other peasant girl, even though her peasant father had become Prince. He made, however, one capital mistake in fleeing to Austrian territory during the next war with Turkey. This was the opportunity of Milos Obrenovic, another swine-raiser. He stayed behind, and led the people so strenuously that the Sultan was constrained to recognize him as Prince of Servia, supplanting the renegade Black George. When the latter returned to Servia, Milos had him assassinated. After two Obrenovic generations, a revolution placed Alexander Karageorgevic, son of Black George, on the throne (1842). He reigned seventeen years, during which time, by the Treaty of Paris (1856), Servia was taken under the protection of the Powers. When the Servians deposed Alexander, they reinstated the Obrenovic dynasty. Ten years later the murder of Black George was avenged by the assassination of Milos's son, Michael. The connection of the Karageorgevic

family with this event was so evident that the Servian legislative body declared them barred from the succession. Then, as now, the plan was to have Prince Peter Karageorgevic obtain the supreme power, but the plot failed, and Michael's nephew, Milan, became prince and later king. He was in every respect a degenerate. Though he succeeded in persuading a beautiful Russian, Natalie Keschko, to marry him, her influence was not sufficient to keep the Servians from compelling Milan to abdicate (1889) in favor of his only legitimate son, Alexander, thirteen years old. Thenceforth Milan lived a disreputable life in Paris, where the Jockey Club finally expelled for cheating at cards the Servian who had not exposed himself under fire when commanding his army against the Bulgarians (1885). Milan died recently, unpitied and unmourned. His later career would have furnished Daudet with new material for "Les Rois en Exil." Alexander proved as great a profligate as his father had been, but on a lower scale of boorishness; and he sought in vain for a bride among the eligible princesses of Europe. Finally, like his father, he married a woman not of noble birth, Draga Maschin, nine years his senior. Childless, and foiled in her effort to pass off a spurious child as her own, she has latterly endeavored to obtain the succession for her brother, Nikodem, a man apparently known chiefly for his vicious stupidity. According to the despatches, the draft of a bill with marginal notes written by the late King was found in the palace. It provided the proclamation of Nikodem Maschin as heir to the throne. This discovery is held by the assassins as complete justification for their action. After the assassination of Alexander and his wife and supporters, a provisional Government, formed in the interest of the Karageorgevic dynasty, issued a proclamation that the Skuptshina, or Parliament, would meet June 15 to elect a monarch. Everywhere in and about the capital troops were posted and field guns placed in position to deal quickly with any opposition to the new Government's will. The Skuptshina met according to this proclamation, and, after first passing a resolution of general amnesty, unanimously elected Prince Peter Karageorgevic King of Servia.

#### The Debate in the House of Commons

Last week, in the House of Commons, occurred one of the most notable debates in recent years. The Chamber was packed with members, peers, and spectators, as it has not been since the day of Home Rule. The debate was precipitated by Mr. Chamberlain's plan of preferential tariffs for the colonies' benefit, but, as the Speaker ruled any discussion on this out of order, the speeches were restricted as much as possible to an amendment offered by Mr. Chaplin, an avowed protectionist, which declared that the remission of the corn tax involves a needless and injurious disturbance of trade and a serious loss in revenue. The most striking speeches in regard to this amendment were made by Mr. Ritchie, Chancellor of the Exchequer, who defended his action; by Sir Michael Hicks Beach, ex-Chancellor, who reminded the House that he might still be standing in the governmental ranks had his protests against the growth of expenditure been received with greater sympathy by his colleagues; by Mr. Arthur Elliot, Financial Secretary to the Treasury, who strove to commit the Government unreservedly to a policy of free trade; by Mr. Asquith, the Liberal leader, who proclaimed that the abandonment of the corn tax was an insoluble mystery if the consumer did not pay the tax, and yet, as Mr. Chamberlain maintained he did not, the speaker asked if this were "a magnificent piece of international attachment whereby Great Britain would make an annual present of \$12,500,000 to the United States;" finally, by the Radical leader, Sir Charles Dilke, who, admitting that America and Germany were reaping much prosperity, showed that Great Britain's foreign exports were equal to the combined exports of the United States, Germany, and France; further, he pointed out Mr. Chamberlain's error in attributing the abounding prosperity in the United States to the policy of protection, since, "with their enormous resources and great energy, the American people ought long since to have taken the first place in international commerce."

⊙

**Mr. Balfour's Reply** By a dexterous but not, as has been claimed by some, an evasive speech, Mr. Balfour summed up the case for the Government

after the two days' debate. So brilliant and large-minded was this speech that not only did he "give Chamberlain enough rope to hang himself on," as an irreverent English journal puts it, but also solidified the case for Great Britain's time-honored policy so as to make a presumably large vote for it still larger. Mr. Chaplin's amendment was defeated by the crushing division of 424 to 28. The 28 votes, therefore, may be taken as representing the protectionist party in the House of Commons, although it must be added that a not inconsiderable number of members are perhaps waiting to be convinced of the desirability of a certain measure of protection as a means of holding the colonies more closely to the mother country. Mr. Balfour defended the imposition of the corn duty in 1902 and its withdrawal in 1903, declaring that it was an entirely legitimate war tax; that it had not had any materially protective effect—yet in the next breath he admitted that he did not realize how great the tax would be on the raw material used by the farmer. Answering those who asked, "If the tax is desirable, why is it removed?" Mr. Balfour said, "We put it on because we wanted the money, and took it off because we ceased to want money." Replying to the Liberal taunts that it was intolerable to have Cabinet Ministers proclaiming irreconcilable views on a matter more vital than any other to imperial unity, Mr. Balfour's tone was one of unusual vehemence as he instanced important divisions of opinion in the Liberal Cabinets of 1885, 1892, and 1894, and quoted his old friend and political opponent, Mr. Gladstone, "in rightly holding that the differences shown in the speeches of his colleagues did not matter as long as there was common action." Mr. Balfour added: "That is true, sound, constitutional doctrine, and you will not improve constitutional conditions if you endeavor to draw a Minister into the bonds of mere discipline; certainly I am not going to exercise an authority over my colleagues which I would never have submitted to myself." As to the charge that he had not made a specific declaration on certain great fiscal, colonial, and international problems raised in recent speeches, Mr. Balfour declared that, though a believer in free trade, he did not regard it as a fetich; that he had

absolutely an open mind regarding the necessity for any alterations in a system which was founded to suit conditions fifty years ago. In maintaining an open mind and the liberty of individual judgment, Mr. Balfour will have the sympathy and support of men everywhere; what his country needs, however, at this juncture, is the sturdy firmness either of Mr. Chamberlain in attacking free trade by a system of colonial preferential treatment or the equally sturdy firmness of Sir Michael Hicks-Beach in defending Great Britain's time-honored fiscal policy.

The International  
Anti-Alcohol Congress  
in Bremen

The ninth international Congress to oppose alcoholism, recently held in Bremen, Germany, was a striking demonstration of the advance of the temperance movement in Continental Europe. To begin with, the city in which it met was remarkably sympathetic in its attitude toward the great throng of delegates who assembled, the Mayor of the city welcoming them in a speech which indorsed not only the movement but also the public activity of women in its behalf, while the Senate of the city entertained four hundred prominent members of the Congress at a costly banquet in the City Hall. Nor was the city's welcome merely official, as over two thousand of its citizens were members of the Good Templar and Blue Cross Societies, while a great many others were enrolled in a Moderation Society which has been doing active work in combating all use of spirits. The German Government showed its sense of the present gravity of the alcohol question by contributing ten thousand marks to the organizing committee of the Congress, and nearly all the nations of northern Europe sent representatives—Germany sending her Secretary of the Interior. The Congress was held during the Easter vacation, when the greatest number of teachers could be present, and the first session was on Easter Monday, when the laborers have a holiday. On this day the delegates of different laborers' total abstinence societies held an all-day conference at the headquarters of the Social Democrats, and in the evening a social entertainment was held in the same building. A later meet-

ing of the whole Congress was under the management of the Laborers' Total Abstinence League, and singularly encouraging reports were given as to the attitude of organized labor toward liquor-drinking. Fortunately, when the time came for general discussion, the Austrian Socialist, Dr. Froelich, who has been the indefatigable organizer of laborers' total abstinence societies, was called upon to defend his agitation against the attack of a local editor of a labor paper, and this impromptu debate disclosed the strength of the appeal he was making to workmen to stop drinking for the sake of advancing the interests of their cause and their class. Another of the evening meetings was under the management of the Good Templars, and this was enlivened by musical, dramatic, and athletic entertainments given by members of the order. The scientific discussions which have formed the chief feature of each of the international congresses were taken part in by distinguished educators and medical authorities from nearly all over Europe. There were differing sentiments as to how far individuals need to go in throwing their influence against the drink evil, but there was no difference as to the direction in which the influence of all thoughtful men should be thrown.

#### Opium Traffic in the Philippines

The papers report that the Philippine Commission has prepared a bill for the regulation of the opium traffic in the islands, under which a monopoly of the business will be put up for competitive bidding and sold to the highest bidder, as was done under Spanish rule. The revenue derived from the monopoly the Commission propose to employ in sending young Filipinos to this country to be educated, building additional school-houses in the islands, and increasing the pay of the local teachers. All opium imported will be recorded, all sales will be recorded by the owner of the monopoly, with the name and address of the purchaser, and all sale will be prohibited except to full-blooded Chinamen. It is said that this is substantially the method which the English and the Japanese have adopted. The revenue to the Government under the Spanish system

was \$650,000 a year, but it is anticipated that under the regulations proposed by the Commission the sales will be less and the Government income accordingly less. Details of legislation must necessarily be left largely to the Philippine Commission until an efficient system of self-government is organized, and then it must be left to the self-governing body, subject to a certain measure of control by the Commission. We have great confidence in the moral judgment of the Philippine Commission; but there seem to us to be serious objections to this plan, as it is reported in the daily press. (1) It is said that prohibition is impracticable. It appears to us that it would be easier to maintain absolute prohibition than a prohibition discriminating along race lines, allowing opium-smoking to Chinamen and making it a penal offense if indulged in by Filipinos or Americans. (2) All monopolies are seriously objectionable. Monopoly granted and guaranteed by government is doubly objectionable. Monopoly in a vice granted and guaranteed by government is trebly objectionable. There is practically no difference of opinion among intelligent men that opium-smoking is a vice. It is condemned by all medical authorities, and is strongly protested against by the best class of Chinamen, the race for whose indulgence the proposed license of opium traffic in the Philippines is to be established. (3) When a representative legislature is elected in the Philippines, and is intrusted with authority to declare what is the will of the people of those islands, if it desires to admit opium under certain restrictions, there would be much to be said in favor of leaving to it the decision of the question. At present, however, the government in the Philippine Islands is purely a paternal government. So long as such a government is maintained, the American people are responsible for determining whether opium-smoking shall be allowed, and under what conditions. There is, therefore, in this case no such question of home rule as is raised in the United States by the issue presented between local option and State prohibition of the liquor traffic. (4) If any sale of opium is to be allowed at all, except for medicinal purposes, it appears to us that the sale should be conducted by

the Government, through salaried agents. No man should be allowed to make a profit out of the sale; for whenever there is such a profit, there is an incentive not only to evade the prohibition but also to stimulate to the largest possible degree the sale within the prohibited lines. For these reasons, if the proposed opium regulations are correctly reported by the press, we hope that they will be overruled by the Administration at Washington, even if the whole question has to be left in a somewhat unsettled condition until a local self-government is organized in the islands. Until that time the National policy should be one of prohibition.

The "Hawaiian Case." A recent decision of the Supreme Court of the United States has reaffirmed the principle involved in the Insular Cases, that the United States may own territory which is not an integral part of the United States, though subject to it, and may govern peoples who are not citizens of the United States, though amenable to its authority. One Mankichi was tried and convicted of manslaughter in the Hawaiian courts, under the law of Hawaii, without having been indicted by a grand jury, which these laws did not require. His conviction took place after the islands had been annexed to the United States under a resolution which provided that "the municipal legislation of the Hawaiian Islands . . . not contrary to the Constitution of the United States nor to any existing treaty of the United States shall remain in force until the Congress of the United States shall otherwise determine." The Constitution of the United States provides that "no person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury." Mankichi demanded release from imprisonment on the ground that he had not been so indicted, and the Court refused the demand. The refusal was based on the grounds: (1) That the islands were by annexation made subject to the sovereignty of the United States, expressed through Federal legislation; (2) that in interpreting the clause "not contrary to the Constitution of the United States," regard must be had by the Court to the

plain meaning of the legislators, and it cannot be believed that it was their intention to abolish the provisions of law already existing in Hawaii, while nothing was put in their stead. The resolution of annexation was adopted July 7, 1898; not until April 30, 1900, was Hawaii organized as a Territory of the United States, and the laws of the United States extended over the islands. The Court holds that no legislation inconsistent with the Constitution of the United States, adopted by Hawaii *after* annexation, would have been valid; but that the resolution did not operate to make void legislation of Hawaii prior to annexation, if the effect of overlooking such legislation would be "the destruction of existing provisions conducive to the peace and good order of the community." The same judges who dissented from the decision of the Court in the previous Insular Cases dissented in this case; but the decision of the Court is reinforced by the coinciding opinions of Judges Holmes and Day, who have been appointed to the Supreme Court Bench since those cases were decided. The Hawaiian case thus emphasizes and reinforces the doctrine, which must now be regarded as established constitutional law, that the United States may acquire territory, and that, not only may Congress legislate for such territory as being outside the provisions of the United States Constitution, but that the Court will hold that these provisions do not apply if their application will "result in the destruction of existing provisions conducive to the peace and good order of the community." We think that Mr. Justice Harlan in his dissenting opinion correctly interprets its significance in his declaration that "it assumes the possession by Congress of power quite as omnipotent as that possessed by the English Parliament"—that is, power over territories acquired and peoples brought under our sovereignty, but not incorporated in the National organization

The Postal Scandals. The results of the investigation so far carried on of the various charges made against officials in the Post-Office Department show at least grave irregularities. We have already noted the arrest of Mr.

Machen and Mr. Miller on the charges of receiving bribes from manufacturers who sold certain articles to the Department, and the resignation or suspension of several other officials in connection with the same matter. These charges will now, of course, be passed upon by the courts, and it can only be said that the evidence presented against these men by the Fourth Assistant Postmaster-General, Mr. Bristow, shows a strong *prima facie* case. This matter has no doubt led the Department to give more serious attention to the charges made by Mr. Tulloch of political favoritism and irregularities in appointments and promotions. While the Postmaster-General at first showed some disposition to minimize and ridicule these charges, it must be added that he also gave orders for their careful investigation, and it must be noted also that these irregularities did not take place during Mr. Payne's incumbency. Most of them appear to be charged, as regards ultimate responsibility, to Mr. Perry S. Heath, formerly First Assistant Postmaster-General. A report has just been made by Mr. Procter, the Civil Service Commissioner, detailing the results of the evidence heard by him at the request of Postmaster-General Payne. This evidence related to the conduct of the post-office in Washington, but Commissioner Procter's report states very positively and very significantly that the irregularities discovered "were directed by the Department or requested or suggested by high Department officials, and in every case came to the Postmaster with all the force of a direction." Mr. Procter's report indicates that it was a common custom, at least when Mr. Heath was in office, to have appointments made to the Washington post-office (and apparently also to many other local post-offices) where new employees were not at all needed, and with the express intent of taking advantage by promoting them to positions in the Department without passing them through the classification required by the Civil Service rules. Mr. Procter says that the astonishing number of three hundred and eighty employees thus entered the service upon considerations other than fitness as ascertained by the competitive examinations. Mr. Procter in part exonerates the Washington Postmaster, Mr. Merritt, on the express

ground that appointments of this kind were forced upon him by his superiors at times even over his protest. Mr. Procter says of these acts:

They show a wide departure in policy from a strict regard for the public interest, and afford indications that the Department used the Washington post-office for political and personal purposes to an extent which left the authority of the postmaster in transfers and appointments of this sort but little more than nominal, and placed the office in many respects in the relation of a bureau to the Department.

The investigation seems to show clearly that most of the irregularities herein set forth were directed by the Department or requested or suggested by high departmental officials, and in either case came to the postmaster with all the force of direction.

The arrest of Machen and his associates on charges of receiving bribes, the disclosures concerning the Washington post-office, the allegations that improper promotions have been made in the New York post-office, and the assertion that the confidential clerk of the Postmaster-General, Mr. H. H. Rand, and other post-office officials have allowed their names to be used by swindling "get-rich-quick" concerns, whose transactions were properly a subject for suspicion by the Post-Office Department itself—all these things show that there is need for a thorough investigation of the workings of the Department. President Roosevelt, it is understood, has directed that this shall be made, that it shall be exhaustive, and that it shall cover all possible sorts of wrong-doing or corruption.

#### Further Gains for Direct Legislation

Next to direct primaries the democratic movement now making the greatest headway in this country is direct legislation. Each new issue of the "Direct Legislation Record" (Newark, New Jersey) contains the account of some further legislative advance for the movement, and a legislative advance for this movement which aims to abridge the power of Legislatures is always indicative of a still greater advance among the general public. Most of the signal victories have been in the Central and Western States, but in Massachusetts the Legislature has this year given favorable consideration to the proposed constitutional amendment permitting the voters themselves, by widely

signed petitions, to secure the submission of future amendments. In the South also the movement is making some headway, particularly in Texas. The strength of the movement, however, lies in what used to be called the West. Illinois, as we have previously reported, already has a "Public Opinion" law, under which the judgment of the voters may be learned upon particular propositions, and under which they have indorsed the entire direct legislation programme by a majority of six to one. In South Dakota, Utah, and Oregon direct legislation constitutional amendments have already been adopted, and in Missouri, Colorado, California, and Washington two-thirds of the present Legislatures were pledged before their election to support such amendments. The work of pledging legislators is being prosecuted with great vigor by a non-partisan "Federation for Majority Rule," with headquarters at Washington. This association, the work of which Mr. George H. Shibley is aiding and promoting, has even undertaken to apply the principle of direct legislation to National affairs by pledging Congressmen to support a plan by which the people may instruct their representatives. Nine of the sixteen Congressmen from Missouri have given their adherence to this plan. In the Missouri campaign preceding the election of the present Legislature the Democratic party indorsed direct legislation, while the Republican party remained neutral; but the referendum amendment submitted by the Democratic Legislature is now being sharply arraigned by the Republicans because of its conservatism. The Republicans charge that the Democratic majority in the Legislature has attempted to maintain partisan control by making the promised referendum to the voters needlessly difficult. In Oregon, where the radical constitutional amendment was adopted, by a vote of eleven to one, year before last, the recent Legislature adopted an act providing that the text of all laws submitted to the people, together with arguments for and against them furnished without cost to the State by responsible organizations favoring and opposing them, shall be sent by the Secretary of State to each voter in advance of the election, in order that he may be informed as to the exact nature and merits of the proposal.

In Oregon, as in Switzerland, direct legislation is to be utilized to the full as a means of popular education upon public affairs. This movement, as a whole, whatever may be thought of details, is an application of the motto, "The cure for the evils of democracy is more democracy."

#### Anthracite Combination Wins Suit

The action before the Inter-State Commerce Commission begun by William R. Hearst, the proprietor of the New York "American," charging the anthracite coal roads with maintaining unreasonable rates by means of an illegal combination, has resulted for the time being in a victory for the roads. The interesting testimony brought before the Commission, it will be recalled, was interrupted by the refusal of the roads to produce certain contracts, by which the complainant's attorney offered to prove the illegality of the conduct of the combination. One of these contracts related to the purchase of the Temple Iron Company at an exorbitant figure to bribe its owners not to build a competing railroad, and others to contracts with shippers giving them for their coal a certain percentage of the price it brought at tide-water. The Inter-State Commerce Commission ordered that these contracts be produced, and when the roads refused, the matter was brought before Judge Lacombe, of the United States Circuit Court. Judge Lacombe's decision sustains the roads in all important points—even attaching "great force" to a minor contention that Mr. Hearst had no right to prosecute a case before the Commission, as he was merely a consumer of coal and not a shipper. This is rather an alarming suggestion, for if consumers have no right to bring complaints of unreasonable freight rates, then the chief sufferers from such rates are often without a remedy under the Inter-State Commerce Law. Upon the chief points at issue between the roads and the Commission the Court decided that the contracts giving the mining companies a certain percentage of the average price of coal at tide-water were not inter-State contracts regulating freight rates, but local contracts for the purchase of coal, and that the contract with the Temple Iron

Company to prevent the building of a new coal road had no relation to the forms of pooling forbidden by the Inter-State Commerce Law. Upon the latter point, however, the Court's decision indicates that another course of action is open to the complainant. It says :

The contracts in question are parts of the machinery by which this combination prevented the building of the new road. If the defendants were being prosecuted under the Sherman Anti-Trust Act for having entered into a combination or contract in restraint of trade, the contracts would be relevant. This, however, is not a prosecution under the Anti-Trust Act, nor is the Inter-State Commerce Commission the forum before whom such a prosecution is conducted.

The Commission is naturally disappointed in the decision, and proposes to appeal to the higher court. The decision seems to emphasize the need of legislation conferring greater powers of control over inter-State commerce by the Commission.

#### Child Labor Restriction

The restriction of child labor at the South accomplished by the now famous Alabama Committee is hardly greater than the restriction of child labor in New York accomplished by the New York Committee organized a year ago. Former agitations had made the time ripe for action, and the Committee, by effectively marshaling the forces supporting its reform bills, convinced reluctant legislators that the general public demanded their enactment. With but few modifications, the entire programme of the Committee was accepted, and the following far-reaching changes made in the laws protecting the freedom of childhood :

First. The perjury of parents regarding the ages of their children made difficult by requiring the transcript of church, school, or other public record establishing the accuracy of their statements.

Second. Vacation work in cities prohibited for children under fourteen (instead of twelve as heretofore).

Third. A nine-hour limit substituted for a ten-hour limit upon the store and factory work of children under sixteen.

Fourth. The employment of messenger, delivery, and office boys under fourteen forbidden.

Fifth. The work of newsboys in New York and Buffalo prohibited absolutely for children under ten years of age, and restricted to wholesome hours by a license system for children between ten and fourteen.

Sixth. The compulsory education law made

to support the child labor law, by requiring school attendance up to the age of fourteen, instead of twelve as heretofore.

The Committee, of which Mr. Robert Hunter, of the University Settlement, is Chairman, realize that advances so far-going invite a counter attack on the part of those wishing to secure a profit from the labor of uneducated and undeveloped children. They therefore propose to continue their activities during the coming year, not only to guard the legislative gains already made, but also to see that laws secured are honestly enforced, and to ascertain to what extent the injurious forms of labor prohibited in the factories are maintained in the tenement-houses. The work is almost of National importance, for in New York City, the port of entry for nearly all our immigrants, and the stopping place for so large a portion of the poorest, there is especial danger of the development of a class of servile laborers inconsistent with American ideals. The work of the Committee is necessarily costly, and deserves the support of all believers in an educated citizenship.

#### Corrupt Labor Representatives

The two most interesting strikes in the country last week were each

affected by the evidence of corruption brought against certain of the labor leaders. In New York Samuel J. Parks, the walking delegate of the Housesmiths', Bridgemen's, and Structural Iron Workers' Union, was arrested upon the charge of extortion, and in Chicago President G. W. Walton, of the Restaurant-Keepers' Association, was deposed from his position for attempting to act as mediator between the leaders of the Waiters' Union and his own association, by getting the latter to bribe the former to settle the strike. The New York case was of exceptional importance by reason of the clearness of the evidence upon which the arrest of the walking delegate was made. This contained among other things a check for two thousand dollars given to Parks to call off a strike in the Hecla Iron Works, and cashed for him at the office of the Fuller Construction Company. This check, according to the testimony submitted, was, at Parks's request, not originally made out to him but to a subordinate officer of

one of the construction companies, and by him made over to Parks, whose indorsement is on the back of the check. In his defense Parks claims that he took the money for his union, and some of its members have shown a desire to shield him; but the judgment of the public has not been influenced by these defenses. Other charges of extortion from other firms have since been brought against Parks, and the evidence against him indicates that he has made large sums of money by selling his influence with his union to employers willing to buy it—sometimes creating difficulties in order to be bought off. The worst of the situation, however, is the evidence indicating that such bribing of walking delegates is of frequent occurrence, and that some of the largest construction companies paid these bribes as a matter of business policy. In such cases as these the labor leaders who demand the bribes are far more guilty than the employers who pay them to prevent losses, but the latter are also participants in the crime, whose consenting to it makes it more difficult for other employers to stand out against it. The evidence presented against Parks has materially aided the Building Trades Employers' Association in pressing its demand for the acceptance of a plan of arbitration in which walking delegates are denied a right to represent their unions. Nearly half of the building trades unions have seceded from the general association because the latter refused to promote a settlement. The seceding unions represent, as a rule, the more skilled mechanics. In Chicago the Waiters' Union tied up nearly all the important hotels on Friday of last week, arbitrarily refusing to arbitrate with the employers' association—organized labor declaring that it would treat only with individual employers. This semi-humorous reversal of the conditions presented by the not infrequent refusal of organized capital to treat with other than individual employees aroused public indignation, and the refusal of other unions to support the waiters made it easy for the employers to engage new help.

**A People's Forum** The recent completing of the season's work of the People's Institute of New York City offers a suitable occasion for a brief

review of the really remarkable scope of that season's activities. As our readers know, the People's Institute has been carried on for about six years under the management of Professor Charles Sprague Smith. Its main intention is to afford a People's Forum for the discussion of questions affecting the people's interests and to afford an opportunity to hear ethical addresses. The underlying principle of the work is that of the brotherhood of mankind and the unity of the interests of the whole people. In the six months of the last season one hundred and twenty lectures were delivered, with an average attendance of between five and six thousand people; classes in political science, ethics, literature, and language were carried on through a club now controlled by the Institute; a Harlem branch provided for fifty lectures, with an average weekly attendance of five hundred. These figures give only in a statistical way—and one by no means representative—the amount of work done. What the influence of the discussions may be is shown by the fact that among the votes taken at the close of the discussions and sent to Albany, as an expression of the people's feeling, was one against the proposed weakening of the tenement-house law, which stood 1,700 to 1, and one in favor of legislation about child labor, which stood 1,400 to nothing. Perhaps the scope of the Institute work may be indicated by the titles of a few of the topics taken up in the Sunday night programmes: Political Corruption (Dr. S. S. Wise); Brotherhood (Dr. A. H. Bradford); Our Philippine Problem (Dr. J. G. Schurman); The Moral Certainty of Jesus (Rev. T. R. Slicer); Christian Socialism (Dr. George Hodges); The Church and the Workingman (Rev. Merle Wright); The Art of Making a Living (Mr. L. F. Post); Arbitration (Mr. W. H. Baldwin, Jr.); The Salvation Army (Commander Booth Tucker); Abraham Lincoln (Dr. S. P. Cadman); What is Religion? (Lyman Abbott). The programme for other evenings of the week (carried on in co-operation with the Cooper Union) dealt with natural science, history, evolution, municipal administration, Shakespeare, Italian art, and many other topics, and included also excellent musical concerts. The power of such an institute,

carried on, as it largely is, through the people rather than for the people, can hardly be overestimated. It is now proposed to provide a home for the various organizations that have been engaged in this people's movement. Of the names suggested for this home, that most commonly used—the People's Palace—seems to us the least descriptive and satisfactory; the People's Forum might be better; but we fail to see why the building as well as the movement might not be properly and without confusion called the People's Institute. It is particularly pleasing to record the fact that the people who attend the meeting will themselves be called upon to assist as their opportunities allow in raising the funds, and that one appeal directly to the audience resulted in trebling the usual voluntary contributions and in eliciting single gifts from workmen which represent to them a larger proportion of their actual capital than the gift of enormous sums does to a millionaire. If this project is carried to a successful outcome, it will provide for an audience of from four to eight thousand; will have a stage suitable for the presenting of plays; will contain an organ, so that great choral works may be given; and, in short, serve as a People's Church (undenominational, creedless, and non-proselyting); a People's Forum, where men eminent in public life may render an account of their trust and all questions of real public interest may be discussed; a People's Theater; and a school of literature, art, and science.

#### The Commencement Season

Many important Commencements were held last week, foremost among them those at Columbia and at Princeton. Columbia graduated eight hundred and fifty-four students, and President Butler announced gifts amounting to half a million dollars, \$300,000 of which is to be devoted to a dormitory of the best order, \$100,000 to be used for the law school, and \$100,000 for the College of Physicians and Surgeons. The announcement was also made that South Field would be acquired by the University on October 1; and an appeal was made on behalf of the trustees for further contributions to this object. President

Wilson, speaking at the one hundred and fifty-sixth annual Commencement at Princeton, announced that he had no statement of recent gifts to make, but that the time was ripe and that during the coming year the University would reap a harvest from the beneficence of its friends. At Columbia the most important honorary degrees conferred were those of Doctor of Science on Peter Cooper Hewitt, a very promising scientist of this city; on Professor Thomson, of the University of Cambridge; the Rev. Dr. George A. Gordon, minister of the Old South Church, Boston, received the degree of Doctor of Sacred Theology; M. Jules Jusserand, Ambassador of France at Washington, received the degree of Doctor of Laws, and Governor Odell that of Doctor of Laws. At Princeton Professor Sloane was honored with the degree of Doctor of Laws, and Professors Corson and Crane, of Cornell University, with the degree of Doctor of Letters. The announcement that Professor Henry B. Fine has been appointed Dean of the Faculty at Princeton was received with profound satisfaction by the students and by all who know Professor Fine's unusual combination of scholarship, broad sympathies, and sound judgment. He has many of the qualities which have identified the position of Dean with the late Professor Murray in the minds of hundreds of Princeton men.

**The International Missionary Union** During the first week of June the twentieth annual meeting of the Union brought together at Clifton Springs, New York, over a hundred and fifty representatives of the missions of American and European societies in foreign lands. Among matters of public interest that came up, the present conditions in the Congo Free State were denounced as "Christian cannibalism," and a letter of protest against their continuance was addressed to the King of the Belgians. First-hand testimony to the atrocities there perpetrated under Belgian rule was presented from members of the Union now in Africa and from others present at the meeting. The Rev. Dr. Nassau, from the west coast of Africa, affirms that the recent barbarities, for

which the syndicate engaged in collecting rubber is responsible, exceed the worst features of the worst days of slave-hunting. The activity of Protestant missionaries in exposing these horrors is resented by a vindictive policy of the Belgian authorities in Africa, in excluding them from land essential to their work. American Presbyterians have been threatened with forcible eviction unless they vacate their station on the Kasai River, and other missionaries have been expelled from Juapa. British Baptists have rendered much service to the Congo Free State by contributions of charts and surveys on the upper Congo, but they are now refused the land privileges necessary for the extension of their work. The letter addressed to King Leopold remonstrates against this obstructive policy, as well as against the cruelties whose exposure is thus resented. The Czar's recent proclamation of religious liberty was also discussed. The English translations of it are not free from all uncertainty. It is regarded as conceding personal liberty in worship, but no opportunity for missionary effort. The opening of industrial schools in connection with other missionary work, which has been a recent subject of discussion, was presented in a large number of papers and addresses, and received hearty indorsement. The papers and addresses which occupied an entire session with the topic "Twenty Years Ago and Now" exhibited the encouragement given by political, social, and religious changes during that period. Among the speakers were Dr. Goodrich, of Peking, who preached the annual sermon, Miss Ellen Stone, and the Rev. J. H. House, of Salonika, who was so efficient in freeing Miss Stone from captivity. Dr. House's account of the complications in Turkey, where he has resided thirty years, will merit attention when published.

**Liturgical Revision** The topic most discussed in the meeting of the General Synod of the Reformed Church was the revision of its liturgy, particularly in the sacramental parts. It was proposed in the form for infant baptism to omit the words "conceived and born in sin." In the form for the communion service, instead of specifying classes of evil-doers

that are warned not to partake—"thieves, liars, drunkards, adulterers," etc.—it was proposed to warn in general terms those "who are continuing in open and unrepented sin." In the marriage service it was proposed to omit the word "obey." The result was that the two forms, old and new, will be submitted to the Classes for final action upon the question. Whatever their decision, individual ministers will probably exercise, as they do now, some liberty of variation. The annual reports show a gain of about two per cent. in membership during the year. The evangelistic movement, whose specific aim is to quicken the religious life of the Church, was reported as being strongly promoted, especially by the Western churches. Consideration of a stringent rule concerning the remarriage of a divorced person was laid over till another year.

**Congregational  
Education Society**

An advance of twenty per cent. in the receipts of a single year is an unusual thing to report, but none too much for the needs of the important educational field worked by this old Society. The Christian school, academy, and college have an influential part in the moral development of the rural regions of the far West and Southwest, by giving permanence to the results of the home missionary's work. In Utah, in New Mexico, they are indispensable in coping with degrading superstitions. One of the twenty-two academies on the Society's list was founded at Carrier, Oklahoma, when the people there were living in sod huts. Thus the primitive New England tradition is followed. The new Theological Seminary opened at Atlanta, Georgia, in 1901 is proving its peculiar adaptation to the need of the Southern field for an educated ministry. While its "Correspondence Course" reaches pastors unable to attend in person, it secures the attendance of younger men with some measure of training. Five women, all wives of ministers, have been among its students the past year. The four colleges aided by the Society all report largely increased attendance, and some students turned away for lack of room. It is strange to hear of a place in this country where, a few years ago, no Protestant could live. At that

place, however, the Congregational Education Society has recently established a school, which now contains more than three-fourths of the children of school age.

**Religious and Educational Work  
in the Turkish Empire**

The political  
unrest now  
existing in the

Balkans calls renewed attention, it would seem, to the religious and educational work chiefly accomplished there by Americans. The American Board (Congregational) has no less than 130 organized native churches throughout the Turkish Empire and Bulgaria, twenty-five of which are self-supporting. The Board has built no church in Constantinople, although it has an organization extending to several parts of the city. It owns sites in Pera and Stambul, but a firman, or permission, to build in these sections of Constantinople has been persistently refused. Even the large congregations of Armenian and Greek Protestants, who have purchased lots to build houses of worship and have funds ready for that purpose, are prohibited from doing so by the officials. The churches already standing in Constantinople have been erected under the patronage of the various foreign embassies. The most noteworthy and significant accomplishment of the various missionary boards in Turkey has been educational rather than religious. They maintain a number of colleges of a high grade and schools of all grades. Taking the Turkish Empire as a whole, their colleges are now educating about 3,000 students and the schools about 20,000. In his recently published volume, Mr. W. E. Curtis shows Abdul Hamid, the present Sultan, to have been a decided reactionary even for a Turk. Between the time of the Crimean War and the present reign, says this author, religious liberty prevailed throughout Turkey; and the Government actually encouraged Mohammedans to enter the mission schools. They came in large numbers. Abdul Hamid's policy, however, has been to restrict education. "He would keep his people in ignorance; and he has created such a condition that no Mohammedan can attend a Protestant school without rendering himself and his family the objects of suspicion and persecution of all sorts." For instance, the father may be arrested upon false charges,

sent to prison, and his property confiscated; or, as Mr. Curtis informs us, the son may be accused of "discontent" (a prevalent crime!), and be sent to prison for years; or some member of the family may be charged with membership in the "Young Turkey party"—an offense punishable by death or banishment. Mr. Curtis adds his testimony to that of others to the effect that a Christianized Mohammedan cannot live in Turkey. He is compelled to leave the country, for as soon as the fact is known he is either assassinated or thrown into prison; hence Mohammedans who will accept Christianity are very few. There is, nevertheless, a good deal of missionary work done by Protestants among the Mohammedans. One indication of this is that about five thousand copies of the Bible are sold in the Ottoman Empire every year. This would indicate a genuine interest, even if the purchasers dare not reveal their names, owing to fear of the Mohammedan priests and government officials.

**General  
Alexander McCook**

By the death last week of General Alexander McDowell McCook, there was removed one of the few remaining really great figures of the Civil War. The son of a soldier who himself was killed in the Civil War, he was one of a family of seven brothers, all of whom fought in the war, and three of whom were killed, while four attained the rank of general. The list of engagements in which General McCook took part and in which he rendered conspicuous service to his country is a long one, and includes Indian fights dating back as far as 1854, while in the Civil War he was present at the first battle of Bull Run, at the battle of Shiloh, in the siege of Corinth, and in the campaigns which included the fight at Perryville, the relief and capture of Nashville, the march to Murfreesboro', the battle of Stone River, and that of Chickamauga. He left West Point as a lieutenant in 1852, entered the Civil War as a captain, and was rapidly promoted until the end of the war, when he held the brevet rank of Major-General. After the war he was prominent in the investigation of Indian affairs as a representative of the army, was one of the delegates

sent by this country to the coronation of the Czar of Russia, and served as a member of a special committee for the investigation of affairs in the War Department after the war with Spain. His military rank in the regular army was that of Major-General.

## The Situation in Serbia

The tyrannical autocracy of the youthful Alexander of Serbia had long given sufficient justification for his deposition, though never for his assassination. A year before he reached his legal majority (eighteen) at a banquet to the Regents and Ministers, he suddenly put them all under arrest, and, declaring their duties terminated, immediately assumed control of the government. Passing over a number of lesser affronts to the people, last April he abrogated the national constitution for five minutes. He decreed the constitution's repeal, and then, as absolute monarch, annulled certain progressive laws passed under it—measures providing for freedom of meeting and of the press, above all the communal electoral law by which greater popular control of the Skuptshina or Parliament was obtained—for the *zadruga*, or family community, still obtains in Serbia; the tribes, often a hundred strong, live in a long succession of connected dwellings and are presided over patriarchally by the head of the family. Alexander further deposed the judges *en bloc*, and then restored the constitution to validity! By such acts, resulting in the disgrace and retirement of a number of his ablest counselors, Ministers, and legislators, he insulted his independently inclined people; at all events, he did enough to cause the majority to sigh for Karageorgiev rule again. Indeed, Prince Peter Karageorgiev was quite justified in saying, as he did a year ago, "Why should I have agents to incite revolt and to work in the interests of my dynasty when King Alexander is performing this task better than any one else?"

Whether Prince Peter, now elected King by the Skuptshina, will be an improvement on his predecessor remains to be seen. In the eyes of Russia he will be; he has long been a vigorous Russophile; his marriage with Princess Zorka of Montenegro was arranged by the Czar, and

their two sons have been trained at the Russian military academy. In the eyes of the rest of the world, however, despite the Prince's professed shock at the horrible deed just perpetrated, he will, if elected, occupy a blood-stained throne, gained through regicide, even though he be personally innocent. His first duty should be to insist on the condign punishment of Alexander's murderers. If King Peter does not do this spontaneously, the sovereigns of Europe ought to compel him to do so, if only as a means of self-preservation and the protection of legitimism in government. It is to be hoped that this reported statement from the Prince will be confirmed: "The nation must avenge the crime. It is imperative under a civilized constitution. A King who could overlook it or receive a crown at the hands of assassins would be their accomplice."

Will Serbia be better off nationally and internationally under the new rule? Nationally, the land could hardly have been worse off than it was under the young autocrat whose stroke-of-state last April constitutes his most prominent claim to governmental remembrance. Internationally, the status of Serbia cannot be greatly changed, although in the murder of the anti-Russian Premier, Zingar Markovic, the country has lost a notable statesman, one who stood in some such relation to Serbia as did the anti-Russian Bulgarian Premier, Stambulov, likewise foully assassinated, to his own country. The new Prime Minister, the pro-Russian Jovan Avakumovic, was at the head of a Liberal Cabinet eleven years ago, and is said to be the best-known jurist in Serbia. He will have a hard task to provide payment for the army and the civil servants. It is not so sure that he will steer a middle course between Russian and Austrian agents, each willing to aid Serbia for the present in return for an option on the future. Meanwhile, a population of 2,500,000 supports an army of 30,000, which probably consumes more time and treasure in proportion to the popular resources than does the army of any other nation. Dissatisfaction with the lack of pay gave the final impulse to the long-planned overturn of the Obrenovic dynasty. Fortunately, Serbia's standing with the Powers is not affected by this financial stringency. As with China and

Turkey, the creditors of Servia have long since imposed a Commission, which, sitting at Belgrade, without reference to the Government, receives and administers for the benefit of these creditors the net earnings of the State railways, the customs duties, the liquor licenses, the tobacco, salt, and petroleum monopolies.

If such accounts only have been permitted to go out as suit those who now have control of the Servian government, the wholesale butchery of last week calls attention, as nothing else has done, to the thin veneer of civilization in the Balkans. Indeed, coming close upon the heels of the Kishenev horror and the work of the Bulgaro-Macedonian brigand revolutionists, we are reminded that all southeast Europe—Russia on one side and Turkey on the other side of the Balkans—is still in a primitive social condition. The last doubters among the Teutonic family of nations may now feel disposed to believe that the Slavs, while energetic and patriotic, are, as a division of the human family, excitable, easily blinded by bigotry or passion, and prone to violence.

As a member of the Slav group of nations, Servia has fallen to a still lower level than that established by the army in its campaign of 1885. Disastrous as that campaign was in its revelations of a lack of fiber, the Servian army has now indulged in something worse—conspiracy, treason, and murder, not only of men but of defenseless women. King Charles of Rumania, who has been an honorary colonel in the Servian army, immediately severed his connection with an organization which, he declared, "has given such horrible proof of the lack of military honor." Still more disheartening were the illumination of the capital the night after the murder, the hasty burial of the dead, the absence of any ecclesiastical dignitaries at that service, above all, the official proclamation of the death of Colonel Naumovic, who had grossly insulted the Queen, as "an officer who died on the field of honor for the fatherland!" It would seem as if the one heroic thing in the whole revolting tale was the instant shooting of Naumovic by the young King.

Finally, allowing for the fact that the despatches are revised by the now ruling party, the Servian people seem to be singularly unmoved by the manner of

getting rid of a detested dynasty. Materially prosperous as the peasant farmers are in Servia, constituting seven eighths of the population, and ambitious as all Servians are to make their country great, there is little hope for a nation which views with apathetic indifference, if not with a silence which gives consent, so brutal a series of assassinations as this has been.

## Reading in the Home

The Department of Agriculture of Cornell University is doing practical and valuable work in endeavoring to aid farmers' families in the matter of reading; and Professor Bailey, who has not only wide knowledge of his subject but skill in popular presentation, has recently issued a little note in regard to home reading which is worth considering, not only by farmers' wives, but by wives and mothers in households of every kind. Home reading is one of the simplest and most easily worked means of education; but it is a means which is often neglected, because people do not give it thought and do not realize what can be done by a little thought. Professor Bailey, who has in mind the children of the farmer's household, emphasizes by illustration the importance of putting the best reading in their hands, and notes the fact that if a boy likes good things to look at and good things to read, it is because he has been accustomed to things of good quality on the walls and on the book-shelves of his own home. The training of the eye and the training of the mind ought to be part of the education of every home; not in a didactic fashion, nor in such a way as to tax the attention of the boy or girl, or to impose a fresh burden on father or mother, but by the much more effective way of having the best pictures on the walls and the best books on the shelves. This does not mean any additional outlay of money; it is possible to-day to secure reproductions of the best works of art in simple and excellent forms at a very moderate cost, and books were never so cheap in the whole history of literature.

The reading habit in a child ought to be formed early, and ought to be formed at home. It is not only the habit which educates, but it is also the habit which

protects. The boy who has become interested in good books is much more likely to be at home in the evening than the boy who lacks that resource. The best way to keep a boy out of temptation and to carry him safely through the dangerous period of youth is to surround him with things at home that are more attractive to him than things he finds abroad. A wise mother discovered not long ago that her boys were absent every evening, and, upon investigation, she found that they were playing whist with the men in the stable. Instead of expostulating with them, she learned to play whist herself, and to play it well, though she disliked all kinds of games. When she had mastered the game, she quietly proposed to her sons one evening to play whist with her, and it followed, as a matter of course, without any consciousness on their part, that the scene of their amusement was transferred from the stable to the library.

It is a capital suggestion of Professor Bailey's to establish the habit of reading aloud in the family. This means a distribution of the work of reading, so far as there is any work involved. It means the unity of the family circle in a common interest and occupation, and it is a capital way of evoking the freshness of thought and suggestiveness in the different members of the family. Reading aloud ought to be a universal accomplishment; as a matter of fact, it is extraordinarily rare, not because it is difficult to learn, but because so few people have ever had any practice. The habit of reading aloud in a family, once formed, trains every member to a certain excellence of expression, adds a new resource to the family life, and knits a new bond between the members of the family. When this habit has been established, it is very easy to carry out. The further suggestion of setting aside one evening in each week for family reading, if it is wisely selected with reference to other interests and engagements, is good. The evening is looked forward to after a time, and nothing of ordinary importance is allowed to interfere with it. Out of such informal readings groups of readers are often organized and neighborhoods interested, and the atmosphere of secluded communities is freshened and vivified.

These hints concern the mechanism of home education; it is assuming that only

the best material for that education will be used. Good books, to put them on the lowest possible basis, are quite as interesting as inferior books. No boy need be relegated to cheap novels because he is fond of fiction; the libraries are full of stories of adventure and achievement told in the best possible way; and it is as easy to interest a boy by putting Stevenson in his hands as to give him some writer who has no sense of form, no excellence of style, no dignity of aim. It is never necessary to read trashy books for the sake of securing the interest of an untrained or immature mind. Nothing but the best ought ever to be read in a family. It costs no more than the worst, it is far more interesting, and it is the only kind of reading that conveys any moral uplifting, or opens the imagination.

## The Ethical Significance of Money

The institution of private property has been potent for moral development up to a certain point. It has wonderfully developed the economic virtues, industry, frugality, prudence. These, however, have been developed mainly on their self-regarding side, and the morality they have fostered has been merely "embryonic." Such is the character, as Professor Bowne has observed, of the current morality of our present industrial and economic order, which stands now at the parting of the ways, where a choice is urgent between moral advance or moral degeneration. The germinant idea of the moral advance now imperatively necessary is an ethical conception of money.

That money is power no one needs to be told. Every one assents to Carlyle's saying: "Whoever has sixpence is sovereign over all to the extent of that sixpence: commands cooks to feed him, philosophers to teach him, kings to mount guard over him to the extent of that sixpence." This, however, is a non-ethical conception. Mere consciousness of power is the spring of tyranny. It must be moralized into consciousness of power as a trust. This moral advance has already taken place in the political world. The most despotic rulers of civilized States regard their power as held, not for their

Servia, and Hungary affording a charming and constantly changing panorama on each side.

The palace at Belgrade, where last week's tragedy took place, the Spectator saw just as evening was coming on. As he went down the gang-plank from the boat and suffered his passport to be rigorously scrutinized, the chief of police addressed him in English, saying he had once lived in America. He was very friendly, and ordered a special policeman to show the Spectator about the city. It is a clear, compactly built, German-like town, with cobblestone-paved streets, and a public square, at one side of which stands the massive stone palace whose courtyard so recently was filled with the blood-mad rabble of assassins. Near by are a cathedral, a theater, several attractive shops and busy little cafés; and the pleasant air of peacefulness and comfort was in sharp contrast to the tumultuous times of a few days later when the Queen was forced to fly.

There are few large towns on the Danube trip, though one has several opportunities to go ashore at quaint villages, and the Spectator remembers with special pleasure an hour spent in the late afternoon at Mohacs, an almost ideally pastoral village with grass-grown streets, trim peasants' cottages, a pretty little church, a common, and bright little flower gardens. It was on this side of the Carpathian Hills. The palms and minarets of the East had disappeared, the Oriental costumes had given place to equally picturesque but more European ones, and the brilliant sunlight caused the colors to glisten and the dark trees to stand out against the sunset sky. Great boat-loads of homecoming farmers were being ferried across the river, and stalwart, tanned, light-haired women were coming down to their cottage gates to meet them, and their toil-marked faces grew tender as the children trooped about them. It was an idyllic picture, and seemed to bestow a new and unexpected grace upon one's idea of these semi-savage, half-Oriental countries. And when one shudders at the outrages at the capitals, of murdered rulers, corrupt ministers, and plotting officers of state, a little memory of the innocent peace and

pastoral simplicity of this village, shining aureoled in the sunset light, seems to soften the scene and leaven it with a savor of good.

Another charming little incident on this peaceful Danube trip was during an evening ashore in a tiny Servian village. A throng of peasants were clustered about a travel-stained circus tent where an exhibition was just commencing. Paying about seven cents each for the best seats, we saw a modest little performance enacted evidently by one family only. The ring-master and chief acrobat was the father, his wife and daughter rode the one horse in the usual "daring feats," his two boys did some acrobatics, juggling, and trapeze acts, and his daughter danced with pretty grace and ingenuousness. It was all so simply and conscientiously done, the audience being most enthusiastic, that it was quite touching, and the Spectator felt a sudden sympathy for this hard-working family who journeyed from village to village earning their arduous living, and the little tent, with its flaring oil lamps and sawdust ring and the circle of eager spectators, formed a picture not soon to be forgotten.

After all, it is among people of this class that we find the truest phases of human nature. They know not of politics and statecraft, of intrigues and savage plotting. And the tragedy of Belgrade is perhaps but little understood and appreciated in these little Servian villages along the river Danube. The people till their fields and sell their milk and guard their flocks and pay their taxes, and one king in Belgrade is, to them, very like another. The river boats pass up and down before them, laden with foreign passengers and perhaps a group of soldiers, and carry their wool and grain and embroidered cotton to distant markets, but the river is always the same, the fields are sown and reaped, and so life passes. And the Spectator, as he sees, in memory, the figure of the boy king hastening down the station platform at Zurich to greet his exiled father, thinks of the far-reaching consequences of that meeting, and the trip up the Danube takes on a new interest to him.

# Reclaiming a Commonwealth

By Cheesman A. Herrick

**N**ORTH CAROLINA has been the very citadel of illiteracy and educational inefficiency; in a recent scientific study of education she was placed with the lowest expenditure per capita for schools, and the lowest productive power per capita. The Governor of the State has been proclaiming to his people, from the tide-water regions to the mountain fastnesses, that theirs is the poorest State in the Union in dollars and cents, and the most illiterate save one.

Knowledge of the North State's part in the Civil War is necessary to understand her subsequent educational history. Attendance upon a recent State reunion of Confederate Veterans at Greensboro' taught a little of how great had been her sacrifice, how complete her subjugation. Broken and aged men, the shadow of their former selves and of the armies in which they served, wore in their hats a "brag feather" of the "Tar Heels Brigade" which recited: "First at Bethel, Foremost at Gettysburg, Furthest at Chickamauga, and Last at Appomattox." North Carolina, it further said, furnished largely in excess of her proportion of the Confederate army; from a war population of 141,000 she sent to the field 127,000, and of these 40,000 were lost. But the loss of men was not all; infinitely greater were the wasted wealth and crushed spirits of a people proud and brave. When the war was over, the special fund for the support of schools was gone, and the school-houses were deserted. The work of Calvin Wiley, former State Superintendent of Schools, closed with Sherman's occupation of Raleigh. To Sherman war meant hell; to North Carolina it meant illiteracy.

When the war closed, the University of North Carolina was without occupation. School organization and school support had disappeared. Hopeless indeed was the outlook; material needs were considered first. It was ten years before the State University reopened her doors, but at once she began to work mightily for the educational renaissance of the State.

In the first three classes were the present Governor, Charles B. Aycock, on fire with educational enthusiasm; the present progressive State Superintendent of Public Instruction, James Y. Joyner; and the recent President of the University, Edwin A. Alderman, whose addresses always present education as the supremest need of a democracy. To these should be added the not less important work of another alumnus, Charles D. McIver, in the establishment of industrial training and as Secretary of the Southern Education Board. University of North Carolina men were leaders in the summer institute movement, and have assumed the superintendencies in one-half of the graded schools of the State. One-fifth of the present county superintendents of schools are also from the State University. Any institution of the world might well be proud of the work of the younger as well as the older alumni of the University of North Carolina. Let it be said to her credit that with her University North Carolina is working out her own educational salvation.

The educational condition from which this State has arisen is shown by the testimony of the Hon. John C. Scarborough, who became State Superintendent of Schools in 1877. There were then no institution for the training of teachers, no provisions for teachers' institutes, and the Legislature, lest the Board of Education should exercise its general powers, had by law prohibited it from securing a clerk for the State Superintendent, or allowing him any money for traveling expenses.

Down to 1900 the progress was slight. A new qualification for electors was to be fixed in that year, and the man for the occasion was the standard-bearer of the majority party, Charles B. Aycock. "Intelligence" was the watchword of the campaign; a provision before the people was that no one, white or black, coming of age after 1908, should be allowed to vote unless he could read and write. "Adopt this provision," said Aycock, "and if I am elected Governor, it will be my chief aim to give every child in North Carolina

the opportunities for an education." The wisdom of universal education was most convincingly presented, and partisan issues were largely ignored. "If you do not want more attention to education," said the frank and fearless candidate, "don't vote for me." Aycock himself made one hundred and eight speeches in that campaign, and his work was supplemented by others who took the keynote from their leader. The pledges of the candidate were widely printed in the press, but he was not content with this, and had his platform struck off in circulars and then distributed. As might have been expected, Aycock was chosen by a handsome majority, and, best of all, he was as good as his word. "Redeeming the pledges," he terms his action. In season and out he is preaching the gospel of a new educational dispensation. The State levy for educational purposes has been largely increased, and the Governor has worked directly and indirectly for additional local taxation. Marked progress has been made in the following directions: improvement in the character of the schools, the introduction of the graded school system into smaller cities and villages, and the subdivision of larger districts so that the schools will be within reach of all.

Governor Aycock loses no opportunity to speak to his people on his chosen theme, and he is most skillful in suiting his message to special occasions. One of his speeches at the county seat of a remote mountain county may be regarded as typical. Waynesville recently unveiled a memorial tablet to the founder of the town. Announcements of this had the statement that the Governor would be present and deliver an address. It was to the whole region a day of unusual interest. The inhabitants for many miles thronged the streets. As the gathering was typical of the "mountain whites," one might well be curious to see how the educational Governor would be received.

The exercises were held in the courthouse, where all available space was early occupied. One anxious visitor who happened to be a little late spent fifteen minutes in trying to get within hearing distance, and failed. The address and its effect were nothing less than wonderful. From first to last, the words were of a man who knew his subject and believed in it,

who knew his auditors and believed in them. The response showed that the hearers were convinced.

The speaker began by reference to his former appearance on that platform, and to the promise then made, that if he were elected there would be furnished the best possible education for every boy and girl in North Carolina. "My election," he continued, "made my pledge that of the people of the State, and we became co-laborers in a great work." With true art, the belief was expressed that every man in the assemblage had voted for him, or if there was one who did not, he was already sorry for it. "I come to you, then," he said, "to give an account of my stewardship, and to ask that you keep faith with me by doing your part in this stupendous work."

The occasion was made to teach its lesson; the founder of Waynesville had been a Revolutionary soldier, and the part of North Carolina in the Revolution, from the Mecklenburg Declaration of Independence to the campaigns of Greene, had a brilliant setting. Local pride was appealed to; it was west North Carolina that saved the "State of Franklin" to the Union, and Waynesville played an important part in that work. The marksmanship of Carolina riflemen received its meed of praise for service in the Second War with Great Britain, the Mexican War, and the Civil War. In courage and heroic endeavor the Governor declared his people to be second to none; "indeed," he asserted, "North Carolinians are the best people in the world when they are doing the things they have been trained to do and know how to do." The greatest shame to a North Carolinian was to be a coward, and the greatest disgrace to turn his back.

North Carolina was then boldly declared to be the poorest State in the Union, and the most illiterate save one. "God bless South Carolina!" said the speaker; "she has got us into a good deal of trouble, but she saves us the ignominy of being the most illiterate of States." Next the question was asked, "Why are you poor? Is it because you are lazy? Yes, you are lazy. Is it because you are thriftless? Yes, you are thriftless. Is it because you are lawless? Yes, you are lawless; but you are neither

more lazy nor more lawless than your neighbors. North Carolina is poor because she is illiterate. Massachusetts is rich, so rich that it sounds like a dream; but Massachusetts has furnished splendid educational opportunities. The trouble with North Carolina has been that we have too long depended upon the education of the few. In our widely separated communities it has been and is difficult to bring education within the reach of all; but the future welfare of the State depends upon this being done."

The speaker devoted himself to the proposition that the strength of a State can be adequately measured by the average intelligence of its people, dwelling on this as it affects both political and industrial life. His illustrations were most pointed and convincing. "When you buy manufactured articles," said he, "you buy them from Massachusetts, and you pay for labor worth four dollars a day; but you pay in the products of your own labor, which is worth fifty cents a day. Now, what does this mean? Why, that you must give eight days of your labor for one day of that of the men in Massachusetts. This is because Massachusetts has taught her people to work, and North Carolina has not." "Not that I urge a mere increase in wages," he continued; "doubling the wages of the people of North Carolina would not double our wealth; what we need is an increase in the efficiency of our workers. We need the application of intelligence to our work. In the Patent Office at Washington there is one patent for every 900 citizens in the United States at large, but there is but one for every 24,000 in North Carolina." Education was found to be *knowing* and *doing* something, and the man who knows and does the things that the times demand was declared to *be* something.

After disposing of universal education as a general proposition and showing the folly and shortsightedness of educating the few, the Governor came to the education of negroes. The one criticism urged against Charles B. Aycock is that he favors taxing white people to educate the blacks; but he declares that his plea for universal education in 1900 meant the education of blacks, and, further, that when he said intelligence should rule, he

did not mean to exclude the intelligent black man. Haywood County, in which the Governor was speaking, has about six hundred negroes in a total population of over sixteen thousand, and the sentiment was strong against the white support of black schools. The discussion of the matter before that audience was like handling fire over a powder magazine.

After the orator was thoroughly *en rapport* with his audience, and his sentiments had been again and again applauded, he concluded a brilliant period with the statement, "Yes, and I believe in the education of niggers!" This was uttered with measured deliberation and intense feeling. The audience was awed. The speaker paused for the effect of what he had said, and, noting disapproval, he added: "I perceive that I have created a gulf between myself and my audience; but, my fellow-citizens, you believe in the education of niggers!" The mountaineer admires courage, and probably nothing but the Governor's fearlessness saved him from being hissed.

One could but admire the skill with which Governor Aycock had captured the strongholds of ignorance and illiteracy; but when he rode full tilt at the fortifications of race prejudice, the seeming self-interest of his audience, and the traditions of over two hundred years, it was too much; one feared for the outcome. But the speaker was equal to the task. He began: "You believe in the education of a mule; he isn't worth much until you break him; he must be educated to work; he will bring no return and be a source of expense until he is trained. You take your setter pup or your foxhound and school him; he would do more harm than good until he is educated. Now," added the Governor, "I think more of a nigger than I do of a mule or a dog, and the reasons for educating a mule or a dog hold to a greater degree for educating a nigger. Intelligence and trained skill of our black men are necessary," he continued, "for the material welfare and political security of our State." This was supplemented by a discussion of true and false education, illumining and convincing. A powerful plea was entered for education of hand and mind, of white and black. The education that North Carolina needs, it was said, is that which shall train

men to keep contracts inviolate, and which shall lead them into, not away from, work.

The rest of the speech was given to removing the prejudice against local taxation for schools, and to inducing the people to make use of the educational facilities offered. The conclusion was reached, and presented with power, that "the best money spent by any community is that spent for schools," and those from the local communities were urged to go home, call a meeting, and petition the proper officials for authority to place an extra levy for school purposes. The Governor said that the compelling power of public opinion must get and keep the children in school, that the State had no compulsory education law, and could not enforce one if it did have it. A burden of responsibility was laid upon teachers to get children to school; the whole community was commissioned a vigilance committee to see that the youth did not grow up in ignorance. Withering was the arraignment of the man who whittles a white pine stick at the crossroads while his wife and children are making a living for themselves and him. "No man who respects himself," it was said, "ought to speak with such a one; tell him to go to work; to get his wife into the home and his children into the school, and then to come back and you will talk with him." The speaker hoped that he should yet see the men of North Carolina at work, the women in the homes, and the children in the schools. The conclusion of this appeal was: "Oh, I wish there wasn't a white pine stick in the universe; we have spent fifty thousand years in North Carolina whittling white pine sticks!" The

speaker also paid his respects to the man who keeps his children from school because he says it will injure them to walk a mile or two to attend, but who compels them to carry corn for three miles to mill.

The conclusion was a call for self-sacrifice and labor. "This is our business," said the Governor; "education that we do not work for will do us little good. I would not accept schools as a free gift from a millionaire; I want the people of North Carolina to pay the price of education and then they will appreciate what it means." While the call was to a difficult task, the speaker said he knew his people, and felt sure that they would not be found wanting. He had confidence in the unmixed and uncontaminated white race of North Carolina. As Governor he bade his hearers join him in placing a school within the reach of every child of the State.

The logic of the speech was convincing, the earnestness of the speaker was irresistible, the response of the audience was spontaneous. Charles B. Aycock and those he modestly represents are rehabilitating a State; they are building the broad foundations of universal education for the superstructure of North Carolina's political and economic future. Progress in recent years has been marked; already North Carolina can give a new account of herself. The per capita expenditure on education increased from sixteen cents in 1870 to fifty-one cents in 1900, while the average earning power of the people more than doubled in the decade ending 1900; but this is only the beginning. North Carolina's achievement is a light to lighten other States, as well as her own glory.

## The Hour and the Man

By Priscilla Leonard

No man can choose what coming hours may bring  
To him of need, of joy, of suffering;  
But what his soul shall bring unto each hour  
To meet its challenge—this is in his power.

# THE FOREST<sup>1</sup>

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

## XIV.—On Walking Through the Woods

WE found ourselves peering through the thicket at a little reed and grass grown body of water a few acres in extent. A short detour to the right led us to an outlet—a brook of a width and dash that convinced us that the little pond was only a stopping-place in the stream, and not a headwaters as we had at first imagined. Then a nearer approach led us past pointed tree-stumps exquisitely chiseled with the marks of teeth, so we knew that we looked, not on a natural pond, but on the work of beavers.

I examined the dam more closely. It was a marvel of engineering skill in the accuracy with which the big trees had been felled exactly along the most effective lines, the efficiency of the filling in, and the just estimate of the waste water to be allowed. We named the place obviously Beaver Pond, resumed our packs, and pushed on.

Now I must be permitted to celebrate by a little the pluck of Dick. He was quite unused to the tump-line; comparatively inexperienced in woods-walking; and weighed but one hundred and thirty-five pounds. Yet not once in the course of that trip did he bewail his fate. Towards the close of this first afternoon I dropped behind to see how he was making it. The boy had his head down, his lips shut tight together, his legs well straddled apart. As I watched he stumbled badly over the merest twig.

"Dick," said I, "are you tired?"

"Yes," he confessed, frankly.

"Can you make it another half-hour?"

"I guess so; I'll try."

At the end of the half-hour we dropped our packs. Dick had manifested no impatience—not once had he even asked how nearly time was up—but now he breathed a deep sigh of relief.

"I thought you were never going to stop," said he, simply.

From Dick those words meant a great deal. For woods-walking differs as widely from ordinary walking as trap shooting from field shooting. A good pedestrian may tire very quickly in the forest. No two successive steps are of the same length; no two successive steps fall on the same quality of footing; no two successive steps are on the same level. Those three are the major elements of fatigue. Add further the facts that your way is continually obstructed both by real difficulties—such as trees, trunks, and rocks—and lesser annoyances, such as branches, bushes, and even spider-webs. These things all combine against endurance. The inexperienced does not know how to meet them with a minimum of effort. The tenderfoot is in a constant state of muscular and mental rigidity against a fall or a stumble or a cut across the face from some one of the infinitely numerous woods scourges. This rigidity speedily exhausts the vital force.

So much for the philosophy of it. Its practical side might be infinitely extended. Woodsmen are tough and enduring and in good condition; but no more so than the average college athlete. Time and again I have seen men of the latter class walked to a standstill. I mean exactly that. They knew and were justly proud of their physical condition, and they hated to acknowledge, even to themselves, that the rest of us were more enduring. As a consequence, they played on their nerve, beyond their physical powers. When the collapse came, it was complete. I remember very well a crew of men turning out from a lumber camp on the Sturgeon River to bring in on a litter a young fellow who had given out while attempting to follow Bethel Bristol through a hard day. Bristol said he dropped finally as though he had been struck on the head. The woodsman had thereupon built him a little fire, made him as comfortable as

<sup>1</sup> Copyright, 1903, by the Outlook Company.

possible with both coats, and hiked for assistance. I once went into the woods with a prominent college athlete. We walked rather hard over a rough country until noon. Then the athlete lay on his back for the rest of the day, while I finished alone the business we had come on.

Now, these instances do not imply that Bristol, and certainly not myself, were any stronger physically, or possessed more nervous force, than the men we had tired out. Either of them on a road could have trailed us, step for step, and as long as we pleased. But we knew the game.

It comes at the last to be entirely a matter of experience. Any man can walk in the woods all day at some gait. But his speed will depend on his skill. It is exactly like making your way through heavy, dry sand. As long as you restrain yourself to a certain leisurely plodding, you get along without extraordinary effort, while even a slight increase of speed drags fiercely at your feet. So it is with the woods. As long as you walk slowly enough so that you can pick your footing, and lift aside easily the branches that menace your face, you will expend little nervous energy. But the slightest pressing, the slightest inclination to go beyond what may be called your physical foresight, lands you immediately in difficulties. You stumble, you break through the brush, you shut your eyes to avoid sharp switchings. The reservoir of your energy is open full cock. In about an hour you feel very, very tired.

This principle holds rigidly true of every one, from the softest tenderfoot to the expertest forest runner. For each there exists a normal rate of travel, beyond which are penalties. Only, the forest runner, by long use, has raised the exponent of his powers. Perhaps as a working hypothesis the following might be recommended: *One good step is worth six stumbling steps; go only fast enough to assure that good one.*

You will learn besides a number of things practically which memory cannot summon to order for instance here. "Brush slanted across your path is easier lifted over your head and dropped behind you than pushed aside," will do as an example.

A good woods walker progresses without apparent hurry. I have followed the

disappearing back of Tawabinisáy when, as my companion elegantly expressed it, "if you stopped to spit you got lost." Tawabinisáy wandered through the forest, his hands in his pockets, humming a little Indian hymn. And we were breaking madly along behind him with the crashing of many timbers.

Of your discoveries probably one of the most impressive will be that in the bright lexicon of woodcraft the word "mile" has been entirely left out. To count by miles is a useless and ornamental elegance of civilization. Some of us once worked hard all one day only to camp three miles down-stream from our resting-place of the night before. And the following day we ran nearly sixty with the current. The space of measured country known as a mile may hold you five minutes or five hours from your destination. The Indian counts by time; and after a little you will follow his example. "Four miles to Kettle Portage" means nothing. "Two hours to Kettle Portage" does. Only, when an Indian tells you two hours, you would do well to count it as four.

Well, our trip practically amounted to seven days to nowhere; or perhaps seven days to everywhere would be more accurate. It was all in the high hills until the last day and a half, and generally in the hardwood forests. Twice we intersected and followed for short distances Indian trails, neither of which apparently had been traveled since the original party that had made them. They led across country for greater or lesser distances in the direction we wished to travel, and then turned aside. Three times we blundered on little meadows of moose-grass. Invariably these were tramped muddy like a cattle-yard, where the great animals had stood as lately as the night before. Caribou were not uncommon. There were a few deer, but not many, for the most of the deer country lies to the south of this our district. Partridges, as we had anticipated, lacked in such high country.

In the course of the five days and a half we were in the hills we discovered six lakes of various sizes. The smallest was a mere pond. The largest would measure some three or four miles in diameter. We came upon that very late one

afternoon. A brook of some size crossed our way, so, as was our habit, we promptly turned up-stream to discover its source. In the high country the headwaters are never more than a few miles distant; and at the same time the magnitude of this indicated a lake rather than a spring as the supply. The lake might be Kawágama.

Our packs had grown to be very heavy, for they had already the weight of nine hours piled on top. And the stream was exceedingly difficult to follow. It flowed in one of those aggravating little ravines whose banks are too high and steep and uneven for good footing, and whose beds are choked with a too abundant growth. In addition, there had fallen many trees over which one had to climb. We kept at it for perhaps an hour. The brook continued of the same size, and the country of the same character. Dick for the first time suggested that it might be well to camp.

"We've got good water here," he argued quite justly, "and we can push on to-morrow just as well as to-night."

We balanced our packs against a prostrate tree-trunk. Billy contributed his indirect share to the argument.

"I lak' to have the job mak' heem this countree all over," he sighed. "I mak' heem more level."

"All right," I agreed; "you fellows sit here and rest a minute, and I'll take a whirl a little ways ahead."

I slipped my tump-line, and started on light. After carrying a heavy pack so long, I seemed to tread on air. The thicket, before so formidable, amounted to nothing at all. Perhaps the consciousness that the day's work was in reality over lent a little factitious energy to my tired legs. At any rate, the projected two hundred feet of my investigations stretched to a good quarter-mile. At the end of that space I debouched on a widening of the ravine. The hardwood ran off into cedars. I pushed through the stiff rods and yielding fans of the latter, and all at once found myself leaning out over the waters of the lake.

It was almost an exact oval, and lay in a cup of hills. Three wooded islands, swimming like ducks in the placid evening waters, added a touch of diversity. A huge white rock balanced the composition to the left, and a single white

sea-gull, like a snowflake against pines, brooded on its top.

I looked abroad to where the perfect reflection of the hills confused the shore line. I looked down through five feet of crystal water to where pebbles shimmered in refraction. I noted the low rocks jutting from the wood's shelter whereon one might stand to cast a fly. Then I turned and yelled and yelled and yelled again at the forest.

Billy came through the brush, crashing in his haste. He looked long and comprehendingly. Without further speech, we turned back to where Dick was guarding the packs.

That youth we found profoundly indifferent.

"Kawágama," we cried, "a quarter-mile ahead."

He turned on us a lackluster eye.

"You going to camp here?" he inquired, dully.

"Course not! We'll go on and camp at the lake."

"All right," he replied.

We resumed our packs, a little stiffly and reluctantly, for we had tasted of woods travel without them. At the lake we rested.

"Going to camp here?" inquired Dick.

We looked about, but noted that the ground under the cedars was hummocky, and that the hardwood grew on a slope. Besides, we wanted to camp as near the shore as possible. Probably a trifle farther along there would be a point of high land and delightful little paper-birches.

"No," we answered, cheerfully, "this isn't much good. Suppose we push along a ways and find something better."

"All right," Dick replied.

We walked perhaps a half-mile more to the westward before we discovered what we wanted, stopping from time to time to discuss the merits of this or that place. Billy and I were feeling pretty good. After such a week, Kawágama was a tonic. Finally we agreed.

"This'll do," said we.

"Thank God!" said Dick, unexpectedly; and dropped his pack to the ground with a thud, and sat on it.

I looked at him closely. Then I undid my own pack.

"Billy," said I, "start in on grub. Never mind the tent just now."

"A' right," grinned Billy. He had been making his o'wn observations.

"Dick," said I, "let's go down and sit on the rock over the water. We might fish a little."

"All right," Dick replied.

He stumbled dully after me to the shore.

"Dick," I continued, "you're a kid, and you have high principles, and your mother wouldn't like it, but I'm going to prescribe for you, and I'm going to insist on your following the prescription. This flask does not contain fly dope; that's in the other flask. It contains whisky. I have had it in my pack since we started, and it has not been opened. I don't believe in whisky in the woods, not because I am temperance, but because a man can't travel on it. But here is where you break your heaven-born principles. Drink."

Dick hesitated, then he drank. By the time grub was ready his vitality had come to normal, and so he was able to digest his food and get some good out of it. Otherwise he could not have done so. Thus he furnished an admirable example of the only real use for whisky in woods travel. Also it was the nearest Dick ever came to being completely played out.

That evening was delightful. We sat on the rock and watched the long north-country twilight steal up like a gray cloud from the east. Two loons called to each other, now in the shrill maniac laughter, now with the long, mournful cry. It needed just that one touch to finish the picture. We were looking, had we but known it, on a lake no white man had ever visited before. Clement alone had seen Kawágama, so in our ignorance we attained much the same mental attitude. For I may as well let you into the secret; this was not the fabled lake after all. We found that out later from Tawabinisáy. But it was beautiful enough, and wild enough, and strange enough in its splendid wilderness isolation to fill the heart of the explorer with a great content.

Having thus, as we thought, attained the primary object of our explorations, we determined on trying now for the second—that is, the investigation of the upper reaches of the River. Trout we had not accomplished at this lake, but the existence of fish of some sort was attested by the presence of the two loons and the

gull, so we laid our non-success to fisherman's luck. After two false starts we managed to strike into a good country near enough our direction. The travel was much the same as before. The second day, however, we came to a surveyor's base-line cut through the woods. Then we followed that as a matter of convenience. The base-line, cut the fall before, was the only evidence of man we saw in the high country. It meant nothing in itself, but was intended as a starting-point for the township surveys, whenever the country should become civilized enough to warrant them. That condition of affairs might not occur for years to come. Therefore the line was cut out clear for a width of twenty feet.

We continued along it as along a trail until we discovered our last lake—a body of water possessing many radiating arms. This was the nearest we came to the real Kawágama. If we had skirted the lake, mounted the ridge, followed a creek bed, mounted another ridge, and descended a slope, we should have made our discovery. Later we did just that, under the guidance of Tawabinisáy himself. Floating in the birch canoe we carried with us, we looked back at the very spot on which we stood this morning.

But we turned sharp to the left, and so missed our chance. However, we were in a happy frame of mind, for we imagined we had really made the desired discovery.

Nothing of moment happened until we reached the valley of the River. Then we found we were treed. We had been traveling all the time among hills and valleys, to be sure, but on a high elevation. Even the bottom-lands, in which lay the lakes, were several hundred feet above Superior. Now we emerged from the forest to find ourselves on bold mountains at least seven or eight hundred feet above the main valley. And in the main valley we could make out the River.

It was rather dizzy work. Three or four times we ventured over the rounded crest of the hill, only to return after forty or fifty feet because the slope had become too abrupt. This grew to be monotonous and aggravating. It looked as though we might have to parallel the River's course, like scouts watching an army, on the top of the hill. Finally a little ravine gave

us hope. We scrambled down it; ended in a very steep slant, and finished at a sheer tangle of cedar-roots. The latter we attempted. Billy went on ahead. I let the packs down to him by means of a tump-line. He balanced them on roots until I had climbed below him. And so on. It was exactly like letting a bucket down a well. If one of the packs had slipped off the cedar-roots, it would have dropped like a plummet to the valley, and landed on Heaven knows what. The same might be said of ourselves. We did this because we were angry all through.

Then we came to the end of the cedar roots. Right and left offered nothing; below was a sheer, bare drop. Absolutely nothing remained but to climb back, heavy packs and all, to the top of the mountain. False hopes had wasted a good half day and innumerable foot-pounds. Billy and I saw red. We bowed our heads and snaked those packs to the top of the mountain at a gait that ordinarily would have tired us out in fifty feet. Dick did not attempt to keep up. When we reached the top we sat down to wait for him. After a while he appeared, climbing leisurely. He gazed on us from behind the mask of his Indian imperturbability. Then he grinned. That did us good, for we all three laughed aloud, and buckled down to business in a better frame of mind.

That day we discovered a most beautiful waterfall. A stream about twenty feet in width, and with a good volume of water, dropped some three hundred feet or more into the River. It was across the valley from us, so we had a good view of its beauties. Our estimates of its height were carefully made on the basis of some standing pine that grew near its foot.

And then we entered a steep little ravine, and descended it with misgivings to a cañon, and walked easily down the cañon to a slope that took us by barely sensible gradations to a wooded plain. At six o'clock we stood on the banks of the River, and the hills were behind us.

Of our downstream travel there is little

really to be said. We established a number of facts—that the River dashes most scenically from rapid to rapid, so that the stagnant-pool theory is henceforth untenable; that the hills get higher and wilder the farther you penetrate to the interior, and their cliffs and rock-precipices bolder and more naked; that there are trout in the upper reaches, but not so large as in the lower pools; and, above all, that travel is not a joy forever.

For we could not ford the River above the Falls—it is too deep and swift. As a consequence, we had often to climb, often to break through the narrowest thicket strips, and once to feel our way cautiously along a sunken ledge under a sheer rock cliff. That was Billy's idea. We came to the sheer rock cliff after a pretty hard scramble, and we were most loth to do the necessary climbing. Billy suggested that we might be able to wade. As the pool below the cliff was black water and of indeterminate depth, we scouted the idea. Billy, however, poked around with a stick, and, as I have said, discovered a little ledge about a foot and a half wide and about two feet and a half below the surface. This was spectacular, but we did it. A slip meant a swim and the loss of the pack. We did not happen to slip. Shortly after we came to the Big Falls, and so, after further painful experiment, descended joyfully into known country.

The freshet had gone down, the weather had warmed, the sun shone, we caught trout for lunch below the Big Falls; everything was lovely. By three o'clock, after thrice wading the stream, we regained our canoe—now at least forty feet from the water. We paddled across. Deuce followed easily, where a week before he had been sucked down and nearly drowned. We opened the *cache* and changed our very travel-stained garments. We cooked ourselves a luxurious meal. We built a friendship-fire. And at last we stretched our tired bodies full length on balsam a foot thick, and gazed drowsily at the canvas-blurred moon before sinking to a dreamless sleep.

[TO BE CONTINUED]

# The New American Navy: Schley's Movement to Santiago'

By John D. Long

Secretary of the Navy from 1897 to 1902

**W**HILE the information received in Washington concerning Cervera's presence in Santiago was not absolutely trustworthy, it was sufficiently reliable to justify the taking of risk, and it was determined to order Schley to Santiago. There were some disposed to criticise this decision, but a choice had to be made between Cienfuegos and Santiago, and, regrettable as would have been the entrance of the Spanish ships into the former port, it was believed that Schley would be able to move swiftly and engage the enemy's fleet if it tried to make Cienfuegos from Santiago, or to blockade it in the latter harbor in case of its failure to escape from it before our ships arrived. Rear-Admiral Sampson was therefore informed that the report of Cervera's arrival at Santiago "might very well be correct," and he was strongly advised "to send word immediately by the Iowa to Schley to proceed at once off Santiago de Cuba with his whole command, leaving one small vessel off Cienfuegos." Sampson received this message early in the morning of May 20, and at once prepared instructions to Schley. Sampson also sent by the Iowa a memorandum from Commander McCalla, describing a good landing-place for troops at Savanilla Point, a short distance from Cienfuegos. This memorandum stated that the Cubans had perfect knowledge of what was going on inside the city, and gave information of the Spanish fortifications defending the place.

These despatches were delivered to Commodore Schley immediately after the arrival of the Iowa and Dupont. Casting, as they did, a doubt upon the presence of the Spanish ships in Cienfuegos, his efforts should have been redoubled to settle beyond question whether the enemy

were in that port. On May 22 he stood in toward the entrance of the harbor, and by means of glasses attempted to ascertain whether the Spanish ships were inside. He also sent a lookout aloft. But the harbor of Cienfuegos is so formed that it is impossible to examine it thoroughly from the sea, and he gained no information of value.

Sampson received corroboration of the report of Cervera's presence in Santiago, and at three o'clock on the morning of May 21 prepared new instructions to Schley, which were sent by the Marblehead. In this communication Schley was informed that the Spanish squadron was probably at Santiago de Cuba. "If you are satisfied that they are not at Cienfuegos," Sampson wrote, "proceed with all despatch, but cautiously, to Santiago de Cuba, and, if the enemy is there, blockade him in port." Concerned about the early delivery of the orders sent by the Marblehead, Sampson ordered the gunboat Hawk to convey a duplicate to Schley, and accompanied it by a memorandum which left no doubt of the presence of Cervera at Santiago. "It is thought that the inclosed instructions will reach you by 2 o'clock A.M., May 23," Sampson said. "This will enable you to leave before daylight (regarded very important), so that your direction may not be noticed and be at Santiago A.M. May 24."

It is now necessary to shift the scene to Schley at Cienfuegos. On the night of May 22 he noticed lights on shore, arranged in line and having the appearance of signals. These lights appeared again on the night of May 23. They were noticed by other officers of his command, and caused considerable speculation. Nothing was done to ascertain what they were, and no attempt was made to send a boat to the shore to communicate with the insurgents, who, as the McCalla memorandum stated, were in the vicinity of Cienfuegos. In view of this

memorandum, it is surprising that Commodore Schley, in official communications, should have stated that he "had no knowledge that there were any insurgents about Cienfuegos who were friendly to us until the Marblehead arrived on the 24th." Schley claims that he did not receive the McCalla memorandum by the Iowa or Dupont, though he admits it reached him at 8:15 A.M., May 23, by the Hawk. The Hawk delivered her despatches before the Marblehead arrived. In order to save time, Sampson accompanied the Hawk some eighteen miles from Key West, writing, as his flagship and the despatch-boat sped along, the instruction urgently directing Schley to hasten to Santiago. Imperative as was this instruction, the only thing done on May 23 to ascertain whether the Spanish ships were within the harbor of Cienfuegos was to permit the entrance of the British steamer Adula, which carried authenticated papers from a United States Consul authorizing her to receive as passengers any persons who desired to leave Cienfuegos. Her commander informed Schley that he had passed the lights of seven ships, which he took to be Spanish, near Jamaica, on May 18, and that a war bulletin published at Kingston announced the arrival of Cervera's fleet at Santiago on May 19, and its departure from that point on the following day. From the refugees on board when the Adula came out, Schley expected to get information as to whether or not the Spanish ships were in the harbor, but she was not permitted to leave while he was in sight.

The Marblehead, accompanied by the auxiliary gunboats Vixen and Eagle, reached Cienfuegos on May 24 and delivered despatches, and Captain McCalla, of the Marblehead, told Commodore Schley that the Spanish force was reported at Santiago. McCalla asked Schley if he had seen any lights on shore, to which Schley replied in the affirmative, and McCalla then stated that they were signals which he had arranged with the insurgents before his departure from Cienfuegos. The mistake of Schley in failing to speak McCalla thirty miles from Key West, when he knew that that officer had been off Cienfuegos, must have been apparent to him then. Receiving permission from Schley, McCalla, in the Marblehead and accompanied

by the Eagle, went to Savanilla Point. He promptly learned from insurgents there that Cervera was not in the harbor of Cienfuegos, and he sent the Eagle post-haste to convey this information to the Commodore.

Schley received the report of Commander McCalla between three and four o'clock on the afternoon of May 24. He immediately prepared despatches, which were forwarded to the Commander-in-Chief and to the Commandant of the naval base at Key West. In his message to the Department he stated that he had ascertained from insurgents that the Spanish fleet was not in Cienfuegos, and added that, as it was not practicable to coal the Texas from the collier at Cienfuegos on account of the swell, he would "proceed to-morrow for Santiago de Cuba." This delay was hardly in accord with the demands of the situation, or with the instructions he had received by the Hawk on the 23d and the Marblehead on the 24th. "Spanish squadron probably Santiago de Cuba," the despatch by the Marblehead read. ". . . If you are satisfied that they are not at Cienfuegos, proceed with all despatch, but cautiously, to Santiago de Cuba, and, if the enemy is there, blockade him in port." The instruction by the Hawk was explicit, imperative. Schley, however, reconsidered his determination to wait until the morrow. He left for Santiago about 7:45 in the evening of May 24.

Such was the course of events at Cienfuegos. We know it now, when all the facts have come to light through the investigation made by the now famous Schley Court of Inquiry in 1901. We did not know it then. Then the delay was inexplicable, and the failure to ascertain without loss of time whether Cervera was at Cienfuegos was a matter of the keenest anxiety in Washington. Each day's information, after the first report that Cervera was probably at Santiago, increased the probability of his presence there, and the certainty that, if not already coaled and ready to sail, he was straining every nerve to get in condition to leave his port of refuge before we could assemble an overwhelming force before it. For us, in the Department, it was a time of nervousness, but of hope, allied with apprehension. Cervera's escape would have been a distinct blow to our prestige. We

would have overhauled him in the end, but his first move would have been successful, and Europe would have hailed it as an American defeat.

This was the condition of mind of the Department on May 25, when it received a despatch from Schley, filed at the cable station at Mole St. Nicholas, Hayti, on the same day. This message had been brought by the Harvard, to which it had been given by the Scorpion, which had been sent by Schley in obedience to Sampson's instructions to communicate with the scouts off Santiago. Schley's despatch contained information of events of May 21 and 22. He was unable to state whether the Spanish fleet was in Cienfuegos or not, and he anticipated difficulty in coaling his ships from the collier Merrimac, laden with 4,500 tons of coal, which had been sent to him by Sampson. Commodore Remey at Key West received on May 26, and immediately transmitted to the Department, Schley's message of May 24, stating that he had learned that the Spanish fleet was not at Cienfuegos and that he would move eastward on May 25. "On account of want of coal," Schley added, "I cannot blockade."

The Department was decidedly puzzled by this second despatch. Why had Schley not obeyed the instruction sent to him by Sampson under date of May 21 to proceed to Santiago? Why, after having learned that the enemy was not in Cienfuegos, did he not move immediately upon Santiago instead of waiting until the morrow? Effort was made, but it was impossible to obtain additional information of Schley's purpose. Besides the despatches to the Department, Schley had cabled to Sampson a duplicate of his message sent by the Harvard to the Secretary of the Navy, and, on May 26, the Commander-in-Chief received from him two letters dated May 23. In one of his letters Schley stated, "Am not satisfied that the Spanish squadron is not at Cienfuegos. The large amount of smoke seen in the harbor would indicate the presence of a number of vessels, and under such circumstances it would seem to be extremely unwise to chase up a probability at Santiago de Cuba reported via Havana no doubt as a ruse. I shall therefore remain off this port with this squadron, availing myself of every oppor-

tunity for coaling and keeping it ready for any emergency." The second letter from Schley closed: "I think I have them here almost to a certainty." Commodore Schley's belief was not that of his subordinates. Lieutenant John Hood, commanding the Hawk, who brought these communications from him, advised the Commander-in-Chief that a good number of officers "do not believe the Spaniards are there at all, although they can only surmise." It was at 1 P.M. of May 27 that Sampson, who was in St. Nicholas Channel, received Schley's despatch of May 24 in regard to the establishment of the fact that the Spaniards were not in Cienfuegos and of his purpose to sail on May 25 for Santiago.

These despatches caused anxiety to the Department and Sampson. Immediately after the receipt of the message brought by the Harvard, the Department cabled to the commanding officer of that vessel, under date of May 25, directing him to proceed at once and inform Schley and also the senior officer of the scouts off Santiago that the information at hand indicated that the Spanish division was still at Santiago. Schley was to be informed that the Department looked to him "to ascertain facts and that the enemy, if therein, does not leave without a decisive action." He was advised that Cubans reported landing-places five or six miles west from the mouth of the harbor, at which insurgents would probably be found, and that from the heights surrounding the harbor every vessel in port could be seen. To relieve his anxiety concerning coal, he was informed that a fresh supply would be sent to Mole St. Nicholas, and it was suggested that his squadron and the Harvard could coal from the collier Merrimac to the leeward of Cape Cruz, in Gonaives Channel, or at Mole St. Nicholas. Sampson, ignorant of what the Department had done, also acted. On the morning of May 27 he sent the Wasp, via Cape San Antonio, to Cienfuegos, with instructions to inform Schley that "every report, and particularly daily confidential reports, received from Havana, up until May 25, state that the Spanish squadron had been at Santiago since May 19." The Flying Squadron was ordered to proceed with all possible despatch to Santiago and estab-

lish a blockade, unless upon arrival positive information were obtained of the departure of the Spanish ships, in which event it was to follow in pursuit. This despatch by the *Wasp* did not reach Schley at Cienfuegos.

Had Schley been at Cienfuegos at the time the *Wasp* arrived, he could have reached Santiago before Sampson could have done so; the latter, therefore, retained his squadron in St. Nicholas Channel. Sampson determined personally to proceed to Key West, coal, and, with the authority of the Department, sail for Santiago. Before his arrival at the naval base he communicated to Captain W. M. Folger, commanding the cruiser *New Orleans*, an instruction to convoy the collier *Sterling* through the Bahama Channel, and then, leaving her, to go with all despatch to Santiago. "You will communicate with Commodore Schley," Captain Folger was instructed, "and direct him to remain on the blockade of Santiago at all hazards, assuming that the Spanish vessels are in that port." It was suggested to Schley that, to prevent the escape of the enemy's division, the *Sterling* should be sunk across the narrowest part of the channel leading into the harbor. "Inform Commodore Schley," Sampson added, "that the details of this plan are left to his judgment. In the meantime he must exercise the utmost care that none of the vessels already in port are allowed to escape, and say to the Commodore that I have the utmost confidence in his ability to carry this plan to a successful conclusion, and earnestly wish him good luck." The idea of sinking a vessel across the entrance of Santiago de Cuba had been considered by the Naval War Board and had received its approval. With the mouth of the harbor closed, the escape of Cervera would have been impossible, and the capture of his ships could have been effected by the army, a division of which the War Department was at the time preparing to embark.

The Navy Department believed with Sampson that on May 24 the Flying Squadron had arrived off Santiago. But on May 26 we learned that not until May 24, three days after May 21, the date reported by Schley as that of his arrival off Cienfuegos, though May 22 was the

date upon which he established a blockade, had the Commodore finally and definitely ascertained that the Spanish division was not in that port, and this notwithstanding the receipt of information from Washington and the Commander-in-Chief indicating that it was at Santiago. And when satisfied that Cervera was not at Cienfuegos, he cabled that he would sail for Santiago, not immediately, as his instructions required, but the next day, and that, on account of the short coal supply of his ships, he could not blockade Santiago! There was no fast scout available, but on the chance of one soon touching at Mole St. Nicholas, the Department cabled on May 27 to that point for delivery to the next American man-of-war to arrive:

Proceed immediately and deliver following to Schley: The most absolutely urgent thing now is to know positively whether the Spanish division is in Santiago de Cuba harbor, as, if so, immediate movement against it and the town will be made by the navy and division of about 10,000 United States troops, which are ready to embark. You must surmount difficulty regarding coaling by your own ingenuity and perseverance. This is a crucial time, and the Department relies upon you to give quickly information as to Cervera's presence, and to be all ready for concerted action with the army. Two colliers have been ordered to St. Nicholas Mole, and your ships might coal singly there, or in Gonaives Channel, or to leeward of Cape Cruz. Sampson will convoy the army transports, probably coming around by the Windward Passage. Yankee will join you and the *Minneapolis* will go north. Cervera must not be allowed to escape.

LONG.

That the apprehension of the Navy Department and the Commander-in-Chief regarding the prospective flight of the Spanish division from Santiago de Cuba was well founded is demonstrated by the official despatches of Admiral Cervera, which were published after the war. On May 23 he was advised that twelve hostile ships were off Cienfuegos and that the *Indiana*, *New York*, and other vessels had gone from Havana to the windward, leaving only four gunboats on the blockade of that port. Later in the same day Cervera received secret information of the positions of our ships. He determined to sail from Santiago at daybreak the following morning for San Juan, Porto Rico, but it was decided at a subsequent meeting of the Commander-in-Chief and his captains that,

"owing to the location of the hostile forces and their number and strength, it is considered impossible to carry out said plan." Contributory to this decision was the fact that four American ships lay off the harbor, the strength of which Cervera did not know, but which we knew to be simply vulnerable scouts. Having defective instruments and inadequate resources, Cervera lost heart, and on May 25 he cabled to Madrid that his division was blockaded. Yet Schley had not arrived. Cervera felt, however, that he could hope to gain little by leaving Santiago. "If another opportunity presents itself," he wrote on May 25, "I intend to try and take advantage of it, but as I cannot hope with these scant forces to attempt any definite operations, it will only be a matter of changing this harbor for another where we would also be blockaded." On May 26 Cervera again convened his captains, and it was unanimously decided that the squadron should sail in the afternoon for San Juan. In the meantime three hostile ships were sighted, and a pilot expressed the opinion that in going out the Colon might sustain injury on account of her draft by striking a flat rock in the channel. Five of Cervera's captains voted against departure; two urged that they should immediately sail. Cervera approved the opinion of the majority, because he did not consider the circumstances so extreme as to make it necessary to risk the loss of one of his ships.

Cervera's hesitation was unknown to the Department and to our officers. We believed him feverishly working to repair and coal his ships, as indeed he was. The coal supply of our scouts off Santiago was running low. If Schley arrived off that port and failed to stay, there was danger, it was believed, that the United States would be without a single vessel in its vicinity to make report of Cervera's departure. Consequently we would be absolutely in ignorance as to the direction he had taken, and the problem of search would have to be worked out all over again.

It is advisable now to follow Schley again. He had been instructed by order of May 21 to "proceed with all despatch, but cautiously, to Santiago de Cuba." On the same day Sampson had advised him to leave Cienfuegos before daylight May

23, so that he could arrive at Santiago on the morning of May 24. Leaving the gunboat Castine to maintain the blockade at Cienfuegos, Schley sailed from that point about 8 P.M. of May 24, his heavy ships in column of vessels, with the lighter ships on his flanks. Heavy rolling caused the forward compartment of the gunboat Eagle to fill with water, causing reduction of her speed, and the weather on the following day, May 25, was bad. In a battle with the Spanish division the little Eagle would have been of no value, and Commodore Schley, in view of the paramount necessity of getting in contact with the Spanish fleet, should have left her to take care of herself and have gone on with his fighting ships. Instead, he reduced the speed of the squadron in order to permit the Eagle to keep up with it. On the following day, when the weather had moderated, and the Eagle's compartments had been freed of water, he ordered her to Jamaica.

The orders of Schley were to go to Santiago de Cuba. He failed to obey them promptly. At 5:30 P.M. of May 26 he was twenty-two miles to the southward of the port named in his instructions. The distance Sampson expected Schley to cover within thirty hours actually occupied more than forty-five hours, and even then the Flying Squadron was not at Santiago. The scouts Minneapolis, Yale, and St. Paul joined Schley at this time, and a few minutes later the Commodore was informed that an accident had occurred to a part of the engine of the collier Merrimac. Captain Charles D. Sigsbee, who commanded the St. Paul, informed Schley that the scouts knew nothing positively or absolutely about the movements of the Spanish fleet, but he says he recited certain events to show that there was a probability that Cervera was in Santiago at the time. Whether unnecessarily uneasy about the coal supply of his vessels or because of the accident sustained by the Merrimac, which increased the difficulty of coaling, though the conditions of wind, sea, and weather were sufficiently favorable for this operation, or for what inexplicable reason, Schley, at 7:45 P.M. May 26, signaled to his squadron: "Destination, Key West, via south side of Cuba and Yucatan Channel, as soon as collier is ready; speed nine knots." The Yale took the

Merrimac in tow, and the squadron actually turned back from its almost reached goal and proceeded westward until 11:15 P.M., when, the tow-lines having parted, it stopped and drifted until 3:40 P.M. of May 27. While the squadron was lying at the drift of wind and current, the Harvard arrived at 9:30 A.M. of May 27, and delivered the Department's despatch above quoted, stating that all indications pointed to the presence of the Spanish ships in Santiago de Cuba, which he was directed to confirm. Schley answered this message three hours later by a cablegram which caused consternation when it reached the Department on May 28. This message may be classed as one of the most infelicitous in history, and it is worth quoting:

"Merrimac's engine is disabled, and she is helpless; am obliged to have her towed to Key West. Have been absolutely unable to coal the Texas, Marblehead, Vixen, and Brooklyn from collier, owing to very rough seas and boisterous weather since leaving Key West. Brooklyn is only one in squadron having more than sufficient coal to reach Key West. Impossible to remain off Santiago in present state of coal account of the squadron. Not possible to coal to leeward of Cape Cruz in summer owing to southwest winds. Harvard just reports to me she has only coal enough to reach Jamaica, and she will proceed to Port Royal. Also reports only small vessels could coal at Gonaives or Mole, Haiti. Minneapolis has only coal enough to reach Key West, and same of Yale, which will tow Merrimac. It is to be regretted that the Department's orders cannot be obeyed, earnestly as we have all striven to that end. I am forced to return to Key West, via Yucatan Passage, for coal. Can ascertain nothing certain concerning enemy. Was obliged to send Eagle to Port Antonio, Jamaica, yesterday, as she had only twenty-seven tons of coal on board. Will leave St. Paul here. Will require 9,500 tons of coal at Key West."

I remember well the receipt of this despatch. I was with President McKinley at the army review at Camp Alger. His face fell when I showed it to him. It was incomprehensible—the first flinching of the campaign. It was the darkest day of the war. It was the lack, not of personal courage, but of that unswerving

steadiness of purpose and nerve which is the essence of supreme command, and of which Farragut is an example. Undoubtedly it is a fair criticism on the Department that Schley was not relieved at once and an inquiry ordered. But it was not then known just what his situation was, and it was taken for granted that the Commander-in-Chief, Sampson, who was near at hand, would take proper action, as, had he been senior in service, he would probably have done.

The situation of his command appeared at the Schley Court of Inquiry in 1901 not to have been as Schley reported it. At noon on May 27 his vessels had coal enough to have remained on blockade duty off Santiago de Cuba—the Brooklyn for 26 days, the Iowa for 16 days, the Massachusetts for 20 days, the Texas for 10 days, the Marblehead for 5 days, and the Vixen for 23 days, and then they would have had sufficient fuel to reach Gonaives or Cape Cruz, where they could have refilled their bunkers from the Merrimac, which contained 4,350 tons of coal. The amount of coal required to have completely supplied these ships was 2,750 tons. Schley must have known when he sent his despatch that the Iowa, Castine, and Dupont had coaled at Cienfuegos on May 23, and the Massachusetts and Castine on May 24. Permission had been asked by the Texas on May 23 to coal, but she was refused, and ordered to coal on the following day. This order was subsequently revoked. Indeed, the Texas and Marblehead did actually coal from the Merrimac at sea off Santiago on the evening of May 27 and the morning of May 28; and the Massachusetts and Vixen on May 29, the Brooklyn and Iowa on May 30, and the Brooklyn, Texas, and Marblehead on May 31. Thus there were but two days—the 25th and the 26th—when no coal was transferred from the collier to the men-of-war, and the failure to take fuel on these days was not due wholly to rough seas and boisterous weather or to the helplessness of the Merrimac, but to the fact that the squadron was under way. Captain McCalla, when at Cienfuegos, had informed Commodore Schley that coaling operations could be conducted in the vicinity of Cape Cruz, and that no difficulty would be experienced in coaling on the south

side of the northern promontory of Hayti. Yet, in spite of the fact that there was ample coal in the bunkers of his fighting ships, that attached to his command was a collier carrying an abundant supply of fuel, that the weather was not too rough for coaling his vessels, and, finally, that near by there were points sheltered from the wind at which coaling could be conducted with safety, Schley cabled the Department: "It is to be regretted that the Department's orders cannot be obeyed, earnestly as we have all striven to that end." Another phase of Schley's action which seriously concerned the Department was his statement that the Harvard would proceed to Port Royal, the Minneapolis to Key West, and that the Yale would accompany him, leaving only the St. Paul, with a depleted coal supply, off Santiago. We did not know until later that for nearly twenty-four hours—that is, from 6 P.M. May 26 to 5 P.M. May 27—not a single scout was off the harbor of Santiago. But we did know that the St. Paul could not keep touch with the Spanish fleet if it attempted to escape, and make frequent reports to the Department, and our plan of constantly following Cervera was in danger of being frustrated by the orders of the Commander of the Flying Squadron.

Schley had been instructed that the Department was looking to him to ascertain whether the Spanish division was at Santiago. He excuses his action in deliberately turning his ships away from that port and starting back for Key West on the ground that Captain Sigsbee told him he had not seen the enemy, and that a pilot, whom Captain Sigsbee and Schley himself did not at first fully trust, expressed the opinion that the Spanish ships could not enter the harbor because of their length. Captain Sigsbee told Schley that he had captured a collier bound for Santiago with coal for Cervera, and this certainly indicated that, if the Spanish division were not at Santiago, that port was its destination. Whatever the opinions expressed by the commander of the scout and by the pilot, however, they were based upon negative information, and Schley's first duty was to have established beyond the shadow of a doubt whether Cervera was in the harbor.

The squadron, again, strange to say,

resumed its retrograde westward course at 3:40 P.M. of May 27, and steamed thirty-three miles, stopping once more at 7:15 P.M., when the Texas went alongside of the Merrimac and coaled. The squadron again drifted until 1 P.M. of May 28, when Schley signaled to the fleet to turn again and proceed to Santiago. He arrived at a point seven miles south of the harbor at 6 P.M. May 28, and established a blockade. Had he obeyed the orders of Sampson, he would have reached that point on the morning of May 24. The result of his vacillation and lack of push was that Cervera had had several days in which to coal and make repairs to the engines of his ships. In the early morning of May 29, the day following Schley's arrival, he discovered the Colon and Teresa and two torpedo-boat destroyers moored inside of the Moro.

Schley's arrival at Santiago and his discovery of the Spanish vessels were not known in Washington until late in the evening of May 29. The receipt of his despatch announcing his purpose to go to Key West imposed upon the Department the necessity of taking action which would repair the grievous, and it might be the disastrous, mistake he had made. Following the receipt of his message, the Department cabled to the Harvard for delivery to Schley, "as soon as possible: utmost urgency," an instruction to remain off Santiago unless it were unsafe to do so or unless the Spanish division were not there. To Rear-Admiral Sampson a despatch was sent giving the contents of Schley's cable, and asking him how soon after arrival of Schley at Key West he could reach Santiago with the New York and Oregon, Indiana, and some lighter vessels, and how long he could blockade that port. Sampson promptly replied. "Answering the first question, three days. I can blockade indefinitely. Think that I can occupy Guantamo. Would like to start at once with New York and Oregon. Do not quite understand as to the necessity of awaiting arrival of Schley, but I would propose meeting and turning back the principal part of the force under his command." Before the New York and Oregon could leave Key West, another despatch came from Schley saying that he would hold on. But though he also reported

that he had sighted only four of the Spanish ships, it was believed that the naval base at Key West could be safely left undefended, and that the battleship *Indiana* and the monitor could prevent the remaining Spanish ships, if they were not at Santiago, from entering Havana. Schley was advised that Sampson was coming, and he was urged to locate the missing armored cruisers. Though the *Colon* and other vessels of the Spanish squadron were discovered lying in the entrance of the harbor on the morning of May 29, it was not until 1:30 P.M. of May 31 that an attempt was made to capture or destroy them. The Department's orders to the Commander-in-Chief, a copy of which had been furnished to Schley, but which he denies having received, authorized him to expose his ships to the heaviest guns of land batteries if there were Spanish vessels of sufficient military importance protected by these guns to make an attack advisable. Instead of approaching within effective range of the enemy, Schley signaled that the Massachusetts, Iowa, and New Orleans should open fire at a range of 7,000 yards, and this range increased until it was 11,000 yards. At this great distance, our fire, as well as the return fire of the Spanish vessels and batteries, was ineffective. The chance of hitting the enemy was still further diminished by the speed—ten knots—of the American men-of-war and the brief time—four minutes—each had to sight and fire its guns at the targets, partially protected by the bold headlands of the harbor.

Sampson arrived off Santiago at 6 A.M. on the morning of June 1. "The importance of absolutely preventing departure of Spanish squadron of paramount importance," he telegraphed to the Department from Key West on May 28, "and demands the prompt and efficient use of every means." The disaster which Cervera had predicted as far back as 1897 was looming portentously upon the Spanish horizon. Upon arrival at Santiago, Sampson established a blockade so strict that the Spanish sentinels could hear the cries of the watch on the American ships. Cervera declared that, with the harbor entrance blockaded as it was during that fateful month of June, it was disaster to leave. "It was absolutely impossible to go out at night," he wrote after the war,

"because in this narrow channel, illuminated by a dazzling light, we could not have followed the channel and would have lost the ships, some by running aground, others by colliding with their own companions. But, even supposing that we had succeeded in going out, before the first ship was outside we should have been seen and covered from the very first with the concentrated fire of the whole squadron."

It is easy, in the light of the foregoing facts, to see the propriety of the opinion of the Schley Court of Inquiry, which upon the points testified to was unanimous except as not very materially modified in one or two minor details by Admiral Dewey in the memorandum which he submitted with that opinion. This modification, as will be seen, relates to the degree of despatch with which the passage from Key West to twenty-two miles south of Santiago was made, to the steamer *Adula*, and to the blockades of Cienfuegos and Santiago. In all other respects the opinion of the Court stands on the record as unanimous.

The opinion of the Court is as follows:

Commodore Schley, in command of the Flying Squadron, should have proceeded with the utmost despatch off Cienfuegos, and should have maintained a close blockade of that port.

He should have endeavored on May 23, at Cienfuegos, to obtain information regarding the Spanish squadron by communicating with the insurgents at the place designated in the memorandum delivered to him at 8:15 A.M. of that date.

He should have proceeded from Cienfuegos to Santiago de Cuba with all despatch, and should have disposed his vessels with a view of intercepting the enemy in any attempt to pass the Flying Squadron.

He should not have delayed the squadron for the *Eagle*.

He should not have made the retrograde turn westward with his squadron.

He should have promptly obeyed the Navy Department's order of May 25.

He should have endeavored to capture or destroy the Spanish vessels at anchor near the entrance of Santiago Harbor on May 29 and 30.

He did not do his utmost with the force under his command to capture or destroy the *Colon* and other vessels of the enemy which he attacked on May 31.

By commencing the engagement on July 3 with the port battery and turning the Brooklyn around with port helm Commodore Schley caused her to lose distance and position with the Spanish vessels, especially with the *Vizcaya* and *Colon*.

The turn of the Brooklyn to starboard was

made to avoid getting her into dangerous proximity to the Spanish vessels. The turn was made toward the Texas and caused that vessel to stop and to back her engines to avoid possible collision.

Admiral Schley did injustice to Lieutenant-Commander A. C. Hodgson in publishing only a portion of the correspondence which passed between them.

Commodore Schley's conduct in connection with the events of the Santiago campaign prior to June 1, 1898, was characterized by vacillation, dilatoriness, and lack of enterprise.

His official reports regarding the coal supply and the coaling facilities of the Flying Squadron were inaccurate and misleading.

His conduct during the battle of July 3 was self-possessed, and he encouraged, in his own person, his subordinate officers and men to fight courageously.

GEORGE DEWEY,  
Admiral, U. S. N., President,  
SAM. C. LEMLY,

Judge-Advocate-General, U. S. N., Judge-Advocate.

The memorandum of Admiral Dewey is as follows:

In the opinion of the undersigned the passage from Key West to Cienfuegos was made by the Flying Squadron with all possible despatch, Commodore Schley having in view the importance of arriving off Cienfuegos with as much coal as possible in the ships' bunkers.

The blockade of Cienfuegos was effective.

Commodore Schley in permitting the steamer Adula to enter the port of Cienfuegos expected to obtain information concerning the Spanish Squadron from her when she came out.

The passage from Cienfuegos to a point about 22 miles south of Santiago was made with as much despatch as was possible while keeping the squadron a unit.

The blockade of Santiago was effective.

Commodore Schley was the senior officer of our squadron off Santiago when the Spanish Squadron attempted to escape on the morning of July 3, 1898. He was in absolute command, and is entitled to the credit due to such commanding officer for the glorious victory which resulted in the total destruction of the Spanish ships.

GEORGE DEWEY,  
Admiral, U. S. N., President.

With regard to the final paragraph in the above memorandum of Admiral Dewey as to the question of command in the later battle of Santiago, July 3, 1898, on which it will be noted that the full Court in its opinion expressed no view, and reference to which more properly belongs to a later chapter, this question not only had not been before the Court, but the Court, through Admiral Dewey himself as its spokesman, had emphatically refused to consider it or hear evidence with regard to it. That, in face of this fact, he should, unlike his associates, pass judgment upon it, has been a subject of surprise and criticism, as it left him in the position of agreeing with his associates on all the more important matters which were considered by him and them, and of then expressing an opinion, while his associates properly expressed none, on a matter vital to a brother officer on which the full Court had refused to hear any evidence on either side.

There have been few more notable trials than that before this Court of Inquiry. It was composed of three distinguished naval officers, Admiral Dewey and Rear-Admirals Benham and Ramsay. It lasted from September 12 to the middle of December, 1901. Judge-Advocate-General Lemly, assisted by the Solicitor of his office, Mr. E. P. Hanna, both of whom made able arguments, put in with great care and fairness the evidence of the witnesses summoned by them, while Admiral Schley was represented with distinguished animation and force by Hon. Isidor Raynor, a leading member of the Baltimore bar. The attendance was large and the public interest great. An appeal was taken to the President, but without changing the result, and the finding and opinion of the Court therefore stand as the historical record.

Unnoticed, saving each to each,  
The look, the touch,  
The voiceless language, silent speech,  
That mean so much.

# The Jacob Tome Institute

By Charles de Kay

**E**NDOWMENTS in aid of education form the salient features of our modern life, but usually the aim of the donor is to found, if not an entire college or university, something that subserves the higher education, a dormitory at least, a library or laboratory at some old place of learning. Less ambitious views had the late Jacob Tome. Before he died he founded for his fellow-citizens a school of secondary education at Port Deposit, Maryland, and by his will he left the bulk of his large fortune to establish a very great school, but not a college, non-sectarian and democratic in spirit. It was placed in the hands of nine trustees, constituting a board, of which his widow is the President. The estate amounts to two million dollars, while nearly a million have been spent on preparing the grounds and erecting such buildings as are needed for the present.

As one may gather from the portrait of Jacob Tome, he was a quiet, steadfast man of business, punctilious in keeping his engagements and utterly unpretending in his views and aspirations. He was one of the dependable men who bear fortune and mishap with equanimity and when they die surprise even their friends at the public spirit and far-sightedness concealed under a reticent exterior.

Of course one thinks of the big public schools of England, like Eton and Harrow; or of the gymnasia in Germany and the lycées in France. But it is doubtful if Jacob Tome intended his millions to be used in a foundation like any of these. Certainly it was not especially his thought to establish a preparatory school for universities. Rather was his idea, without excluding the preparation for college, to afford a place where the boy intending to embrace a commercial career might be prepared for his life-work and at the same time gain some of the advantages that a university offers. His conception of the Jacob Tome Institute is not easy to grasp; it may be that he never clearly defined it in his own mind; but so far as one can see, it was a school that was neither exactly business college nor preparatory

school, but an educational center partaking of both, on graduating from which a boy would be prepared to enter active life or, in some special school, work for a profession, just as he chose.

Undoubtedly his friendship with Johns Hopkins, of Baltimore, did much to turn his attention into such channels. At times one is tempted to believe that he was considering something which might take the place of an undergraduate department, while Johns Hopkins University is in the main a university where graduates carry forward special studies. Given his purpose to reinforce the educational advantages of his State and the seaboard States in general with an institute that might aid education where it is weakest, no more picturesque, no more convenient place could have been chosen than the higher lands just by Port Deposit, where Mr. Tome lived.

A little town of one street between the edge of the Susquehanna and the hills, Port Deposit was at first waked from its slumbers by the building in 1889 of the old school-house by Mr. Tome, but has now leaped into fame by the erection on the higher land above of a series of buildings which many a college might envy. The architects, Boring and Tilton, and the landscape engineer, Charles W. Leavitt, Jr., have had the rare pleasure of laying out an Institute from the start, having no earlier buildings to consider, no streets or avenues or private property to humor in their plans. From the bluff where the residence of the principal stands one gazes off, down the broad Susquehanna, past a historic island and the railway bridges, toward Havre de Grace and the Chesapeake. Up-stream the eye follows the winding of the river across a cluster of small islands. Inland there is a rolling country diversified with groves of trees and pointed here and there with the strong, dark exclamation of the cedar, where some farmer has provided against the need of posts in the following generation. Hill and dale and blue distant ridge and solemn gleaming river form a combination of landscape beauties which impressed Jacob Tome with the feeling that here was a

fitting spot for the largest institute, a spot where Nature might play her part in education, and where, on the merely practical side, the thousands who should enjoy the privileges his wealth had prepared for them would live in most healthful surroundings. For, on the one side, the space for land sports is without limit, and, on the other, the river and estuary furnish all the water sports of summer and winter that any one can reasonably demand.

Conspicuous in the view is Palmer Island, just below Port Deposit, before the Susquehanna enters the Chesapeake. Singularly enough, that island was chosen two hundred and eighty years ago by Edward Palmer, of Warwickshire, a graduate of Oxford, for the site of a school to enlighten the colony of Virginia, the foundation to be called *Academia Virginien-sis Oxoniensis*, as we learn from his will directing that, in default of heirs, it shall remain for that purpose. The location on an island was probably suggested on the principle of safety from Indians; for while the local Indians of Maryland, Virginia, and Pennsylvania were not very dangerous, the war parties of the Five Nations from the distant region of the Great Lakes used the Susquehanna as one of their main highways for raids on the coast Indians. And if, like so many other plans and projects in colonial times, the generous idea of Edward Palmer never came to fruition, if this Academy which would have antedated Harvard College never was founded after all, it is pleasant to think that the great fortune amassed by Jacob Tome two and a half centuries later should be expended to establish a school that fills a gap in the great educational fabric of the United States in the present day.

The location of the Tome Institute is ideal, not only for its natural beauty and healthfulness, but for its accessibility. It draws its pupils from the neighbor States of New Jersey, Pennsylvania, Delaware, and Virginia, being situated in Cecil County, Maryland, near stations on the Philadelphia and Baltimore Central. It is forty miles from Baltimore, sixty from Philadelphia, and eighty from Washington. Four miles off is a station on the main line of

the Pennsylvania Railroad, giving quick connection with New York. There are also daily steamers to Baltimore from Port Deposit.

To those who have seen the plateau above Port Deposit when all was rolling pasture and farmland, the change is difficult to realize as one stands in a formal garden with balustrades bearing vases full of shrubs and looks northward to Memorial Hall, a stately building of granite and Indiana limestone, with its pillared portico, strong roof-line, and cupola rising in octagonal stages to the circular, eight-columned belfry; then looks westward to the Director's residence, with its four-columned porch outlined in profile against the bold wooded bank of the Susquehanna opposite Port Deposit, and then, turning eastward, sees the less severe architecture of the Inn, a wooden structure with its semicircular piazzas jutting out from the center of the building.

Although the Institute is now in its ninth year, formal dedicatory services were held only last month. Nearly three thousand people attended the celebration, which was an important event in the history of American secondary education. Several speakers of National prominence took part in the exercises, and over fifty educational institutions were represented by delegates. Notable among the speeches was the tribute to the founder of the Institute rendered by Senator McComas. Provost Harrison, of the University of Pennsylvania, in his remarks, pointed out that Tome Institute, while it had a financial capitalization exceeded by only nine out of the nearly five hundred colleges and universities of the United States, "had sprung into being ready for its perpetual and beneficent work without the sore struggle which almost every school, college, and university has had to make." President Denny, of Washington and Lee University, urged better co-ordination between the universities and the secondary schools, and predicted great usefulness for Tome Institute in this direction. The exercises closed with the unveiling of a life-size portrait of the founder.

## Lanier's "Shakspeare and his Forerunners"

WHILE Sidney Lanier has been the occasion for a cult to a small circle of admirers, the world at large has been deaf to his music and his theories. This is the habit of the world toward a man who does not deliver his message in the world's terms and language. A recent critic has declared that Lanier was "the most memorable man of letters as yet produced by the South," adding thereto, however, that a lack of articulate expression debars him from the honors of lofty distinction. Every reader of "The Marshes of Glynn" and a few other poems by Lanier must feel that at times this Southern poet touched and grasped the high-hanging fruit which is the nutriment of real greatness; yet a perusal of most of his other work, both in poetry and criticism, will convince him that, in the main, Lanier's reach exceeded his grasp. His ears heard more than his lips could adequately report, at least for the average man. So he remains the object of homage for a few.

On the other hand, there was real greatness in this man's life. No one can read the simple record of that noble career without profound emotion; it recalls the tragic story of Keats. The breath of life came into the body of Lanier with pain, and it went forth from it vibrant with music and passionate beauty. Like Keats, he wrote with one hand and warded off death with the other; and like him, too, he had that peculiar sensitiveness of temperament which, while inspiring, is also exhausting. The voice of the violin sent him into trances from which he awoke with distressed nerves. Nevertheless, he was no weakling, no "sentimental bawling." He fought as a private all through the long years of the Civil War, and with a singleness of devotion that refused advancement from the ranks. After the war had closed, he turned to scholarship and literary creation with equally militant zeal. His chronic disease, however, slowly got the better of him. "It was daily a question of his ability to stand on his

feet," writes a friend. His "Sunrise" was written when his hand shook and his temperature was at a hundred and four; and his last lectures were delivered with gaspings for breath to an audience momentarily fearful of a collapse. Nevertheless, he preached his gospel of the "holiness of beauty" to the end with enthusiasm; until, amid the shadows of death, to apply his phrase for another, "he caught a crystal cupful of the yellow light of sunset, and, persuading himself to dream it wine, he drank it with a sort of smile."

His lectures on Shakespeare and his predecessors, which have long lain in manuscript, are now printed and offered to us in two large, handsome, and aptly illustrated volumes. Knowing the circumstances of their composition and delivery, he would be a heartless critic who should apply to these remains the rigorous standards of criticism. Candor must, indeed, admit that, in their general treatment, they are an inconsequent mixture of things technically abstruse and things patently obvious. The development is shifting and persistently digressive, as if the lecturer were unable to carry out his programme and were forced to resort to substitutions. The excerpts and the selections are too copious for a scholarly treatise. But, for all these defects in the broad plan, the lectures are full of unusual and acute suggestions. The reader should take up the volumes in the mood of a prospecting gold-seeker, and if he will be content to examine a great deal of low-grade ore, he will, as a reward for his patience, come upon a great many rich nuggets of precious metal.

Lanier has a definite and individual conception of Shakespeare. To him Shakespeare and the Elizabethans were literary passions. "They are so noble, so manful, so earnest. . . . Like the good girl in the fairy tale who spoke so kindly to the old woman at the well, every time this Elizabethan age opened its mouth there fell from it a diamond, a rose, and a pearl." Shakespeare he regards as the culmination of England's awakening mind, and his purpose, par-

<sup>1</sup> *Shakspeare and his Forerunners: Studies in Elizabethan Poetry and its Development from Early English.* By Sidney Lanier. Illustrated. In 2 vols. Doubleday, Page & Co., New York.

tially achieved, is to show the process of the awakening from the days of Beowulf through the long centuries of twilight and semi-civilization. The early poets, he writes, molded our ancestors, and we can no more escape their influence than we can that of heredity. We have, of course, advanced beyond them in our conceptions with the awakening of our minds. Note, for example, the difference between the Anglo-Saxon view of nature and our own. In Beowulf's time nature was a waste of dreary marshes, joyless woods, and monster-haunted caves, in which, to the imagination, lurked Grendel and his kind—surviving figments in the human memory, perhaps, of the saurian monsters of Devonian and Jurassic times. Nature, in those days, was as the mother of Grendel. But in later times, in the days of Shakespeare, she becomes as a mother of Ariel—something finer, sweeter, and more benevolent. In the "Midsummer Night's Dream" Grendel gives place to Puck, and malicious hate to benignant mischief.

It is in connection with this discussion that Lanier interlards one of those passages of personal experience with which the lectures are so frequently and delightfully tintured. We cannot resist the temptation to quote it at length, for it is so illustrative of his discursive manner and so typical of his fine sensitiveness:

You—you moderns—you know nothing of cold. If your furnace is not giving you sixty-five degrees of Fahrenheit in the morning when you awake, you shiver—or think that you shiver—and ring to put on more coal. But, if you will allow me to be so personal, I thank Heaven I know what it is to be cold—to be cold from the crown of my head to the sole of the foot, to be cold from the cuticle in to the heart, and from the heart to the soul: I thank Heaven for it because, knowing this, I have a new revelation of the possibility of suffering, and I am able to find a paradise in a common wood fire. Knowing this, I declare to you there is not a more pathetic sight in this world than a poor man who is thoroughly cold from week to week. It is the refinement of torture. It does not gnaw, like hunger, which presently becomes a sort of insanity and relieves itself: it is dead unblest icy torment. I used to see men in the army whose silent endurance of cold brought more tears to my eyes than all the hunger and the wounds.

In his appreciation of poetry Lanier placed great emphasis on a knowledge of technique. The function of verse, in his view, was near that of music, and he

believed that mere sound was fully as important as meaning. The system which is elaborated in his "Science of English Verse" is partially introduced into these lectures. Every complete poem, he declares, consists of a succession of sounds, and the formal effects of poetry are produced by the artful employment of the differences of sounds. These sounds differ in Duration, Pitch, Intensity, and Color, and poets make use of these differences to produce Rhythm, Speech-tunes, and Word-color. It will be seen from this that, in a sense, he is a disciple of Poe, to whose fragmentary theory he has added a scientific nomenclature of his own.

The sonnet-makers of the reign of Elizabeth call for a great deal of his attention and his love. "The sonnet is a confidential letter," and he compares it to a flash of lightning in a dark night whose brilliancy prints itself on the nerve with great intensity. For the sonnet, too, he has an individual theory. "Every sonnet should be a little drama." Like a play, it should have three elements—a single central idea, a development of this by subordinate ideas which are analogous to the characters on a stage, and it should also have a crisis phrased in an epigrammatic couplet for a climax. This theory, which may seem fanciful and far-fetched, is, of course, applicable only to the Shakespearean form. The Petrarchan form, with its octette and sestet, precludes any such analysis.

The chief thing in these lectures, and the one which gives them their greatest originality, is his theory of Shakespeare's development. We have observed that he placed emphatic stress on sound and music as elements of poetry, and it is his predilection for the musical point of view which gives him his basis for an interpretation of Shakespeare's career. He finds a parallel between music and the moral life. Music is the result of opposition; a tense string, set into vibration, produces music by the opposition of a longitudinal and a transverse force. So the transverse force of the human will, acting upon the longitudinal strain of the natural instincts of man, can, when properly applied, produce moral harmony and ethical music.

This doctrine of oppositions he applies to Shakespeare as a technician of art and as a seer of human nature. In both cases

Shakespeare made conquest of the obstacles and brought forth from his soul the divine harmonies. The two phases of his genius, the technical skill and the vision of wisdom, were developed side by side. The finer verse structure is accompanied by a finer conception of character. "Shakespeare's progress was toward a more artistic arrangement of oppositions." When he was using rhyme pairs, he used also broad contrasts of characters; the inconstant lover, as a type, set off the constant into bold relief. But as he discarded rhyme the distinction of opposites, in pairs, grows less and less, and we see the characters drawn in the confusion of natural complexity.

To illustrate this theory he takes the "Midsummer Night's Dream," "Hamlet," and "The Tempest," and shows how, as the poet grew, he solved this problem of bringing oppositions into harmony. Man's relation to the supernatural is the touchstone in the test. In the "Midsummer Night's Dream" the supernatural element plays with man, crossing or blessing him without reason; it is frankly capricious and fortuitous, and the question of vital faith is not at issue.

But in "Hamlet" the mind of the author has begun to question and seek a creed. Hamlet shows inability to believe. He has "a lack of belief combined with a yearning belief that he does believe." He distrusts the ghost and the reality of the after-life, and yet he is afraid to kill the king at prayer lest he thereby send him to that heaven which he doubts. He is in a cold paralysis of irresolution because, not being able to accept the validity of the ghost's message, he cannot lay hold of the faith necessary for action. The opposition of forces here produces discord.

In "The Tempest," however, all doubts are dispelled, and "the mere belief in belief becomes a joyous and benignant assurance." The mystery of the supernatural has been resolved into Providence. The barbaric motive of revenge has given place to the divine motive of forgiveness. Doubt no longer produces a discord. The moral exaltation of benevolence is the new way—the master artist's way—of managing the oppositions of life and of bringing them into harmony. "Shakespeare has sung himself from the darkness of night into the light of morning."

## Books of the Week

*This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."*

**Arts in Early England (The).** By G. Baldwin Brown, M.A. Illustrated. E. P. Dutton & Co., New York. 6x9 in. In 2 vols. \$8, net.

Reserved for later notice.

**Ancient European Philosophy: History of Greek Philosophy Psychologically Treated.** By Denton J. Snider, Litt.D. The Sigma Publishing Co., St. Louis. 5¼x8 in. 730 pages.

There is no lack of valuable works on this subject, but none that we have known is written from the point of view taken by Mr. Snider. This, in brief, is that there are three supreme disciplines of human thought—religion, philosophy, and psychology—each of which goes back to the fundamental process of the universe. Philosophy was brought forth out of religion, and now psychology is being brought forth out of philosophy, which, though endeavoring to interpret the universe, has reached the limit where itself needs an interpreter. Psychology, though it lays chief emphasis on man rather than upon God or the world, is essentially a return from philosophy to religion, since man in thought creates his Creator. From the standpoint thus set

forth Mr. Snider describes the progress and change of Greek philosophy through its course of a thousand years. Many readers will ask him to explain wherein psychology, as he uses the term, is not philosophy under a borrowed name. There has been much complaint that the two have not been more sharply separated in past discussions. Here, however, psychology, which is simply one of the sciences, is described as succeeding to the special task of philosophy—the endeavor to get back of all the facts discovered and systematized by science to the ultimate reality behind them. If Mr. Snider chooses to call this "psychology," he has perfect right to do so; even without reason. Some years since, Dr. F. E. Abbot set forth "the American theory of universals," as distinct from the Greek and the German theory. Somewhat on this adventurous line Mr. Snider sets forth the discipline of psychology as specifically American, saying, "It would be the exception in all history if the American spirit should find its adequate self-expression in a Greek or German philosophy." Our countrymen, we

believe, have carried off the honors in the advancement of psychology as a science, but there is no apparent reason, except that of an individual illusion, for terming us "the psychological State."

**Autobiography of a Thief (The).** Recorded by Hutchins Hapgood. Fox, Duffield & Co., New York. 5x7½ in. 349 pages. \$1.25, net. (Postage, 10c.)

These annals of the life of a New York professional thief have every appearance of being essentially genuine; and they have sociological value in that they show under what influences a bright boy in bad surroundings turns to crime "for fun" more than for money directly. Mr. Hapgood declares that this is the real story of an individual, edited and retold only enough to give it form and clearness. One feels that the thief has not so much reformed as abandoned his criminal career because he can no longer follow it with safety; and there is a certain relish and self-complacency in "Light-Fingered Jim's" relation of his exploits which makes one doubt whether this would be a desirable book for all young men to read.

**Babel and Bible. Two Lectures Delivered before the Members of the Deutsche Orient Gesellschaft in the Presence of the German Emperor.** By Friedrich Delitzsch. Edited by C. H. W. Johns, M.A. G. P. Putnam's Sons, New York. 5x7½ in. 226 pages. \$1.50.

It will be remembered that Professor Friedrich Delitzsch delivered two lectures before the German Emperor, the first on January 13, 1902, the second on January 12, 1903. The former was published last year and was noticed in our columns. The two have now been published together in one volume, under the same title, with controversial notes by the author and an introduction by the editor. Of the controversy that arose as a consequence of these lectures *The Outlook* has already given reports. Professor Delitzsch's opponents are of two classes: one consists of those who reject his statements of fact because they seem to fall foul of certain doctrines which they consider fundamental; the other consists of those who do not accept his conclusions because they do not consider them sustained by the evidence. The issue is confused, and the reason therefor can easily be seen by an examination of this book. Professor Delitzsch is himself responsible. He has seen fit to inject into his discussions interpretations of Old Testament religion, concerning which he speaks as an amateur, instead of confining himself to modern discoveries in Babylonia, concerning which he speaks as an expert. He shows no sign of having either historical imagination, literary insight, or appreciation of the necessary stages in the processes of religious evolution. Whatever his contributions to Assyriology, he cannot be said to have made any contributions to the understanding of the Old Testament, except as he may have proffered material which others can use. There is nothing alarming about the idea that the ancient Hebrews owed their religious conceptions to Babylon; but the very facts which he cites to prove it only emphasize the contrary idea. That he does not see this

seems to be due to his failure to understand what the religious conceptions of the ancient Hebrews really were.

**Baron Stiegel.** By Rev. M. H. Stine, Ph.D. The Lutheran Publication Society, Philadelphia. 5x7½ in. 331 pages. \$1.25.

**Basis of Morality (The).** By Arthur Schopenhauer. Translated by Arthur Brodric Bullock, M.A. Swan Sonnenschein & Co., London. 5x7½ in. 285 pages.

Schopenhauer's disappointment was great, and his indignation also, when this "prize essay" was not approved by the Danish Royal Society of Sciences in 1840. That judgment is not likely to be reversed by many readers now. Reading Schopenhauer, however, is intellectually whetting, as his translator intimates, and may serve a turn if one has no preferable whetstone at hand. For the sharpening of insight into ethical principles and problems one needs to look elsewhere than to the author of this sentence: "The character is an original datum, immutable, and incapable of any amelioration through correction by the intellect."

**Bible in the Nineteenth Century (The): Eight Lectures.** By J. Estlin Carpenter, M.A. Longmans, Green & Co., New York. 5½x9 in. 512 pages. \$3.50.

This valuable work is both a history and an interpretation of history: The changes of opinion in the advance of learning are fully recorded. The road is seen lined with defunct theories, both traditional and innovating, that have dropped by the way. The result, as Professor Carpenter says, is that we have ceased to ask of the Bible what it cannot give; we prize it more highly for what it gives. In the later Hebrew prophecy, and its vision of an ultimate religious unity, we discover the product of a teleological interpretation of history, whose worth for religion is beyond price. The primitive cycle of Messianic ideas—a heavenly Son of man descending, the graves simultaneously yielding up their occupants to stand before his judgment bar—belongs to an interpretation of the universe which science has abolished; but we may look behind these, as picturesque symbols, to the divine reality, the ultimate triumph of spiritual humanity over all opposing forces. Among the religious autobiographies of our race the ethnic scriptures must be reckoned with our Bible, for they add their testimonies to some of its chief truths. Yet it towers above them as our noblest continuous witness to the reality of divine things. Historically, Jesus embodies the loftiest goodness that we know. To make it universal religion will still describe as the salvation of the world. Both as a record of progress in Christian learning and thinking, and as a reverent and judicious appreciation of its present results, this is an illuminating work.

**Big Game Fishes of the United States (The).** By Charles Frederick Holder. Illustrated. The Macmillan Co., New York. 5½x8¾ in. 435 pages. \$2, net.

What tiger and lion hunting is to the land sportsman, the taking of the tarpon and the leaping tuna, Mr. Holden says, is to the sea angler, who often takes his life in his hands

when he plays his huge game in the open sea. This book tells about these big fish and about the dolphin, the halibut, the drum, the sea-bass, and many other of the large fish. A colored picture of a royal battle with a tarpon makes an effective frontispiece, and there are many other pictures. Besides all possible information for the sportsman, the author gives the scientific data in orderly and complete form. All of the volumes of this series are notably well printed.

**Building Superintendence: A Manual for Young Architects, Students, and Others Interested in Building Operations as Carried on at the Present Day.** By T. M. Clark. (New Edition, Revised and Rewritten.) The Macmillan Co., New York.  $5\frac{1}{2} \times 9$  in. 306 pages.

**Captain's Toll-Gate (The).** By Frank R. Stockton. D. Appleton & Co., New York.  $5 \times 7\frac{1}{2}$  in. \$1.50.

Reserved for later notice.

**Castle Omeragh.** By F. Frankfort Moore. D. Appleton & Co., New York.  $5 \times 7\frac{1}{2}$  in. 404 pages. \$1.50.

The horrors of war, a little romance, and a dash of the supernatural are the elements compounded in this narrative of the time of Cromwell's invasion of Ireland. The action occasionally flags somewhat, and the book is too long; but it gives an interesting picture of the domestic life of the Irish nobility and gentry of the period.

**Christ's Cure for Care.** By Mark Guy Pearse. Eaton & Mains, New York.  $5 \times 7\frac{1}{2}$  in. 143 pages. 40c., net.

**Danish Life in Town and Country.** By Jessie Brochner. Illustrated. G. P. Putnam's Sons, New York.  $4\frac{1}{2} \times 7\frac{1}{2}$  in. 266 pages. \$1.20, net.

So far as we know, the reader can find such information as is here contained in no other single volume. The author informs us about a large variety of subjects—the people, their government and politics, their church and religion, their system of public education, their army and navy, their administration of justice, their local governments, their trades-unions and social democracy. About these things we learn, as is desirable, before we are informed as to the king and the courts, Danish art and letters, music and the stage. The concluding chapters, however, are perhaps of greater interest than the foregoing, since they treat of subjects about which not so much knowledge is commonly possessed—on the position of woman in Denmark, on the press, country life, moor reclamation, freehold farming, and agricultural co-operation. As regards hospitals, homes for the blind and deaf and for imbeciles, and for men in want of temporary care, Denmark yields to no country; her works of humanity now constitute her highest claim to international notice; once she was a power able to cope with England herself politically and in military strength. The author tells us that the Danes have accepted their reverses in the great political games of the nations with notable resignation. The only bitter sting left is the severance from the mother country by the war of 1864 of the southern provinces; many a pious Danish pastor still publicly prays for "our brethren in South Judland."

**Detached Pirate (A).** By Helen Milecete. Illustrated. Little, Brown & Co., Boston.  $5 \times 7\frac{1}{2}$  in. 347 pages. \$1.50.

A charming young English woman, reckless and flippant, but sound at heart, is the self-styled pirate of this book. Her erratic career on both sides of the Atlantic, as exploited by herself in a series of letters to her "dearest friend," we follow with interest, and regret when we find "The End" at the bottom of the page.

**Diary of John Evelyn, Esquire, F.R.S.** Edited by William Bray. Charles Scribner's Sons, New York.  $4 \times 6\frac{1}{2}$  in. 809 pages. \$1.25, net.

The latest addition to the very attractive Caxton Series, printed in large type, on antique paper, with photogravure frontispiece, a number of illustrations, and bound in flexible leather.

**Dictation Studies in Melody and Harmony for Children.** By Mary Frances Frothingham. Clayton F. Summy Co., Chicago.  $7\frac{1}{4} \times 10\frac{1}{4}$  in. 80 pages.

**Dominant Strain (The).** By Anna Chapin Ray. Illustrated. Little, Brown & Co., Boston.  $5 \times 8$  in. 350 pages. \$1.50.

Although a professional singer is the hero of this book, it is better-class New York society, and not musical Bohemia, into which the reader finds himself introduced. The dialogue is often witty; the characters always interesting and well managed; and a good story is told. But the thought will intrude on the pleasant impression with which we close the book, that in real life obstacles are not so conveniently and expeditiously removed.

**Emerson's Complete Works: Centenary Edition.** Edited by his Son, Edward Waldo Emerson. Vol. I. Nature Addresses and Lectures. Vol. II. Essays. Houghton, Mifflin & Co., Boston.  $5 \times 8$  in. Per vol., \$1.75, net.

Reserved for later notice.

**Encyclopædia Biblica.** Edited by T. K. Cheyne, D.Litt., D.D., and J. Sutherland Black, M.A., LL.D. Vol. IV. Q to Z. The Macmillan Co., New York.  $7\frac{1}{4} \times 10\frac{1}{4}$  in. 2,722 pages. \$5, net.

Reserved for later notice.

**English Literature: An Illustrated Record in Four Volumes.** Vol. I. From the Beginnings of the Age of Henry VIII. By Richard Garnett. Vol. III. From Milton to Johnson. By Edmund Gosse. The Macmillan Co., New York. Price, \$6 per vol.

Reserved for later notice.

**Experimental Psychology and Its Bearing upon Culture.** By George Malcolm Stratton, M.A. The Macmillan Co., New York.  $5\frac{1}{2} \times 8$  in. 331 pages. \$2.

Professor Stratton's work on the lines of the new psychology is noteworthy for the continuity of this with the old which it exhibits, thereby correcting a current impression that a breach exists. The old psychology worked with introspection; the new works with laboratory experiments. But, as Professor Stratton says, introspection is really at the bottom of every method; it supplies indispensable data. The present volume gives an untechnical account of certain groups of psychological experiments, and shows their significance for intellectual and moral interests, as well as their immediate scientific result. The general reader will gain from these pages a conviction of the practical value of the scientific research

that seems remote from the concerns of daily life. The new psychology has often been taken to be "psychology without a soul." Psychologists do not now content themselves with referring in general terms to "the soul" in explanation of natural processes, as geologists are not satisfied with a bare reference to "nature." Scientific explanation must be more specific. But the new psychology, while thus waving aside the soul with one hand, is earnestly beckoning it back with the other. "So far," says Professor Stratton, "as the reality of the soul is concerned, the new psychology is in advance of the old. It makes the mind a living, personal thing." In his chapter on "Illusions" he notes the complete refutation which illusions, when understood, supply to the common idea that in its experience of external nature the mind is passive. It is the activity of the mind in effecting a union of subject and object that produces our actual perception. The problem of the interaction of mind and body Professor Stratton leaves an open question still, but with the conviction that one must strike a middle course between those who see only the physical side and those who are blind to it.

**Felix.** By Robert Hichens. Frederick A. Stokes Co., New York. 5x7½ in. 432 pages.

Mr. Hichens, with his usual tendency toward the abnormal, gives us here a study of the morphine habit, sometimes going into revolting detail. The reader admires the author's unquestionable ability, and follows the painful story with unflagging interest, but not exactly with pleasure. A clever lad, fresh from the reading of Balzac, and flushed with pride in his supposed knowledge of the world, falls a victim to the wiles of a brilliant woman, and is almost the last of all who know her to discover that she is a debased and hopeless victim of the morphine habit, and has used him merely to cloak her vice and to borrow money from him in order that she may procure the drug. The study of the young man, with his fits of boldness and of timidity, his absurd belief in his power of analyzing character and his actual gullibility, is, psychologically speaking, extremely well done. Mr. Hichens has written several able novels; one wishes he would write a story that should be agreeable.

**Feuerbach: The Roots of the Socialist Philosophy.** By Frederick Engels. Translated by Austin Lewis. Charles H. Kerr & Co., Chicago. 4x7 in. 133 pages. 90c.

**Fire Insurance and How to Build.** By Francis C. Moore. Illustrated. The Baker & Taylor Co., New York. 6x9½ in. 860 pages. \$5, net.

**Gentleman of the South (A): A Memory of the Black Belt from the Manuscript Memoirs of the Late Colonel Stanton Elmore.** Edited without change by William Garrott Brown. The Macmillan Co., New York. 5x7½ in. 232 pages. \$1.50.

Reserved for later notice.

**Golden Kingdom (The).** By Andrew Balfour. L. C. Page & Co., Boston. 5x8 in. 424 pages. \$1.50.

A very elaborate tale of marvels and adventures in the search for a wonderful people and the treasures of their "golden kingdom." As a piece of ingenious invention and exciting hairbreadth escapes it is not without ability.

**Gordon Keith.** By Thomas Nelson Page. Charles Scribner's Sons, New York. 5x7½ in. 448 pages. \$1.50.

Reviewed in the issue of May 16, in the group of books entitled "The New Novels."

**Hamlet.** By William Shakespeare. Edited by L. A. Sherman. The Macmillan Co., New York. 4x5½ in. 323 pages. 25c.

**Harzreise (Die).** By Heinrich Heine. Edited by Leigh R. Gregor, B.A., Ph.D. Ginn & Co., Boston. 4½x7 in. 183 pages. 40c.

**History of Philosophy.** By William Turner, S.T.D. Ginn & Co., Boston. 5½x8½ in. 674 pages. \$2.50.

A recent and excellent "History of Philosophy" devotes about twenty pages to a subject to which Dr. Turner here devotes nine times as many—the scholastic philosophy of mediæval Europe. The prevailing estimate of it has undoubtedly been derived more from the period of its decay in the fourteenth and fifteenth centuries than from its golden age in the thirteenth. The presentation of Scholasticism in a measure adequate to its importance in the history of speculative thought—an aim frankly avowed by Dr. Turner—is certainly a sufficient reason for the addition of another text-book to the excellent manuals already in use. "The core of Scholasticism," as defined by Dr. Turner, is certainly a principle to which the modern scientific world accords supreme importance—"the doctrine of the continuity and independence of the natural with respect to the supernatural order of truth." With this it held that there can be no contradiction between the data of revelation and the discoveries of reason. The later doctrine of the Averroists, that what is true in philosophy may be false in theology, and *vice versa*, struck at the heart of Scholasticism, and, in combination with other causes—political motives, religious decay, shortened courses for theological degrees, the bestowment of these by institutions of inferior rank, and the exaggerated valuation of mere dialectics—brought about its decline and subsequent disrepute. Dr. Turner's work has other merits than the fresh study it provokes and the fresh estimate it proposes of a chapter in the history of philosophy whose importance has not in our time been so amply recognized. One may, however, question his conclusion, that never has the wave of human thought carried its crest to so high an altitude as in the golden age of Scholasticism. Not in that period only, but throughout the work, the student is well served both by reference to the sources and by critical comments. The thoughtful estimate made of the phenomena and tendencies of contemporary philosophy prompts a question of some novelty as well as interest—whether, in the method which aims to unite the objective with the subjective, and to exhibit the continuity of the natural and the supernatural, the path of modern thought may be unwittingly striking into the very line attempted by the mediæval thinkers in a time less promising for full success.

**Ideas of Good and Evil. Where There is Nothing.** By W. B. Yeats. The Macmillan Co., New York. 5x7½ in.

These two volumes by one of the most inter-

esting and probably the most typical member of the group of Celtic writers who have organized a kind of propaganda in Great Britain during the past few years are capital illustrations of the Celtic spirit; and if they are supplemented by Renan's "Poetry of the Celtic Races" and Matthew Arnold's well-known "Study of Celtic Literature," they will give the reader as intelligent an idea of the Celtic genius and of the qualities which it has contributed to our literature as any other body of books, not because they are full of definite information, but because they are so sympathetically interpretative of the original elements of Celtic imagination. It is this element which Renan has in mind when he says, "No race communed so intimately as the Celtic race with the lower creation." It had "a love of nature for herself, a vivid feeling for her magic, commingled with the melancholy a man knows when he is face to face with her and thinks he hears her communing with him about his origin and his destiny." Add two or three more phrases from Renan, such as that declaring that the Celtic race "has worn itself out in mistaking dreams for realities," and recall Matthew Arnold's admirable characterization of its revolt against the tyranny of the fact, and one gets an insight into a very elusive race type. Mr. Yeats's chapter on "The Celtic Element in Literature" is one of the most interesting in "Ideas of Good and Evil" by reason of its elusiveness, its delicacy, its sentiment, its aloofness, so to speak, from the interests of modern life. It puts one in touch with the later Celtic genius, while his play "Where There is Nothing" brings into striking relief the immense suggestiveness and the complete indefiniteness of the Celtic imagination, its sense of intimacy with nature, with the lower orders of life, as Renan says, its consciousness of the Infinite on all sides, of the pressure upon life of undefined ideas and indistinct influences, its inability to deal with facts, to organize ideas, to solve problems in any distinct way. These two books are as far removed from the conventional literature of the day as possible. It is a relief to read them, and it is also a profitable exercise of the mind.

**Indigestion: Its Prevention and Cure.** By F. Herbert Alderson, M.B. Charles Scribner's Sons, New York. 4x6 in. 130 pages. 90c., net.

**Legal Tender: A Study in English and American Monetary History.** By S. P. Breckinridge. The Decennial Publications. Second Series. Vol. VII. The University of Chicago Press, Chicago. 5½x9 in. 181 pages.

**Log of a Cowboy (The).** By Andy Adams. Illustrated. Houghton, Mifflin & Co., Boston. 5x7½ in. 387 pages. \$1.50.

As the name indicates, this is the simple record of a land voyage—a five months' trip with the herds on the trail from Mexico to Montana. It is a refreshing chronicle, and bears the unmistakable stamp of truth, reflecting the monotony and laboriousness of the old-time life of the plains as clearly as it does the adventurous and sportive side of conventional representations. The book has several fine illustrations by E. Boyd Smith.

**Love Thrives in War: A Romance of the Frontier in 1812.** By Mary Catherine Crowley. Illustrated. Little, Brown & Co., Boston. 5x8 in. 340 pages. \$1.50.

Detroit during the War of 1812 is the scene of this story. Laurente, daughter of a French Creole mother and a Scotch father (type of the strange admixture of civilizations in the society of the time and place) is a charming heroine; but there are too many characters and too much history in the book.

**Modern Civic Art; or, The City Made Beautiful.** By Charles Mulford Robinson. G. P. Putnam's Sons, New York. 9x5½ in. 381 pages. \$2.50, net.

Reserved for later notice.

**More Money for the Public Schools.** By Charles W. Eliot. Doubleday, Page & Co., New York. 5x7 in. 193 pages. \$1, net.

**Municipal Public Works: Their Inception, Construction, and Management.** By S. Whinery. The Macmillan Co., New York. 5½x8½ in. 241 pages. \$1.50.

A popular presentation of the engineering problems of modern municipalities. The author, unlike most of the writers in this field, is, on the whole, an opponent of the present tendency to extend municipal ownership, and a defender of the contract system of conducting public works. The volume contains some interesting statistics—particularly on the subject of street paving—but it is, on the whole, both deficient and defective on the statistical side. The attempt, for instance, to estimate the community's "economic" loss for every death at \$5,000—or five times the average wealth—is hardly convincing, and the assumption that the cost of our water systems might be practically cut in two, if consumption were reduced to one-half or one-third by the use of meters, is altogether a violent one for most cities. As a rule, the operating expense of water plants is insignificant compared with the interest on the cost of installing the system. This cost is not in proportion to the amount of water used by the ordinary householder.

**Old China Book (The).** By N. Hudson Moore. The Frederick A. Stokes Co., New York. 5½x8 in. 300 pages. \$2, net.

A book that will be welcomed by collectors and by casual owners of old china. It shows very plainly what is and what is not valuable, and why; tells the history of the manufacture, gives the different marks, and illustrates the subject with many reproductions of old, rare, and quaint pieces. Staffordshire, lustre, Wedgwood, Liverpool, Worcester, and many other kinds of ware are differentiated and many particular specimens are minutely described. The book fills a place not occupied by any other work of its kind to be had at a moderate price.

**Open Door (The).** By Henry van Dyke. (The Presbyterian Pulpit.) The Presbyterian Board of Publication and Sabbath-School Work, Philadelphia. 5x7½ in. 160 pages. 75c., net.

Reserved for later notice.

**Pilgrimages to Methodist Shrines.** By William Henry Meredith. Jennings & Pye, Cincinnati. 5x8 in. 335 pages. \$1.25.

These memoranda of places and persons of note in the early history of Methodism, British

and American, but chiefly British, make a good guide-book for future travelers on the same road, especially those who share the author's laudable interest in the history of his own Church. Points of comparison and contrast between British and American Methodism are treated in the Appendix.

**Pipes of Pan. No. II. From the Green Book of the Bards.** By Bliss Carman. L. C. Page & Co., Boston. 4½×7½ in. 137 pages. \$1.

The second in the series of reprints from Mr. Carman's verse already published, with additions. The first volume was noticed at some length in *The Outlook* at the time of its appearance, and further comment will be made on the series as a whole at a later date.

**Political History of Slavery (A).** By William Henry Smith. In 2 vols. G. P. Putnam's Sons, New York. 6×9 in. 350 pages. \$4.50.

Reserved for later notice.

**Portraits of Julius Cæsar.** A Monograph by Frank Jesup Scott. Longmans, Green & Co., New York. 7×10 in. 185 pages. \$5, net.

Mr. Scott's monograph is one of peculiar charm and merit. Ideals of the real Julius Cæsar have long shaped themselves in our minds out of the aggregate of the imperfect fragments preserved to us. Out of all the preserved coins and gems, statues and busts bearing evidence of belonging to Cæsar's age and intended to represent him, certain points of physiognomy have been settled. The present book gives a detailed survey of these coins, gems, busts, and statues. It is a book which recreates for us the great Roman in a singularly graphic and vivid manner.

**Prince Hagen: A Phantasy.** By Upton Sinclair. L. C. Page & Co., Boston. 5×7½ in. 249 pages. \$1.50.

**Questionable Shapes.** By W. D. Howells. Illustrated. Harper & Bros., New York. 5×7½ in. 219 pages. \$1.50.

Reserved for later notice.

**Remembrances of Emerson.** By John Albee. Robert Grier Cooke, New York. 5×8 in. 202 pages. Reserved for later notice.

**Sacrifice of the Shannon (The).** By W. Albert Hickman. Illustrated. The Frederick A. Stokes Co., New York. 5×7½ in. 323 pages. \$1.50.

An ingenious and lively romance, having as its subject the great ice-fields of the St. Lawrence Gulf in the winter-time, with the dangers and adventures of ice-bound ships.

**Selection from the Best English Essays (A): Illustrative of the History of English Prose Style.** Chosen and Arranged by Sherwin Cody. A. C. McClurg & Co., Chicago. 4½×7 in. 415 pages. \$1, net.

A selection from ten masters of the essay, including Bacon, Swift, Addison, Lamb, De Quincey, Carlyle, Emerson, Macaulay, Ruskin, and Matthew Arnold, with an introduction covering the ground historically in outline, commenting on the artistic element in prose, and pointing out some of the possibilities of further development.

**Side-Lights on Immortality.** By Levi Gilbert, D.D. The Fleming H. Revell Co., New York. 5×7½ in. 233 pages. \$1, net.

The author has given his book an appropriate title. Without endeavor at originality, he has

aimed at helpfulness, undertaking, not to convince skepticism, but to confirm belief. From a wide range of literature he produces the testimony of eminent thinkers, and from various positions in the wide field of thought gives a lucid and popular exhibition of the grounds of the Christian doctrine.

**Silent Maid (The).** By Frederic Werden Pangborn. L. C. Page & Co., New York. 5×7½ in. 223 pages. \$1.

A German folk-lore tale, not particularly well told.

**Sociology: The Science of Human Society.** By J. H. W. Stuckenborg, LL.D. G. P. Putnam's Sons, New York. 5½×8½ in. In 2 vols. \$4.50, net.

A clear philosophical survey of the forces governing the development of human society, not only in the past and present epochs in which the family and the State have been the dominant socializing factors, but also in the dawning epoch in which international solidarity shall assume a supreme position in the guidance of the co-operative work of mankind. The distinguishing spirit of the author is seen in the emphasis put upon the ethical factors in human evolution.

**Song of the Cardinal (The): A Love Story.** By Gene Stratton-Porter. Illustrated. The Bobbs-Merrill Co., Indianapolis. 6½×9 in. 163 pages.

The bird's search for a mate, its adventures with rivals and enemies, its relations with human admirers—all this and more is told with delicate charm and beautifully illustrated from the author's photographs. The book is one that may well be put on the same shelf with James Lane Allen's "Kentucky Cardinal."

**Studies in History, Economics, and Public Law.** Edited by the Faculty of Political Science of Columbia University. Vol. XVII. Centralizing Tendencies in the Administration of Indiana. By William A. Rawles, Ph.D. The Macmillan Co., New York. 6×9½ in. 336 pages. \$2.50.

**Texas: A Contest of Civilizations.** By George P. Garrison. (American Commonwealths.) Houghton, Mifflin & Co., Boston. 4½×7 in. 311 pages. \$1.10, net.

A clear account of the history of Texas, and particularly of that part of it which witnessed the triumph of Anglo-American over Spanish civilization. The Americanization of the great territory, proceeding from the establishment of the Austin colony, is lucidly shown to have made its annexation practically inevitable. Events, however, since the outbreak of the rebellion are given in too meager outline. Judged as a whole, the work, while creditable to the scholarship of the author, and useful to those wishing a compact account of the commonwealth, can hardly be considered adequate. Few States have a more interesting past, and few in all probability have a more important future. The importance of Texas is only beginning to be realized by Northern students.

**Under Dog (The).** By F. Hopkinson Smith. Charles Scribner's Sons, New York. 5×7½ in. 332 pages. \$1.50.

Reviewed in the issue of May 16 in the group of books entitled "The New Novels."

**World's Great Orators and Their Best Orations (The).** By Charles Morris, LL.D. Illustrated. The John C. Winston Co., Chicago. 6½×9½ in. 639 pages. \$1.50.

# TO THE CAREFUL INVESTOR

**ABSOLUTE  
SECURITY**

**IN**

**5%**

**MISSOURI  
FARM  
MORTGAGES**

Who is not given to speculation, no more solvent security can be found than good Missouri 5% mortgages, based on well improved farms in old established communities where land values are conservative and where farms are always salable at their worth.

North Missouri's record of 35 years with but one crop failure is the best evidence of the producing qualities of her lands. Our rich soil, never-failing blue grass, equable climate, and just laws (which are more favorable to the investor than those of probably any other State in the Union) makes your security abundant.

The record of this office is over three million dollars loaned, no losses, and fourteen-years' experience. Every farm is carefully examined and a fair proportion only of its actual cashable value is loaned. Every loan is carefully registered on my books and the interest and principal collected and

remitted to the investor free of charge.

I loan my own funds on the same class of security offered you. I offer you loans in amounts of from \$1,000 to \$10,000, and will redeem them at any time within 90 days at their face value and interest, giving you ample time to investigate the security. I will furnish you with evidence that I am financially able to carry out such a contract. I will also furnish you with strongly worded letters commending my loans and my methods of selecting securities, from men of known responsibility and character, prominent in public and business life, from investors who for from ten to fourteen years have entrusted to me their savings and surplus wealth. The good record of Missouri farmers' trustworthiness can be shown by letters from Presidents of some of the largest financial institutions of America.

Try good old Missouri, whose record is—PAY—and not DEFAULT, whose prosperity has been continuous for over a generation.

Booklets, with detailed reports of investments offered, sent on application.

## A LIST OF SUBSTANTIAL VALUE

"The publishing business is one that usually grows slowly if its growth shows signs of reaching maturity. Since the Outlook Company began making books they have proceeded upon the plan that it is better to publish an occasional worthy book than to achieve a long list of more or less speculative character. They now have a list of substantial value, and the indications are that the Outlook Company will become an important factor among the makers and sellers of books of standard literature."—*The Interior*.

We should appreciate an opportunity of giving you further information about THE OUTLOOK BOOKS already published and about those which we shall publish later. If you will fill out and mail to us the blank below, we shall take pleasure in sending you a copy of our illustrated catalogue, and in placing your name on our mailing list for the receipt of such printed matter as we issue from time to time.

Books of the Week.....	524
CORRESPONDENCE.....	528

**The Outlook** is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

**Price.**—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

**Postage is Prepaid** by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add \$1.56 for postage.

**Change of Address.**—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

**Discontinuances.**—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

**How to Remit.**—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

**Letters** should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

# MENNEN'S

**DELIGHTFUL AFTER BATHING, A LUXURY AFTER SHAVING**

**Beautifies and Preserves the Complexion.**

A positive relief for PRICKLY HEAT, CHAFING and SUNBURN, and all afflictions of the skin. For sore, blistered and scurrying feet it has no equal. Removes all color of perspiration. Not Mennen's (the original), a little higher in price, perhaps, than worthless substitutes, but there is a reason for it. Sold everywhere, or mailed for \$1.00. A trial sample, free. (Sample free.)

GERHARD MENNEN CO., Newark, N. J.

## NEW-SKIN

TRADE MARK  
REGISTERED  
WATERPROOF

### LIQUID COURT PLASTER

Heals Cuts, Abrasions, Hang-Nails, Chapped and Split Lips or Fingers, Burns, Blisters, etc. Instantly Relieves Chilblains, Frosted Ears, Stings of Insects, Chafed or Blistered Feet, Callous Spots, etc., etc.

A coating on the sensitive parts will protect the feet from being chafed or blistered by new or heavy shoes.

Applied with a brush and immediately dries, forming a tough, transparent, colorless waterproof coating.

**MECHANICS, SPORTSMEN, BICYCLISTS, GOLFERS, Etc.**

are all liable to bruise, scratch, or scrape their skin. "NEW-SKIN" will heal these injuries, will not wash off, and after it is applied the injury is forgotten, as "NEW-SKIN" makes a temporary new skin until the broken skin is healed under it.

Pocket Size (Size of Illustration) • 10c.  
Family Size • 25c.  
2 oz. Botts. (for Surgeons and Hospitals) 50c.

At the Druggists, or we will mail a package anywhere in the United States on receipt of price.

**Douglas Mfg. Co.**  
Dept. E

107 Fulton St., New York

## WILLIAMS' SHAVING STICK

**It's So Convenient**

No cup needed.

Just wet your face, rub on a little soap, work up a big, creamy lather with your brush and you'll shave with ease and pleasure.

Nothing like it.

Williams' Shaving Stick sold by all druggists, etc.

## The German Elections

Last week the elections to the German Reichstag, or Parliament, were notable by reason of the success of the Socialists in increasing their representation in the legislative body by about fifteen seats, and their total vote to upwards of 2,500,000—an increase of 400,000. One-third of all the voters in the Empire now class themselves as Socialists, and in Saxony this party now outnumbers all others combined. It is interesting to note that the most pronounced single Socialist success was in Essen, the town of the late Herr Krupp, the great ironmaster, where the vote was increased fivefold. This in the very town in which the Emperor recently and vigorously denounced the Socialists! A confusing factor in fixing the relative positions of parties in the new Parliament is the number of second elections which must be held in all constituencies in which no candidates received a majority. In 192 districts out of 307 there must be new elections at which all the voters must choose between the two candidates who stood highest in the balloting last week. Of the 202 members who received majority votes 54 are Socialists, 87 are Clericals, and only 42 belong to the old conservative groups—the National Liberals, the Conservatives, the Free Conservatives, and the Agrarians. For the maintenance of a conservative economic policy, therefore, Bismarck's successors are becoming more and more dependent upon the conciliation of the Catholic Clericals, against whom he instituted his "Culture Battle." The second elections will not, however, greatly increase the number of the Clerical members, as they carried at the first election almost all of the districts—chiefly South German—in which they have any real strength. In only 36 districts will Clerical candidates be voted for on the

second ballot, while Socialist candidates will be voted for in 122 districts. The great Socialist gains, it should be said in conclusion, do not indicate a corresponding advance for revolutionary Socialism. Much of their gain has been at the expense of the old Radical parties, whose members have grown slightly more radical and have been conciliated by the action of the Socialists in putting their revolutionary programme in the background—or rather in the dimly distant future—and concentrating their efforts upon immediately practicable democratic reforms. The recent campaign was particularly directed against militarism and the tariff taxes by which its burdens were put almost exclusively upon the shoulders of the relatively propertyless classes.

## The Irish Land Bill

Last week in the House of Commons a vote on one of the sections of the Irish Land Bill was taken. The result was a Government victory, but one purchased at a price and at a loss in support which furnish occasion for not a little misgiving. Mr. John Redmond, the Irish leader, proposed an amendment virtually abolishing the minimum price at which the landlord may sell, if he and his tenant agree on a lower price. This seemingly fair proposition the House rejected by a vote of 217 to 176, thus reducing the Government majority to 41. Mr. George Wyndham, Chief Secretary for Ireland, declared that he considered that limits on bargains were essential precautions. Mr. Redmond expressed regret at Mr. Wyndham's decision, and said that if the amendment was not accepted by the Government he was afraid "they had arrived at the parting of the ways." He declared that the Nationalists must stand by the amendment, and there must be further consid-

eration of this point by the Government, otherwise ninety-five per cent. of the Irish members would be found in the lobby against the Government. Irish opinion is united, he concluded, and if no concession is made it will be impossible for the Irish members to represent the bill as acceptable to the Irish people. Mr. John Morley, the well-known Liberal statesman, also complained of Mr. Wyndham's attitude. The latter replied in a speech which showed a realization of the gravity of the situation, but which indicated that no concession would be made. The Irish, however, would be more than human if they did not scent some bargaining with a Government needing their support.

#### Servian Civilization

Last week, the day following the election of Prince Peter Karageorgevic as King of Serbia, the Skuptshina in a body attended a great thanksgiving service at the Belgrade Cathedral, where a Te Deum was sung. The aged Metropolitan of Belgrade, in gorgeous vestments, was surrounded by the bishops of the Cathedral chapter. None of them had taken any part in the burial service for the murdered King and Queen. The Metropolitan, who officiated at the Te Deum, read a brief address, in which he congratulated the nation upon the restoration of the Karageorgevic dynasty, a dynasty which had included so many brave and noble men. While deploring the necessity for recent events, the Metropolitan thanked the army for what it had done! As half the audience was made up of officers in full uniform, it was perhaps not surprising that they should audibly express their pleasure at these remarks from the prelate, who concluded by invoking a blessing on King Peter and expressing the hope that under him Serbia would enjoy peace and prosperity. The service appears to have been a monstrous travesty. The outside world does not take the slaughter of rulers quite so complacently, and the Great Powers are expressing their horror in very distinct language. The Governments most nearly concerned, Russia and Austria, through their Emperors, have addressed to the new King letters which, while recognizing him, insist on the punishment of the assassins of the late King

and Queen. The Russian communication expresses the hope that King Peter will display a firm will in investigating at the outset the abominable misdeed which has been committed, and will mete out rigorous punishment to the traitors and criminals who have stained themselves with the infamy of regicide. The English Government has withdrawn its Ambassador from Belgrade, and he will remain absent for some time to come; no formal recognition of the provisional government, which is made up largely of assassins or of their associates, will be made in any form. With this action it is understood that France, Germany, Italy, and Spain concur. The Servians have apparently to learn the fundamental lessons of government, if not the primary lessons of civilization.

#### The Postal Scandals

Public attention continues to be occupied with the investigations in the Post-Office Department. During the past week there has been a rather unnecessary discussion of two rumors—one alleging that officials high in rank were implicated and would be indicted, the other that the investigation was to be peremptorily stopped at a certain point lest the revelations should affect the credit of the McKinley administration. All this discussion seems to us futile; there is no good reason to doubt that the investigation will be thorough and that the public will be fully informed. The chief actual news of the week with regard to the inquiry lay in the fact that Postmaster-General Payne made public the report of Fourth Assistant Postmaster Bristow relating to Mr. Tulloch's charges regarding the Washington city post-office. Mr. Bristow's report seems to confirm Mr. Tulloch's charges very fully, and also confirms the report of the inspectors which we outlined last week. The report puts Mr. Perry S. Heath, formerly First Assistant Postmaster-General, in the light of carrying on the Washington post-office as a bureau of the Department for the purpose of furnishing places for political adherents, and transferring them to the Department in such a way as to avoid the civil service rules. It includes reports of inspectors asserting that in some cases salaries for two positions were paid to the

same man; that other men drew pay without performing any service whatever; that some of the positions to which appointments were made were unauthorized by law; and that there was found to be evidence of favoritism, political influence, and questionable disbursements. On Monday of this week new indictments were returned against Machen and four others on the specific charge of conspiring to defraud the Government.

In such an investigation as the present public opinion is not very discriminating, and not only the press, but public officials, are liable to jump from the one extreme of causeless confidence to the other extreme of causeless suspicion. There seems some reason to think that this has been the fact in the case of Mr. Metcalf, the superintendent of the money-order bureau of the Department. The charges against him were thus stated by Postmaster-General Payne in his letter of dismissal:

It appears from your answer that when the proposals of the different competitors for the contract for supplying money-order forms were opened, Paul Herman, of Rutherford, N. J. (formerly employed as foreman by the Wynkoop-Hallenbeck-Crawford Company, of New York, by which company, it seems, your son is also employed), was found to be the lowest bidder, his proposal being \$45,000 below that of the next highest bidder, namely, the Wynkoop-Hallenbeck-Crawford Company; that the bid of Mr. Herman as submitted was regular in form, and that he had deposited a certified check for \$5,000 as a forfeit. It further appears that within a day or two the Wynkoop-Hallenbeck-Crawford Company filed a protest against awarding the contract to Herman, alleging that he was not financially responsible; that a short time thereafter Mr. Herman called at your office, and you advised him to withdraw his bid and re-enter the employ of the Wynkoop-Hallenbeck-Crawford Company, understanding at the time that such withdrawal would result in the contract being awarded to said company, and consequently in a loss to the Government; that you offered to write, and did write, a letter to said company, apprising it of your interview with Mr. Herman, and using your good offices in his behalf; that you advised Herman that his \$5,000 deposit would probably be returned to him if he adopted your suggestion.

The rules of the bureau, formulated by Mr. Metcalf himself many years ago, and applicable to the granting of all such contracts as that under discussion, provide

explicitly that such a contract cannot be lawfully transferred or assigned, and shall not be awarded to "bidders who are unable to prove their financial responsibility aside from the formal guarantee," nor "to bidders whose places of business are unfavorably located, nor to those whose establishments are provided with limited facilities, nor to those who shall not satisfactorily guarantee absolute ability to fulfill such contracts to the satisfaction of the Department." Mr. Herman had no plant; his intention was to transfer the contract; and he was, therefore, clearly barred out by the rules of the Department. There seems, therefore, to be no force whatever in Mr. Payne's assertion that Mr. Metcalf's action resulted in a loss to the Government, and until full investigation shows the contrary it is fair to assume that, although Mr. Metcalf may have gone beyond his province in trying to adjust matters between the Wynkoop Company and Mr. Herman, he acted for the profit of the bureau and to facilitate its work. The presumption of his good faith is confirmed by the universal testimony of those who have known Mr. Metcalf's career, and who have had large dealings with the important bureau he has conducted, that he has been a public servant of a high type—giving to the service skill, constructive force, and organizing ability. His peremptory dismissal by Postmaster-General Payne has been followed by a request for a hearing by him before the Postmaster-General, and, as we write, the Postmaster-General still has the request under advisement. Mr. Payne asserts that it was not any part of Mr. Metcalf's duty to pass upon the question of Mr. Herman's responsibility. While we hesitate to question Mr. Payne's judgment in this matter, it is only fair to say that there has been a general public belief that heads of departments, such as the money-order bureau, have, in point of fact, commonly and constantly throughout the governmental service passed upon points like that in question, subject, of course, to the formal signature and approval of the Postmaster-General. It appears to us that Mr. Metcalf is entitled to a more thorough hearing both from the Postmaster-General and from the general public than he has received.

### Servitude for Debt in Georgia

While the Federal Court at Montgomery is considering the cases of the kidnappers indicted for selling negro men to the managers of convict camps in Alabama, the Waycross "Journal" reports the case of a negro woman similarly victimized in Georgia. The report of the "Journal" is, in brief, as follows:

Lulu Frazier, the negro woman who was sent off to the McRee camp nine months ago to pay her attorney's fee, was brought back to Waycross Monday night, and appeared before the County Commissioners Tuesday afternoon. It will be remembered that she had been arrested and put in jail charged with living in adultery and with bigamy. After three weeks of incarceration it was discovered that she had been legally married, and she was released. In the meantime she had employed a lawyer to defend her, and to pay the lawyer's fee the McRees carried her to their camps to work out the amount, which they considered to be worth fourteen months' servitude. When Lulu was brought into the Commissioner's room at the court-house Tuesday, she was with her erstwhile husband, Nathan Frazier. She was first asked why she had gone to the McRee camps. She replied that Mr. Will Crawley [her attorney] had got her to go there to pay her lawyer's fee. She was asked if she voluntarily hired to McRee. She replied that she did not, but thought she had to go there. She said she went with Mr. Frank McRee.

"Were you allowed your freedom when you got there?" asked the Commissioner.

"I was locked up at night till two weeks ago," she replied.

"How long have you been there?"

"Nine months."

"Did they whip you any?"

"They whipped me twice with a leather strap wide as your four fingers."

"What did they whip you for?"

"They claimed I was trying to run away one day when I went to the cow-pen, and another time they said I was neglecting my work."

Mr. Crawley says that he did not recall what the woman's fee was, and that he did not know what kind of a contract McRee made with the woman. He had nothing to do with her fourteen months' service there, any more than the officers of the court do when they allow the McRees to pay fines and take parties there who have been prisoners.

This Georgia case differs from the Alabama cases, reported three weeks ago, in two important respects. In the first place, the Georgia woman seems to have been imprisoned solely for debt, without any warrant in the law, while the Alabama negroes, in some cases at least, were imprisoned for alleged breach of contract, over of a dangerous statute enacted

a year ago, providing for the punishment of "any person who has contracted in writing to labor or serve for any given time . . . and who before the expiration of such contract, and without the consent of the other party, abandons such contract." In the second place, the Georgia abuse was exposed solely by the action of local officials, without any intervention of the Federal authorities. Both of these differences give assurance that in Georgia there has been no such widespread kidnapping of friendless negroes as has been revealed in Alabama.

☉

### Negro Rights Defended in Mississippi

A correspondent in Lincoln County, Mississippi, a prominent

attorney in Brookhaven, sends us an interesting letter explaining the recent Whitecap depredations in that vicinity, and telling the sequel of Judge Fulton's arraignment of them, reported in The Outlook three weeks ago. The letter is so compact that we print it in full, omitting only its introductory reference to our former paragraph: "Under the Deed in Trust law of this State merchants have acquired considerable real estate throughout this section of the country, which has been rented to negro tenants. In December, 1902, negroes who were tenants of such merchants, or who were tenants of landowners living in towns, received notice that they would not be permitted to cultivate land belonging to such landlords. In some instances, also, negroes who owned their own land were threatened in this way and ordered to vacate their homes. The negroes of Lincoln County complained of this treatment, and the Governor offered a reward for the conviction of persons guilty of giving such notices and making such threats. Affidavits were made against several persons charged with this offense. Afterwards they were tried at Brookhaven, the county seat of Lincoln County, by Judge Powell and District Attorney Graves; and they were bound over to await the action of the Grand Jury. In this trial most of the members of the bar in the county refused to defend the Whitecappers. Upon the meeting of the Grand Jury the result was that indictments were secured and a conviction followed in each indictment. The judge imposed a fine and put each con-

victed person under bond to keep the peace. These convictions were secured upon the testimony of two negro men, who recognized the Whitecappers upon the night they were warned by said Whitecappers to vacate the farm they were renting. The matter of securing their reward has been placed in my hands by these two negroes, and there is every certainty that it will be paid. The indictment and conviction of these parties has without doubt suppressed the Whitecap movement in this county, and the negroes are now living unmolessted in their former homes. It will thus be seen that it was more an opposition to merchants and landed men than to the negroes themselves which gave rise to the Whitecap movement, and that the law has successfully protected the colored citizens of Lincoln County, Mississippi."

●  
President Roosevelt on the  
Kishenev Massacres

The reply last week of President Roosevelt to a delegation of Jewish citizens who requested his aid and the Government's sanction for a petition to the Czar protesting against the Kishenev massacres, not only defined the position of the United States in the matter, but was an extremely vigorous and interesting tribute to the achievements of the Jewish race. That official action by our Government was impossible was clearly shown. It would be a gross insult to a friendly country to assume that its Government instigated or willingly permitted such atrocities. The petition to which President Roosevelt's attention was directed was in its nature a private and not a governmental affair. Nevertheless, the reply of President Roosevelt, prepared as it was with some care and almost officially given out for publication, contained a deep expression of sympathy for the victims and of horror for the appalling calamity at Kishenev. President Roosevelt said:

Exactly as I should claim the same sympathy from any one of you for any tragedy happening to any Christian people, so I should hold myself unworthy of my present position if I failed to feel just as deep sympathy and just as deep sorrow and just as deep horror over an outrage like this done to the Jewish people in any part of the earth. I am confident that much good has already been done by the manifestations throughout this country,

without regard to creed whatsoever, of horror and sympathy over what has occurred.

With regard to the position of the Government of Russia, the President assured his visitors that he had been visited by the Russian Ambassador and had received from him an assurance that the Government of Russia had the same feeling of horror and indignation with which the American people look upon these outrages, and that active measures were being taken to punish all concerned in the outrages. In a way, the utterance of the President may be regarded as giving form and substance to the opinion of the people of this country. It may be hoped that this remonstrance and the horror of the whole civilized world will lead the Russian authorities to take such steps as will make the future occurrence of such an episode, which seems to reek with the barbarism of mediæval times, impossible.

●  
Strike Settlements The exhaustion caused by the prolonged strike fever resulted last week in the settlement of several important strikes and in pacific overtures to settle and prevent others. In Chicago the waiters' union, under pressure of indignant public opinion—including that of the officials of the American Federation of Labor—abandoned its preposterous attitude in refusing to recognize the employers' association, and accepted the arbitration the latter had offered. In Omaha, where building operations have been practically suspended for three months, the bricklayers last week accepted a compromise by which they were to receive union wages, but agreed to work alongside of non-union men. Other unions also made terms with their employers, and the strike virtually collapsed. In Lowell the strike of the cotton-mill operatives was formally ended by a unanimous vote of the unions, the latter acknowledging a complete defeat. The fact that raw cotton is ten cents a pound, or just twice as high as five years ago, while manufactured cotton goods have advanced but little, had so reduced the manufacturers' margin of profits that the strike, as was pointed out by Mr. Kennan in our columns, was foredoomed to failure. In New York City operations in the

building trades have not yet been resumed, owing largely to the apparent insistence of the employers' association that the unions must accept the precise form of arbitration offered them. This form, it will be recalled, demanded the exclusion of the walking delegates from the arbitration board, and denied the union the freedom of representation accorded to the employers' association. The position of the employers on this point lent strength to the belligerent faction in the unions. Nevertheless, peace overtures continue to be made, and a small concession on the part of the employers seems now likely to result in the reaching of a general working agreement. At the miners' convention there was an overwhelming popular sentiment in favor of insisting upon the right of the union to "appoint" the miners' representatives on the Board of Conciliation, as provided by the letter of the Commission's award. President Mitchell, however, secured the substance of the union's demand by dismissing as trivial the form in which it had been put. Upon his recommendation, the convention elected as conciliators the three district presidents who had previously been appointed, and the operators promptly accepted this action as satisfactory to themselves. Through this bit of courteous diplomacy President Mitchell avoided a needless strain upon friendly relations with the operators.

#### A Lesson in High Finance

The public rehearsal of their woes by the various magnates of the United States Ship-building Company last week furnished an impressive lesson in the mysteries of trust finance. This Company was organized, it may be recalled, just as the public appetite for trust securities began to be cloyed, and the difficulty of selling its stocks at the figures expected nearly wrecked the banking company which had financed the enterprise. Even the bonds of the Company fell to a low figure, and some of the dissatisfied bondholders asked for the appointment of a receiver. Their complaints drew forth the published replies of Mr. Lewis Nixon, the experienced ship-builder who has been the President of the trust, and Mr. Charles M. Schwab, who has been the controlling factor in its

management. Mr. Nixon's statement is chiefly remarkable for its general disclaimer of all knowledge of the financial side of the enterprise. The prospectuses issued to attract investors seem to have been entirely out of his department, though his name as President of the Company was one of the most attractive things about them. As a ship-builder, he says, he was hampered by intolerable limitations, and his general view as to the economy of trust management is strikingly in accord with the pessimistic one so frequently expressed by Mr. Carnegie. Instead of the combination earning half a million a year more than the constituent companies had done, it earned half a million less—a result partly attributed by Mr. Nixon to "the decrease of energy of management at some of the plants with the removal of local and personal responsibility." But Mr. Schwab's statement is still more interesting. He went into the ship-building combination, he says, in order to secure a good customer for the United States Steel Corporation, of which he is President. Then he and Mr. Morgan bought the Bethlehem Steel Company and sold it to the ship-building combination—thus enabling it to supply its own steel without patronizing the corporation of which he is President. He practically denies the charge that he paid but three million dollars for the Bethlehem works, declaring that he paid Mr. Morgan nine millions for it. He admits, however, that he sold it to the ship-building combination for \$10,000,000 of bonds, \$10,000,000 of preferred stock, and \$10,000,000 of common stock. A voting power was given to his bonds as well as his stocks, and he was thus in complete control of the management of the combination. Now that the whole speculation stands as it does, he offers to complaining bondholders to return their thirty million dollars of securities if the Bethlehem works are given back to him; but the bondholders reply that under his management the value of the Bethlehem works has been enormously increased at the expense of other funds of the combination, and they ask a still greater concession. Of course the whole proceeding has called forth a great deal of angry comment on the part of investors who trusted to the great names in the combination and the enor-

mous economies which consolidation was expected to secure.

#### Lives Saved by Automatic Couplers

The report of the Interstate Commerce Commission, just issued for the year which ended in June, 1902, brings out sharply the remarkable prosperity of American railroads. They have now over two hundred thousand miles of track, or nearly half again as much as the whole of Europe, and a standing army of nearly twelve hundred thousand employees—an industrial force just about equal to the military forces of Germany and France. Particularly satisfactory to investors is the contrast between conditions in 1902 and 1896. During this period net earnings have increased sixty-two per cent.—from \$377,000,000 to \$610,000,000. If the net earnings of each year are capitalized at a five per cent. rate—the natural basis when selling securities in Europe—the value of the roads has increased from about seven billion dollars to twelve billions. The aggregate of salaries and wages paid has not increased in so large a ratio, but this has advanced from \$468,000,000 to \$676,000,000. The average wages for each employee have increased from \$550 to \$580, or about five per cent. The general advances in railway wages made during the past five months will add materially to the gains recorded for the employees. To the public, however, these financial figures are perhaps less interesting and certainly less novel than the gains recorded in saving the lives of trainmen by the enforcement of the automatic coupler law of 1893. The figures upon this point to which Mr. E. E. Clark, of the Brotherhood of Railway Conductors, has recently called attention in "Boyce's Weekly" are gratifying in the extreme. In 1893, he writes, a few roads had voluntarily introduced the automatic couplers, but most of the roads refused to follow their example because of the expense involved. The railway brotherhoods in that year convinced Congress that "the balance-sheet had to be made up with dollars on the one side and human lives on the other," and succeeded in getting through both houses an act requiring that within five years all cars used in inter-State commerce should be provided

with automatic couplers. The time allowed to substitute the improved couplers for the old ones not quite worn out was afterwards extended to 1900. In 1893 the number of persons killed in coupling cars was 433, and the number injured was 11,277. In 1902 the number of killed had been reduced to 167, and the number of injured to 2,864. Inasmuch as the number of railway employees had meanwhile greatly increased, and inasmuch as the National law does not cover cars used in purely State traffic, the act has certainly succeeded as well as its most enthusiastic supporters hoped.

**Major James B. Pond** Major James B. Pond, who died on Sunday of this week, in the sixty-fifth year of his age, has rendered to the American people a service something analogous to that of a great publisher, with this difference: the publisher introduces the writings of thinkers to readers; Major Pond introduced the thinkers themselves to audiences. When he began his work as a lecture agent in 1875, the lecture platform was more an instrument of education and less a means for amusement than to-day. Under his auspices many of the great public teachers of the last quarter of the last century addressed the American public, from that distinctively American forum, the lecture platform. Among those whom he was the means of introducing to America are Henry M. Stanley, George Kennan, Ernest Thompson Seton, Israel Zangwill, and John Watson. Among those whose agent and representative he was were Wendell Phillips, Charles Sumner, Henry Ward Beecher, John B. Gough, Joseph Jefferson, George W. Cable, Mark Twain, Bill Nye, and James Whitcomb Riley. The extent and nature of his work are indicated by the fact that he traveled with Mr. Beecher nearly three hundred thousand miles, and spent the last summer of Mr. Beecher's life with him in England, during which time, under his arrangements, Mr. Beecher preached seventeen times and delivered nine public addresses and fifty-eight lectures. Major Pond's imperturbable good humor, broad human sympathies, naïve enthusiasm, personal as well as professional interest in the men whom he represented, delight in the work of both entertaining and educat-

the audiences to whom he introduced them, coupled with his high ethical ideals, gave him easily a front rank in a profession which he may almost be said to have created. We do not think that in that profession he ever allowed himself to be the instrument of lecturers whose influence on American life was otherwise than beneficial, or of entertainments which were other than innocent, healthful, and, in the broad sense of the term, elevating.

**Herbert Vaughan  
Cardinal-Priest and  
Archbishop**

On Friday night of last week Cardinal Vaughan, head of the Roman Catholic Church in England, after many weeks of illness, died in London. Born in 1832 of a family which had been Roman Catholic for generations and had furnished many stalwart sons to the army and the Church, he became an ecclesiastic of the militant, uncompromising type almost by instinct. In character, training, and inheritance he offered a strong contrast to his predecessors in the archiepiscopal see of Westminster, Cardinals Newman and Manning, both of whom were accessions to the Church of Rome from the Church of England. During his term as Archbishop of Westminster the extreme High Church party of the Church of England made many advances to the Roman Catholic Church, but Cardinal Vaughan would have no dealings with them. He believed that Rome would eventually become supreme in England and needed to have no treaty with those whom he considered schismatics. Probably this policy gained the Roman Catholic Church many who find repose in what is unyielding; but it also did much to awaken the opposition of those who under other circumstances would have been content, with easy tolerance, to let the Roman Catholic movement go its own way. It is therefore difficult at present to estimate Cardinal Vaughan's service to the hierarchy of which he was so distinguished a member. He was held in high esteem by the present Pope. When he was a young man, still a priest, he visited America twice to further missionary work among the negroes. In 1873, the year after his second visit, he was made Bishop of Salford; in 1892 was made Archbishop of Westminster; and the next year was

received into the College of Cardinals. Besides his attitude of opposition to all conciliatory policies, Cardinal Vaughan was eminent for his interest in ecclesiastical education and for his active efforts for the furtherance of temperance.

**Inauguration  
of President Bliss  
at Beirut**

During the week of May 10 the Syrian Protestant College at Beirut celebrated the inauguration of its new President, the Rev. Howard S. Bliss, D.D. The retiring President gave a historical address, and there were also a series of addresses on "The Foundations of Religious Belief." At the installation exercises the hall was crowded with foreign residents and representatives of the highest Syrian culture, there being about one thousand people in the body of the building and one hundred and fifty on the platform. The President Emeritus represented the Board of Trustees, and there were addresses from the Syrian Mission, the local Board of Managers of the College, the faculty, the alumni, and the students. President Bliss's inaugural address was an eloquent discourse upon "The Educated Man," his qualities and development. The Syrian Protestant College was founded in 1866, under the direction of the Rev. Daniel Bliss, D.D., father of the new President, recently appointed President Emeritus. It has never been directly under mission control, being incorporated under the laws of the State of New York, and governed by a board of trustees resident in New York City; but in aim and in effect it has worked for the civilization and evangelization of the East. From very modest beginnings it has grown to be a college that would now bear comparison with many an American institution. On its beautifully situated campus of forty acres there are twelve large, well-equipped buildings; the corps of instructors numbers forty-five; and the six hundred and fifty students come from Syria, Turkey, Armenia, Persia, Egypt, Greece, the islands of the Mediterranean, even from Brazil and New York City. Instruction is given in six departments—the schools of medicine, pharmacy, and commerce, the college, the preparatory department, and the school of Biblical archaeology and philol-

ogy. In connection with the medical work clinics are held at the Johanniter hospital, and a model pharmacy has been established on the campus. The American trustees have recently decided to increase the endowment by \$500,000, and a few weeks ago the Sultan issued an *irade* allowing the College new and important privileges.

**The Election  
of Dr. Lines**

Great interest has attended the election of a Bishop of Newark in succession to the late Bishop Starkey. At the first Convention there was a deadlock between the clergy and the lay delegates which prevented an election. On Tuesday of last week, at an adjourned meeting of the Convention, the Rev. Dr. Edwin Stevens Lines, rector of St. Paul's Church, New Haven, Connecticut, was elected Bishop on the fifth ballot. Dr. Lines's majority of the clerical vote was small, but his election was accepted with the utmost good feeling by a very large majority of those who had voted for other candidates, and would have been made unanimous but for the opposition of three or four clergymen representing the extreme ritualistic wing of the party. The ministry of Dr. Lines in New Haven has been notable for its deep religious spirit and its practical efficiency; and he is held in very high regard by men of all classes for his sterling character, his courage, capacity, and friendliness. From many points he is one of the foremost citizens of New Haven. His election as Bishop of Newark is another indication of the strength of moderate churchmanship. Dr. Lines is in no sense a partisan, and, if he accepts, will be the Bishop of the Church and not of a party. The results of all recent elections in the Episcopal Church and of the votes in the various conventions on the question of a change of name indicate a very conservative sentiment and a distinct reaction against the extreme ritualistic movement.

**The Turkish Method of  
Revising the Bible**

The American Bible Society has indirectly felt the result of recent political agitation in the Turkish provinces in a curious way. The Turkish Department of Public Education has

become suspicious of the editions of the Bible published by the Society. It has been aroused by such an insignificant change as the addition of the word "here" in the saying of Jesus (as recorded in Mark xiii. 2 and Luke xxi. 6) that "there shall not be left [here] one stone upon another." Perhaps the Department felt that that was bringing it too close to Constantinople. In another case the Department objected to the word Macedonia. The substitute they suggested would, if uniformly adopted, make the famous passage in Acts xvi. 9 read, "Come over into the villayets of Salonika and Monastir, and help us," though in fact the objection seems limited to the word as used in but one of Paul's epistles, the First to the Thessalonians. As used there it seems to the casual reader far more harmless. Other objections in past times have been even more curious, though perhaps more comprehensible. In one Bible a map of Egypt was objected to because it was printed in red, and that suggested British possession! But perhaps the most naïve suggestion was that the sentence in 1 Timothy i. 9, "Christ Jesus came to save sinners," was unwarranted in including Mohammedan sinners with the rest of mankind, and that the sentence be changed so as to read, "Christ Jesus came to save Christian sinners"! Though this Turkish suggestion does not altogether lack pertinency, it is satisfactory to be able to record that this change was finally not insisted on. Humorous as the procedure of the Turkish Department of Education may appear, it is not altogether different in principle from that followed by many theologians who have occupied themselves in reconciling the Bible to their systems of belief; it is only more frank and ingenuous.

**College Events** There were several picturesque incidents in the college world last week; among them the visit of President Roosevelt to the University of Virginia, where he was received with characteristic Southern cordiality, the audience applauding him enthusiastically as he was introduced in the fine auditorium. His speech was brief and characteristic. He emphasized the significance of the University of Virginia in the history of the country, not only on account of its

early constitution, but on account of its historical associations, and said that at almost every step in his recent journey across the continent he had been reminded of some important thing accomplished by a Virginian or a descendant of a Virginian. He paid a tribute to the courage and services of Lewis and Clarke, and many other citizens of the State; and declared that Virginia has a right to be proud of the character of the men whom she has sent into public life. He commented on the beauty of the housing of the University, recalled the fact that Poe and Thomas Nelson Page were among its graduates, and spoke of the great number of Virginia University men filling high public positions. He emphasized the duty of citizenship, and made his customary plea for a strong navy as an instrument of peace, declaring that the way to invite war was to be "prosperous, aggressive, and unarmed." There was a great gathering of the graduates of Phillips Academy at Andover on Wednesday to commemorate the one hundred and twenty-fifth anniversary of a school which has taken the highest rank among secondary schools for scholarship. The chief feature of the day was the address by the Chinese Minister, Chen-Tung-Liang-Cheng, a graduate of the seminary, who greatly interested his audience by his very intimate dealing with baseball and other games and with his reminiscences of his own athletic performances. On the same day occurred the celebration of the hundredth anniversary of Bradford Academy, not far from the Academy, of which a full account appears in this issue of *The Outlook*. At the Brown University Commencement President Faunce announced gifts amounting to \$25,000 in money, and various important contributions of paintings and books. At the University of Chicago President Harper announced gifts aggregating nearly \$700,000. At the University of Iowa Senator Hoar declared that the final purpose of all scholarship and of all life is character, and that the fate of the Nation depends in the last resort on individual character. At Hobart College, Geneva, New York, Langdon C. Stewardson was formally installed President of the College; and among other degrees conferred was that of Doctor of Divinity on the Rev. J. Selden Spencer, of

Tarrytown, New York, the recent celebration of the fifty-second anniversary of whose connection with Christ Church parish in that town was reported in these columns. At the University of Rochester Mr. Talcott Williams, of the Philadelphia "Press," received the degree of Doctor of Letters.

#### The Literature of Anarchism

There is something more than an interest of curiosity attached to the purchase by Columbia University of what is believed to be the most complete collection of Anarchistic literature in existence. As a member of the Columbia faculty who has examined the collection points out, not only will students of sociology and history find in this collection material and data of value, but it has an even more positive interest for those who are looking into the problems of morbid psychology. It seems that the collection was made by a French Anarchist living in London; that it was turned over by his executors to a well-known London firm of book auctioneers, and that it escaped the observation of book-hunters and specialists so completely that the agent of Dr. Canfield, the Columbian librarian, secured the entire library for only one hundred dollars; while the real value is shown by the fact that double this sum and more has since been offered for single items in the long list. Such a "find" has rarely been heard of lately among bibliophiles. The collection includes not only about two hundred and fifty sets of periodicals and newspapers relating to Anarchism and three hundred books and pamphlets, many of which are rare and a few of which are absolutely unique, but also hundreds of photographs of revolutionists, a great mass of documents, letters, and manifestoes by leading Anarchists, and an extremely curious collection of posters, broadsides, and inflammatory songs. Among these are to be found such things as a so-called death-warrant predicting to Anarchists the assassination of President Carnot, of France, and a bundle of scorched papers found on the body of a London Anarchist who died while hurling a bomb into a crowded square. One benefit to be found from a careful study of such documents and books is, of course, the light thrown on

the methods of thinking and the growth of belief among the deplorably large number of men who, either through personal wrong or through that peculiar intellectual twist which we call crankiness, have been led to adopt the theories of violence as a remedy for social evil. Another is the exposition by its own adherents of the so-called philosophical Anarchism which disowns the idea of violent measures, although it fails to explain how otherwise the abolition of all government is to be obtained. Sociologists will find hereafter in the Columbia Library a mine of curious information not obtainable elsewhere in this country and probably not to be found in any great foreign capital.

**The Ascent of  
Sorata**

What is the highest mountain peak in the Western Hemisphere? The claim has been made for several mountains, but there seems to be good reason to accept the belief of Sir Martin Conway, Professor Pickering (who established the Arequipa Observatory in South America for Harvard), and others, that the honor lies with Sorata, in the Andes of Bolivia. The ascent to the top has never been made; the feat was attempted in 1898 by Sir Martin Conway, but he failed to reach the summit. Sir Martin is confident that Sorata exceeds in height the Chilean mountain Aconcagua, and believes that Sorata will measure between 22,000 and 25,000 feet. To solve the problem of primacy among American mountains, to make other ascents of special interest, to visit the remains of the pygmy city near Lima, Peru, to search for a reported pygmy city near Mount Chachani in Peru, and to carry out other archæological investigations in that vicinity—these are the principal objects of the expedition organized by Miss Annie S. Peck, which sailed from New York last week. Dr. Tight, of the University of Mexico, will accompany the party and will have charge of the scientific observations. The chief guides have been brought over from Switzerland. Miss Peck's feats in mountain-climbing have given her a first place among American women mountaineers; the Matterhorn, and, in Mexico, Popocatepetl and Orizaba (the last being far the most difficult), are among her achievements. Miss

Peck is not only an expert mountaineer, but has a reputation as a scholar, magazine writer, and lecturer; she has been a teacher at Purdue and Smith Colleges, was the first woman student at the American School of Archæology in Athens, and holds two degrees from the University of Michigan. It may be expected, therefore, that there will result from her present undertaking something of serious scientific and archæological value, as well as one of those graphic and thrilling accounts of mountain-climbing which writers and climbers like Whymper, Mummery, and Conway have made so fascinating and dramatic. Readers of *The Outlook* will be interested to know that Miss Peck's expedition is undertaken in large part under the auspices of *The Outlook*, and that at the earliest practicable date the accounts of its achievements will appear in this journal, illustrated with the author's own photographs.

**Leprosy in  
Norway**

Until the middle of the last century the number of lepers in Norway was very large, as little attempt had been made to check the horrible disease, and the prospect of uprooting it seemed small. It was not until 1870, when the total number of lepers in Norway was estimated at 2,055, that a decided improvement began to appear, and this has continued and increased ever since. In 1885 the number had fallen to 1,195, in 1895 to 688, and in 1900 to 577. The marked decrease in cases since 1885 is due chiefly to the passing of a law in that year for the compulsory isolation of patients. The administration of this law proved so successful and met with so little opposition from those affected by it that a similar measure has recently been introduced in connection with tuberculosis. In some districts where leprosy was formerly very common not a case is now found, and in Bergen the St. Jørgens Hospital for lepers has been turned into a sanitarium for tuberculosis. Although it is impossible to fix a definite date, there is good reason to believe that before many years leprosy will be wholly a thing of the past in Norway. A similar change for the better is reported from Iceland, presumably from the same causes.

## To College Graduates

There are two forms of knowledge which the college can do but little to furnish, but which you must acquire if you are to succeed in the life on which you are about entering. Perhaps we should rather say, two forms of capacity: one is represented by the word *Insight*, the other by the word *Foresight*.

You are going out to deal with men. If you are to deal successfully with them, you must understand them. You must know their nature and the motives which control them. If you are to live peaceably with them, you must know how to avoid needless friction. If you are to lead them, you must know how to win their confidence, esteem, respect. To do this you must enter into their lives, see things as they see them, get their point of view, be able to put yourself in their place. You must be able to do this not only for right-thinking, right-willing, and reasonable men; you must be able to do it for wrong-thinking, prejudiced, and unreasonable men, for with such men you will have to do in your life.

If you go into the ministry, you will enter it after three or four years of academic study, four years of college study, three years of professional study. You will have obtained new views of theology and of the Bible. Much of the creed of your fathers will perhaps seem to you antiquated; much even of the Bible will have taken on a new significance. But you will have to preach to a congregation many of whose members have not taken an academic course, few of whom have taken a college course, none of whom have taken a theological course. You will have to preach to a congregation possessed by the prejudices from which you imagine that you have been emancipated. Their prejudices will rise up in arms against you, if they find that you are attacking the traditions which they hold sacred, but which you regard outgrown. If you are to give them a better knowledge, a broader horizon, a larger life, it is not enough that you know what that better knowledge, that broader horizon, that larger life, are; you must know them, their horizon, their life; and you must know how to lead them out of the valley on to the mountain top.

Or you are going to practice medicine. If your patients were all reasonable men and women, your task would be easy; but they are not. Even in their best estate they are not all reasonable men and women, and you will have to deal with them when they are not in their best estate but are morbid. You will have to deal with patients who throw your medicine out of the window and still expect you to cure them; in one house with a mother busy with other things and careless of the sick child; in another house with a mother whose weak and tearful sympathy does much to negative the influence of your presence and the effect of your medicines. It is not enough for you to know physiology and anatomy and therapeutics; not enough for you to know what your medical school has told you; you must know men and women—their physical constitutions, their mental and moral constitutions. You must understand them—their life, their narrownesses, their prejudices, their unreasonableness. You must see into them, that you may minister to them.

Or you are going into a mercantile or a manufacturing life. You are going there to take some position of responsibility. Not to be a day-laborer, not to be a single workman under orders, but to be a foreman in a shop, or the head of a department, or perhaps eventually the manager of the entire industry. To do this successfully you must understand workingmen; you must know their tastes and inclinations, their prejudices and passions, their envies and jealousies. You will have to deal with labor unions. If labor unions were always directed by well-trained minds, if they were always actuated by the highest motives, were always led by the noblest men, always sought the greatest good of the greatest number by the purest and best measures, your task would be easy, except that there would scarcely be any use for you at all. If labor unions were made up of educated scientists and industrial saints such as these, workingmen would need no foremen, no bosses, no managers of departments. In fact, their race, their religion, their mental and social habits, their companions, their traditions, their very language, will be different from yours. You must learn how to see with their eyes, to feel with

their hearts, to share in some true sense their experiences. You must know how to avoid avoidable friction; when to concede, when to refuse concession. You must understand not only what is just and right, but what seems to them just and right; and in order to enable you to make them see with your eyes, you must first see with theirs.

College life has given you some acquaintance with men; but it has been for the most part with men of your own class, educated and cultivated men, whose horizon is your horizon, whose interests are your interests, whose traditions are your traditions, whose point of view is your point of view. You have now to mix with men whose whole conception of life will be different from yours, who will perhaps be no more prejudiced, but who will have other prejudices, no more narrow, but will have other narrownesses, no more selfish, but will have other selfishnesses. How to deal with them with the courage that is always patient and the patience that is always courageous, with the gentleness that is strength and the strength that is gentle, this is one of the lessons you must learn if you expect to win success in your life, whatever its path may be.

The other knowledge or capacity which you must acquire is Foresight. "There's a divinity that shapes our ends, rough-hew them how we will." We must understand what He is doing, to what end He is shaping our generation. We are like men upon the deck of an ocean steamer. We can walk forward or backward, or not walk at all; but we are borne on toward a distant point by forces which transcend our understanding, and which we can do little to direct. The currents which control our life are almost wholly beyond our control, and we succeed in life only as we understand what those currents are and whither they are carrying us. We fail in life, however sagacious, strong, talented, and learned, if we set ourselves against those life-currents, endeavoring to thwart them, or if we live in ignorance of them, as though they did not exist. John C. Calhoun was a great political thinker, Robert E. Lee was a great military commander, yet their lives resulted in failure because they fought against the irresistible currents of human destiny. It was

decreed by a power mightier than the mightiest that the feudal system of the South should be overturned, and on its ruins a new system erected. Democracy was, as the saying is, in the air; it was as hopeless to resist it as it would be for the iceberg to resist the summer sun and the warm bath when it gets into the embrace of the Gulf Stream. Daniel Webster was a far greater man than William Lloyd Garrison, but Daniel Webster endeavored in vain to check the currents that led through attempted secession to emancipation, and William Lloyd Garrison lived to see his dream realized, though by methods the operation of which he had in vain endeavored to prevent.

You must understand the currents of this age if you are to live successfully in it.

The individualism of the middle of the nineteenth century belongs to the past. Ruthless and unlimited competition is passing away. No human forces are strong enough to restore it. We are living in the age of combination and co-operation. It is equally in vain for the coal operators of Pennsylvania to refuse recognition to the laborers' union and for the waiters' union in Chicago to refuse recognition to the hotel-keepers' union. Capital will combine for greater efficiency; labor will combine for better protection. The man who endeavors to prevent combination, whether of capital or of labor, swims against a resistless tide. He walks from the bow to the stern of a steamer which is steadily carrying him in the direction opposite to that in which he thinks he is walking. The wise leader of industry will neither ignore the competition of the past nor attempt to resist the tendency to co-operation and combination in the present. He will endeavor to see how out of the competition of the past to construct a combination and co-operation which will preserve the virtues and values of individualism, and secure also the virtues and values of a true, free, co-operative fellowship. The tendency toward combination is as apparent in government as it is in industry. It is a part of the great movement toward universal brotherhood which can be guided, but cannot be thwarted. The separate and jealous provinces of Italy are united in one Italian kingdom. The hostile German States are united in

one German Empire. Egypt, India, Australia, have become parts of the great British Empire. The frantic endeavor for the dissolution of the American commonwealth in the interests of political individualism failed. In lieu of it, the American flag floats not only over all the former American commonwealth, but, in spite of the protests of the timid, carries American sovereignty across the ocean to Hawaii and the Philippines. Commerce beckons American enterprise to enter the East, a thousand miles nearer our coast than to the British Isles, and opportunity demands of us a courage and a wisdom equal to the exigencies of the new day which dawns with the new century. To resist the tendency toward what men miscall imperialism is a hopeless task; to guide the tendency so that wherever the American flag carries with it American sovereignty it shall also carry with it liberty, justice, and good will, is the problem which the God of nations calls on you to solve.

In religion the supreme and final authority has passed, for substantially all Protestant denominations, from the Church, and is passing, despite the hopeless resistance of many, from the Bible. The minister of the future must learn that the secret of authority is God in the individual conscience, and that the authority both of the Church and of the Bible is due to the fact that they have both interpreted that voice to human souls. He who would succeed in the religious development of his age must not live in the nineteenth century, still less in the sixteenth. He must live in the twentieth century, and must show men how to use both the Church and the Bible in interpreting that voice of God in the soul of man which is the secret of all authority—social, political, and religious.

You may not agree with this interpretation of the life-currents of this twentieth century. We briefly describe them, not for the purpose of making you see life as we see it, but for the purpose of inducing you to turn your faces toward the future and see for yourselves whither those life-currents are guiding you. The knowledge of the past will not give you success in the present, unless out of that past you learn lessons to guide you toward the future to which God is bringing the chil-

dren of men. All that you have learned of history and literature, of science and of art, in your college course will serve to enrich your life and that of your fellow-men, will serve to give you real influence over them and real leadership in your age, only as, to the scholarship which the college has conferred upon you, you add by your own individual study of life and men these two vital qualities, Insight and Foresight—an understanding of men, and some comprehension of the future toward which you must guide both them and yourself.

## John Wesley

If the Methodists are inclined to regard the writings of John Wesley as a supreme and final authority, the other Christian denominations too little recognize the value of the service which he has rendered to the whole Christian Church. It may be hoped that his bi-centenary will have the effect to call attention, not only to that service as an important historic fact, but to the principles which that service illustrates and the direction in which it points the Church universal to-day.

The primitive Church was primarily a missionary organization, and this missionary spirit remained in it, inspiring and actuating it, for several centuries. The spirit and purpose of Paul animated the early Fathers of the Church, and Christian missionaries went from Rome into northern Africa, throughout northern Europe, and as far as England. English and Irish missionaries in turn crossed the Channel as heralds of the new faith. During this epoch the first duty of the Church was to give to others its newly discovered gift of life; though it simultaneously organized a ministry for the development and enjoyment of that life itself. It may not be easy to say how or why this spirit was lost. Perhaps Augustinism in the Roman Church and Calvinism in the Protestant Church may have had something to do with that loss. For a faith which teaches that the number of the saved is so determined by divine decree that it can neither be increased nor diminished is not an incentive to missionary effort.

Whatever the cause, in the beginning of the eighteenth century there was practically no missionary work in the Protestant

churches except among the Moravians. In England institutional religion had become little more than a class privilege. There was a "Society for the Propagation of the Gospel," but its energies were mainly devoted to labors in the English colonies. There was some attempt at Church extension, but very little evangelical enthusiasm. The general religious conditions in England were some years ago thus described by an eloquent writer in the "North British Review:"

There was no freshness in the past, and no promise in the future. The Puritans were buried, and the Methodists were not born. The philosopher of the age was Bolingbroke, the moralist was Addison, the minstrel was Pope, and the preacher was Atterbury. The world had the idle, discontented look of the morning after a wine-mad holiday; and, like rocket-sticks and the singed paper from last night's squibs, the spent jokes of Charles and Rochester lay all about, and people yawned to look at them.

It was at this time (1703) that John Wesley was born. He was designed for the Church, became a High Churchman and an extreme ritualist, urged the maintenance of a weekly administration of the Lord's Supper, excluded from it all Dissenters and admitted to it Romanists. The spiritual earnestness of the Moravians attracted him, somewhat as the spiritual earnestness of the Christians attracted Saul of Tarsus, and in 1728 he underwent a conversion as radical if not as sudden as that of his ancient prototype. The theological reformation which he initiated was twofold: he denied the doctrine of Calvin, that man had lost his freedom by the fall, and taught that all men were free to accept the salvation which was proffered to them, and all men were able to do so. This doctrine of human freedom necessarily carried with it a doctrine of philosophic universalism, which, heresy though it then was—heresy social as well as theological—he frankly accepted and logically developed. He taught that the Christian life was in good faith offered freely to all men—elect and non-elect, rich and poor, cultivated and ignorant. Holding these two doctrines—perhaps we should rather say, this one doctrine, since philosophical universalism is a necessary result from freedom of the will—he laid upon the Church the responsibility of carrying the gift of life to all men, and he practiced what he preached, by going

forth as a herald to offer this gift to the uncultivated and the non-elect, as he could gather them in the streets of the towns and in the fields of the country.

In the birth of Methodism the universal Protestant Church, both Puritan and Episcopalian, experienced a new birth. For to-day practically the Christian ministry of all denominations are Wesleyan in their theology. The doctrine of human freedom and of consequent human responsibility, with its necessary accompaniment, the new evangelism, was taken up in this country by such men as Lyman Beecher, Charles G. Finney, and Albert Barnes. It split the Presbyterian Church in sunder, and the preachers of the new theology were turned out as heretics; but the doctrines remained in the Church which had excluded the preachers, and to-day it would be difficult to find any professed Calvinist of any eminence who holds to John Calvin's doctrine that the freedom of man has been lost by the fall, or denies John Wesley's doctrine that every man is free to repent of his sin and accept the gift of God through Jesus Christ. Every Protestant Church has its missionary organization and its missionary work. Every Protestant Church is in theory, though not always in practice, a herald of life to those who do not possess it. That this is true, that the Protestant churches are missionary churches, is primarily due to the Moravians; secondly, to John Wesley, who, imbibing the spirit of catholicity and of missionary enthusiasm from the Moravians, carried it over into other denominations by his spiritual earnestness and his organizing power.

And yet, though in theory substantially all Protestant churches accept the fundamental postulates of Wesleyan theology, and attempt to act in accordance with that theology by their missionary endeavors, there is, we are persuaded, a great need of a new revival of the spirit of what might be called either Wesleyanism or primitive Christianity. The churches of to-day are too much mere worshiping assemblies. They devote too large a proportion of their energies and their income to promoting the enjoyment of the Christian life by those who already possess it, and too little to imparting that Christian life to those who do not possess it. The cathedral-like church, the well-organized

choir, the well-paid orator, all minister to the spiritual luxury and perhaps to the spiritual development of the elect and cultivated few. They do little to carry the message of life as heralds to the non-elect and the uncultivated. The Church needs to study afresh the methods, and still more the life, of the primitive missionaries, the Wesleyan itinerants, and the Puritan revivalists. We do not, indeed, urge the re-employment of their methods. It is not at all probable that street and field preaching would accomplish in this century in America what it accomplished in the eighteenth century in England. It is quite as improbable that the methods of St. Patrick and St. Columba would be efficacious in our country and in our time. But, though a renewal of their methods might not be desirable, a revival of their spirit is the greatest need of the Church. The most discouraging sign of our times is the content of the Church to provide for the spiritual edification of its own members by a combination of all the æsthetic enjoyments which architecture, music, and oratory combine to afford. The most hopeful sign in the Church is the growing discontent with a religious work so limited in its scope and effects, and the beginning of the inquiry what methods the Church can discover and adapt for our age and our civilization, in order to do effectively in the twentieth century the work which the primitive Church did in the apostolic age, and which John Wesley and his followers did a hundred and fifty years ago.

## Church and State in France

The recent confirmation of President Loubet's son in a Paris church without the President's presence brings to mind in a concrete way the estrangement which exists in France between many sincere, patriotic, and intellectual men of radical opinions, on the one hand, and the Roman Catholic Church, so long the dominant religious power in the country, on the other. No one doubts the sincerity of the French President in maintaining an attitude of resistance to what he considers the interference of the Roman Church in French affairs; but many even among

those of his own political faith must deplore an attitude which accentuates the unhappy division on religious matters increasingly evident.

The truth is, France needs, and has always needed, both Conservatives and Radicals in religion as in politics. As a conservative body, the service of the Roman Catholic Church in solidifying France has been of great importance. The superstitions which have encumbered Latin Christianity for centuries are not so prevalent in France as in Italy and Spain; while the priests and prelates have been of a higher order intellectually than those found in the other Latin countries. Nor has the work of the French priests been purely religious; it has had perhaps an equal social value. No one can read the novels of Honoré de Balzac, Victor Hugo, Ludovic Halévy—to mention three names at random—without feeling that the village *curé* was and is one of the most influential social personages in France. It is perhaps not too much to add that this distinction has been for the most part deservedly gained.

But the Roman Catholic Church has not been entirely represented by its priests. There have been also the monks; and the antagonism to republican institutions from a few of the reactionary monastic orders has been undeniable. That the whole nation has recognized it was shown two years ago when the Law of Associations was passed. By the terms of this law every association, religious or secular, must obtain the Government's authority for the exercise of its special functions. Some of the monastic orders applied for such authorization; others, feeling that they owed allegiance only to the Vatican, did not. In the latter category there were both preaching and teaching orders and one notable charitable order, the Carthusians, the makers of a famous liqueur at their monastery, La Grande Chartreuse, near Grenoble. These orders retired under duress from France, some going to England and America, and others to Austria, Italy, and Spain. The teaching of French youth will be hereafter under greater Governmental control and direction. The Radical Ministry has not been satisfied with effecting this result; it has attempted to silence certain preachers who have been osten-

tatiously invited, on account of their martyrdom as members of a proscribed order, into the pulpits of cathedrals whose bishops have been in sympathy with reactionary political ideas. In contrast with such prelates, there are others, the Archbishop of Albi being a conspicuous example, who declare that the logical outcome of the whole situation would be the separation of Church and State, but that the Church cannot afford just now to have the Concordat denounced, since it would cut off eight hundred priests from salaries paid by the State, without any guarantee that they could find equal or even scantier support.

The Concordat was framed a century ago by Napoleon, who had recently become Emperor, and Pope Pius VII., who was anxious to make terms with him. They finally agreed that the Government should nominate candidates for episcopal honors; and in return for this privilege the Government agreed to pay the salaries of all the priests and bishops. The present position of the Vatican is that the spirit of the Concordat demands a "*nominatio nobis*"—a nomination *to us*—as indicating that the supreme power of approval or disapproval rests with Rome. The French Premier's reply has been to omit the word "*nobis*" from his recent nominations. This, however, is only a detail; the main matter is the attitude of the bishops and other clergy regarding obedience to the secular law. In a recent speech in the Chamber of Deputies, M. Combes declared—amid the loud disapproval of his Socialist supporters, it is true—that, for one, he intended to support the Concordat in its integrity, but only so long as the bishops and priests remain strictly observant of the civil law.

In America, with its time-honored tradition respecting freedom of education and of worship, we can hardly realize the full meaning of the possible separation of Church and State in a land where nine-tenths of the population are nominally Roman Catholic, and where a historic charm lies upon every village church and city cathedral, appealing alike to all classes of society. Yet in France, as also in England, the spiritual power of the dominant Church would be greatly increased by a gradual emancipation from the bondage of legal relations with the State.

## The Faith of College Men

We give considerable space in this week's issue of *The Outlook* to certain religious statements by college men, which illustrate the trend of religious thought in educated circles at the present day.

If any one could have the right to speak with authority for physical science, that right would belong to Lord Kelvin, who is recognized on both sides of the water as one of the most eminent physicists of the age. His testimony is explicit that belief in God is a scientific necessity. This belief is not inconsistent with that form of agnosticism which declares that the nature of God transcends our knowledge. All that science assures us is that there is a creative and directive power which is working in the world to definite and intelligent ends. Atheism is unscientific.

The answers which come from certain members of the Faculty in Dartmouth College to the question, What is Christianity? show something more than this, because the field of their examination is wider than that of physical science. They show practical agreement of belief in historical Christianity as, to quote one of these statements, "a living force making for complete righteousness, sufficient for man's life in this world with other men, and revealing and providing for his life after death." If physical science demonstrates the existence of God, creating and directing the physical world, history demonstrates that God is educating, developing, redeeming humanity through a spiritual force revealed in and made efficacious by the life and character of Jesus Christ.

The composite creed of a college class is interesting because it goes so far toward negating the fears of those who imagine that college education tends toward infidelity. This composite creed contains, the reader will discern, nothing which all the members of a class of sixty students could not agree upon. With one very important modification, it might well suffice as an adequate though simple statement of Christian faith. That modification is this. The creed of these college students says: "I believe . . . in sacrifice as the price we must pay to make right what is wrong." To make this an adequate state-

ment of Christian faith it would only be necessary to add: I believe in sacrifice as the price which God has paid to make right what is wrong.

No one can read these creeds of college men, from Lord Kelvin to a senior class in a New England college, without realizing that the faith of the educated men of to-day is less intolerant, less dogmatic, and less defined than the creeds of the educated men of a hundred years ago; but also he cannot read them without perceiving that the faith is more personal, more vital, more practical, and, in the best

sense of the term, more spiritual. If he remembers that at the close of the eighteenth century there were two Thomas Paine societies in Yale College, only four or five professing Christians, and a number of the senior class who had adopted the names of the French Encyclopedists as their own, he can hardly doubt that spiritual faith among the educated classes has gained, not lost, in genuineness as well as in simplicity in the last hundred years. With this introduction, we commend these creeds of college men to the careful consideration of our readers.

## A New England School Anniversary

### Editorial Correspondence

SCHOOL and college centennial celebrations are multiplying as the first hundred years of the life of America as an independent Nation is rounded out. Harvard, Yale, Williams, Bowdoin, Amherst, Dartmouth, Princeton, and many other colleges have recalled, with appropriate academic exercises, the small beginnings from which great institutions have grown. It is not many years ago since Phillips Brooks delivered that delightful address commemorative of the foundation of the Boston Latin School, in which, with rare literary skill, in a series of portraits of masters and teachers, he outlined the history of the school and revealed its spirit. Last week Phillips Academy at Andover, Massachusetts, celebrated its one hundred and twenty-fifth anniversary; and never, perhaps, has the hill seemed more beautiful in its restfulness, its wealth of foliage, than to the men who came back in throngs to renew the associations and revive the memories of school days. A little farther to the north another school, which during the past three years has entered upon a striking stage of its development, recalled its graduates and friends from many States and classes, and, with an enthusiasm which indicated the wealth of affection of its present and former students, celebrated the hundredth anniversary of its foundation.

Those schools are fortunate which have beautiful situations; for the imagination is never so sensitive and the mind never so open to outward impressions as during

school and college days; and no small part of the education of institutions which are beautiful for situation, like Heidelberg, Oxford, Eton, Williams, Amherst, the University of Virginia, Wellesley—to name but a few of the many fortunate schools—is received unconsciously from the beauty of the landscape, the impressiveness of mountain-forms, or the charm of flowing rivers. Bradford Academy, at Bradford, Massachusetts, is to be counted among these fortunate institutions; and the fact that it is a typical New England school gives its history general interest. The building in which it is housed, the third in its history, was built too early to conform to the modern æsthetic requirements; but it is so embowered with trees, so liberally covered with vines, that its large outlines are revealed and its lack of beauty of detail concealed. Mrs. Alice Freeman Palmer once described it as “a miniature Wellesley,” and it has many features which recall the beautiful surroundings of that college. In front of the school building stretches a great lawn, admirably and artistically planted with shrubs and trees; behind it, and opened up by charming walks, is an extensive grove of oak and beech, as quiet in its way and as suggestive of meditation and of sylvan sports as the grove of pines behind Bowdoin. In the grounds there is a small lake, large enough for skating and boating. On Tuesday evening of last week the lawn glowed with colored lights, and the front of the school build-

ing was effectively outlined by flashing points of electricity; while the groups of girls moving about, the band playing, the stir and life and mystery of the night, made a scene of almost fairylike beauty.

The day of the celebration was overclouded, but delightfully cool; and the Congregational church could not contain the graduates and friends who had come to take part in the celebration. The note of hope and success was heard on all sides, and with good reason; for within three years the attendance at the Academy has trebled. In its early history it was largely a New England institution; to-day its pupils are drawn from twenty-two or twenty-three States. The exercises were of the simplest character, consisting of a long procession moving through the quiet, shaded, perfectly kept New England street to the old, plain New England meeting-house; admirable singing by the school, supplemented by the voice of one graduate, who, by her sympathetic and finely sustained tones, seemed to interpret the spirit of the time and the place; an address by Mr. Hamilton W. Mabie; the presentation of diplomas; and, later, an immense dinner party in a tent on the grounds, with the usual after-dinner speaking, notable for pride in the growth of the school, confidence in its present management, and assurance of success in the future.

No schools have ever done more for the education of the country than the old New England academies, in which the cultural elements were at the front, while the comparatively small numbers of students made it possible for the teachers to exercise a direct personal influence, to recognize differences of temperament and gift, and to impart to educational methods a touch of spontaneity and originality. Of this type of school Bradford Academy is one of the few survivors. It is, in fact, the oldest school of the kind for girls in the country, with the exception of two Moravian seminaries in Pennsylvania. Founded by the citizens of Bradford in response to that instinct in the New England mind which has made New England the school-teacher of the Nation, it found its earliest constituency in the vicinage; but the area from which it draws its students has steadily widened, until it now practically calls them from all parts of the

continent. The school was founded on old-fashioned lines; the emphasis of its teaching has always rested on character. It has been one of the prime agencies for the liberation of women and the opening of the large field of modern activity to them, but it has always sought to develop that which was distinctly womanly in its students. From the beginning it has had a series of notable teachers. Every old school has its patron saints, its great personalities, who have become inspiring traditions. The names one hears at Bradford are those of Miss Hasseltine, whose reputation as a teacher extended far beyond the borders of New England; Miss Johnson, her pupil, who continued the methods and traditions which she had established; Dr. Rufus Anderson, for many years the head of the Board of Trustees; Benjamin Greenleaf, a man of National reputation, whose mathematical text-books are still remembered with mingled sorrow and joy by the boys and girls of a generation ago. In the long line of teachers associated with the Academy, one of the foremost names is that of Miss Lucy Larcom.

The Academy has always been pre-eminently a Christian school. At the very inception of the American Board a meeting for organization was held at Bradford, and the Rev. Adoniram Judson, then an Andover student, took part in this important conference. The portraits of Mrs. Judson and Mrs. Newell, which hang in the chapel of the Academy, are a constant reminder to this generation of students of the self-denial, the quiet heroism, and the spirit of sacrifice of the earliest American missionaries. The religious life of the school of to-day is strongly sustained along sound lines of practice and of expression; and the students are taught by practical service to others the fundamental principles of Christianity. Of the six thousand graduates whose names appear on the records of the Academy, there have been many women conspicuous as leaders in the educational and ethical life of their communities; but in estimating the influence and sacrifice of women nothing is so unsatisfactory or inconclusive as any public record of public action. The ideals of Bradford have never been distinctly associated with public or professional service; they have

always stood for the highest characteristic womanly qualities. They have neither forwarded nor antagonized some of the recent movements among women; their influence has been rather to develop that soundness of character which underlies all activity, and which often gives to the most obscure a greater spiritual significance and importance than to the most conspicuous.

Founded long before colleges for women were dreamed of, the Academy has had the great advantage of not starting fresh with new methods, but of gradually modifying its methods, and thus preserving a certain historical continuity of the highest importance. The course of to-day is shaped to deal with equal completeness and strength with those girls who desire a good education, but who stop short of the college career, and with those girls who are eager for college opportunities, with a marked tendency to conform more and more to the requirements of a school preparatory to college. Among secondary schools for women it may claim to be the oldest in the country; beginning as an Academy with the emphasis on the cultural elements in education, it has been gradually conforming to the requirements of a modern secondary school, without sacrificing its old ideals.

In an address delivered by the present principal, Miss Laura A. Knott, who entered upon her duties three years ago, four aspects of the school life were emphasized, and may be taken as interpreting the spirit and practice of the Academy. First, scholarship, thoroughness of intellectual work, the best modern methods, the highest intellectual aims; second, health, secured by liberal out-of-door and indoor exercises; third, culture, the definite attempt not only to train, but to ripen, to impart refinement, gentleness, and courtesy, and to give the beautiful expression in manner, voice, and carriage; and, lastly, character, accepting as a fundamental platform Emerson's phrase, "Character is higher than intellect; the great soul has strength to live as well as to think."

Perhaps the most characteristic feature of the Academy is its combination of old-time ideals of life with the modern methods of securing them. It places the greatest emphasis on character; it regards culture as the true end of education; it inculcates
